Mr. Theodore Roosevelt is still a young man, who has been but a short time in politics, and whose hold on public opinion of course still wants the final and binding stamp which nothing but prolonged trial in a variety of situations ever gives. He may still lose his hold on popular confidence through great mistakes. It may turn out that his moral and intellectual qualities fit him better for strife and struggle than for assured success. We do not ourselves look for any of these things, but we admit that it is open to any critic to expect them without being considered captious or pessimistic. Whether they are true or false is, however, of little consequence for our present purpose. We mention them merely for the purpose of showing that in using him as an illustration we are fully aware that his career is not complete, and has not been subjected to the final tests.

What is it that his success thus far indicates? It indicates, in our opinion, in a very striking way, that the term "politics" is returning to its original meaning—the management of public affairs, as distinguished from the working of the nominating machinery. At the close of the war the South—that is, a distant region of which the people of the North had little knowledge, and whose condition their opinions could do but little to affect either for good or evil—became for a number of years the sole bone of contention in national politics. This, combined with the continued smouldering of the passions of the strife, put all home questions in abeyance, and converted politics into a simple scramble for office; elevating the successful caucus managers into the rank once occupied by statesmen. The old-fashioned type of leader, like Silas Wright, Seward, and Marcy, in this State; Webster and Sumner in Massachusetts, and Clay and Calhoun, and even Davis and Benjamin, at the South—that is, men who obtained prominence and maintained it through the ideas which they held and advocated, and the great lines of public policy with which they were identified—seemed between 1865 and 1880 to have passed completely away. A new kind of politician, of which we may use Mr. Conkling, of this State, as an illustration, came on the stage, and took complete possession of it. Mr. Conkling, for instance, came into public life in his early youth simply as a skilful manager of local caucuses, then of district, and then of State conventions. He knew how to wheedle, and coax, and convince, and terrify the smaller tribe of politicians into doing his will in the various stages of that monster growth of nominating machinery which is the strangest, most puzzling political product of the day, and the one of which the future is hardest to predict. Through these arts, and these only, without even an affectation of interest in great public questions, without any pretence of devotion to ideas, or of concern about legislation or responsibility for it, he rose rapidly under the new régime to be the leader of his party in this State, and he was for some time the most potent influence in the Administration at Washington. For men to whom questions, ideas, measures were the chief concern, who sought to embody in laws long-planned schemes of public improvement, he used at that time hardly to conceal his contempt. They were visionaries, doctrinaires, molly-coddles, pedants. In a convention managed by him, they furnished subjects of ill-concealed amusement to his followers. What he thought upon the great topics of the day—and some of them were among the most serious topics of our time—nobody knew and apparently nobody cared. He made no speeches about them, wrote no articles, and affected no sort of interest in them.

Moreover, he of course furnished a model to the generation of young politicians who came after him. He set the fashion, not only for the young fellows like himself who began to dabble in politics in the country towns, but to the young "gentlemen" in this and other cities who thought they would like to be State legislators, or Senators, or foreign ministers. Several went up to Albany from New York during his reign, and, if they stuck to their work, rapidly began to be "practical," and sneer at the "reformers," and affect contempt for people who did not know how to "fix" primaries and make "deals," or to "knife" opponents, and who yet presumed to talk politics and complain of the use of the public service as spoils. In fact, indifference to public affairs, and scorn for men who wished to improve anything, and profound respect for successful wirepulling and secret management, became the note of the new school. It was most visible in New York, but it spread to other States.

Conkling fell through the gradual growth of a healthier public sentiment as much as through his own folly. But for the revival of popular interest in public affairs, the state of things which drove him into his final blunder would not have grown up. And he is to-day in his retirement a far more impressive illustration of the effects of the system under which he rose than he ever was while in power. Under the old régime, in which the leaders were men of ideas and policy, a politician who filled so conspicuous a position as he filled in this State for so many years, could not suddenly drop into insignificance and obscurity. He would remain identified in men's minds with great causes, or plans, or measures. His advice would still be sought; his speeches would be remembered and quoted. He would have a large body of followers who would see in his return to public life the best possible expression of their own hopes and aspirations about public affairs. But of Conkling's political greatness literally nothing remains but what he calls "the chalk-mark of captain on his brow." What he thinks or ever thought, says or ever said, about war or peace, currency, trade, foreign affairs, State rights or wrongs, nobody remembers and nobody cares. When he lost his hold of the patronage there was nothing left of him.

Now, the fact that the most successful young politician of our day, Mr. Roosevelt, should have achieved his success in a manner so different—that is, by a complete return to the arts by which all the earlier statesmen rose into power—is certainly one of the most hopeful signs of the times. He has achieved all the distinction he possesses by untiring devotion to *questions*. He has occupied himself with legislation, embodying the ideas of that portion of the American people who, in the long run, rule the country—the portion which believes in making the world better by effort, and is not satisfied with "harmony" over the offices. He has not been discouraged or daunted by the sneers of "the boys." He has not sought cheap success and popularity with the professionals, by sneering at the kickers and grumblers; and he has resolutely occupied himself, day in and day out, first, last, and all the time, with public business. The result is, that in three or four years he finds himself the most powerful man in a Convention made up largely of these very professionals, and finds that his equipment is, after all, even for the work of management, the best that a

young man in our day can have. The lesson for young men, and especially for young men of leisure, who wish to "go into politics," is very instructive, and they will wisely take a note of it. The times have changed and are changing, and they will do well to change with them.

PROHIBITION WITHOUT COMPENSATION.

Now that the Iowa Legislature has passed a law prohibiting the manufacture and sale of all intoxicating liquors, including ale, wine, and beer, and prescribed severe penalties for violation of the act, some interesting questions are raised. One of them is this: How far has a State, in the exercise of its authority to make police regulations, the legal right to interfere with property interests vested under a preëxisting and different law? Can it, for instance (as has been attempted in Iowa), after having encouraged the investment of capital in the manufacture of wine and beer, turn short round, and, without making compensation to those whose property is either wholly destroyed or greatly depreciated in value by the change, declare such manufacture (with the attendant sale of the manufactured product) to be illegal?

The Constitution of the State of Iowa provides:

1 (Sec. 9, Bill of Rights). "No person shall be deprived of life, liberty, or property without due process of law."

2 (Sec. 18, Bill of Rights). "Private property shall not be taken for public use without just compensation first being made, or secured to be made, to the owner thereof."

3 (Sec. 21, Bill of Rights). "No bill of attainder, or ex-post-facto law, or law impairing the obligations of contracts, shall ever be passed."

The last two of the foregoing provisions protect vested interests in two ways; first, by forbidding the unjust conversion of private property to public uses, and second, by forbidding absolutely and at all events the infraction of any obligations created by contract. But they do not reach the case which has arisen in Iowa. They do not forbid the State passing, if it choose, a law prohibiting the manufacture and sale of liquors, the practical effect of which is to confiscate a vast amount of private property. For such a law does not seek to convert the property thus taken to public uses, nor does it impair the obligations of any contract under which such property has been held. The first constitutional provision quoted goes further than the last two. It might be supposed to reach the case which has arisen in Iowa. This, however, has been denied by the Iowa Supreme Court in Santo et al. vs. Iowa (vol. ii. Iowa Reps., p. 164).

But vested interests are also protected by the Constitution of the United States. That instrument provides:

1 (Sec. 10 Art. 1). "No State shall pass any bill of attainder, ex-post-facto law, or law impairing the obligations of contracts."

2 (Vth Amendment). "No person shall be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."

3 (Sec. 1 XIVth Amendment). "No State shall deprive any person of life, liberty, or property without due process of law."

This last provision of the Federal Constitution, it will be observed, is identical with that provision of the Iowa State Constitution which the Supreme Court of Iowa has held not to forbid the passage by that State of a prohibitory liquor law affecting vested property interests. Let us take the sense of several of the present members of the Supreme Court of the United States on the effect of such a constitutional provision. Says Justice Miller, in Bartemeyer vs. Iowa, 18 Wall., 129 (a case not decided on the point discussed in the following dicta, however): "The weight of authority is overwhelming that no such immunity has heretofore existed as would prevent State Legislatures from regulating, and even prohibiting, the traffic in intoxicating drinks, with a solitary exception. That exception is *the case of a law operating so rigidly on property in existence at the time of its passage, absolutely prohibiting its sale, as to amount to depriving the owner of his property.* A single case, that of Wynehamer vs. The People (3 Kernan R.), has held that, as to such property, the statute would be void for that reason." Justice Bradley also remarks in the same case: "No one has ever doubted that a Legislature may prohibit the vending of articles deemed injurious to the safety of society, *provided it does not interfere with vested rights of property.* When such rights stand in the way of the public good, they can be removed by awarding compensation to the owner." And finally, in the same case, Justice Field says: "I have no doubt of the power of the State to regulate *the sale* of intoxicating liquors, *when such regulation does not amount to the destruction of the right of property in them.* The right of property in an article involves the power to sell and dispose of such article as well as to use and enjoy it. Any act which declares that the owner shall neither sell it nor dispose of it, nor use and enjoy it, *confiscates it; depriving him of his property without due process of law.* Against such arbitrary legislation by any State, the Fourteenth Amendment affords protection." It seems, therefore, that, if the arguments of Justices Miller, Bradley, and Field, in Bartemeyer vs. Iowa, should, in any case growing out of the recent prohibitory enactment of the Iowa Legislature, prevail with the court of which they are members, an open sale of a glass of wine or beer in existence at the time of such enactment, on or after the Fourth of July next, the day on which prohibition takes effect in Iowa, would not be illegal, but that the statute prohibiting it would be unconstitutional and void.

LITERARY CENTRES.

THE death of Mr. T. G. Appleton has attracted attention again to the condition of Boston as a "literary centre," a subject on which the New England newspapers have published within a year or so several articles. In these the fact of what Mr. Wegg would have called the decline and fall-off of that city has been admitted, and various attempts made to explain it. One theory advanced is, that in a growing country like the United States it cannot be expected that the literary centre, any more than the centre of population, should remain the same; if it was in Boston a generation ago, it may fairly be expected to be found in New York now; hereafter, perhaps, in Chicago, or Kansas City, or Omaha. The difficulty with this explanation is that few candid New Yorkers appear to be ready to claim that this city really is a literary centre, such as Boston may really claim to have been. In fact, one of our best-known critical writers, Mr. R. G. White, continually insists that New York, too, has fallen off from the palmy literary days of the Tontine Coffee-house and "Old Tom's." It is not that there are fewer men who follow literature as a profession in New York than there were, for we believe there are more than ever, and just as many of them have been in their different ways as successful as ever their predecessors were. But for some reason they do not make New York a literary centre such as all faithful New Yorkers fondly believe it to have been in the days of Halleck and Bryant and the Knickerbockers. The cohort of lion-hearted youth who are said to be engaged in a generous rivalry to see which shall supply the Madison Square Theatre with a play that will run without spreading among the spectators a desire to run, do not make New York a dramatic centre in the sense that Paris has been for so many years. The equally gallant band of yearling novelists whose surprising stories of American life go through the pages of the magazines, have not yet made it a centre of fiction. Mr. James, who might almost be claimed as a New York novelist, is denounced by his critics as a European in disguise, while Mr. Howells, whose origin is Western even if his habitat is New England, is, for some reason which we never have been able to make out, suspected of a concealed literary kinship with the author of 'Daisy Miller,' and at any rate has little or nothing to do with New York. By a literary centre we suppose something like Edinburgh at one time, Boston at another, Paris a generation ago, is meant—a place which has a distinct literary character and standard of its own, which it sets up and by which it judges the past, present, and future. There is little or nothing of this sort in New York, and therefore the idea that the literary centre has simply been transferred from Boston to New York falls to the ground.

Another theory is, that in the future we are not going to have literary centres any more. After all, what does a country like ours want with such centres? It was all very well to start literary centres in the ante-railroad and telegraph times, when New York was as far from Boston as London was from it before there was a cable. But now every literary man makes his own centre, and for the real lover of letters, whether he be in Oshkosh or the social and commercial capital of the continent, he may still do the work that is "in him," as the late Mr. Carlyle would have said, quietly and humbly and faithfully, without seeking earthly reward. This is undoubtedly a very noble and inspiring view of the subject, and has been embodied in a stirring poem of Browning's, adapted to any latitude or period,

celebrating the unselfish life-long devotion of its hero to the interesting problems, if we remember right, presented by the Greek particle δε, and the well-known verbs in μι, which even Mr. Charles Francis Adams, jr., does not wish to snatch from any one willing to devote time to them as an elective.

This is really an altogether new view of the whole subject. The development of purely individual literary centres is novel, and, of course, explains the decline of corporate or municipal literary centres like Boston. There is, for instance, Joaquin Miller, the poet of the Sierras. His poetry does not belong to any school or fashion, and would be just the same whether it was written in a hall bed-room in New York, a two-pair back in London, or a cave in the Rocky Mountains. It does not resemble the Lake school, nor the Emersonian, nor the verse of Longfellow, and we are confident that if it did, Mr. Miller would at once change it. In the same way there is Walt Whitman, the discoverer of the great truth that there is no difference between virtue and vice, between the pure and the filthy, the beautiful and the ugly, prose and verse, but that these are all different and equally interesting manifestations of the Ego of the poet, the Bard Walt himself. There is the Sweet Singer of Michigan, who has shown that neither rhyme, nor metre, nor sense, is essential to poetry. She lives in Michigan. Michigan is not a literary centre, but she is. Zola is an almost perfect instance of an individual literary centre. He teaches us, not that there is no difference between virtue and vice, or the beautiful and the ugly, the foul and the pure, but that the secret of art is "small profits and quick sales," as they say in dry goods, and that the artist makes himself notorious most easily by a careful delineation of the disgusting. Zola, it is true, is a Parisian, but he does not represent Paris as a centre of literature in the way that Balzac or Victor Hugo once did. He represents Zola, and is his own literary centre.

If it is the principle of the individual literary centre which is now beginning to establish itself, it is capable of indefinite extension, limited in fact only by the ingenuity, originality, or eccentricity, or what the old fashioned literary set call the "conscience," of the centres themselves. One may spring up tomorrow in Albany, or Gowanus, or any other unexpected place. The Queen of England has, in the seclusion and entirely unliterary atmosphere of Windsor Castle, and under the inspiration of the society of an entirely uneducated Scotch gillie, written one of the most popular books of the day, in which she shows what use may be made, by any one who knows how, of the flat and uninteresting in literature, and what a mistake it is to imagine that successful authorship is necessarily confined to those who have anything to say. If this view of the future of literature is correct, it shows how foolish it would be for the Bostonians to repine over the decline of Boston as a literary centre. The field hereafter will be world-wide, and each strange new centre will attract the attention of the whole of it until it is diverted by the appearance of some one even more delightful, surprising, and monstrous than his immediate predecessors.

THE PLAYWRIGHT'S ART.

THE system of symposia has spread to Belgium. The *Revue Politique* publishes a *causerie* delivered at Brussels by M. Abraham Dreyfus, "Comment se fait une pièce de théâtre?" It is a very bright *causerie*, but it is rendered much brighter by letters from Dumas, Augier, Sardou, Labiche, Legouvé, Doucet, Gondinet, Banville, d'Ennery, Zola, Pailleron. M. Dreyfus had the happy thought of getting these dramatists to write his lecture for him; but he furnished his part in skilful introductions, ingenious transitions, and neat compliments, treating them as a good presiding officer treats the after-dinner speakers at some banquet. But the result of it all must have been that the audience know no more how to compose a good play than before.

M. Augier had protested that he did not know how his plays were composed, and when asked if he did not make his own pieces, replied, "Certainly not, they make themselves." Nevertheless, in his letter he gives two processes, the first the same rule that the old sergeant gave to the conscript for forging cannon: to take a hole and put brass around it; the second just the opposite: to take brass and put a hole through the centre. The hole in cannon is called *l'âme;* the same name may do for a dramatic work. This advice, which to the frivolous might seem trifling, is to M. Dreyfus full of deep meaning. There are plenty of dramatic pieces made of nothing, of emptiness, which is covered with something sounding and brilliant. Such pieces, well put upon the stage, with showy scenery and costly toilettes, have a great success and last for a time; and this, as it is the easiest, is the most usual method. The other, which is the best, is to take some solid material, that is, a strong idea, and give it dramatic life, to put an *âme* into the brass. Such, flatteringly avers M. Dreyfus, is the process by which M. Augier's pieces are constructed. Augier does, by the way, quote one other recipe from a friend—Imbue your last act with sweet tears, and scatter sparkles of wit over the other four—which is useful advice for those who have wit and tears at command; those who have not may reflect upon the recipe, First catch your hare. M. Dumas's letter is longer, but it ends in the same avowal: he does not know how plays are written. One day he asked his father, who said, "It's a very simple matter—the first act clear, the second act short, the whole interesting"; which advice, like the other, is excellent to those who know how to follow it, but the playwright is born, not made, either by others or himself. One might as well ask *Romeo* how he went to work to love *Juliet* and to be loved by her.

Sardou writes that every one has his own method, and that the only invariable rule that he can suggest is, that one must know where he wants to go and how to get there. Labiche enters more into detail. When he hasn't an idea, he says, he bites his nails and calls upon Providence. If he has an idea he still calls upon Providence, but with less fervor, because he thinks he can do without its assistance. He then draws up the plan, scene by scene, of the whole piece from beginning to end. Then he goes over it most carefully, inquiring what purpose each scene serves, whether it introduces or develops a character or a situation, whether it helps forward the action. A play must be going all the time. If it lags, the public yawn; if it halts, they hiss. Finally, to make a lively piece, one must have a good digestion. M. Labiche must have always enjoyed a perfect digestion.

M. Legouvé also is practical. He insists on the distinction between a romance, which one may begin without any idea how it is to come out, and a play, which must have a definite plan—which, therefore, must be begun at the end. Walter Scott conceived his characters and sketched a situation, and then let the story work itself out as it would. Eugène Sue declared that a plan would put fetters on his imagination; if he was to surprise his public, he must be surprised himself. He often got his characters at the end of a part into an inextricable tangle, without the least idea how he was to get them out. George Sand only needed a thought, a phrase, a scene to set her going. But Scribe, the Dumases, Augier, Labiche, Sardou know exactly where they shall land before they set out on their journey. This same belief in the importance of a plan appears in the letters of Sardou and Labiche. Still, Legouvé allows that there are unplanned *chefs-d'œuvre*, and that an author who really had some talent—Molière—owed his dénouements in large measure to fortune.

M. Doucet lays the chief stress on following the fashion. To-day, he says, the "Misanthrope" would run a great risk of being rejected by a manager; and if by chance it was played (for the first time) it would have a very moderate success. The treasurer would soon demand that it should be replaced by "L'Ami Fritz." Whereupon, killing two birds with a single stone, M. Dreyfus protests that "L'Ami Fritz" is a very good comedy or idyl, and that M. Doucet's "Les Ennemis de la Maison," produced thirty-four years ago, has not yet been driven from the boards by fashion. M. Gondinet tries the modest vein. When he gets an idea for a play he does not ask whether he can make a *chef-d'œuvre* of it, but only whether the subject will be amusing to treat. A little pleasure now is more to him than a bust even of marble after he is dead. Théodore de Banville's reply is what might be expected of a poet. M. Dreyfus's question, he says, is really double: 1, how to write a play that shall succeed and bring in a good deal of money; and 2, how to compose a really good drama, that shall have some chance of lasting. To the first question he answers, Nobody knows; for if the process were known, all the theatres would make six thousand francs every evening. To the second his reply is, Have genius; there is no other way. In art, talent is nothing, genius is everything. And then he ends with a fling at Scribe; he would not be Théodore de Banville if he did not have his fling at Scribe.

M. de Banville's advice, "Have genius," is not always easy to follow. M. d'Ennery's is not much easier. It is: Take an interesting idea, a subject neither too new nor too old, neither too original nor too commonplace, so as to avoid displeasing both the vulgar and the refined. Zola writes that he is out of the running; he has harnessed himself to a novel ('Les Rougon-Macquart') which will take the rest of his life; he shall hardly get back to the dissipation of theatrical writing before extreme old age. But if he ever does, he shall try to have his plays less artificial in plan than is the modern custom. Molière's comedies are of very simple construction, almost too simple, whereas Scribe's (poor Scribe!) are *articles de Paris*, fearfully and wonderfully made. Finally, M. Pailleron closes the long list by avowing, like Dumas and Augier and Sardou and Banville, that he does not know, that nobody knows—the successful author least of all. And the proof is that he may write a play and be perfectly sure of it, the manager may accept it (though a manager must from

experience be a sceptic and by interest ought to be), the actors will like it when it is read to them (at least will like their own parts, which is all that they listen to), the rehearsals will go off well, the dress rehearsal especially, and yet at the first performance, though the public is nowadays substantially the same as at a dress rehearsal, the piece may fall flat. Talent, skill, experience are all very well—to some unknown extent and in some unknown proportions they are necessary; but there is something else in it, something demonic, mysterious. After all, M. Pailleron is here simply repeating the testimony of all ages in regard to works of art. And the other letter-writers, practised playwrights in the city where the best plays in the world are made, men who ought to know if any one could know, all substantially agree with him. When women learn to be graceful by studying Peirce's 'Curves and Functions,' when horses are taught to run and leap by showing them Muybridge's photographs, and birds get hints in flying from Marey's 'Aerial Locomotion,' then the art of writing plays may be part of the instruction in the common schools, and the theatre will please the Universalists, for no play will be damned.

PLASTER CASTS FOR MUSEUMS.

THE four chief German-speaking capital cities are all known as "art-centres," but only one of the four is rich in original works of classic sculpture. That one is, of course, Munich, ranking sixth among the cities of Europe in this respect, or after London, Athens, Rome, Paris, and Naples. The other three cities of German race, Berlin, Dresden, and Vienna, to make up for their comparative poverty in this respect, and Munich to complete and illustrate its possessions, have organized large museums of reproductions, of which the Berlin collection is by far the richest, the Dresden one the best lighted and best shown, the Vienna one somewhat less extensive than that at Dresden, but growing fast, and, if room is to be had for it in the newly built museum building, or elsewhere, likely to equal Berlin very soon. The Munich collection of plasters is also extensive, but so badly housed in dim and crowded little rooms off the Hofgarten, that it is hard to study. It appears to be considered as an incomplete and unorganized museum, for it is open only twice, or perhaps only once, a week, and although for marks and pfennigs the custodian will meet you there as often as you like, you have still to find him and make your appointment; so, no more of the Munich *Museum von Gypsabgüssen*.

The *Museum der Gypsabgüsse* at Vienna, belongs to the Imperial and Royal Academy of Plastic Art, and is perhaps the only one belonging to an art-school which comes within the compass of our inquiry, as being general in its nature, historical, comparative, and not confined to the developed and elaborated art which is supposed alone to be good for pupils to study. It is especially noticeable for the admirable care and good taste which have presided over it. The 600 pieces which compose it have been carefully chosen from among the 3,000,* more or less, which are above ground and of importance enough to be reproduced for such a purpose. If the whole ground floor of the Academy building, or if, still better, more spacious and roomy quarters elsewhere could be had for it, a slight annual expenditure—4,000 gulden a year for twenty years—would make it equal to that of Berlin in extent, and perhaps superior in choice and arrangement. There is an intelligent little catalogue, or rather a guide, for it is not complete, and leaves unmentioned the less important pieces and calls itself only a *Führer;* but it is good and instructive. The Munich pamphlet is a mere numbered list.

The Dresden Royal Museum of Plaster Casts has a catalogue somewhat fuller and more popular in character, with quotations and critical remarks, but having the fault of too great unevenness in its descriptions, devoting a page to one statue and passing the next with a mere mention, not stating even the place where the original was found or the museum in which it is housed. The collection itself numbers 800 pieces (classic art alone). Varied and fine as it is, it is open to the suspicion of being less carefully selected than it should have been: there are too many Roman inferior copies of finer Greek originals, and too many much-restored ornaments of palace galleries. But it is a capital museum for study. The Zwinger Palace affords it an ample series of halls, open and airy for the most part, and abundantly lighted. The *Barokstyl* in which it is built has the good trait of allowing, and in fact demanding, huge openings, and even the ideal museum of the future can hardly be expected to give a larger percentage of glass-surface.

We come now to the capital of the Empire, and it is worth noticing what has been done and what is doing to make of Berlin a metropolis of intelligence. The German imperialists have been laughed at for being in too much of a hurry to claim all sorts of superiorities as the immediate concomitants of military supremacy: one critic having discovered that "Faust" is a greater drama than any of Shakspere's, and a legion of them being busy in trying to shove German plastic and graphic art into the front rank. No harm in laughing at those vagaries, but it may be better worth our while to observe what has actually been done toward intellectual supremacy; and it is a fact that Berlin is to-day the best place in the world to study classic sculpture. For everything is there. The results of the Olympia excavations are arranged and displayed at full; the Pergamon marbles, with their strange revelations of the later Greek spirit in art, are to be seen nowhere else in Europe; the old museum contains, besides these, a score or two of original antiques, among which are two or three of first-rate importance; and, finally, the new museum displays the finest collection of casts from the antique in the world—1,400 pieces. If to these we add the Olympia collection, we shall have more than 1,600 pieces. If to both we add the sculptured slabs from Pergamon, it will appear that at Berlin the student can see and examine two-thirds of all the most important classical sculpture above ground. Indeed, the pieces that still lack are rather doubles of what is here, than entirely independent and otherwise unrepresented designs. The desirability of having also these replicas, no student will dispute; moreover, every student will have some favorite bas-relief (like fifty at Athens), some Greek marble head (like two at Brescia), some bit of archaism at Constantinople or some out-of-the-way town, or in private hand—all of which may be wanting at Berlin. But practically this combined museum of classic sculpture may be accepted as complete; as sufficient for purposes of study, up to the point where the student, giving up his life to it, starts to visit the shrines themselves.

The authors of the general Guide to the Berlin museums ('Führer durch die Museen') are very mild-spoken about the collection of casts. Naïvely they say that it is "difficult to get together quickly a collection of original sculptures with limited means," and remind themselves and the reader that the best (they might have said the *good*) pieces of ancient sculpture are "in festen Händen"; not for sale. Apologetically, they urge that "even if a part of the full impression of a plastic original must be wanting in a cast of it; even if the cast, by getting dirty, or by imperfect care and preservation, should be injured, yet is the opportunity of closely comparing scattered masterpieces even in their casts most valuable." To which the reader is inclined to answer, in his thought, with an affirmative a degree warmer than the hesitating suggestions of the authors, who, perhaps, are among those who think it strange that conquering Germany should not have all the original masterpieces in the new Imperial capital. As the reader turns down the page of the introduction to the 'Führer' we have cited above, or opens the too brief separate catalogue of the casts, he probably enters one of the eleven halls or corridors in which the collection is arranged; and his feeling probably is that if the collection before him is *not* important and valuable, it must be because of some serious essential defect in plaster casts; it must be because some heavy charge, as of infidelity to their originals, can be made good against them. He finds himself invited, as it were, to select the best hundred pieces of sculpture from the Vatican, the best hundred pieces from the Capitol, the Lateran, and the Villas Albani and Ludovisi, the best hundred and fifty from the British Museum, including all the Parthenon sculptures which are there; and so on throughout Europe, from Madrid to Constantinople. He finds, too, that the rule is to strip the modern additions from the antique originals; that the catalogues so declare, and that accordingly many, if not all, the more injurious restorations are suppressed in the casts. The San Ildefonso group is, indeed, left as it appears in Madrid, although put down as "stark restaurirt." This rule, though the only safe one for a museum of casts, is a little less binding than for originals, because the choice of originals to copy will naturally be made from the less injured antiques. In Berlin, however, it is to be rigidly enforced hereafter. Finally, our visitor finds the kindred sculptures brought together for comparison; for instance, the Hermes of the Belvedere set face to face with its older double, the Athens statue which I have described and praised in these columns as the "Hermes of Andros," where side by side would assuredly be a better arrangement. These comparisons the catalogues urge and aid, brief and temporary as the catalogues are as yet. And our visitor must indeed be convinced that casts are poor things, or he can hardly fail to be aware of a thrill of emotion as he contemplates the prospect before him.

What, then, are the shortcomings of plaster casts? Are these shortcomings truly so important that a collection of casts is essentially inferior to a collection of marbles and bronzes? To answer first the second question, let us see what competent and interested judges think of plaster of Paris as a medium for plastic form. What is the material in which all the important works of modern sculpture are first exhibited? The French school of sculpture is obviously the first now in existence. The annual Salon is that school's chosen place of exhibition and triumph. There are shown not only the portraits, busts, and bits of domestic sentiment, but also the great designs for the exterior decoration of public buildings, the Government commissions, the national monuments. Mr. Bartholdi's "Lion of Belfort" stretched its gigantic length along one end of the "Jardin" in 1878; Mr. Chapu's monument to Berryer stood there in 1877; Mr. Dubois's monument to General Lamoricière was shown there, one statue at a time. No more important works of modern sculpture could be

* Classical sculpture only is under consideration here. A note affords also the best means of explaining that a long frieze is here taken as not one but many pieces; the Parthenon frieze, *e. g.*, though bearing only the one number, 32, in the Vienna catalogue, consists really of about one hundred slabs, and is so numbered at Berlin and so considered here.

named than these. And in what material is it that the sculptors embody their thoughts when *first* given to the public, and to the judges who award medals and the marks of all that social and professional success for which sculptors strive? It is plaster of Paris. Nine times out of ten, the first exposition of a work of plastic art is in plaster; or, to leave the annual exhibitions and to pass over the newly-founded triennial Salon, the show of sculpture in the Champ-de-Mars in 1878, when the pick of ten years' work was brought together, and a sculpture gallery was made up such as gave one new ideas and new hopes of modern art, the exhibited works were generally in plaster. And let us hear the archæologists, the professors, the champions of exactness, and the students of the antique; what did they, in their late favorite and most serious undertaking, get for their efforts? What did Berlin receive for the thousands of marks spent in uncovering Olympia and in securing the precious marbles for Greece? Plaster casts—nothing but plaster casts, photographs, and glory! The long gallery built on the foundations of the never-built new cathedral at Berlin, where once were the Cornelius cartoons, is filled now with the Olympia sculptures, *in plaster*. The pediment sculptures are given twice—once above, in a full-size model of the pediments themselves, and once below, on tables, each statue beneath its double in the architectural frame above. On the walls are the metopes, on brackets the more interesting heads, at one end of the gallery the Nike and the Hermes of Praxiteles. Nowhere else can the Olympia finds be judged aright; and these casts are, by the original agreement, all that Germany gets for her money, except some trifling monopoly of photographing for a limited time.

If, then, the Berlin people are satisfied with their plasters, and if modern sculptors stake their reputation upon casts, the common American contempt for them is somehow a mistake. So far as this prejudice is caused by the cheapness of casts, or by the daily appearance of poor copies of poor originals, misleading the uninstructed into buying what they suppose to be works of art, so far it is absurd: one might as reasonably dislike marble because our cemeteries contain such very dreadful things in that material. But to our first question: What are the shortcomings of plaster as a medium for plastic form? The chief one is the opaque, dead whiteness of plaster when new, so inferior in beauty to the lustrous, crystalline, slightly translucid surface of marble. In marble, even the whitest and most uniform, there are slight, untraceable differences in color and in the reflection of light from its surface, which slight variety becomes more marked as the marble is exposed to the air. In the case of bronze, the effect of time is far greater. Now, plaster casts can be colored (of the advisability of that, by and by); but it is evident that however much we may wish for a material with all the advantages of gypsum and a more beautiful surface, this fault is not an *essential* one. The work of art remains in all respects the same, in the plaster as in the marble. Every quality which the sculptor gave his original is independent of the more or less perfect whiteness, the greater or less brilliancy of surface of the medium. We cannot imagine a sculptor altering his modelling even in the slightest degree to accommodate itself to snow-white plaster, or to marble of any ordinary kind, or any other white material of tenacity and hardness sufficient.

Now, as regards accuracy of reproduction in form, plaster of Paris keeps its place as the best material for common use. The workmen tell us that it swells very slightly just before setting, and then shrinks again, either exactly to its original volume or a trifle more, according to the quality of the material. The expansion is so slight that the mere tying of a string around the filled mould prevents its bursting; the ultimate shrinkage is so slight that the mould is only just released by the cast. Every one knows how sharp and exact a sealing-wax impression of a seal may be made; but antiquarians generally prefer a plaster to a wax impression of an intaglio inscription or head for purposes of study.

We reach the conclusion, then, that a thoroughly well made plaster cast is the best reproduction of any work of sculpture. It remains, in every case, to be sure that the cast is well made. There are good workmen in the cities where the great museums are, and really extraordinary skill is shown by them in making and putting up casts of the largest and most complicated works of art. The writer has watched, for days together, the process of taking these casts, and with wonder at the skill and readiness displayed. In the case, for instance, of the carved walnut stalls and canopies of Amiens, than which work can hardly be imagined by man more elaborate and more delicate, with its population of statuettes, its delicate relief sculpture, and the elegant pierced canopies high overhead, workmen were busied in the spring of 1882 in making a cast of three of the bays together. This is now put up in the Trocadero museum of comparative sculpture, and wonderful it is as a piece of clever workmanship. Still, in all the casts, even of the best workmen, there is one fault which constantly appears, and a bad one: it is the inaccurate placing of adjacent moulds, so that the surface of one piece of the plaster cast given by one mould is not precisely continuous with the surface of the next piece, after the whole is put together. The smooth rounding of a thigh or a shoulder will then be wholly contradicted by such an interruption. Let the reader look at any cast in a studio or art-school, or in the shop of a maker of casts; the little projecting ridges show where there were joints between the moulds. Now, suppose one of these ridges carefully and gradually scraped away, would the surface be perfectly continuous, the curves unbroken, with no break or step? The casts commonly for sale will not be found to bear this test very well.

The casts we commonly see, those covered all over with the little ridges, as above described, are made from plaster moulds. Casts are also taken from gelatine moulds, and these latter show no seams nor joints, for the gelatine is so pliable that it can be turned almost inside out, and the most elaborate castings withdrawn from it without injury to the delicacy of the mould. This very pliability, however, limits its practical use. The gelatine mould has to be supported behind by a counter-mould of plaster. When the cast is made, the gelatine and cast are lifted together from the plaster backing; the gelatine can then be opened, pulled off, dragged away like a glove; and when a new cast is to be made, the gelatine mould is put back into its plaster holder, and, from its great elasticity, takes its proper form, within as well as without. This method of employment causes its use to be almost confined to bas-reliefs; but statues have been moulded in gelatine, two moulds going to a statue, as if two reliefs without background should be put together, back to back. A cast of the elaborate marble pulpit of Santa Croce, in Florence, is for sale there, and the maker says it was made in more than sixty different moulds, all of gelatine. In such cases there are, of course, seams and ridges; but it is not hard to keep them where they are not very prominent, thanks to the flexibility of the gelatine.

R. STURGIS.

Correspondence.

A DEFENCE OF MR. BLAINE.

TO THE EDITOR OF THE NATION:

SIR: On April 10 you made formal charges against James G. Blaine. They are the same which were made eight years ago, and which were, I think, at that time satisfactorily answered. Lest others, however, may, like yourself, have forgotten everything except the misstatements, you must permit me to remind you of the facts. I think I may claim some qualifications for the task. I have long had a close personal intimacy with Mr. Blaine, and during many years have had that knowledge and care of his moneyed interests which men absorbed in public affairs are not inapt to devolve upon friends who have had financial training and experience. I do not see how one man could know another better than I know Mr. Blaine, and he has to-day my full confidence and warm regard. I am myself somewhat known in the city of New York, and think I have some personal rank with you and your readers. Am I claiming too much in claiming that there is not one among you who would regard me as capable of an attempt to mislead the public in any way? With this personal allusion—pardonable, if not demanded under the circumstances—I proceed to consider your charges.

The first charge is really the one upon which all the others hinge. I give it in full and in your own language, only italicising some of your words, in order that my answer may be the clearer. You say:

"In the spring session of Congress in 1869, a bill was before the House of Representatives which sought to renew a land grant to the Little Rock and Fort Smith Railroad of Arkansas, *in which some of Mr. Blaine's friends were interested;* that an attempt to defeat it by an amendment was made, and was on the point of being successful, and its promoters were in despair; that at this juncture, Mr. Blaine, being then Speaker of the House, sent a message to General Logan, to make the point of order that the amendment was not germane to the purposes of the bill; that this point of order was accordingly raised and promptly sustained by Mr. Blaine as Speaker, and the bill was in this manner saved; *that Mr. Blaine wrote at once to the promoters calling attention to the service he had rendered them, and finally, after some negotiations, secured from them, as a reward for it,* his appointment as selling agent of the bonds of the road, on commission, in Maine, and received a number of such bonds as his percentage; that the leading feature of this transaction appeared in two letters of his afterward made public, dated respectively June 29 and October 4, 1869."

Your error is in the facts. Mr. Blaine's friends were not connected with the Fort Smith and Little Rock Road at the time of the passage of this bill. Those to whom you refer as his friends were Caldwell and Fisher. The bill passed in April, 1869. In April, 1869, Mr. Blaine did not know that there was any such man as Caldwell; and Fisher, who was Mr. Blaine's friend, did not know that there was any such enterprise as the Little Rock Railroad in the world. The evidence of these assertions was before Congress, was uncontradicted, and is within your reach. On the 29th of June, nearly eighty days after Congress had adjourned, Mr. Blaine, from his home in Maine, wrote to Fisher, and spoke of Fisher's "offer to admit him to a share in the new railroad enterprise." Fisher had introduced the subject to Mr. Blaine for the first time a week before at the great music festival at Boston. He told him there that Mr. Caldwell, whom Mr. Blaine had not yet seen, had now obtained control of the enterprise and had invited Fisher to join him. At that time Fisher was a sugar refiner of considerable wealth in Boston, had

been a partner of Mr. Blaine's brother in-law, and through him had made Mr. Blaine's acquaintance. The offer Mr. Blaine refers to in his letter was Fisher's offer to induce Caldwell, if he could, to let Mr. Blaine have a share in the bed rock of the enterprise. Mr. Fisher failed to do this, and Mr. Blaine never secured any interest in the building of the Fort Smith and Little Rock Railroad.

What interest, then, did Mr. Blaine obtain? An interest in the securities of the company. How? By purchase, on the same terms as they were sold on the Boston market to all applicants; sold to Josiah Bardwell, to Elisha Atkins, and to other reputable merchants. He negotiated for a block of the securities, which were divided, as is usual in such enterprises, into three kinds, first-mortgage bonds, second-mortgage bonds, and stock. The price, I think, was *three for one.* That is, the purchaser got first-mortgage bonds for his money, and an equal amount of second-mortgage or land-grant bonds and of stock thrown in as the basis of possible profit. I may be mistaken as to the price, but I think not. I went myself at this time into several adventures of the kind on that ratio, and have always understood that Senator Grimes and his friends got their interests in the Burlington and Missouri Road, a branch of the Union Pacific, on the same basis of three for one. It was the common ratio in that era of speculation. Mr. Blaine conceived the idea that he might retain the second-mortgage bonds as profit and sell the first-mortgage bonds with the stock as a bonus. He believed the first-mortgage bonds were good, and he disposed of them to his neighbors in that faith and with the determination to shield them from loss in case of disaster. Disaster came. The enterprise, like so many others of the kind, proved a disappointment and the bonds depreciated. Mr. Blaine redeemed them all. In one or two cases only had he given a guarantee. In none other was there any legal obligation, but he recognized a moral claim and he obeyed it to his own pecuniary loss. I cannot but feel that the purchasers of these bonds would have fared worse had they been compelled to look to many of those who have sought to give an odious interpretation to Mr. Blaine's honorable conduct. The arrangement for the purchase of the block of securities was made in June or July. The sales of the first-mortgage bonds out of the block were continued through the months of July, August, and September, 1869. The transaction was nearly closed when, in the letter of October 4, Mr. Blaine wrote to Fisher and told him the parliamentary story of the 9th of April. Mr. Blaine had come across it while looking over the *Congressional Globe*, with a natural curiosity to see what had been his decisions during the first six weeks of his Speakership, and he wrote of it to Fisher as an item in the legislative history of the enterprise into which they had both subsequently entered. It concerned a bill to renew a land grant, made long before the war, to the Little Rock and Fort Smith Railroad. The bill had passed the Senate without opposition, and there was no one objecting to it in the House, but the advocates of the Memphis, El Paso and Pacific Railway Bill sought to attach their bill to it as an amendment. This El Paso Bill was known at the time as General Fremont's scheme, and had been urged upon Congress before. It was unpopular and was openly opposed by General Logan. Wedded to the Little Rock Bill it would gain strength, but the Little Rock Bill would lose strength, and a just measure, universally approved, would be killed in the effort to pull through with it this objectionable measure which was generally disapproved. Mr. Blaine's letter to Fisher will tell the rest of the story. He wrote: "In this dilemma, Roots, the Arkansas member, came to me to know what on earth he could do under the rules, for he said it was vital to his constituents that the bill should pass. I told him that the amendment was entirely out of order because not germane, but he had not sufficient confidence in his knowledge of the rules to make the point. But he said General Logan was opposed to the Fremont scheme and would probably make it. I sent my page to General Logan with the suggestion, and he at once made the point. I could not do otherwise than sustain it, and so the bill was freed from the mischievous amendment and at once passed without objection." Mr. Blaine added these very significant words: "*At that time I had never seen Mr. Caldwell, but you can tell him that without knowing it* I did him a great favor. . . . I thought the point would interest both you and Mr. Caldwell, *though occurring before either of you engaged in the enterprise.*"

This seems, Mr. Editor, to dispose of your first charge. The bill was a just one and Mr. Blaine's friends had no interest in it when it passed the House. Eighty days after the House adjourned Mr. Blaine asked his friends, who had in the meantime taken hold of the enterprise, and had offered him some interest, to let him in as a partner. They refused. They did, however, sell him a block of securities on the same terms they sold them to others, and it proved an unfortunate purchase, for he sold them out among his friends, believing them valuable, and took them all back when they depreciated in value. The letter of Mr. Blaine, written long after the transaction, is his complete vindication. To give it a semblance of evil you assign a date to it six months before it was actually written. The late Judge Black, after an investigation of the whole subject, declared in his characteristic style that "Mr. Blaine's letter proved that the charge (which you repeat against him) was not only untrue but impossible, and would continue so to prove until the Gregorian Calendar could be turned around and October made to precede April in the stately procession of the year."

Your second charge consists of two parts. The first part is that Mr. Blaine wrongfully asserted that "the Little Rock and Fort Smith Road 'derived its life and value and franchise wholly from the State' [of Arkansas], and not from Congress; whereas the evidence subsequently taken disclosed the fact that the road derived the value on which these bonds were based from the Act of Congress of which Mr. Blaine secured the passage." It will be found that you have inaccurately quoted Mr. Blaine's language, or rather that you put language into his mouth which he never used. What Mr. Blaine did say was, "The railroad *company* derived its life, value, and franchises from the State of Arkansas." And Mr. Blaine stated the precise truth. What are the facts? More than thirty years ago Congress granted to the States of Missouri and Arkansas a certain quantity of public lands to aid in the construction of certain lines of railway. The franchises which should be granted to the companies that should build the road were expressly left by Congress to the Legislatures of the States. Mr. Blaine spoke therefore with absolute precision of language, as he usually does, when he stated that "the Little Rock Railway Company derived its life, value, and franchises wholly from the State of Arkansas," just as the Illinois Central Railroad Company derives its life, value, and franchises from the State of Illinois, though enriched by a land grant from the United States, just as the Little Rock Road was.

The second part of your second charge is, that Mr. Blaine did not speak truthfully when he asserted that he bought the bonds "at precisely the same rate as others paid." There is no evidence anywhere to sustain this accusation. I have already said any person could negotiate for them on the one-for-three basis just as Mr. Blaine did, and many availed themselves of the opportunity. The price paid was not in the least affected by the fact that Mr. Blaine had already arranged to sell the securities at a higher price than he paid for them. He did this with the determination, honorably maintained, that he would make good any loss which might accrue to the purchasers. These sales did not change the price paid to Fisher, and the proof that they did not is found in the fact that Mr. Blaine paid it to him in full. You speak in this connection of Mr. Blaine's being appointed an agent to sell the bonds of the company. No such appointment was ever made and no evidence suggests it. Mr. Blaine negotiated for his securities at a given price which was paid in full to Mr. Fisher.

Your third formal charge relates to an alleged connection of Mr. Blaine with a share in the Northern Pacific enterprise. You charge this in the face of the fact that in Mr. Blaine's letter, in which you find the subject referred to, was his distinct asseveration that he could not himself touch the share. Have you seen any evidence that he did? I have not. The Northern Pacific Railroad Company has been organized and reorganized, and recently reorganized a second time. Its records of ownership and interest have passed under the official inspection of at least a hundred men, many of whom are political enemies and some of whom are to my knowledge personal enemies of Mr. Blaine, and there has never been a suggestion or hint from any of these that in any form whatever Mr. Blaine had the remotest interest in the Northern Pacific Company. If one of your associates has such evidence, it is right that he should produce it.

Your fourth charge is, that after Mr. Blaine got possession of the so-called Mulligan letters, "he subsequently read such of them as he pleased to the House in aid of his vindication." The answer is that Mulligan's memorandum of the letters, in which he had numbered and indexed each one of them, was produced, and number and index corresponded exactly with the letters read. This was fully demonstrated on the floor of the House, and is a part of its records.

You repeat the charge that Mr. Blaine received a certain sum from the Union Pacific Railroad Company for seventy-five bonds of the Little Rock Road. You say this without a particle of proof. You say it against the sworn denial of Thomas A. Scott, who was the party alleged to have made the negotiation. You say it against the written denial of Mr. Sidney Dillon, President of the Company; against the written denial of E. H. Rollins, Treasurer of the Company; against the written denial of Morton, Bliss & Company, through whose banking house the transaction was alleged to have been made. Against this mountain of direct and positive testimony from every one who could by any possibility have personal knowledge of the alleged transaction, you oppose nothing but hearsay and suspicion as the ground of a serious charge against the character of a man long eminent in public life. The courtesy which admits me to your columns prevents my saying what I think of your recklessness in this matter.

Your fifth charge arraigns Mr. Blaine's policy as an executive officer, and your last charge is that of his packing conventions in his own favor. I do not desire to dwell upon either. This is not the place to review his foreign policy to which you refer, and I am content to remark

that however much some Eastern journals may criticise, it is popular with a large majority of the American people. It is simply an American policy, looking to the extension of our commerce among the nations of this continent, and steadily refraining from European complications of every character.

The charge of packing conventions needs no answer. This is the third Presidential campaign in which Mr. Blaine has been undeniably the choice of a large proportion of the Republican party. In each of them he has had the active opposition of the National Administration, with the use of its patronage against him. Mr. Blaine has control of no patronage. He has no Machine. Machine and patronage have been persistently against him. Whatever prominence he has enjoyed has been conferred by the people. He has no means, not open to every citizen, of influencing public opinion. No campaign in his favor originated elsewhere than among the people. He has never sought office. He never held a position to which he was not nominated by the unanimous voice of his party. He has not sought the Presidency. Circumstances made him a candidate in 1876, almost before he was aware of it. In 1880 he did not wish to enter the canvass. I was one of a small party of intimate friends who, in a long conference in February, 1880, persuaded him that it was his duty. He has done nothing to make himself a candidate this year. He has asked no man's support. He has written no letters, held no conversation, taken no steps looking to his candidacy. He has never said to his most intimate friends that he expected or desired the nomination.

If, upon a review of the whole case, you should charge that it would have been better and wiser for Mr. Blaine to have refrained from making any investment in a railroad that had directly or indirectly received aid from the legislation of Congress, I should be ready to agree with you, not because the thing was necessarily wrong in itself, but because it is easy for such matters to be so represented as to appear wrong. But why should Mr. Blaine be selected for special reprobation and criticism when so many other Senators and Representatives have been similarly situated? I know of my own knowledge that Governor Morgan, Mr. Samuel Hooper, Senator Grimes, and many of my friends while in Congress acquired and held interests in such enterprises; and neither you nor I nor the people suspected the transaction to be wrong, or that it gave them an advantage over other investors. Why entertain and publish that suspicion against Mr. Blaine alone? When I sat as a delegate-at-large in the last National Convention, Senator Edmunds and Senator Windom were both candidates for the Presidency, and I should gladly have supported either. Senator Edmunds was understood to have a block of Burlington and Missouri securities, and Senator Windom had not only a block in the securities of the Northern Pacific Company, but was one of its directors. Yet you find no fault with these gentlemen. Nor would you and I differ in giving the highest rank to Senator Grimes; but both he and Senator Edmunds acquired their interests in the Burlington and Missouri Road when they were in the Senate. They both supported the bill to restore the land grant to their road. It was passed on the same day with the Little Rock Bill. Both measures were just, and both were passed in the House and Senate without a dissenting vote. Why must we suspect that Mr. Blaine had a secret and corrupt motive, and that other members and Senators had none?

Let me add a circumstance which seems to me to be not only significant but conclusive of Mr. Blaine's conscious innocence in this Fort Smith transaction. He voluntarily made himself a party of record in a suit against the Fort Smith and Little Rock Railway Company, in the United States Circuit Court, which involved the nature and sources of his ownership in the property. This was before he was named for the Presidency. If he had obtained this ownership dishonorably would he have courted this publicity?

I have thus ventured, Mr. Editor, to make answer to the charges you have brought against Mr. Blaine. There are other charges equally baseless which I have read, but in other papers, so that I may not claim your space to deny or answer them. I give two examples. Mr. Blaine is represented as the possessor of millions, while I personally know that he was never the possessor of the half of one million. He was represented as living for the past ten years in palatial grandeur in Washington. He sold that palatial mansion, with all its furniture, to Mr. Travers for $24,500, and got all that it was worth. But you are responsible only for such charges as you have made, and I have, therefore, made answer to them authoritatively over my own name, and I challenge denial of any substantial fact I have stated. Your attacks are not on Mr. Blaine alone; they are on his friends as well, and these are certainly a larger and more devoted body of supporters than can be claimed by any other man in public life. It seems to me, as I recall those in every station who are proud to be numbered among them, that I recognize many of the ablest, truest, and most honorable of our countrymen. WM. WALTER PHELPS.

WASHINGTON, April 23, 1884.

THE END OF EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: I beg to enter an earnest protest against the doctrine of your correspondent "A," that education is to be directed solely or chiefly to preparation for the special pursuit to which the scholar will afterwards devote himself. This certainly seems to be implied in his dictum that "increasing specialization of employment must necessarily lead to divergence of preparation," as compared with his last paragraph, in which he gives his opinion "that the adaptation to individual choice will gradually extend until it reaches the very beginning and embraces all subjects." When it is remembered that the vast majority of schoolboys and a large proportion of college students will devote their lives to no other pursuit than that of money, the absurdity of the principle becomes palpable, and even in the case of those who will follow some calling for which special training is requisite, its inadequacy is scarcely less apparent. Before a man can prepare himself for his calling he must have acquired mental grasp, readiness, and versatility. The first object of education is to give him these; the special training of the professional or scientific school is an after consideration, both as to time and importance. I submit, sir, that, whatever may hereafter be invented, no instrument has yet been found by which this object can be so well gained as by the study of language, and especially of Latin and Greek. The time which can be devoted to study must necessarily determine whether one or both of these languages can be profitably taught; but I challenge the votaries of science to show any practicable method by which a boy can be taught, while learning chemistry or biology, to think, to reason, to apply principles to facts, as he must do if he is studying Latin or Greek. Every sentence which he translates is new ground for original investigation; in each he must exercise his ingenuity, his judgment, his taste. I leave purposely out of the account the nobler culture derived from a knowledge of the immortal masterpieces of antiquity, and insist only on the value of the elementary training in the principles of syntax. Moreover, the critical study of the structure of a sentence is nothing but a study of the forms in which all thought must necessarily clothe itself, and leads inevitably to greater precision in thinking. And this training may, under rational instruction, begin at the very outset. That method which insisted on the memorizing of the Latin grammar before any practical application of its rules was begun, has happily passed away. I can instance a class of boys, not above the average in intelligence, who began Latin on the first of last month, and of whom one had never heard of such terms as *noun* and *verb*. These boys have not yet learned all the forms of inflection, but they can turn a compound sentence into indirect discourse with correctness in both moods and tenses. Such a process involves the exercise of the mind, and this exercise must be continuous so long as they pursue the study of Latin. To this will be added, as they advance, the discrimination of shades of thought and fluency of expression, as they are compelled to enlarge their English vocabulary in searching for the best words to render the meaning of Cæsar, Cicero, or Vergil.

Here I might ask "A" if such a training is not the best preparation for any conceivable pursuit; but I prefer to ask whether these studies will not, more than any other, enlarge the mind, sharpen its perceptions, strengthen its grasp, quicken its movement, ease its expression, and give at least some ground for the hope that those who have been thus trained will always have interests beyond their specialty, whether that shall be language, or science, or money-making.

J. H. L.

CANANDAIGUA, N. Y., April 19, 1884.

ARISTOTLE AND BACON.

TO THE EDITOR OF THE NATION:

SIR: In your review of Church's 'Bacon (No. 982, p. 370) occur these words: "Aristotle lived about 2,500 years ago, and his fame is undiminished. Bacon's fame has endured for 250 years, of late with sensible diminution."

It may be that something of the difference in permanence of work here suggested is due to the comparative narrowness of the English philosopher's vision. With small competence to judge such a matter, I have the impression that Bacon failed somewhat in supposing his new instrument to be an *only* instrument; that he had, as compared with Aristotle, a less catholic comprehension of the immense inclusiveness as well as the unity of science, upon any definition of science true enough to stand the wear and tear of many centuries

However this may be, it will hardly be doubted that Dean Church speaks more truly of Bacon than of Aristotle when he says: "Bacon, like Aristotle, belonged to an age of adventure, which went to sea little knowing whither it went, and ill-furnished with knowledge and instruments. He entered with a vast and vague scheme of discovery on those unknown seas. . . ." I should suppose that Aristotle had a distinct advantage over Bacon in the less *vagueness* of his work.

I write this note, however, only because I hope some of your readers may be glad, after reading the review in question, to be referred to an article on "The Organization of Scientific Work," in the first *Heft* of vol. liii. of the *Preussische Jahrbücher*, by Hermann Usener, in which the very great definiteness of Aristotle's work is shown in a strong light. In many ways the article is notable; but the matter to which I

wish to call attention here is the clear way in which the reader is made to see Aristotle at the head of a great system of organized research—research which busied many men of remarkable powers; men who worked by definite methods in search of definite results, upon many lines; lines which not only were divergent, but convergent also.—Yours respectfully,

JOHN H. WHEELER.

UNIVERSITY OF VIRGINIA, ALBEMARLE COUNTY, VA., April 25, 1884.

MARYLAND SUFFRAGE IN 1675.

TO THE EDITOR OF THE NATION:

SIR: Mr. Bancroft, in his 'History of the United States' (Rev. Ed. I.,439), speaking of the qualifications of voters in Maryland in 1675, after stating that the suffrage was restricted to freemen having fifty acres real estate, or forty pounds' worth of personal, adds: "No difference was made with respect to color"; thus implying that negroes did vote or might have voted in Maryland.

Putting aside the fact that no negro, whatever his personal status, would have been considered a political "freeman" in Maryland, the explanation of the omission is found in the other fact that all negroes in the Province were slaves for life.—I am, sir, etc., W. H. B.

GRAPE GROWERS AND INTEMPERANCE.

TO THE EDITOR OF THE NATION:

SIR: In your last issue I notice my friend Bush from St. Louis wishes his "paper stopped" because you make common cause with the "temperance fanatics." I write to say simply that I, as a new subscriber, will take his place, and I wish to encourage and commend you in every way for the stand you take in favor of temperance and other reforms.

Please do not think that all the grape growers favor the *wine* business. I myself, together with a multitude of my brethren in the profession, are emphatically opposed to putting so fine a fruit as the grape is, to so ignoble a use as assisting in making tipplers and drunkards.—Yours, T. S. HUBBARD.

FREDONIA, N. Y., April 25, 1884.

Notes.

IT is announced that the completion of the supplement to the 'American Catalogue' will not be delayed by Mr. Leypoldt's death, and that the work will appear in the autumn, carrying the entry of titles from July 1, 1876, to July 1, 1884. The proceeds will go directly to the estate of Mr. Leypoldt, for the benefit of his wife and children. Subscriptions, at ten dollars, may be sent to Mr. R. R. Bowker, 31 Park Row. The sale of the few remaining copies of the 'American Catalogue' itself is desirable on the same account. The worth of both is enhanced by the intention to continue the supplements at five-yearly intervals. We have more than once insisted on the great utility of these lists for all book-buyers.

Mr. S. S. Rider, Providence, concludes his first chatty volume of *Book Notes* with an index to the local historical matters touched upon; and states that when the first series of his Rhode Island Historical Tracts is completed, as it shortly will be, by the twentieth number, a second series will be begun if sufficient support is promised.

A. S. Barnes & Co. have in press 'A Handy Anglo-Saxon Dictionary' based upon Grein's 'Sprachschatz,' and edited by Profs. James A. Harrison, of Washington and Lee University, and W. M. Baskervill, Ph. D. (Lips.), of Vanderbilt University. The former will also contribute a List of Irregular Verbs, and the latter an Outline of Anglo-Saxon Grammar. The Grammar will be enlarged for separate publication by the same house a little later in the season.

J. R. Osgood & Co.'s approaching issues embrace 'Mingo, and Other Sketches in Black and White,' by Joel Chandler Harris; 'Henry Irving's Impressions of America,' as recorded through the interviewing and editorial agency of Mr. Joseph Hatton; and the 'Battle of Stone's River,' by Alexander F. Stevenson.

Houghton, Mifflin & Co. have nearly ready the first contribution to their "American Men of Letter Series" which fixes the generic signification of the term "men," namely, 'Margaret Fuller Ossoli,' by T. W. Higginson; 'Captains of Industry,' by James Parton; 'The American Horsewoman,' by Mrs. Elizabeth Karr; 'Government Revenue, especially the American System,' by Ellis H. Roberts; and a new translation of the 'Odyssey,' by Prof. George H. Palmer, which will be awaited with great interest. The same firm will also shortly bring out a new enlarged and revised edition of Warren Colburn's 'Intellectual Arithmetic,' with a portrait of the author and a sketch of his life.

Thomas Whittaker will soon have ready Sir John Lubbock's 'Chapters in Popular Natural History,' in a cheap edition, with ninety illustrations, and Ellice Hopkins's 'Work among Workingmen.'

'The Libraries of Boston,' public and private, to the number of more than a hundred, will form a work to be issued by subscription by Cupples, Upham & Co.

'Rapid Ramblings in Europe,' by Col. W. C. Falkner, and 'Vacation Cruisings in Chesapeake and Delaware Bays,' by Prof. J. T. Rothrock, are announced by J. B. Lippincott & Co.

This month appears, from the press of J. C. Hinrichs, Leipzig (New York: Westermann), vol. iii., Prolegomena, Part I., of Tischendorf's *editio octava critica major* of the Greek Testament. This has been prepared by Dr. Caspar René Gregory, with the aid of the late Dr. Ezra Abbott, and will contain an account of Tischendorf's life and writings, with much grammatical and critical discussion.

The Rev. William C. Winslow, No. 429 Beacon Street, Boston, will furnish on application, to those interested, a circular concerning the explorations now going on at Zoan, in the Delta of Egypt, under the supervision of Mr. W. Flinders Petrie.

The sixteenth of the "Bibliographical Contributions" of the Library of Harvard University is certainly one of the most useful. It is a classified index to the maps contained in *Petermann's Geographische Mittheilungen*, 1855–1881, by Richard Bliss, of the Northern Transcontinental Survey. The list numbers 1,340. Mr. Bliss has been at the pains to calculate the scale where this was not given originally. He has added a reference list of writers, travellers, explorers, and cartographers, and a list of expeditions and surveys. Handy would have been also a list of the *ships* which have given their names to the several expeditions.

Arrangements have been completed for holding, at the University Library, Berkeley, Cal., during the last week of May—commencement week—a loan exhibition of books illustrative of the history and progress of printing and the related arts. To this exhibition the private collectors and public libraries of San Francisco, Oakland, and vicinity have generously promised contributions. There will be represented specimens of block books, early wood engravings, and playing-cards, manuscripts (the predecessors of the typographic art), many examples of printed work of the fifteenth century, and rare and noteworthy editions of succeeding centuries. Special attention will be given to showing the progress of book illustration in its various forms. Another department of the exhibition will be devoted to samples of the work of famous binders. Specimens of California printing and binding will be exhibited. The exhibition, it is hoped, will prove of great interest to the book lovers and collectors of the Pacific Coast, and be an occasion for the display of many a rare work, the presence of which on that side of the continent might not have been suspected.

The fifteenth of the Q. P. Indexes is the 'Q. P. Index Annual for 1883,' and the already large list of periodicals unlocked by it has been extended by the addition of *Nord und Süd*, *Westermann's Monatshefte*, and (of great utility) United States Consular and Education reports. Our copy also includes the index to Mr. Griswold's *Monograph*, and Corrigenda to his 'Index to Essays,' the only index whose support has been inadequate to its continuance. The German contingent in his list for annual indexing leads Mr. Griswold to refer from the English term to the German, as in "Asia Minor [☞ *Klein Asien*]," "Astronomy [☞ *Himmel*]," etc. Occasionally even the page is indicated in parenthesis. Finally, the interpretation of the figures and abbreviations used is repeated at the foot of every page. Interesting intelligence is the refusal of the *Living Age* to send a free copy for indexing; and the expiration of the *International Review*, after its checkered career, in May-June, 1883.

'Day's Collacon,' an encyclopædia of prose quotations (New York: International Printing and Publishing Office), is a ponderous volume of more than 1,200 pages, whose value for a certain class of minds will probably be shown in an extensive sale. Another class will admire the compiler's industry, but shun the result, from which discrimination is wanting. Care has not always been taken to quote the sayings accurately, and their dislocation from the context has sometimes a curious effect, as in Webster's "Suicide is confession," which is nonsense when standing by itself. The index is biographical as well as topical.

Mr. Egmont Hake's 'Story of Chinese Gordon' has been reprinted by R. Worthington with additions, which bring the narrative down to date, by Hugh Craig, M.A. The new portion deals with the tangled events of the past four months as well as could be expected; but whether Gordon emerges or not from his latest peril, it is certain that the present passage in his extraordinary career will require a full volume for itself. Mr. Archibald Forbes has compiled from the foregoing and from Wilson's 'Ever Victorious Army' and Hill's 'Colonel Gordon in Central Africa,' a small volume called 'Chinese Gordon' (Geo. Routledge & Sons), of which the chief merit is a striking photographic portrait of Gordon, from a negative made in Khartum. The pale blue eye, which is so much of the man, was hardly definable by the camera. The woodcut after this print, which serves as a frontispiece to an edition of the same work published by S. W. Green's Son, fails to catch this feature.

Roberts Bros., Boston, have brought out a cheap edition, two volumes in one, with separate pagination, of Lord Ronald Gower's 'My Reminiscences,' which we reviewed at length last August.

Cassell & Co. send us Koehler's excellent 'Art Directory' for the current year, improved and enlarged to a considerable book. It contains very complete information on every subject connected with the arts in this country—exhibitions, periodicals, academies, art schools, local institutions, etc.—with a large number of pro-

cess illustrations of works exhibited during the past year, as well as the very convenient artists' and art-teachers' directory.

'The St. Anne of Leonardo da Vinci, by Alfred Marks,' is the title of a brochure reprinted from the Transactions of the Royal Society of Literature, being a study on the cartoon of the Royal Academy of London and its relation to the cartoon of the same name recorded by Vasari. It is one of those patient and thorough monographs that result from the application of the modern scientific spirit to art matters, which is changing the whole character of the archæology of art. It is illustrated by twenty-five reduced illustrations of the pictures and cartoons which come into the inquiry.

An important work upon the archæology of Syracuse, undertaken about five years ago, under the direction of the Italian Minister of Public Instruction, has lately been published at Palermo in a volume of 417 pages 4to, with an atlas of plates. The authors, Professors F. Saverio, Cavallari, and Adolph Holm, are well known among archæologists. The former has written upon the "Topografia di Siracusa," and the latter, who is Professor of Ancient and Modern History at the University of Palermo, is the author of many important works upon the history and antiquities of Sicily, including a history of Sicily, in two volumes.

An antiquarian in France has found a document, dated 1644, indicating a curious survival of Pagan superstition. It is an order from some ecclesiastical authority that a hole in the lower part of the altar in the Church Saint-Jean du Marillais be closed, in order to stop the practice of the peasants of putting the heads of their children into it for some fancied benefit. He connects this custom with a superstition relative to dolmens with holes.

Mr. Samuel Garman, of the Cambridge Museum of Comparative Zoölogy, has in preparation an important work on the trout and salmon of New England. An abstract of his conclusions was prepared for the April meeting of the Fish and Game League, and may be found in the Boston *Transcript* of April 15. Mr. Garman finds two varieties of salmon—*Salmo salar* and *Salmo sebago*—the latter the land-locked variety; and two of lake trout and three of brook trout, in whose identification the number of rows of scales plays a prominent part.

A series of papers on Cambridge (Eng.) printers is begun in the April *Bibliographer* (J. W. Bouton). The first printer was John Siberch, 1521-22

A print catalogue before us offers the "Old Clarkson House, L. I. (in this house the British officers quartered themselves)." No wonder that the lot containing this consists of "12 pieces."

—A correspondent writes us from Kioto, apropos of a recent article in the *Nation*:

"I am rejoiced to see you giving attention to the important subject of dusting. Let me call your attention, however, to the fact that the feather duster has long been used in Japan. Also, you will be interested to hear of the Japanese way of dusting, which is to dust first and sweep afterward. In this way whatever dust has been brushed off the objects dusted, is returned with interest."

—A list of the birds inhabiting and frequenting the District of Columbia is a very proper publication for the United States National Museum, whose twenty-sixth Bulletin is accordingly an 'Avifauna Columbiana.' It is called a second edition, and indeed a sentimental interest attaches to it as the return of two professors in the National Medical College, Dr. Elliott Coues and Dr. D. Webster Prentiss, to a boyish task creditably achieved a quarter of a century ago. They find little to alter—only one species to discard; and not very much to add, bringing the total number up from 225 in 1862 to 248 at the present time. For the rest, the text has been wholly rewritten, and any one familiar with Dr. Coues's style will recognize his hand in the pleasant discourse which is not wanting even in the technical portions of the Bulletin. His are not only the remarkably restrained observations on the European Sparrow as the expeller of our native singing birds (and, by the way, he admits that that "melodious creature," the Song Sparrow, is one of the birds which hold their own the best against the foreigner), but his must be the picturesque description of the motley "meet" of the Rail shooters at the opening of the season, and the feeling account of the joys, perils, and humors of those who take to the sport in skiffs. He even gives details as to the build of these craft, and the price of one made of galvanized iron. He tells you how the wounded turkey buzzard plays 'possum, and again graphically relates the damming up of the northern migration in May, 1882, which flooded the District with a "tidal wave" of discouraged birds in numbers and beautiful variety quite unprecedented. Another damming, that of the Potomac at Analostan Island, is mentioned for its curious ornithological and sub-pestilential effects, in the topographical introduction, the reader of which will (with the aid of four excellent maps) find himself well informed as to the environs of the capital. In short, one not an ornithologist will be surprised at the interest this scientific pamphlet proves to have for him, to say nothing of the abundant illustrations. For some time, we suppose, it will have no successor from Dr. Coues's pen, for during the present month he is to sail for Europe, in compliance at last with the formal request of Darwin, Huxley, Flower, Wallace, Mivart, Gould, Sclater, Newton—names no longer wholly of the living—made five years ago, that he would visit the Old World in order to prepare a complete Bibliography of Ornithology, of which we have already had from him such brilliant essays.

—In the last two numbers of the *Magazin für die Litteratur*, we find a review of Dr. Busch's last production, under the title, "Bismarck vom Lakaien Standpunkt," which those who look in vain in German criticism for literary cleverness and sharpness will find an agreeable surprise. This title is an allusion to the story that, after several chapters had appeared in the *Gartenlaube*, further contributions were declined; and upon Busch's rather indignantly asking why, he was told that it was because "he wrote history from the standpoint of a lackey"—hardly, one would think, a cause for objection to a magazine editor, however discreditable it might be to the author. The book (of which a translation is announced) has already been described briefly in these columns, and our object is to call attention to the criticism rather than to its subject. Busch is first exposed with respect to the nature of his advertising methods, being accused of writing the favorable notices himself. Then the present work is analyzed so as to show that it consists partly of scourings of the kettle from which 'Graf Bismarck und Seine Leute' was served, but chiefly of discussions, for the greater part irrelevant, borrowed from other authors, without credit. Mr. Busch admits that he has not hesitated to supplement what he saw "with his own eyes" with "materials from other trustworthy sources"; in illustration of which the editor of the *Magazin* narrates how, some years ago, being then the editor of a popular journal, he was annoyed by seeing his best articles reprinted without credit, and played a joke on his esteemed contemporaries by publishing an invented anecdote about Bismarck, which, of course, was reprinted and translated as usual. This anecdote he is naturally pleased to find—unvouched for, indeed—in Busch's latest volumes. The latter's chapter on state socialism is alleged to be taken bodily from Mehring's 'Socialdemokratie,' that on the earlier phase of German socialism from Carl Vogt's 'Mein Prozess'—the sources of his information being carefully concealed. The only original matter, in fact, is said to be abuse of Liberalism, and insulting allusions to persons whom the compiler dislikes.

—"Beiträge zur Charakteristik Nathaniel Hawthorne's" is the title of an essay by Dr. Anton Schönbach, first published in Dr. Kölbing's *Englische Studien*, and now reprinted in a pamphlet of 65 pages. A great portion of it is devoted to an elaborate comparative study of the unfinished posthumous stories of Hawthorne, which grew out of his experiences in England, and were various attempts at carrying out one identical theme. The learned professor analyzes 'The Ancestral Footstep,' 'Dr. Grimshawe's Secret,' 'Septimius Felton,' and 'The Dolliver Romance,' and through ample citations from the 'Note Books' traces the common genesis of all these fragments. He considers them valuable as throwing much light on the workings of Hawthorne's mind, and as at the same time affording a glimpse of the manner in which other writers may have developed a crude idea into a finished work of art. He judges Hawthorne to have been the greatest writer whom the United States have as yet produced. He is wholly original and redolent of his native soil. He absorbs English culture, but in a critical spirit, and is not dominated by it. Even after becoming closely acquainted with England his Americanism does not suffer any diminution, but rather he guards it jealously and cherishes it consciously. Further, he is entitled to a high rank in the general category of modern literature, independently of his position as an American representative. His fictions occupy a place by themselves, are the expression of a decided poetic individuality, and refuse to range themselves under any of the accepted classifications. Next to George Eliot he is the greatest English prose writer of our century.

—Professor Schönbach's opinions are supported by a constant reference to everything that has been written by and concerning Hawthorne. Fully four pages of his pamphlet are taken up with a mere list of various jottings in Hawthorne's note books which he made use of in his published works, the latter being in each case specifically indicated. The essay gives evidence also of an intimate acquaintance and a high appreciation of American literature in general. The best English fiction, says the writer, comes from America, and the most elegant English, since the death of George Eliot, is written by Henry James, jr. This he thinks the more remarkable as it is hardly more than half a century since the United States declared their literary independence, which dates from the transcendental movement. Whatever is distinctive in the American national character emanates from New England, more particularly from Massachusetts. It will be judged from these specimens that in spite of insisting a little too much on details, Dr. Schönbach's essay is a valuable contribution to American literary history and criticism. It is to be regretted that articles of this description are so rare in our own magazines and reviews, which are devoted on the one hand to being "readable," and on the other to being "timely," with the frequent result in both cases of being only scrappy, and producing little or nothing of lasting literary value.

—A collection of old German rhymes, such as may be found in every nook and corner of Germany, in churches and inns, on bridges and fountains, tombstones and bumpers, ought to be pleasant and suggestive reading; but somehow Herr H. Draheim, who has gathered a number of such inscriptions into a quaint little volume ('Deutsche Reime, Inschriften des 15. Jahrhunderts und der folgenden'; Berlin: Weidmann), has missed his opportunity. Although his collection begins with the fifteenth century and extends to the present day, it reflects none of the characteristics of the homely muse of Germany so faithfully as its piety. The book is, on the whole, a very sober, almost lugubrious, one; there hangs about it the air of graveyards and cloisters, the musty smell of old chronicles and missals; but there is very little of the "wit and wisdom" of bygone ages. Evidently the contributors to the collection, worthy pedagogues and pastors, took their task too seriously. "Faith," "The Ten Commandments," "The Sufferings of Christ," "Death and Life," "Bible and Religion," "God's Omnipotence," such, almost without a break, are the subdivisions of the first part of the book; and even when we approach more modern times we are entertained with scarcely anything more cheerful than "Cares and Devotion," "Eternity," "Courage and Conduct of Life," etc. However, humor is by no means wholly wanting in this collection; for even the most pious monks of the Middle Ages knew how to flavor their exhortations with a vein of grim pleasantry, as witness the "death-dances" of the fifteenth century. The well-known dialogues between Death and representatives of all the social classes, from the Pope down to the beggar, are here introduced in a modern dress, and are all the more enjoyable on that account; indeed, we cannot doubt that a more general employment of the current orthography would have added to the attractiveness of the book. Humor too—of a type not peculiar to mediæval Germany alone—may be found in the epitaphs on shrewish wives, in jokes at the expense of rascally butchers and bakers; while the poetry of beer casks and goblets is both more characteristic and less enjoyable. Alone in general interest is the plaintive soliloquy of a Hessian farthing of the beginning of the seventeenth century, on its depreciation. It may not seem strange that, on the whole, German rhymsters had so little to say in the days when Latin was the real language of the learned and thoughtful; but it certainly is surprising that the rhymes here quoted deteriorate towards the end of the collection. Most of the epitaphs of recent date are worthy of the obituary bards of the newspaper columns. The inscription from the tombstone of the elder Kleist gives almost the only hint of what valuable material the tombs of distinguished men might have furnished to this collection. Although in the preface Latin inscriptions are said to be excluded from the book, there are several given on the second page—an intrusion which will not be resented by those who know how weak are the German variations of such Latin bell mottoes as:

> "Sabbata pango, funera plango, noxia frango,
> Excito lentos, paco cruentos, dissipo ventos."

Similarly feeble are the changes rung on the old tombstone inscription:

> "Quod es, fui; quod sum, eris: para te."

That the editor has ignored Austria in his collection—Vienna in itself being a rich mine of old and curious German inscriptions—is characteristic of the narrowness of his plan.

—The educational statistics recently published by the Italian Government furnish valuable information in regard to the progress in public instruction made in that country. In the twelve years since 1871 the annual governmental expenditures have increased at a steady rate from 16,300,000 lire in 1871, to 30,400,000 in 1883. The organic law of 1859, making instruction compulsory and gratuitous for all children from six to twelve years of age, seems not to have been carried into execution. By that law the communes were required to defray the expense of erecting the new school-houses required, and it is not singular that the statute was very generally evaded. From 1861 to 1881 the number of primary schools increased from 21,353 to 42,510; and during the same period the number of pupils enrolled was extended from 1,008,674 to 1,928,706. In 1877 the obligatory law of 1859 was modified in some essential particulars. Primary education was now made compulsory only in such communes as furnished the requisite accommodations: namely, in all communes of less than 5,000 inhabitants with at least one teacher to every 1,000 persons; in all communes of from 5,000 to 20,000 inhabitants with at least one teacher to every 1,200 persons; and in all the more important communes with at least one teacher to every 1,500 persons. This law of 1877 appears to have resulted in some increase of the number of pupils in attendance; yet the figures given are but a new evidence of the difficulty of enforcing any law that is not supported by a strong popular opinion. Even in 1879 the number of pupils in attendance was only 768 to every 10,000 of the inhabitants. In secondary and higher education the showing is much better. There are 701 gymnasia with 3,674 teachers, and with courses extending through five years. These are attended by 41,124 pupils, or about 58 pupils each. The colleges, which in the course of three years supplement the instruction in the gymnasia and complete the preparation for the university, are 298 in number, and show an enrolment of 1,601 teachers and 11,133 pupils. Besides the colleges there are 383 technical schools of corresponding grade, with a force of 2,704 teachers and an attendance of pupils amounting to 22,120. The seventeen royal universities of Italy showed an enrolment in 1881 of 10,592 students, the largest, those at Turin and Naples, having 1,651 and 2,851 respectively. In the four independent universities and the twenty-one superior schools there were in the same year 1,948 students, making a total attendance in the higher institutions of learning of 12,805. This number is much greater than the attendance at schools of a corresponding grade in England, though only about half the number in attendance at the universities of Germany. In this thriving condition of the higher educational institutions of Italy we see but another evidence of the remarkable intellectual activity of the people.

—In the little Galician town of Stanislaw a scholar is busily engaged in editing a work which, when finished, will undoubtedly prove to be of great importance not only to investigators of the Slavic languages, but also to students of comparative philology. Prof. Eugen Zhelekhovski began the publication of his Ruthenian (Little-Russian)-German dictionary in 1882, and a few weeks ago we received the eighth part of the work (up to page 400), which extends as far as the beginning of the letter L. Those who know how rich the Ruthenian language is, and how little has been done hitherto for its scientific investigation, will certainly admire both the courage of Mr. Zhelekhovski in undertaking such a work, and the skill with which he fulfils his task. The already existing vocabularies by Piskunov, Leotchenko, and others are so small that they can be of but little help to a compiler of a dictionary, and with the sole exception of Ogonowski's excellent book, 'Studien auf dem Gebiete der ruthenischen Sprache' (Lemberg, 1880), the grammatical treatises on the language do not furnish much material for Mr. Zhelekhovski's work. He had, therefore, even for the most common words, to go back to the literature itself, and wherever we have been able to test him, we have found him very accurate and trustworthy. He has gathered a large number of words, never before mentioned in any vocabulary, not only from the classics of the Ruthenian tongue, like Gogol (the father), Kotlyarevski, Shevtchenko, Marko Vovtchok, Fedkovitch, etc. (and for these sources his work is done with systematic completeness), but also from the rich collections of popular songs and stories, like those of Antonovitch and Dragomanov, Golovatski, Tchubinski, and many others which are less known except to specialists. Now and then a dialectic expression in Tchubinski's popular stories, or in Golovatski's songs seems to be lacking in Zhelekhovski, but such words, which the various collectors of popular traditions spell so differently, may almost always be found in their right place, if we remember that Zhelekhovski uses a strictly phonetic spelling. We hope that this first Ruthenian dictionary will find access to our larger libraries; for it will prove to be of great service not only to the philologist, but also to the "folk-lorist."

SCHUYLER'S PETER THE GREAT—I.

Peter the Great, Emperor of Russia. A Study of Historical Biography. By Eugene Schuyler, Ph.D., LL.D., Author of 'Turkistan' In two volumes. Charles Scribner's Sons. 1884.

'PETER THE GREAT' is more than an historico-biographical "study." It is a history of Peter and his reign—of his life and struggles, his reforms, wars, and diplomacy—with comprehensive digressions, illustrative of things and characters not so closely connected with the main subject as necessarily to enter into a biography. That the author designates it as a study is explainable by his mental and literary bent, as apparent in his writings, and not in these alone: he is a constant and indefatigable student of ethnology and languages, of modern history and diplomatic relations. Exhaustive and conscientious research, and hesitation in forming conclusions and adopting judgments, are characteristic of all his activity. Even after having amply mastered his subject, he does not group his results, but lays before the public single facts and aspects separately examined, out of which a whole is to be constructed by those who follow him through the entire course of examination. In the work before us there is no rounded picture of either Peter, his nation, or his time; but Peter, his nation, and his time are made to pass before us in successive attitudes, actions, and stages, in chronological order, and the reader is left to judge and to combine. Such is the author's abstention from generalizing, summing up, and reviewing that, in spite of exhaustiveness pushed almost beyond limit, he seems to consider the mass of details accumulated by him still inadequate for his task as a historical biographer, or, as we should say, as a historian and biographer.

Mr. Schuyler had before him an immense literature from which to draw materials, for the Russian historical writers, who are hindered by restrictions and considerations of prudence from freely discussing topics of recent date, have piled up stores of most minute information on their national past, and German, Swedish, and other compilers and critics have helped them in ransacking archives and sifting testimony. He has availed himself of these resources with extra-

ordinary diligence, extracting from biographies, memoirs, diaries, correspondence, and records of all kinds an amount of particulars sufficient to give a fulness to each separate subdivision of his subject, and vastly more than sufficient for the general characterization. And herein lie both the strength and the weakness of Mr. Schuyler's work. The division and arrangement of his matter are excellent, and there is order in the whole and symmetry in the parts; but the fulness of the parts makes the whole heavy, though clearness is everywhere preserved in spite of the great crowding of facts. On the whole, the book is, we think, better adapted for the general European, and even the special Russian literary market, than for the English or American, and will, no doubt, be translated, as it deserves to be, into Russian and other languages. Its profusely varied, highly characteristic, and not seldom charming illustrations will make it an attractive addition to every library.

Two hundred years ago, when Peter was a little boy, Muscovy had begun to emerge slowly from its Asiatic barbarism. His sister Sophia, the regent for his elder brother Ivan and himself, showed in her administration a slight tendency toward reform and the creation of a better-regulated order. Wives were no longer to be buried alive for the murder of their husbands, creditors were no longer allowed to kill or maim their debtors, serf women who had married soldiers were allowed to remain free. The influence of foreigners—Germans, Dutch, Swedes, Danes, Poles—began to make itself felt. Peter, as a youth, associated with a motley crowd of denizens in the "German suburb" of Moscow, and adopted foreign habits, tastes, and prejudices, without divesting himself of his Muscovitish instincts, or in the least taming the fierce impulses of his nature. He contracted a passion for playing at war and boat-building, with the desire and view of creating a well-disciplined army and a navy, and the expectation of doing great things as monarch of a great nation. His ambition was as impetuous, and his violence as uncontrollable, as his frame was gigantic and his strength prodigious. When, in 1689, he had removed Sophia from the regency and baffled attempts at reinstating her in power through a rising of the Strieltzi—the Janissaries of Russia under the early Romanoffs—he chastised conspirators whose guilt was elicited by torture in this fashion: "Snáklovitz, Petróf, and Tchérmny were beheaded, Major Múromtsef, Colonel Riazántsef, and the prisoner Lavréntief were beaten with the knout, and, after having their tongues torn out, were exiled to Siberia. Sylvester Medvédief . . . was arrested in the monastery of Biziúk, together with Major Gládky, and sent to Tróïtsa" (mark Mr. Schuyler's care in transliterating names, as well as the unnecessary profusion of them), tortured, degraded from the clergy, and confined, again denounced, "and again subjected to the severe torture of fire and hot iron, and was finally executed in 1691."

The young Czar, who was now virtually sole master of Russia, continued to spend a great deal of his time in the society of his foreign friends, and especially of his able advisers, Gordon and Lefort. Dinner frequently lasted from noon till late in the night, sometimes till next morning. There was excessive drinking. Gordon's diary is full of it. Lefort, in one of his letters, speaks of spending in his house for wine in two or three months a sum equivalent to about $25,000. "It is not to be supposed," says Mr. Schuyler, "that, because so much liquor was used, the company was constantly intoxicated. . . ." There were heroic meals, intervals for smoking the interdicted tobacco, games, matches in archery and musketry practice, speech-making, and music, and in the evening fireworks and dancing. Lefort's house was in reality a kind of club-house for Peter and his boon companions. Peter was fond of masquerading, buffoonery, and practical jokes. During the Christmas holidays he went with his comrades from house to house, singing carols and receiving the usual gifts. Once the Czar appeared at Lefort's with a suite of twenty-four mounted dwarfs, and a few days after both rode out into the country to exercise this cavalry. In 1695 there was a great banquet on the occasion of the court fool's wedding, which was pompously celebrated in the open fields near Moscow; the festivities lasted three days, and were accompanied by a procession in which the highest nobles of the realm appeared in ludicrous costumes, in cars drawn by cows, goats, dogs, and swine. In this manner the future transformer of Muscovy spent much of his time. Of family life he knew little. He had married simply to obey his mother, and he found the society of his old-fashioned wife, Eudoxia, very uncongenial. Anna Mons, the daughter of a German jeweller, was then his great favorite. He loved, however, his mother and sister Natalia, though when the former died, in 1694, he expressed, in a letter to his friend Apraxin, rather shallow sentiments of filial and religious piety.

Peter's first marine experiments were made at the mouth of the Dvina in the White Sea. On the capture of Azov from the Turks in 1696, after two not over-glorious campaigns, he formed the design of establishing a fleet in the Black Sea, near the opposite shores of his realm. He had, by the death of his brother Ivan, just become sole ruler, and he threw himself with passionate ardor into the enterprise. Every landed proprietor owning ten thousand peasant houses, every monastery owning eight thousand, was obliged to construct a ship, equip and arm it; all other proprietors owning not less than one hundred peasant houses were enrolled into companies for construction; the merchants were required to contribute twelve mortar boats. The ships and galleys were to be built at Voronezh, on the Don. Shipwrights were brought from Venice, Denmark, Sweden, and Holland. To learn the nautical art and shipbuilding, fifty nobles, representatives of the highest families—most of them married and fathers of children—were summarily ordered to Italy, Holland, or England. Shortly afterward, the Czar himself went abroad to become a good shipwright. He went under the strictest incognito as a "volunteer," attached, among many others, to an extraordinary embassy to the chief countries of Western Europe, at the head of which was General Lefort. The acquisition of nautical knowledge and skill was to Peter not an object of whimsical desire or aimless curiosity. It was to become an instrument, as he wrote from Holland, in fighting the enemies of Jesus Christ and liberating the Christians who live under them. And in that country, which he reached in August, 1697, at Zaandam, Amsterdam, Leyden, Delft, and elsewhere, everything engaged Peter's eager inquisitiveness. He visited workshops, museums, theatres, hospitals; he went to see Boerhave and his botanical garden; studied the microscope under Leeuwenhoek, made the intimate acquaintance of the great military engineer, Coehorn, and of Admiral Van Scheij; learned to etch under the direction of Schonebeck; and frequented the lecture-room of the anatomist Ruysch. He learned cobbling and dentistry, experimenting on his servants and suite. In a similar way he lived in England. In both countries he attracted gazing crowds—for his incognito proved unavailable—as well as the attention of the highest circles. Burnet thus speaks of him in the 'History of his Own Time':

"He is a man of very hot temper, soon inflamed and very brutal in his passion; he raises his natural heat by drinking much brandy, which he rectifies himself with great application; he is subject to convulsive motions all over his body, and his head seems to be affected with these; he wants not capacity, and has a larger measure of knowledge than might be expected from his education, which was very indifferent; a want of judgment with an instability of temper appears in him too often and too evidently. He is mechanically turned, and seems designed by nature rather to be a ship-carpenter than a great prince. This was his chief study and exercise while he stayed here; he wrought much with his own hands, and made all about him work at the models of ships. . . . He is resolute, but understands little of war, and seems not at all inquisitive that way. After I had seen him often, and had conversed much with him, I could not but adore the depth of the providence of God that had raised up such a furious man to so absolute an authority over so great a part of the world."

The "furious man" was suddenly called home by a revolt of the Strieltzi, aiming at his overthrow and the raising of his sister Sophia to the throne. The revolt was stifled in blood before his return, in September, 1698, but, dissatisfied with the trial of the ringleaders, and anxious to settle the question of Sophia's share in the disturbance, he instituted a new criminal investigation on a tremendous scale, which proved how little a year's contact with the civilized world had changed his nature or his idea of "absolute authority." He had all the Strieltzi, who were kept under guard, brought in batches to Preobrazhensk, near Moscow, where fourteen torture-chambers were established, presided over by Princes Tcherkasski, Dolgoruki, Golitzyn, and eleven other grandees—"Russians he had most confidence in for that sort of work." The Czar was himself present at the work, and personally questioned those who seemed most guilty. The torture was of three kinds: by rods, the knout, and fire. "In this way"—we omit the revolting particulars—"1,714 men were examined, and Guarient and Korb write that thirty fires were daily burning . . . for this purpose." The extorted depositions proved very little, but "Peter chose to be satisfied of the complicity of his sister," and imprisoned her in a convent. Her sister Martha was also made a nun, and both were kept confined till their death. Of the first batch of the Strieltzi examined, numbering 341 in all, 196 were hanged along the walls and at the gates of Moscow, five were beheaded, and a hundred, who were under age, were branded in the right cheek and banished. Of the second batch, 770 men were executed. Of these, 95 were hanged on a large square gallows in front of Sophia's cell, and three remained hanging all winter under her window. There is also strong evidence to the fact that on one day, in the Czar's presence, and by his order, 109 men were beheaded by the nobles of his court. Whether Peter himself acted as executioner "remains a question." Such was Russia at the close of the seventeenth century, and such the Czar who undertook to civilize her. His equally despotic and insane crusade against beards and long robes, in which he was occasionally active in person, also belongs to this period.

Peter's private life was then in harmony with his public activity. He sent his wife Eudoxia to a cloister, there to live a life of abject penury and moral degradation, and resumed his carousing with his favorites in the German suburb. There was no end of revelling, buffoonery, and blasphemous jesting; there were bacchanalian festivities. Boisterous merriment was now and then interrupted by outbursts of Czarish madness. Sometimes, however, he gave way to melancholy and despondency. At the news of Lefort's death, in 1699, he burst into sobs, crying, "Now I am left without one trusty man." He felt

keenly his inability to cope with the corruption of his Russian officials, which hampered all his undertakings. A few months later he lost another faithful friend. The Scotchman Gordon followed in death the Swiss Lefort. The Russian Menshikoff, one of Peter's former play-soldiers, now rose to the highest influence as a favorite, adviser, and general. He was handsome, witty, of quick intelligence, but of light morals. Peter once said of him, "Menshikoff was conceived in iniquity, born in sin, and will end his life as a rascal and a cheat." And such was his end, but after Peter's reign and after that of his widow, Catharine I., whom Menshikoff had ceded as a young mistress to the amorous cupidity of the Czar. Menshikoff and Catharine, though both of low origin, were more congenial to Peter than others of his surroundings: they understood him, and knew how to deal with him.

The Spanish Masters: An Outline of the History of Painting in Spain. By Emelyn W. Washburn. G. P. Putnam's Sons.

THE history of painting in Spain is one which does not require much archæological research, nor is the material presented of great interest in the philosophy of art. With the exception of Velazquez, who heads the roll of great realistic painters of all nations and all time, and Goya, an artist of great imagination, there is in the record of Spanish art little or nothing not due to Italian inspiration. Where there is departure from Italian tradition, it proceeds from the ecclesiastical narrowness of mind which came near to stifling the tender exotic, and probably would have done so but for persistently renewed importations. It is a record which shows better than any other the inevitable antagonism between ecclesiasticism and art, and how completely unfounded are the claims of the Church to have fostered the development of the arts.

The résumé of the chronicle of the arts in Spain in the book under notice is a compact, well-arranged history, and as such deserves commendation, even in view of its want of perspective, which gives it the air of making too many great men where comparative magnitudes really differ so much. There is a little too much affectation in using Spanish terms, as, *retablo* instead of picture; for though literally this word means a picture on panel, the author employs it for those on canvas as well. The archæological part of the book is sufficient for the subject, and is based on good authorities well collated, as Stirling-Maxwell, Ford, and Head, with references to the native chroniclers, and on interest in, and study of, the original works in the Spanish galleries. The volume is not to be classed with the authoritative work of Morelli, but takes its place as a hand-book of unquestionable value.

We must, however, take exception to the very undiscriminating manner in which the opinions of other writers are used, and to the crude and unphilosophical views of the author. To collate and justify *authorities* is one thing, to compare and weigh *opinions* quite another; and the writer who may be entirely competent to do the former must completely fail in the latter unless his views are sufficiently ripe and sound to make the collator a competent judge without reference to those opinions. If he is not qualified to pronounce judgment on a work of art independently, how shall he be able to endorse or compare the opinions of others? The assumption of so doing is either a claim to superiority in some respect, or a confession of incompetence; and the value of the author's own opinions must be judged from his independent judgments. What can we say to the author of such expressions as this:

"In his picture of San Pedro de Alcantara there is what embodies most powerfully the secret of painting, its ability to body forth the spiritual. It is the eye of the saint in his rapt utterance, and it conveys indeed that conception in its fulness: not the eye of the common observer gazing on visible things before him; not the eye of the philosopher seeing vague forms in its blank abstraction, but the keen eye of the imagination shaping the unseen thought in all the distinctness of reality—'seeing the invisible,' in the language of St. Paul."

At the risk of being discourteous, we must say that this is not criticism of art. The eye sees what is visible, and the secret of painting is to paint what can be seen. That any observer can see in the eye of a painted saint what *he* saw which was invisible, is a sentimental fallacy which may be in place in a spiritualistic "circle," but is not in art criticism. There is but one way to paint a thing well, and that is to paint it as if seen: what is unseen belongs to the poet, not the painter. Another passage equally objectionable is this:

"In the great epochs of life, whether in religion or art or letters, we find this universal law, that the man who leads the age is he who has winnowed the dusty chamber of opinions with a knowledge drawn from living sources. Luther goes back from the scholastic divinity to the personal faith in the Christian soul. Descartes studies his own mind, and the insight of his volume outreaches all the earlier speculative theories. . . . Velazquez rises from Pacheco's teaching to the truer, simpler master—Nature. It is the sure sign of decay when the main purpose of art or literature is to defend the old system, when age on age must repeat the definitions of Fernandez, or the style of Luis de Vargas. Education means, above all, the leading forth of the mental powers of the man. Art tradition cannot take the place of our own minds, and of the real sources of knowledge which are always fresh and as living as in the past," etc., etc., etc.

Or this:

"Among the artists of this age, which Head calls the 'middle period of Spanish painting,' Luis de Morales stands well-nigh alone—a survival of the olden time, and inspired by that religious sentiment which the mediæval Church developed so powerfully. The artists of his day, followers of the Italian Renaissance, had lost that earlier feeling of an 'objective presence' which Morales breathes forth in the very spirit of Fra Angelico and of the early Italian painters. Christianity gave to those masters certain ideas, which permeated their thought, feeling, and life. The mystery of God in Christ brought Him nigh to the heart of humanity, yet spiritually and purely; and nature was *the mystic shrine that pointed to the Invisible.* Painting with them transcended the material vehicle; it was charged with spiritual meaning. So in the Gothic cathedral *the arch and the tapering spire were the symbolic fingers that pointed to an embodied, incommunicable beauty.*"

"The Greek mind, the most beautiful intelligence that the world has seen, embodied in perfect form the ideas of its religion; and embodied them with equal perfection in the *sculptured finish of Sophocles, the marble of Phidias, or, we may presume, in the lost paintings of Apelles.*"

But a writer who thinks and talks so unscientifically as this should be careful about laying down "universal laws"; and when it comes to "winnowing the dusty chamber of opinions with a knowledge drawn from living sources," we should say a little study of logic would be an assistance, perhaps by way of sprinkling the dusty chamber. In treating of Velazquez, the author gives us this:

"There is a strange melancholy which the grandest works of art sometimes beget in us, especially if we view them *whilst we ourselves are in the midst of lofty but unfinished labors.* A statue, a painting seem no longer human: they are disengaged from all past processes of imperfection: they have passed from the stage of becoming to the state of changeless being. We see no more the struggling artist, but, as it were, an instant creation. Their completeness withers our hope. The scaffolding on which a Velazquez stood is gone, and the lofty painting looks down on us with an overwhelming grandeur, an unattainable distance."

We must confess to being lost here. The uninspired use of the English language does not, we believe, avail in these word-puzzles.

The illustrations of this volume are indifferent to bad—rather the latter than the former.

The Chronicles of Newgate. By Arthur Griffiths. Illustrated. New edition. Scribner & Welford. 1884.

NEWGATE is one of the oldest places for the imprisonment of criminals in the world. As its name indicates, it dates from a time when justice was administered in Europe, as it still is in the East, at the gates of cities. An exact chronicle of what has taken place within its walls would make a curious companion-picture of the changes in manners and habits outside. Of the earlier history of the place, however, there are but scanty materials. The jail calendars, which are our main reliance, are chiefly, if not altogether, modern records, and the historic life of the jail is a growth of the last two or three centuries. Most of the existing body of Newgate learning is common property, and in looking over Mr. Griffiths's volume the reader is continually reminded of the curious fact that so many of the most familiar names in literature are those of criminals of the vilest sort, who nevertheless were popular heroes in their day. Crimes of violence seem in the last century and the century before to have invested those who committed them with an interest that we know little of, partly, perhaps, because the public has no opportunity nowadays of interesting itself in its criminals *en masse*, either in the hue and cry or in the procession to Tyburn. Captain Kidd, Jack Sheppard, Dick Turpin, Jonathan Wild, occupy a more interesting historical position than we can expect any of the criminals of our day to hold in the next century, and the effort to endue ruffians like the James outlaws with a halo of romance amounts to little more than a ghastly burlesque of a bygone fashion. The noted Newgate criminals of a later period—the Mannings, the Courvoisiers, the Fauntleroys—have a much poorer literary standing than their immediate predecessors, and Newgate itself has ceased to be a place of any dramatic or romantic consequence. As a place of detention for religious and political offenders it long since lost all interest, though for many a year it supplied the fires of Smithfield with their human fuel, and the Tower scaffold with the ill-fated victims of political hatred and vengeance.

We are accustomed to congratulate ourselves on the wonderful progress that we have made within a few generations in our way of dealing with crime and criminals, and the fact that we do not torture them, nor starve them, nor kill them except for very grave reasons is incontestable; but our criminal records do not give us much reason to believe that civilization has yet begun to sap the forces which produce crime, or to convert them into good agencies. Our manners are milder, and we shrink from the infliction of cruelty; our laws forbid unusual or excessive punishments; we have taught ourselves, in a way that would have seemed to our ancestors laughable, to put ourselves in the criminal's place, and to understand the temptations which have led him astray. By these means, a system of philanthropic reformation has been elaborated which is capable in efficient hands of producing wonderful results. But our philanthropy and sympathy have led also to a general relaxation of the old desire for the criminal's punishment, until we now continually see a homicide followed by an outburst of sympathy for the murderer—a singular substitute for the social desire for vengeance or retribution, on which any system of punishment must rest. The

effects of this state of feeling in procuring immunity for criminals must tend to that insecurity of life which, in the long run, will produce a reaction in favor of severity. There is no reason for thinking, however, that we shall return to the primitive barbarism of feeling which led to the bloody penal code of a hundred years ago. Nothing is more difficult to understand now than the inaccessibility of our ancestors to those feelings of sympathy and pity which make systematic cruelty in punishment in our time out of the question. One of the interesting cuts in Mr. Griffiths's volume represents a prisoner undergoing the *peine forte et dure*, or being pressed to death by heavy weights. The object of this horrible torture was to make persons accused of crime plead. As long as they remained silent they could not be tried; and if they died without a trial they were not felons and their estates could not be confiscated. For this reason prisoners were now and then found heroic enough to endure this terrible death rather than say guilty or not guilty. The imagination of the scene of the suffering—the wretched victim chained to the floor and the added weights slowly but surely stifling him, the jailors standing by and watching his agonies—is enough to sicken the reader without the picture, which, as in the case of many another horror, gives the whole a slightly ludicrous turn. But it was not long ago that such punishments were thought valuable for their deterrent effect.

On the whole, the long record of crimes presented in such a volume as Mr. Griffiths's brings out not the romance so much as the commonplace, vulgar character of crime. It is a dreary record of murders, robberies, forgeries, arson, and perjury, unredeemed for the most part by a single fine incident, and never in modern times rising to a tragic level. It seems, indeed, to be a literary fallacy which renders crime romantic or interesting; for when we come near the criminal, we nearly always find him to be a vulgar, sordid wretch, who loses his human interest as he becomes steeped in criminality and habituated to violations of the law. The criminals who are led into crime by excessive ambition, by a generous desire to save some one else from the consequences of their folly, are to be found on the stage and in books, but not in such books as the Newgate chronicle. Simple idleness and a desire to enjoy the good things of life without working for them, seem to be the explanation of most of the crime that is committed; and the great problem of "penology" is so to arrange things that the reward of crime shall be not the good things of life, but hard fare and just that severe labor which the criminal most fears—certain retribution, without cruelty. Mild punishments, made more lax by the uncertainty of the administration of the law, must in the long run prove just as dangerous to society as the excessive rigor of a cruel age.

The Creators of the Age of Steel. By W. T. Jeans. Charles Scribner's Sons.

THE misnomer of Mr. Jeans's book is the result of a false perspective of the arts involved in civilization. The "age of steel" began, so far as our civilization is concerned, when the Romans used the Celtiberian steel against the Gauls, whose longer swords had no temper. The great development of steel industry of which Bessemer, Siemens, Whitworth, and their lesser companions in the Walhalla of Mr. Jeans were the promoters, was the cause of one of the greatest modern increments of industrial wealth; but steel had ruled the world for centuries before Bessemer was born, and when we measure things comparatively it may be found that Benjamin Huntsman, the inventor of cast steel, who is not one of Mr. Jeans's heroes, has had a more important relative influence on the metallurgic wealth of England than Bessemer. The "age of steel" opened when a way was found to make an iron which would temper, and, like the "age of bronze" or that of stone, has had successive dawns in various countries. There exists in Franklin County, N. Y., an iron ore which, cast directly from the smelting furnace into cutting tools, takes admirable temper, can be hammered, etc., and if some accident had developed the smelting process for the Iroquois as is fabled of the Chalybes, who are said to have found iron after a great conflagration of forests on Mount Ida, the age of steel might have revolutionized North America before Christopher Columbus discovered it. The shallow view that the inventors of processes by which great wealth is rapidly developed, are correspondingly great benefactors of the human race, and to be honored accordingly, is supported by the heralds' college, but not by history or philosophy. Riches make their own apotheosis, and have no need of the extravagant laudation of Mr. Jeans for their agents. Genius, in whatever branch of human occupation, merits and receives its due respect, but to graduate this reverence by the scale of the pecuniary results is to go back to the golden calf.

Thus, apropos of the Bessemer process we are told:

"According to the best information extant, it appears that in the twenty-one years that elapsed after the process was first successfully worked, the production of steel by it, notwithstanding its slow progress at first, amounted to no less than 25,000,000 tons; and if we were to estimate the saving as compared with the old process which it superseded, at £40 a ton, the total would be about £1,000,000,000. . . . Such a man needs no honors; but no industrial nation could afford to let him go unhonored. Hence honors and distinctions have been showered on him from all quarters."

The struggles of Bessemer, the corrupt and partisan course of the officials of the crown in his case, and, still more, in Whitworth's, and the patient persistence in the pursuit of a definite result through years of experiment and failure, make Mr. Jeans's book an interesting one, though apparently only a very one-sided compilation. Whitworth, as a clear-eyed, systematic, and great mechanical inventor, as a practical mechanician who has probably never been surpassed in the records of mechanical industry, seems to us much the greatest hero of Mr. Jeans's list; and Siemens, as a scientist of a higher type than Bessemer, since his discoveries are more far-reaching and of more true and comprehensive benefit to the human race, should also have preceded the latter, and, if there is justice in the future of Fame, will do so.

The English and Prussian Governments, according to the author, vied in meanness toward Bessemer, but the Prussian excelled easily in dishonesty. The record, in this matter, of both Governments is quite on a par with that of the most ungrateful republics. The artillery question, as brought out in the histories of Bessemer and Whitworth, shows the ordnance authorities of the English Government in a position (which also better authority than Mr. Jeans exists for recognizing) utterly disgraceful and degrading. The hold of Sir William Armstrong on the Ordnance Department of England is probably excelled by nothing in the corrupt records of our American rings. Pages 81 and 91 of the book ought not to be pleasant reading to honest and patriotic Germans and Englishmen.

The author curiously ignores all the discoveries made in America. When dealing with Siemens's researches into light, he credits incidentally Lockyer and others in England for researches far surpassed by those of Langley, of the Allegheny Observatory, who is not mentioned; and when Mr. Jeans comes to Mr. Whitworth's studies in the rifle, he does not seem to know that Whitworth found in the manufacture of the Kentucky rifle in America the secret of the certainty of rifle construction—the hexagonal bore, known by his name still, but which we who write used above forty years ago, when it was being abandoned. The manufacture of rifles then was, as an art, only known in the United States, and for short-range shooting is still far in advance of that of England, though the experiments of Whitworth on the relation of the size and shape of missiles for long-range shooting, and their relation to the rifling of the gun, have never been equalled as systematic and extensive research by any gun-maker on either side of the Atlantic. The persistent neglect—contempt, perhaps—with which Sir Joseph Whitworth has been treated by his own Government, is one of the most disgraceful things in the history of English industry, though it is almost equalled by the treatment of Bessemer.

Spanish and Portuguese South America during the Colonial Period. By Robert Grant Watson, Editor of 'Murray's Handbook of Greece, Fourth edition.' In two volumes. London: Trübner & Co. 1884.

IN 1866 Mr. Watson received the appointment of second Secretary of the British Legation in the Argentine Republic and Paraguay. His previous experience having been in an entirely different part of the world, he looked for information regarding South America among English books, and found almost none. At the place of his destination he discovered that there was plenty of it in Spanish, Portuguese, Dutch, and other foreign languages, and gradually became acquainted with the literature on the subject. Of two years of diplomatic service in America, he passed one in Buenos Ayres and the other in Rio de Janeiro. He successively visited Uruguay, the Argentine province of Santa Fé, Patagonia, Paraguay (then a seat of war), and the Brazilian province of Minas Geraes. He collected voluminous materials for the elaboration of a work on South America, such as he had felt the want of, but, owing to subsequent employment in several countries of the Eastern Hemisphere, only recently found the necessary leisure to compose it. He unpretentiously offers it to the public as a much needed epitome of more elaborate and original works, and as such it deserves a great deal of credit. It is strictly confined to South America. It relates successively the discovery of the main land (1498), and of the Pacific Ocean; the careers of Balboa and Las Casas; the discovery of Brazil, La Plata, and Paraguay; the discovery and conquest of Peru and Chili (1521-50); the exploration of Brazil; the rebellion of Gonzalo Pizarro and other events in Peru; the Araucanian war (1550-60) and its consequences; the growth of the Brazilian colony; the arrival of the Jesuits in Paraguay (1608 and after); the southern voyages of Hawkins, Drake, and Raleigh; the Dutch war for the possession of Brazil (1623-45), and the creation of the Jesuit missions in the north of that country; the French efforts to establish themselves in South America; the advance of Brazil in the seventeenth century; the history of the Viceroyalties of Peru and New Granada; the mining discoveries and other events in Brazil; the rise of Buenos Ayres; the expulsion of the Jesuits from Portugal and Brazil (1759-67), from Buenos Ayres and Paraguay; the arrival of the Braganza dynasty in Brazil, and the English expeditions to La Plata (1806-07). The history of the transition, through insurrection and war, from the colonial state to independence is not told.

The narratives are plain and minute in a some-

what diffuse style. There is no attempt at rhetorical embellishment, picturesque description, or ethnological disquisition. A liberal and humane spirit, averse to all forms of oppression, fanaticism, and intolerance, pervades the whole book. This liberalism is coupled with a strong sense of impartiality and of fairness even toward the oppressor and bloody bigot. The story is a dismal one, almost from beginning to end. Ruthless conquest, rapine and torture, enslavement and extermination, fratricidal conflicts, fanaticism and ignorance, colonial oppression, the reign of monopoly, stupid maladministration, invasion—these are the successive or alternating topics, seldom redeemed by instances of noble devotion such as has rendered immortal the philanthropy of Las Casas, or of high administrative sagacity like that displayed by the Jesuits in the treatment of the Indians in their districts. Our author does full justice to the zeal and skill with which the Jesuits carried on their work of converting and training the Indians, especially in Paraguay, but he does not fail to add, "Their system of government had been so absolute, and their disciples had been reduced to such a condition of being merely thoughtless animals or machines, that, when the guidance of the Fathers was withdrawn, the whole system established by them suddenly and absolutely collapsed." The cruelties perpetrated on the Fathers in the execution of the decrees of expulsion are related with sympathetic feeling. The author avoids harshness of expression and sweeping denunciations. The following, on the "national disgrace" of Portugal, is a characteristic exception:

"There seems indeed something peculiarly ingrained in the Portuguese race which makes them take to slave-dealing and slave-hunting as naturally as greyhounds take to chasing hares; and this observation applies not to one section of the race alone, but to Portuguese wherever they are to be found beyond the reach of European law. No modern race can be cited as slave-hunters within measurable distance of the Portuguese. Their exploits in this respect are written in the annals not only of the whole coast of Brazil, from Pará to Uruguay, and along the Misiones of Paraguay, not only on the coast of Angola, but throughout the interior of Africa. We may take up the journals of one traveller after another, of Burton, of Livingstone, of Stanley, or of Cameron, and, in whatever respects their accounts and opinions may differ, on one point they are one and all entirely agreed, namely, as to the pestilent and remorseless activity of the ubiquitous Portuguese slave catcher."

Lessing. Geschichte seines Lebens und seiner Schriften. Von Dr. Erich Schmidt. Erster Band, pp. 487. Berlin: Weidmann'sche Buchhandlung. 1884.

A NEW life of Lessing has at once the advantage and the disadvantage of coming after one of the best biographies in the German language. For largeness of conception and thoroughness of execution the volume published by T. W. Danzel in 1850 is hard to improve upon. But Danzel, very abstruse in matter and in manner, is unreadable except for scholars; and the continuation of his work by G. E. Guhrauer, who died in 1854, while his part of the enterprise was still in press, is entirely different in style and in the quality of the thought. Thus the work as a whole lacks unity. The various lives of Lessing that have appeared in Germany and England since 1854 are dilutions of the Danzel-Guhrauer biography. They present little or nothing in the way of new facts or new criticism, and are not based primarily upon independent research.

Prof. Erich Schmidt, of the University of Vienna, has accordingly undertaken to make a Life of Lessing that shall be up with the times. His first volume, a book well made in every way, and adorned with a spirited etching of the Lessing portrait commonly ascribed to Tischbein, ends with a section on "Minna von Barnhelm." It thus covers the first thirty-six years of Lessing's life, or precisely the same ground covered by the work of Danzel, which it aims to supplement rather than to supersede. Danzel's strength was philosophical, Schmidt's is historical. He is a man of great learning in the imaginative literature of the eighteenth century, and is in his element when depicting the relations of Lessing to English and French writers, when describing the persons and places that Lessing had to do with, or when trying to revivify for a moment some one of the multitudinous literary pigmies whom Lessing slew and embalmed. Schmidt's work is always acute and always thorough; and the result of all this acuteness and thoroughness is a book which will be very valuable to one who is already perfectly informed about Lessing and his mental environment, and very unsatisfactory, if not soporific, to one who is not. Even a fairly educated reader will find in Schmidt a good deal of matter about men that he has never heard of, books that he has never read, and events of which he does not see the bearing. The underlying conception of the book seems to be that Lessing was a very great man, and that, therefore, nothing that in the remotest way concerns him can be uninteresting. There is little or no effort to deal with anything but minute details; but this of course is unavoidable if one must write nearly 400 pages on the part of Lessing's life which precedes his greatness. To find fault with an author for doing that is to find fault with the whole German *modus operandi* in matters of this kind. In a better state of civilization, we hope, one volume of moderate size will be thought enough to contain the life of any man of letters who has been dead a hundred years.

Schmidt's style may be safely called piquant. He has none of Danzel's Hegelian deep-diving, but instead of that he has any number of recondite facetiæ, which render it important to read him in the neighborhood of a good reference library. A countryman of his gently expostulates with him in the Leipzig *Centralblatt* in regard to this profusion of jests. But that is only the austerity of German science. The cisatlantic public will not find Professor Schmidt's book too humorous.

Richard Baxter. By G. S. Boyle, M.A., Dean of Salisbury. A. C. Armstrong & Co. 1884.

THIS volume is the sixth of a series of "Heroes of Christian History." The author's task has evidently been somewhat perfunctory. He has brought to it no special fitness for biographical writing, and no special sympathy with his subject. Of the four-and-thirty volumes in the "English Men of Letters," it would be difficult to name a single one which is not better done than this; and yet the material was here for a biographical sketch of unusual interest. It has not been produced. The more is the pity, therefore, that the death of Dean Stanley "has deprived the reader of these pages of what would have been a true distinction"—an estimate from him of Baxter's review of his own life.

A brief chapter on his early days is succeeded by one on "The Beginning of Pastoral Work." He was only twenty-four when he entered on his Kidderminster pastorate. England had fallen upon troubled times. On October 23, 1642, he preached at Alcester, and "heard the cannon play" at Edgehill while he was preaching. The next morning he visited the field of battle. The civil war found him in a dreadful strait. He was a devoted monarchist, with a passion for religious liberty. He ranged himself upon the side of Parliament and took the Covenant, but with a doubtful mind, and sore repentance as the war continued and the Protectorate of Cromwell succeeded the King's death. He took a chaplaincy, but after a period of service his constitutional maladies obliged him to abandon it. Then, "in continual expectation of death, with one foot in the grave," he wrote the first part of 'The Saint's Rest,' the least polemical and best of all his works, which was first published in the year of the King's death. He had made a heart of quiet for himself in the midst of the most violent passions. After the Restoration, Baxter was offered a bishopric, which he declined, and his letter to Clarendon declining it is an invigorating and inspiring document. When the Act of Uniformity was passed he was ejected from his parish, though sixteen hundred of his parishioners out of eighteen hundred were in his favor. Baxter had thirty years to live, and they had much of sorrow and anxiety, but also great alleviations—a "marriage of true minds" and work to an unlimited extent. His closing years had less of molestation and annoyance from the ruling powers.

The Dean of Salisbury concludes his sketch with chapters on Baxter's review of his own life, on his doctrinal and practical teaching, and his place in history. There is much in these chapters of great interest, and the most of it is in Baxter's own words. Undoubtedly his place is preëminently that of the schoolman of the English Protestants. His thought and character abound in admirable traits, but the Dean of Salisbury has no skill for imparting information: he is very sparing of facts and dates. He seems afraid of telling his readers what they know already, whereas he might safely have reckoned on the general ignorance. His book will teach scholars nothing, and for the average reader it is not sufficiently explicit. It may, however, provoke a thirst that can be slaked at other fountains.

The Campaigns of the Rebellion. By Albert Todd, First Lieutenant First United States Artillery. Manhattan, Kansas. 1884. Pp. 130.

IN this little book Mr. Todd has undertaken to state briefly all the material facts of the late war. He has not, we think, been over-careful to state them accurately; but even if his work had been a model in this respect, we should be inclined to doubt its utility. A *general sketch* of the war can undoubtedly be given in 130 pages; it would take perhaps a clever man to do it, but it could no doubt be done, and it might be very useful to those who purposed making a study of the operations in detail. But a *very concise narrative* is a wholly different thing; no one, new to the subject, can possibly recollect so many facts, following one another with such unfaltering steps. The mind reluctes at such condensed food.

Mr. Todd has completely separated his narrative of the operations in the East from his narrative of the operations in the West. Each subject is treated by itself. But surely this is to lose sight of the very important fact of the interdependence of the Eastern and Western campaigns. No correct view of the general posture of affairs at any particular epoch can be gathered from such a treatment as we find in this book. The work is, however, fairly well done for what it purports to be; any one familiar with the war would no doubt say that, as an abridgment of a full history, it was sufficiently provided with all the principal facts. It is written, we presume designedly, in the tone of one who is addressing young people, and the conciseness, which is its chief characteristic, is not infrequently departed from to let in some-

thing of a personal character or otherwise interesting to the reader. Still, as we intimated above, there are inaccuracies. It is news to us to hear that Pickett commanded at Gettysburg any troops besides those of his own division. Nor did we ever hear before that Schofield's army, after the battle of Franklin, was indebted to the friendly cover of the smoke, which, owing to a peculiar condition of the atmosphere, did not rise much above the ground, for its ability to retire unmolested from a field on which it had just inflicted on its adversary such a severe blow. It availed itself certainly of the darkness of night to commence its retirement to Nashville; but the smoke is, we suspect, an unwarranted addition. We think Mr. Todd is seriously in error in putting the strength of Lee's army, at the opening of the campaign of 1864, at only 52,000 men; and in his note to page 48, in which he states that Grant had 140,000 men at that time, but that only 20,000 of these were effectives, he doubtless would have us read 120,000 for 20,000.

BOOKS OF THE WEEK.

Avey, Mrs. H. E G. Home and School Training. Philadelphia: J. B. Lippincott & Co. 75 cents.
Baker, Sir S. W. In the Heart of Africa. Funk & Wagnalls. $1.

Fine Arts.

THE ACADEMY EXHIBITION.—III.

PERHAPS the best test of the real vitality of any school of art which can be recognized by the general public is its treatment of portraiture. And it is at once a test of the taste of the community and the power of the painter; for a public that does not care for art *per se* will only care for what are called "faithful" portraits, nor will the commonplace painter care to labor for more than contents his client. The greatest schools of art have always been marked by the preëminent quality of their portraiture at their highest attainment. Raphael, Titian, Veronese, Rembrandt, Tintoret, Rubens, Velasquez, in fact, all the great technists, have given their portraits the best of their powers and sometimes the highest of their art. Even the French heroic school, with its absurd classicism, did good work in portraiture, and the best art England has ever produced was in her portrait school. A man who cannot make a good portrait may do clever and amusing genre or landscape, but not good ideal work in any vein, and the surest indication of an art given up to trivialities and surface technicalities may be seen at once in the weakness or non-existence of portraiture. One class of men avoid it because they are incapable of the sustained discipline which it demands as the indispensable condition of success, and another fails in it because it has no perception of character, which is the foundation of all true idealism; weaker men, because the severe drawing which is the basis of it is impossible to them even with patience and their utmost sincerity. A common delusion which artists and art lovers often permit to themselves is that, as fidelity to the external appearance of a man is not the highest vein of portraiture, therefore a painter who cannot draw well may still be capable of doing something better, and give the true character of the man without giving his face—which is simply a consolation to failure. There may be something in art higher than exact truth to the forms of nature, but no man can reach it except through those forms, or at least without the refinement of drawing which enables him to attain them when he will. The conditions of the ideal are too obscure and subtle to dogmatize about, but it is safe to say that the painter whose hand and eye do not permit him to be true to what he does see, will not safely attempt an ideal which he does not. There is no escaping the law that the ideal is only to be found in the actual; beyond it, it may be, but through it inevitably.

The condition of our portraiture, as seen in this exhibition at least, is not therefore encouraging for the future of our art. With the exception of the single portrait by Millet, No. 210, there is not a single head by any of our younger men which shows a resolute attempt to meet all the conditions of portraiture. This is, so far as can be judged from the portrait alone, a thorough piece of characterization—too individual not to be true—and the classic sympathies of the painter are shown in the treatment of the accessories, the subtle play of pale tints, and the frank severity of the design. A deeper key of color would have better suited the exhibition room, and perhaps have made the work more impressive, but its subtlety and refinement are certain to win their way to those who will give it the study it deserves.

Eastman Johnson's two portraits, Nos. 70 and 259, are strongly painted and characterized heads, and, so far as the general public is allowed to know, at the very front of American portraiture; certainly in the exhibition there is nothing to rival their solid qualities of color and drawing, and, with the exception of the portrait of Hiram Powers, by Page, No. 461, nothing so individual in character. Mr. Johnson, however, in the accessories, shows the tendency of the mere portrait school—all that is not demanded by an unartistic clientèle is left out. In this respect Millet stands at the head of the portraitists of the exhibition. The head of Powers, which the catalogue describes as "painted about 1848," cannot be of that date, as Page did not go to Europe till after 1849. It shows, too, the method which Page adopted when he went abroad, by which he believed he had got the qualities of Titian—*i. e.*, using pure color in repeated paintings over a solidly prepared ground. Titian certainly did use such a method in his flesh sometimes, and possibly generally where the flesh was the important element of the work, but he did not use it throughout the pictures, as Page has done, nor did he ever paint his accessories in so flimsy a manner as they are painted here. But the picture is in character and in certain qualities of color a proof that Page's friends did not overrate his powers, which might easily, but for his obsession by theories, have made him the greatest of American portrait painters thus far. A sketch of Sumner, No. 662, apparently the beginning of a portrait, also by Page, is very grand in character.

Mr. Porter, in his portrait of a lady, No. 124, pushes Mr. Johnson very closely, and in general treatment of accessories and pictorial completeness goes beyond him, as we see him here. This half-length is admirable not only for its well-painted head, but for the figure, so well posed and real. The portrait by the Vice President of the Academy, No. 324, is strong and in general effect of color good, but with over-hot shadows, which interfere with the solidity of the head, as if the flesh let light through from within. No. 403, by Edgar M. Ward, is evidently excellent as likeness and painted with vigor and skill, but in all the accessories, even the hair, with a reckless and heartless dexterity which is rather mannerism than style. Hicks's portrait of Dr. Wood is a professional success, but hardly up to the work the artist used to do twenty years ago. Of Miss Barber's portrait of a child, No. 274, we have already spoken, and we recur to it now only as fitting in a notice devoted to portraiture.

The Nation.

NEW YORK, THURSDAY, MAY 8, 1884.

The Week.

THE resolutions and speeches of the Massachusetts Republican Convention constitute the most noteworthy political demonstration of the year, and emphasize what we said the other day concerning the change which is going on in political methods. The resolutions are a distinct advance over their immediate predecessors in their declarations on the most important questions of the day. Last year the tariff plank was written by Senator Dawes, and was simply the stereotyped demand for "wise and well-matured laws to protect and develop American industry and enterprise both at home and on the ocean." This year there is a demand for a "reduction of customs duties because of the dangerous surplus in the treasury receipts," a proviso that this reduction should "be made with the least possible injury to the labor and manufacturing interests of the country," and a recognition of the necessity, in the "progressive changes in industrial conditions, for an investigation of the tariff on a scientific basis, to the end that it may be considered as to its real influence upon labor, capital, production, and revenue." This is a distinct recognition of the tariff as a question which is not irrevocably settled, but whose consideration is of pressing moment. Coming immediately after the organization of a Revenue Reform League in Boston, and after ex-Governor Long's remarkable statement as Chairman of the Convention, that "conditions are rapidly changing, and it may be but a few years, especially in view of the progress already made, before the system of protection will have done its work and may be laid aside," its significance is so obvious as to require no comment.

On the subject of Presidential candidates the sentiment of the Convention was equally noteworthy. Mr. Long was cheered to the echo when he said that for the approaching campaign the best candidate is the most available, and that the best candidate would be one of such acknowledged worth that the "thousands of influential and sterling voters who all over the land have become, not Democrats or Independents, but Indifferents, shall regard his nomination as an earnest that the Republican party is looking only at the public welfare and prosperity." The platform gave voice to the same idea when it demanded as the choice of the Massachusetts Republicans for President "a man of proved fidelity in public life, and whose relations to the party are such that all its members can heartily unite in his support." It is easy enough to pick out a candidate who answers to these demands. There are several of them in the party, but none of them is at the head of a boom, or is seeking the nomination in any other way. They are all formidable, not through wire-pulling and pipe-laying, but because the spirit of the time is in their favor.

The worst showing for Blaine is in the New England States. His boomers have been claiming delegates in every one of them except Vermont, but now that the conventions have been held it is shown that he has no following to speak of outside of Maine. He has one delegate in New Hampshire, and two, or possibly three, in Rhode Island, but not one in Massachusetts or Connecticut. The conduct of Massachusetts is especially reprehensible, and we are surprised that it has not been sternly rebuked by the Blaine organs. In the face of their assertion that if Mr. Blaine was a bad man Mr. Edmunds was another, the Massachusetts Republicans elected a solid Edmunds delegation, and in State Convention chose four men as delegates-at-large who were fairly shouting for Edmunds.

There is a manifest quibble in Mr. Phelps's reply to Senator Edmunds's letter. In his first letter Mr. Phelps said: "Nor would you and I differ in giving the highest rank to Senator Grimes; but both he and Senator Edmunds acquired their interests in the Burlington and Missouri Road when they were in the Senate. They both supported the bill to restore the land grant to *their* road." Mr. Phelps now says he did not imply that Senator Edmunds owned stock in the Burlington and Missouri Road when he voted upon the bill, but merely that he was "in the Senate" when he acquired his interest in the road. What, then, does he mean when he says: "They both supported the bill to restore the land grant to *their road*"? How was it "their road" if they had no interest in it at the time the bill was voted on? It turns out that the bill was not a bill to restore a land grant, but virtually to change the name of the road. It was a bill to confer upon the Burlington and Missouri Railroad in *Nebraska* the grant already conferred upon the Burlington and Missouri Railroad in *Iowa*, which is a very different thing from restoring a lapsed land grant. Mr. Phelps ought to employ his leisure solely in the management of Mr. Blaine's estate, and leave that of Mr. Edmunds to an abler financier.

Our esteemed contemporary, the *Sun*, says the charges against Mr. Blaine will not injure him in the Convention. All the Democratic papers say the same thing, for two reasons. One is, that it is a legitimate deduction from their belief in the corruption and rottenness of the Republican party. The other is, that they wish extremely to have Mr. Blaine nominated. The *Sun* is, therefore, pursuing in the Blaine matter a perfectly proper course from the party-journal point of view. Any Democratic editor who joined in the outcry against Blaine would make a great mistake, and deserve to have it said that his circulation was falling off.

A very important report has been made by the Bureau of Statistics on the operations of the Tariff Act of 1883, showing the changes effected by that measure in the rates of duty on the various articles of import affected by it, and the change in rate upon all dutiable imports in the aggregate. The reduction in the aggregate is shown to have been only 1.47 per cent. That is, the average ad-valorem rate on dutiable merchandise during the six months ending December 31, 1882, was 42.34 per cent., and for the six months ending December 31, 1883, 40.87 per cent. On sugar the reduction was 1.47 per cent. It is worth mentioning that the present average rate of duty on sugar under our tariff (1.95 cent per pound) is exactly the wholesale price of raw sugar in the London market as stated by the *Economist* of April 26, viz.: one penny per pound, grocery sugars selling at two pence, and loaf at two and a half pence. The reduction on iron and steel effected by the tariff of 1883 was equal to 4.54 per cent.; on clothing wool 10.73 per cent.; on woollen manufactures 1.01 per cent. On the other hand, there was an increase of duty on earthen and china-ware equal to 13.11 per cent., on spirits and wines 22.76 per cent., on glassware 1.48 per cent., and on cotton manufactures 2.51 per cent. The following table shows the present average ad-valorem rates of duty on the principal articles of dutiable imports, to which we have added the rates as they would stand under the Morrison bill, supposing it to make an average reduction of 20 per cent.:

	Average ad valorem rates.	Morrison bill rates.
Spirits and wines	89.50	71.60
Manufactures of wool	62.19	50.76
Earthen and china ware	55.99	44.79
Glass and glass ware	55.58	44.47
Manufactures of silk	49.83	39.80
Clothing wool	45.58	36.47
Malt liquors	43.84	35.18
Sugar and melada	42.85	34.28
Combing wool	38.92	31.12
Manufactures of cotton	39.53	31.62
Iron and steel, and manufactures thereof	32.97	26.37
Carpet wool	21.78	16.43

The vote on the tariff in Congress on Tuesday was the first regular stand-up fight between the forces of protection and free trade which has taken place in this country since 1846. The tariff has been since then much debated, and frequently modified in one direction or the other, and there have been numerous skirmishes between the friends of low and the friends of high duties, but the issue has always been in some way a side issue. Tuesday's battle, in which the Democrats were divided on the distinct question whether there should be any step taken in the direction of revenue reform or not, was, therefore, the first marked advance which has been made in Congress in nearly forty years. It is not possible that the Democratic party can heal up the breach thus opened. The division showed that four Democratic members to one are in favor of revenue reform, and that without the aid of the Republicans Mr. Randall could not have defeated and delayed the policy to which the bulk of his party ought now to be irretrievably committed. He has done the Republican protectionists a very good turn, however, for he has enabled them to throw on the Democrats before the country the responsibility of refusing to make any concessions whatever to the rising popular demand for lower duties, or to make any attempt to remedy the failure of the legislation of last year to produce the reductions which the Tariff Commission recommended.

That he was only able, even with the Republican aid, to carry out his plans by a majority of 159 to 155, after the fullest preparation, ought to be sufficient to satisfy him that it is not to his views that the future belongs.

The situation now furnishes, however, to the Democrats the materials for one of the finest blunders they have ever committed—a blunder so huge and attractive that the mere thought of it must make the mouths of some of them water. That blunder would consist in treating the vote in the House as conclusive proof of the impolicy of any further attempts at revenue reform on the Democratic side, and the wisdom of going into the Presidential campaign on the theory that the tariff will do as it is, or, as the *Sun* puts it, that there are "matters of more moment that demand attention," without being able to mention on demand what these matters are. The appearance of the party once more on the Presidential field without any baggage in the shape of ideas or policy would certainly be the most delightful spectacle its enemies could have, and its effectiveness will be greatly increased if the Morrison bill be treated by the managers as a mistake.

"Puts and calls" have been in a languishing state for some months, and they have now received a bad blow in the failure of Mr. James R. Keene to take up the privileges which it is said he has been raising money on for some time back. As the Stock Exchange very properly refuses to recognize puts and calls as contracts to be enforced under its rules, the failure of Mr. Keene cannot raise any questions in that body. Possibly the intervention of the courts may be invoked to determine whether an agreement of A to receive stocks from B at a fixed price at a future time, in consideration of a sum of money paid down, can be enforced at law. Probably not. There must be some place to draw a dividing line between gambling and legitimate business, and if business organizations have drawn it at puts and calls, that is a safe place for the law to draw it. The failure of Mr. Keene will lead to anxious scrutiny of signatures on the part of holders of this evanescent sort of property.

An interesting fact connected with Mr. Keene's suspension is that it produced no bad effect upon the Wall Street market, though the total amount of his "puts" must have been very considerable—according to one account, 200,000 shares. That the market should have been strong notwithstanding the collapse of such a bull as this, shows what a mistake it is to imagine that the course of the market is governed by the agile gamblers and speculators who operate in it. The reason that the stock of such a corporation as the Erie Railroad affords an excellent field for gamblers is because of the extraordinary vicissitudes to which the management is subjected; the Keenes and Sages are produced by the condition of such properties. They enrich or ruin themselves or their friends, but in the long run the value of stocks is not much affected by them one way or the other.

A notable event of the past week in Wall Street was the heavy selling of Union and Central Pacific and Western Union Telegraph shares, which declined six to eight points. The Pacifics were depressed in part by reduced earnings, but still more by the conviction that they have passed from the monopoly stage to the competitive stage of their existence, and that they must hereafter fight for traffic, like the railways in the older States. The report that Samuel J. Tilden had sold out his Union Pacific had a demoralizing effect on the property, Mr. Tilden's sagacity in business matters being rated as highly as his shrewdness in politics. Western Union was depressed by a variety of stories, among others that Jay Gould was selling in the most intrepid manner. This the habitués of the street fully believe. They can find no other source of supply of long stock adequate to account for the number of shares tumbled upon the market from day to day. The only stocks which made any decided advance during the week were the Northern Pacifics and Oregon Navigation. The coal properties were well sustained, but there was a good deal of nervousness about Reading. Gold exports, although reaching $2,750,000, attracted no attention whatever. The business community no longer look upon the specie movement as an evil in itself, but merely as a sign of other existing evils.

There is a dispute between the bulls and bears in the wheat market on the question whether we shall have any considerable surplus to export during the remainder of the year. This is, of course, all guesswork, but much depends upon the price offered in foreign markets. The outlook in that quarter is by no means encouraging, but the causes which tend to curtail exports here operate in the same way in Russia and India. While the European markets have not improved, the Indian scare has largely passed away, having been succeeded by a conviction that we can raise wheat and get it to the chief centres of consumption as cheaply as anybody. There has also been a general restoration of confidence in renewed prosperity, arising from a calmer survey of the productive powers of the country. Nations are not brought to permanent distress by a superabundance of everything needful for human wants. This reflection has gradually found its way into the channels of business, and has led to a more hopeful feeling. It is now commonly believed that prices have touched bottom, the shrinkage in general merchandise having ceased some time since.

Mr. Hurd's bill to reduce the duty on works of art to the old figure of 10 per cent., and remove the exemption of American artists abroad, will bring certain dissidents from the general petition of the artists for abolition of the art tariff to a distinct sense of their errors, and will probably diminish their number. To protect art by taxing all the American artists who work abroad even ten per cent. on the value of all the work they send home will not increase the selling price of their pictures as it might of the works of Rousseau or Millet, which are practically priceless, but will simply be a tax on the painter who has not a cosmopolitan reputation and market, and whose prices are regulated by the home demand alone. He will merely sell his pictures for the familiar prices minus ten per cent., while the purchaser of a picture in Paris will charge himself necessarily with the duty. The young artist, who most needs protection, if anybody needs it, will be the person who will not get it. And sending his pictures home for sale he must pay the duty as if already sold. This is the legitimate and inevitable effect of the duty on art, for, as Mr. Hurd showed, and as we stated long ago, the distinction by nationality cannot be maintained in face of our treaties. Those who went in for a thirty per cent. duty have done this good service, that they have laid the last feather on the back of the foreign producer and compelled him to invoke the treaties. This ought to bring the narrowest-minded protector of American art over to the total abolition of the duty. But is it worth while for the country to employ (if even we had competent ones) art-appraisers for the trivial gain involved to the Treasury? And as we must reduce income, why should we not do so on an item in which protective or any duties are an injury to everybody involved, and a useless expense and complication involved in the collection, etc.?

The plan of "tapping" South America with a railroad 6,000 miles long, running from Mexico south through the Isthmus and to the principal towns below the Equator, is a far more harmless scheme for developing international trade than many that have yet been advanced. It is not likely to lead to a war with any South American State, and is less likely to breed trouble than a "Pan-American" congress. It would no doubt cost more than having free ships, but then the cost and the losses would fall on the shoulders of the capitalists who undertook the work. They could always stop, too, if they found it was too expensive; nobody could compel them to build the whole 6,000 miles; and unless the South Americans showed a liberal disposition about taking stock and bonds, we trust they would stop. The plan of getting the Government to spend $100,000 or so on a preliminary survey by "commissioners" is the only part of the scheme to which the public could possibly object; this will be a mere bagatelle to the capitalists who have the matter in charge, and can properly be charged to the construction account. There seems no reason why Congress should do anything about it.

The acquittal of Kellogg, following as it does upon the heels of the other failures of justice in the Star-route cases, is unfortunate for the Government; but the explanation of the result furnished by Mr. Ker, who drew the indictment, shows clearly enough how it happened. The act under which Kellogg was indicted provides that "if any member of Congress shall receive or agree to receive from any person any compensation, directly or indirectly, for any service rendered or to be rendered in relation to any contracts, he shall be guilty of a misdemeanor," etc. The Statute of Limitations requires that an indictment shall be found "within three years

from the time the offence was committed." Price, the contractor, testified that in July, 1879, he promised Kellogg $20,000 if he would get Brady to make an order relating to a couple of Star-routes; that Kellogg took the papers and reported that it was "all right"; that Brady made the order in July, 1879; and that Price thereupon gave Kellogg, for "fixing" Brady, a note for $5,000 (paid November, 1879), and five "Post-office drafts," dated July 16, 1879, each for $3,000. These drafts, according to Mr. Ker, are not negotiable paper, nor are they authorized by any law or regulation of the Post-office Department. They are recognized by the Auditor as a sort of order upon him to enable the contractors to pay their debts; they cannot be sued upon; they are revocable at any time before payment, and are only called drafts by courtesy. These drafts were to be paid out of money coming due to the contractor quarterly, the last payment being due March 31, 1881. The Government proposed to prove that Walsh collected the money every quarter, handed Kellogg half of it, crediting Brady, by Kellogg's directions, with the other half.

The indictment was found April 18, 1883, and the question in the case was whether Kellogg received his "compensation" within three years from that time. The Court took the view that he received it at the time the promissory note and drafts were given (July, 1879), and that the prosecution was barred. Mr. Ker thinks the decision ought to have been that he got no compensation till he got the money. Price's testimony was, as might have been expected, that the paper was received in full payment. The point seems to be one of which different lawyers might take different views, and we hope that it is not necessary that Judge Wylie's decision should be followed generally by criminal judges. The view of such transactions taken by plain, practical business men like Kellogg, Brady, and Price is, we believe, that it is a continuing or ambulatory agreement, not wholly satisfied until the cash is transferred from the pocket of the briber into that of the bribee.

The death of "Chevalier Wikoff" removes from the scene a curious character, who played, according to his own belief, an important part in the world for many years. He had a good education, and a passion for the society of distinguished artists and theatrical people, and did one very good turn to the people of the United States in bringing Fanny Elssler here. Those who have read his reminiscences have probably a friendly feeling toward the deceased Chevalier, and do not attach great importance to his occasional lapses from the path of strict rectitude, which usually got himself into deeper trouble than any one else. He was a journalist, and had throughout his life a strong belief in the appetite of the public for "news," though he never had capital enough to turn it to proper account. His faculty of invention was very strongly developed, and we think it is a pity for his friends and admirers not to recognize this fact. Taken seriously, his account of himself would have seemed monstrous. As a "Chevalier," he will be generally regretted.

It is evident that the Rev. Dr. Newman did not take all the tendency to Stalwart political methods with him when he departed from the Methodist Church. Judging by the debate in the General Conference at Philadelphia on Monday, the influence of the parson's example is still felt there. One of the delegates said he regretted that the disposition to employ "methods which find favor in political assemblies" was growing so rapidly in the Church's election of bishops, and alluded to "combinations" which were disturbing the proceedings of the Conference. He was greeted with a loud chorus of "Amens," and was followed by the Rev. Dr. Hatfield, of Rock River, who created a tremendous commotion by charging that the old Methodist custom of the delegates spending hours upon their knees before voting for a bishop had given place to "caucussing, log-rolling, and wire-pulling." He said that a "delegate could hardly get out of a car before he was button-holed and asked to join a combination," and that there was too much of the "you tickle me and I'll tickle you," and too little of genuine piety, in the elections to be good for the Church. The Rev. Dr. Hatfield was finally shut off, but no one seems to have questioned successfully the truth of his charges.

It is very odd that the captain of the *City of Rome* should not have received far severer public censure for his extraordinary conduct in the matter of the supposed wreck of the *State of Florida*. His own story is that he, in command of one of the largest and most powerful steamers afloat, was signalled by a sailing vessel that she had a shipwrecked crew on board, and though the rest of the message was imperfectly made out, it led him to believe that they were the crew and passengers of the *State of Florida*. He took no notice of this, however, and kept on his way, reaching England on the 27th of April. He then learned that the *State of Florida* was over-due, and that there was some anxiety about her. Nevertheless, both he and his officers kept silent about the signal till the *Devon* came in six days later, with two lifeboats of the missing steamer which she had picked up at sea. The captain of the *City of Rome* knew well that at this season of the year the Atlantic steamers are apt to be pretty full; as a matter of fact there were eighty-five passengers on board the *State of Florida* besides the crew. He knew the kind of accommodations an ordinary sailing vessel can supply in our day, both as regards food and quarters, to a large addition to her own crew. He knew that there is no certainty when any sailing vessel will get to port. The one which signalled him might not get in for thirty or forty days. He knew the mortal anxiety which the friends and relatives might suffer in the interval between the arrival of the news of the wreck and the arrival of the rescuing ship. Moreover, he might have run down to the ship and got the full particulars at least, in two or three hours, if he did not bring off the passengers. He, however, kept straight on, caring more for the glory of saving half a day in a quick trip than for the rescue of a hundred people from great suffering and danger. His silence, too, after he reached port seems to indicate that he knew he had been doing something which it would be difficult to defend or excuse. If the racing against time which is now going on across the Atlantic among the great steamship lines is to cause sailors to forget or make light of their primary duty of helping their fellow-men amid the perils of the great deep, owners ought to be admonished that speed is not the only thing which a line needs to earn popularity.

The British Ministry seem to be giving way before the popular sympathy with Gordon and the growing dread of French interference in Egypt. The French have been decidedly emboldened by their success in Tonquin, and are taking a much more decided stand about their interests in Egypt than at the beginning, and of course it would greatly strengthen the Ferry Cabinet to be able to retrieve the terrible mistake of refusing to participate in the original occupation when invited to do so. There is to be a conference in London in the first week in June, called by Great Britain, nominally to settle on some plan of repairing the Egyptian finances, but France insists on its providing for the cessation at a fixed period of the British occupation. This is rousing more or less irritation in England, where there is a strong popular tradition, as old as the conquest of India, that the control, and, if need be, the undivided control, of Egypt must be in British hands. Any appearance of yielding to French dictation about Egypt, therefore, or any withdrawal or agreement to withdraw from Egypt at the French demand, would put the Ministry in a position of considerable peril. Their embarrassment over Gordon grows greater every day. He is clearly shut up in Khartum, and talks of making his escape through Central Africa. The insurrection, too, seems to be spreading down the Nile, and the demand that he shall be relieved grows louder in England. So an expedition begins to be definitely talked of, but it could not take the field under three months, and nobody knows what may happen before then.

The defeat in the Committee of the Reichstag of the bill prolonging the Anti-Socialist Law for two years was caused by a tie, two Ultramontanes voting with the Liberals who opposed it. This looks as if Prince Bismarck had not as yet come to terms with the Clericals. The bill may still, however, be submitted to the Reichstag, and a dissolution is threatened if it should be thrown out there. The Liberal opposition seems to be due mainly to dislike of familiarizing the country and the Government with the protracted use of extraordinary police powers. No one denies that the Socialists are more or less turbulent and dangerous, and probably there would be no difficulty in arming a Liberal minister with ample and extraordinary means of repression, even for a long period; but arming a minister of strongly autocratic views with them is another matter. Bismarck has prosecuted men like Bunsen and Mommsen for mild criticism of him in speeches on the stump during a parliamentary canvass.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 30, to TUESDAY, May 6, 1884, inclusive.]

DOMESTIC.

STATE CONVENTIONS were the political feature of the week. On Wednesday the Republicans of Massachusetts held an enthusiastic meeting in Boston, which was presided over by ex-Governor John D. Long. In the course of his address he made the following notable allusion to the tariff: "Conditions, however, are rapidly changing, and it may be but a very few years, especially in view of the progress already made, before the system of protection will have done its work and may be laid aside. I hope so, for it involves a most perplexing problem, so interwoven with all the other fibres of the national economy that artificiality and lack of simplicity and singleness are its most objectionable features." He, however, opposed the Morrison bill as unwise. On the first ballot Senator Hoar, Henry Cabot Lodge, ex-Governor Long, and ex-Congressman Crapo were elected delegates-at-large to the National Convention. They are for Edmunds and Lincoln as a Presidential ticket.

The Massachusetts Democrats, on the same day at Worcester, passed a resolution that "It is the sense of the Convention that General Butler should be nominated President of the United States at the National Democratic Convention at Chicago." Benj. F. Butler, Josiah G. Abbott, M. J. McCafferty, and James Delaney, were elected delegates-at-large.

The Maine Republican Convention on Wednesday recommended Blaine as a candidate for President. The West Virginia Convention instructed the delegates to vote for Blaine as long as he was in the field. All the California delegates are for Blaine, as are those of Nevada and Iowa. Of the Wisconsin delegates 10 are for Edmunds, 9 for Blaine, 2 for Arthur, and 1 for General Sherman.

The Maryland Republican Convention on Thursday elected delegates-at-large on a platform expressing preference for Blaine. The Minnesota Convention adopted a resolution in favor of Blaine. The Texas delegates are divided principally between Blaine and Arthur. The Rhode Island delegates, it is said, will vote for Blaine on the first ballot. The Colorado delegates are for Blaine. The Oregon delegates are instructed for Blaine. The Utah delegates are instructed for Arthur, and the Wyoming delegates favor him. Kentucky sends Arthur delegates-at-large, as do Washington Territory and Florida.

In Kansas the Republican State Convention expressed a preference for Blaine, and nominated delegates-at-large of a similar opinion.

The anti-Mahone or Straightout Republicans of Virginia met at Richmond on Wednesday. There was a small attendance. The Convention adopted a resolution favoring Blaine and Lincoln, but did not instruct its delegates. They will contest the right to seats in the Chicago Convention with the regular Mahone delegates.

Vermont Republicans, on Wednesday, elected delegates for Edmunds, and instructed them to vote for him as long as his name was before the Convention. The New Hampshire Republicans elected two Edmunds delegates, one for Blaine, and one for Arthur. The Liberals and Republicans of North Carolina have united, and their platform proposes "to abolish the present system of county government; advises the immediate repeal of the internal-revenue laws; and favors such tariff laws as will not foster monopolies, but give all needed protection to American industries and labor."

The House Committee on Post-offices and Post-roads on Wednesday unanimously agreed upon a bill "to secure cheaper telegraphic correspondence." It provides for the prepayment of all telegrams, except Government telegrams, by stamps, and the maximum rate for telegrams of twenty words or less, exclusive of address and signature, when the distance of transmission is 1,500 miles or under, is to be 25 cents; for every 250 miles or fraction thereof in excess of 1,500 miles, an additional rate of 5 cents may be charged. There are other regulations for important cities.

The House of Representatives on Saturday, by a vote of 184 to 13, passed the bill to secure a stricter enforcement of the Anti-Chinese Law.

In the House of Representatives on Tuesday the long tariff debate was brought to a close with speeches by Messrs. Randall (Dem.) and Kasson (Rep.) against the Morrison bill, and Messrs. Blackburn (Dem.) and Morrison (Dem.) in its favor. Mr. Converse (Dem.) then made a motion to strike out the enacting clause (the House being in Committee of the Whole). The motion was carried by 156 to 151. The test yea and nay vote was on the motion to agree with the Committee's report, which was adopted, 159 yeas, 155 nays. Of the 159 votes which defeated the bill, 118 were Republicans and 41 were Democrats. Of the 155 votes cast against the motion to reject the bill, 151 were Democratic and 4 Republican. The four Republicans were Messrs. Nelson, Strait, Wakefield, and Milo White, of Minnesota.

Mr. Van Wyck, on Monday, introduced a bill in the Senate to forbid the ownership by aliens and foreign corporations and companies of a greater quantity of public land than individual citizens of the United States are authorized to enter under the Settlement and Improvement Laws, or to acquire or hold a greater quantity of land in the Territories of the United States than 640 acres.

H. W. Cannon was nominated on Wednesday by the President as Comptroller of the Currency to succeed John J. Knox, resigned. He is thirty-five years of age, and has been a banker for many years. In 1870 he went to St. Paul, Minn., and in 1871 he removed to Stillwater, where he organized the Lumberman's National Bank, and was made Cashier of the bank, a position he has held for nearly thirteen years.

During April the decrease of the United States public debt was $5,232,075.

A sudden termination of the Government's suit against ex Senator William Pitt Kellogg, for receiving compensation while Senator in regard to the Price Star-route contract, was reached on Thursday. A motion was made by the defence on Wednesday to reject Price's testimony, on which the Government had founded their case. Judge Wylie, of the Criminal Court in Washington, in making his decision, referred to the counts of the indictment charging that Kellogg had received $1,500 from Price at different dates, beginning April 19, 1880. If the allegations in the first count were true, that the first payment was on April 19, 1880, it would bring the offence within the three years' limit imposed by the statute of limitations. If Price testified before the Grand Jury as he had done on Wednesday, then the indictment gave the wrong date, for the bribery took place on April 19, 1879, and the prosecution was barred. This was the principal point on which the Court ruled against the prosecution. The jury then rendered a verdict of "Not guilty." A *nolle prosequi* was then entered as to Mr. Price, who was under charge of conspiracy with Thomas J. Brady. This course was taken in fulfilment of a promise that Price would not be prosecuted if he told the truth.

The *Thetis*, of the Greely relief expedition, sailed from Brooklyn Navy-yard for St. Johns, N. F., on Thursday.

In the Assembly on Wednesday, Mr. Howe, from the special committee on the alleged abuses of the Utica Insane Asylum, presented the Committee's report. Mr. Howe said the Committee was convinced that the business affairs of the institution need a thorough revision. He offered a resolution, which was adopted, requesting the Attorney-General, Comptroller and President of the Board of Charities to devise a plan for a reorganization of the business and financial management of the charitable institutions of the State, so that funds may be administered by the Comptroller, and purchases of supplies may be made by some central authority or responsible agency. The report showed that great cruelty and brutality toward patients were exercised by attendants, one of whom was personally responsible for the death of the patient Hughes.

The Assembly Bill to regulate the hours of labor for car conductors and drivers was killed in the State Senate on Wednesday afternoon by a vote of 12 to 15. The bill prohibiting the manufacture of cigars in tenement houses was passed by the Senate, 20 to 2.

Six of Mr. Roosevelt's New York city reform bills were passed in the State Senate on Thursday, with only two or three opposing votes. The Senate on Thursday, by a vote of 12 to 18, refused to disagree with the adverse report on the Five Cent Elevated Fare Bill. On Friday the City Civil-Service Act, with amendments covering the Police and Fire Departments, and striking out the exemption of soldiers, was passed. An amendment extended the bill to all cities of the State.

James R. Keene, the noted speculator, suspended on Wednesday. In explanation of the event Mr. Keene said: "After paying out millions of dollars in cash in the last few months in my efforts to protect my privileges on a falling market, I have finally determined to-day to call a halt in the interest of those with whom I have business." His counsel, Mr. S. L. M. Barlow, said: "It is impossible to tell the exact, or even approximate, extent of Mr. Keene's liabilities. Mr. Keene himself does not know. He has expended $400,000 within the last fortnight to protect his privileges. It took $1,500,000 out of his pocket during the last month to make good his margins, and altogether, during the last six months or thereabouts, he has lost probably $4,000,000 all told in his Wall Street operations."

At about 10 o'clock on Tuesday morning the Marine National Bank, Wall Street, suspended payment. Its capital stock is $400,000. Definite information as to the cause of the failure and the probable results was hard to gain on Tuesday. Soon after the announcement, came rumors of trouble with the firm of Ward & Grant, brokers. The firm is composed of General U. S. Grant and U. S. Grant, jr., Ferdinand Ward, James D. Fish, and W. C. Smith. It is asserted that this firm owed the Marine Bank about $600,000, loaned on certain securities. On Tuesday morning the bank asked for payment, which was refused. Mr. Ward, who is also a director of the bank, was said to have disappeared, and with him the keys of the safe in which all the books and papers of the firm were deposited. Great sympathy is expressed for General Grant, who, it is said, knew nothing of the firm's speculations. The city has a deposit of $1,000,000 in the Marine Bank. It is not thought that the bank will be able to resume payments, and the exact condition of its affairs will not be known until the bank examiner completes his investigations.

A six days' walking match was concluded at the Madison Square Garden in this city on Saturday night, Fitzgerald, an ex-Alderman of Long Island City, being the winner with a score of 610 miles, the largest on record. Rowell, the Englishman, was second with 602 miles.

The General Conference of the Methodist Episcopal Church began its sessions on Thursday morning in Association Hall, Philadelphia. The attendance was very large.

Mrs. C. B. Kilgore, who was refused admission to the bar by the Philadelphia Courts of Common Pleas Nos. 1 and 2, was admitted on Saturday by Court No. 4

Forest fires prevailed throughout Northern and Western Pennsylvania and in parts of New York on Friday and Saturday, burning

a great deal of valuable timber and several villages, and causing some loss of life.

On Saturday news was received from London at the office of the State Line Steamship Company in this city that their vessel, the *State of Florida*, which left New York for Glasgow on April 12, had probably been lost at sea. The ground for the belief was that the steamer *Devon* had picked up at sea on April 27 two life-boats of the *State of Florida*, while the *City of Rome* reported having passed on the same day a sailing vessel which had signalled that she had on board the shipwrecked crew of the *State*— (supposed, therefore, to be the *State of Florida*). The vessel was of 3,155 tons burthen, and was built at Glasgow in 1857. She carried eighty-five passengers, thirty-five of whom were cabin.

The steamship *Alaska* brought to this port on Sunday afternoon the members of the Siamese Embassy, who were received by a delegation of naval officers. They went to Washington on Monday and paid their respects to President Arthur. They will travel around the country for several months.

Prof. Samuel D. Gross, M.D., the eminent surgeon and writer on medical topics, died in Philadelphia on Tuesday, aged seventy-nine. He was for many years professor in the Jefferson Medical College of that city.

FOREIGN.

Lord Dufferin has informed the Porte that the Egyptian conference will be held in London, and that it will be limited to financial affairs. The Porte has not replied to the invitation to join the conference.

Earl Granville, British Foreign Secretary of State, received on Thursday the reply of the French Government to the English proposal for a conference to discuss Egyptian affairs. It is couched in very friendly terms and accepts the conference in principle. It asks, however, for a previous exchange of views between the two Governments upon matters evidently connected with the financial question, which it will therefore be impossible to treat separately. It has been settled that the conference will be held in London, beginning the first week in June.

The London *Post* says it understands that the conditions upon which the French Government will consent to the conference with England upon the Egyptian question are, that England shall give up all idea of annexation and of a protectorate; and that, on the other hand, France shall recognize the services rendered by England in Egypt, and shall acquiesce in the right of England to maintain a military occupation of Egypt until the task of reorganization has been completed. France stipulates that the date of withdrawal of the British troops shall be definitely fixed. France, on her side, pledges herself not to interfere by arms with the affairs of Egypt, recognizing that England alone has the right so to do.

In the House of Commons on Thursday Mr. Gladstone said that the latest advices from Khartum indicated that the city was in no military danger. He was unable to speak in regard to the termination of General Gordon's mission until he received replies to the communications which the Government had addressed to the General. The Egyptian correspondence shows that the Government refused to allow Indian troops to relieve General Gordon, on the ground that India has no direct interest in the Sudan.

Parliamentary documents published in London on Monday contain a despatch from General Gordon, dated Khartum, April 16, to Sir Evelyn Baring, in which he says: "As far as I understand the situation, you state that there is no intention of sending relief here or to Berber. You refuse me Zebehr Pasha. I consider myself free to act according to circumstances. I shall hold on here as long as I can. If I can suppress the rebellion I shall do so; otherwise, I shall retire to the equator and leave you the indelible disgrace of abandoning the garrisons of Sennaar, Kassala, Berber, and Dongola, with the certainty that you will eventually be forced to smash up the Mahdi under great difficulties, if you would retain peace in Egypt." This despatch, when read in the House of Commons, produced an unpleasant impression, and it is believed that it will affect the vote on a pending resolution to censure the Government.

Khartum despatches, of April 21, reported everything safe. Trade, it is asserted, will be carried on with El Mahdi's men in case Khartum is taken. The Greek merchants are already in direct correspondence with El Mahdi with a view to the establishment of regular commerce.

Hussein Pasha was still at Berber on Wednesday, and telegraphed that it was too late to retreat. The town was completely surrounded by rebels.

There were fresh reports of the surrender of Berber in circulation at Cairo on Sunday. Three English officers of the Egyptian army have been ordered to ascend the Nile on May 9th, for the purpose of making a reconnoissance.

Two thousand refugees have reached Assuan from Korosko, and more are coming in daily. Evacuation is proceeding quietly at that place. Refugees who left Khartum before it was invested by El Mahdi are expected at Assuan within a few days.

The debate on the Franchise Bill was resumed in the House of Commons on Thursday night. A motion was made that to increase the electoral privileges of Ireland at the present time is dangerous to the state. Mr. Gladstone opposed it, saying that it was impossible to maintain the union between England and Ireland except by giving equal rights to both countries. The motion was not pressed.

The House of Commons has rejected, by a vote of 149 to 79, the bill licensing crematories. It was opposed by the Government on the ground of public feeling against cremation.

Lord Randolph Churchill has resigned the Chairmanship of the National Conservative Union in London, owing to a violent quarrel with the Marquis of Salisbury over the affairs of the Union. This withdrawal has created a sensation in London. The cause was a bitter disagreement with the Marquis of Salisbury. Lord Randolph Churchill indignantly denies a report that he intends to withdraw from the Conservative party and form a new one.

In consequence of documents found in the possession of James Eagan, the man who has been under arrest at Birmingham for complicity in a dynamite scheme, William MacDonnel, a publican, was arrested in Wednesbury, a town seven miles northwest of Birmingham, on Thursday, and taken to that city. He is charged with being a Fenian District Centre. He will be tried with Daly and Eagan for treason-felony. On Saturday all three were arraigned in the police court, and after some damaging testimony against them had been produced they were remanded for one week.

Fitzgerald and ten other Fenians were arraigned at Sligo, Ireland, on Monday, charged incidentally with being Invincibles, and specifically with the murder of landlords and others.

Michael Davitt has abandoned politics, and will go to Australia and make that country his residence in future. The reason generally assigned is the dispute between Davitt and Parnell as to the nationalization of land scheme.

James Stephens is engaged in Paris upon a work entitled 'A History of Fenianism and the I. R. B.' (Irish Republican Brotherhood), compiled from private diaries and the correspondence between himself and the late Fenian leader, John O'Mahony. The way in which the organization spread in Great Britain, Ireland, and America, and the original constitution of the Brotherhood will be fully explained. An impartial picture of the inner circle up to 1870 will, it is asserted, also be given.

The Oriental Bank of London suspended payment on Friday. On Saturday the bank shares were quoted at a discount of 35 per cent.

The Ceylon Company (Limited), of London, failed on Monday. It owed the Oriental Bank $2,000,000.

Chevalier Henry Wikoff died at Brighton, England, on Friday, at about seventy-four years of age. He has been prominent for half a century in the society of Europe and America. He was born at Philadelphia, and was educated at a Princeton academy, Yale, and Union. He was admitted to the bar in 1834, but the following year began a life of travel with a voyage to Europe. In 1844 he started a paper called the *Republic*, for the advocacy of free trade, in which he sank $70,000. He was the friend of Louis Napoleon, of Lord Palmerston, and a hundred celebrities. In 1880 he came to this city to publish his book, 'Reminiscences of an Idler.'

An additional credit of 40,000,000 francs, to defray the expenses of the Tonquin expedition, will be asked by the French Minister of Marine when the Chamber of Deputies reassembles.

The French Government has requested Señor Zorilla, the Spanish agitator, to leave France, and so avoid expulsion, and he has complied.

The election for members of the Spanish Chamber of Deputies resulted in the choice of 334 Conservatives, including 20 Ultramontanes. Forty two Liberals, supporters of Señor Sagasta; 35 members of the Dynastic Left; 3 Possibilists, including Señor Castelar; 3 Radicals, and 3 Cuban Autonomists were also chosen.

It is asserted in a Vienna newspaper that, owing to the discovery at Moscow of a plot to assassinate the Czar, the festivities designed in honor of the coming of age of the Czar will be held at St. Petersburg.

The Committee on the Bill to prolong the German Anti-Socialist Law has rejected the measure as proposed by the Government. The Reichstag will, however, be called to vote upon it.

Professor Virchow, the eminent scientist, has published a letter, in Berlin, in which he says that trichinosis in Germany caused by eating imported American meat is confined to a few isolated cases at Bremen. Besides this, he points out the dangers connected with the rearing of pigs in general, and urges the compulsory examination of German and imported American pork.

The marriage of Princess Victoria of Hesse to Prince Louis of Battenberg took place at Darmstadt on Wednesday. Queen Victoria, the grandmother of the bride, the Prince and Princess Imperial of Germany, and the Prince and Princess of Wales were present.

The ex-Empress Anna, widow of Ferdinand I of Austria, and aunt of the present Emperor, is dead, aged eighty-one. The ex-Empress was the third daughter of King Victor Emmanuel I., of Sardinia.

Three dynamite cartridges were found on Wednesday at Toronto under the Parliament buildings, two at the eastern and one at the western end. Wires were attached and preparations had been made for attaching the fuse. The discovery created considerable excitement, and additional guards were immediately placed at the building. It was at first supposed to be a Fenian plot, but afterward that it was probably a joke or trick on the part of some one who wanted to be appointed a police officer.

Another insurgent band, headed by Chief Varona, has appeared in Cuba. The civil guards have had an encounter with it, in which the rebels were defeated.

THE PARTIES AND THE PRESS.

THE following letter comes from a well-known Southern politician:

TO THE EDITOR OF THE NATION:

SIR: Can you explain a mystery that puzzles me? Half the nation believe that our revenue should be so raised as to protect, encourage, and maintain American manufactures. With this half agree Blaine, Arthur, Logan, Edmunds, and substantially the whole Republican party. The other half believe that the tariff is primarily solely for revenue, with just such protection as incidentally must arise from any tariff whatever. With this half agree Bayard, McDonald, Morrison, Carlisle, and all the Democratic leaders, and substantially the whole party. This is really the line of demarcation between the parties. Now, please explain to me why it is that no Republican journal (as for instance, the *Nation*, New York *Times*, New York *Herald*, Chicago *Tribune*) ever proposes boldly to support the party which it believes to be right, and oppose the party it believes to be wrong, upon that which must be for years to come the question of questions, dominating and controlling all others? Is there any country in the world, save ours, in which such a thing as a failure on the part of representative journals to support the party which advocates their views, is possible? Why is this so with us? Are Carlisle, Bayard, McDonald, and Morrison disloyal to the Union, or ever likely in any event to be so? An answer will oblige C.

JACKSON, MISS., April 21, 1884.

The answer is easy enough. In the first place we think few Republicans would admit our correspondent's statement of the facts to be correct. Few, for instance, would accept the statement that the half of the nation which believes in a tariff for revenue only, is to be found in the Democratic party, and the half which believes in a tariff for protection, is to be found in the Republican party. The lines which divide people on the tariff question are, indeed, notoriously not coincident with the party lines. There are both Democratic protectionists and free-traders, and Republican protectionists and free-traders.

Granting, however, that the Democratic party contains more revenue reformers than the Republican party, the question remains whether it contains enough to make it possible to consider it even in a rough way the party of revenue reform. This, too, must be answered in the negative. The Democratic party has never since the war ventured to take the field, either through its platforms, its stump, or its legislation, as a party of free trade or low duties. The feeble attempt it made to do so in 1880 was abandoned before the canvass was half over. Consequently no Republican who considered the tariff the most important question of the day has been able, since 1861, to feel sure, if he gave in his adhesion to the Democrats, on the approach of any electoral contest, that he would not find himself thrown ignominiously into the ditch before it was over, and left to find his way back to his own party in the wretched character of an undeceived renegade.

The attempt the Democrats are now making may be more sustained and more successful, but confidence is, of course, a plant of slow growth. A considerable portion of the party evidently wishes it to fail, and is afraid to go into the Presidential campaign on the tariff issue. They may yet succeed in depriving the Morrison bill of all its valuable features. No party can earn a character for sincerity on any subject in six months. Most Republican free-traders will be disposed to wait until the Democrats have boldly fought out a Presidential contest on the tariff issue, and lost in it, before throwing in their fortunes with them, even if free trade were what they considered the gravest question in the politics of the day.

This brings us to what is perhaps the most important point of all. The number of those Republicans who consider free trade and revenue reform so serious a question of the day as to make others by comparison of little moment, is very small. Most of them seek from the party they put or keep in power that kind of soundness which, in an individual, would be described by the term good character; that is, they want to be sure that it gets its impulse and direction from the more intelligent, industrious, thrifty, orderly, and in the best sense of the word conservative portion of the community—the portion which finds its political satisfaction mainly in seeing the laws faithfully executed, the public moneys honestly collected and spent, the fruits of honest labor secured to the owner, and peace maintained with the outer world. To this class the Democrats have, during the last quarter of a century, offered little inducement to join them. They had a great chance on the question of civil-service reform, which has taken such a strong hold of the public mind, but they deliberately put it aside. To have taken hold of this after the war, and made it a sort of support for the attacks on the corruption of the Republican party, would, as far as one can see, have been a most successful stroke of policy, especially if linked with an effort to put the currency on a sound footing. Far from taking hold of it, however, the Democrats not only allowed the Republicans to start the reform movement, of the strength of which the recent legislation in this State is such a striking proof, but since its inception have mainly occupied themselves in obstructing and ridiculing it. The credit they might have got from Mr. Pendleton's share in it, they have deliberately refused by repudiating him and trying to exclude him from public life.

In fact, the only thing they have offered revenue reformers as an inducement to join them has been "harmony," as if harmony were in itself a supreme political good. But, of course, nobody can be tempted by harmony without asking what the harmony is about. Harmony in itself, meaning the absence of discord, is of no more value in politics than music. When anybody asks what Democratic harmony means, the answer has always to be, a general agreement that it would be nice to get the offices away from the Republicans, and divide them, without reference to the public interest, among the Democratic politicians. To this kind of harmony, however, almost everybody who cares for good government in these times prefers discord, and discord is now what all Democrats who love their party ought to try for. The road to success lies through it.

THE "STRENGTH" MARKET.

Harper's Weekly, in recently condemning the boss system of instructing delegates to vote for a particular candidate at the Convention, said:

"The foolish practice of instructions to delegates has been generally, though not universally, abandoned by the conventions of this year. It is a practice which converts a representative with discretion into a mere instrument, and it is absurd, because local conventions may as well announce their will and their number of votes for candidates as send thirty, or forty, or fifty, or seventy men to a distant city, at great expense and inconvenience, to do the very same thing."

The practice is, however, not by any means so absurd as it seems. It would not serve the purpose of those who uphold it just as well to announce their will and the number of their votes as to send forty or fifty or seventy men to a distant city. They do not send the instructed delegates simply to vote. They send them to make bargains, and "deals," and "trades," and this could not be done by letter. In fact, to the friends of instructions the convention is not simply a place of nomination, but a market in which "strength" is bought and sold. The instructed delegates are not bound to hold out for their candidate indefinitely. As soon as they perceive that there is no reasonable chance of nominating him, it becomes their duty to sell his "strength," or, in other words, to find out who among the other candidates, whose prospects still are good, will give most for their votes in the shape of office or patronage for their own man. This accounts for the lively interest which instructed delegates retain in the work of nomination long after their own chance of success has passed away.

The candidate at the coming Convention who will have most strength to sell will probably be Mr. Blaine, and his brokers will enjoy the great advantage of being long forewarned that the best they can do is to make a "deal." To have to offer strength for sale suddenly, after having previously expected to find a better use for it, is of course always disadvantageous. Mr. Blaine's delegates will go to Chicago knowing exactly what their business on hand is, so that they will waste no time. What he would like to trade for is very well known. One of his pet fancies is that he would make a brilliant Secretary of State, and probably any candidate whose chances are good can have his "strength" for a promise of the State Department. It is surmised, according to the Boston *Herald*, that either General Sherman or General Harrison would give it to him, but that Edmunds, Arthur, Gresham, or Lincoln would not. The *Herald* adds "that this is a matter which should be inquired into by delegates who think Blaine's influence in the Cabinet would be pernicious." It certainly is. There will, of course, be many delegates at the Convention who will oppose his nomination simply because they think he cannot be elected, and these may think that he would make a good Secretary of State. But no delegate who thinks him unfit to be President can help thinking him eminently unfit to be put in charge of our foreign affairs. It will, therefore, be undoubtedly the duty of all such delegates to find out if they can whether, in voting for any candidate, they are voting to put Blaine in that department of the Government in which he can do most mischief in the shortest space of time.

That he has by no means abandoned the hope of being able to make trouble with foreign nations was revealed by an observation in the letter which his mouthpiece, Mr. William Walter Phelps, recently wrote in his defence. Mr. Phelps said, that as to the Blaine foreign policy, "however much some Eastern journals may criticise, it is popular with a large majority of the American people." That Blaine thinks so still there is no doubt. Garfield's death, he feels, put a sudden and unfortunate stop to a series of rows with foreign Powers, which he was industriously getting up, and which would have covered him with glory. Like all politicians of his type in every country in the world—the flashy, unscrupulous, conviction-less type to which Disraeli and Louis Napoleon belonged—his idea of "brilliancy" in administration is the absorption of the public attention in foreign complications, to the neglect of home affairs, and the general promotion of financial looseness, so as to give plenty of chances to the class of enterprising political adventurers. If Garfield had lived, Blaine would probably have made so much trouble that he would have by the end of four years been permanently excluded from the political arena, or "ordered off the course," like the jockeys and betting men who indulge in sharp practice or get up scrimmages at race meetings.

It would be most unfortunate now if he should get another chance. Our relations, both political and commercial, with the South American Republics are doubtless capable of much improvement. We ought, too, doubtless to have some definite understanding with Great Britain and all European Powers about the piercing of the Isthmus. But the very last man in American public life to be intrusted with the transaction of any such business is Mr. Blaine. He not only is wanting in the kind of knowledge necessary for any such work, but the unsteady, sensational character of his mind, and his devouring egotism and ambition, make him now unfit for any work but that of electioneering. He cannot put pen to paper without producing a "campaign document." The very same reason which makes so many people opposed to all attempts, however moderate, to change the tariff, ought to exclude him from all share in the National Administration. He is essentially, by temperament and character, a disturber of business in all cases in which his operations are visible above the surface. The larger our population grows, and the greater the volume of our invested capital, the more delicate does the machinery of our trade and finance become, and the more necessary is it that our foreign affairs should be in the hands of cool, sensible, clear-headed men, who are more concerned about the fortunes of their country than about their own. Of these we luckily have plenty both in public and private life.

BOOM MORALITY.

A Stern Moralist, armed with power, would, we think, at this stage, call together the newspaper members of the Blaine boom, including Mr. William Walter Phelps, and address them somewhat in this fashion:

"Inasmuch, dear friends, as the charges against your candidate for the Presidency, which you are fighting so manfully, and which you are afraid will damage him, are not that he bought railroad bonds, but that he has been corrupt, tricky, unscrupulous, and evasive, don't you think your manner of defending him is likely to aggravate any unfavorable impression about him which the public has already formed? For instance, I notice that you have published with much horn-blowing Mr. Phelps's 'complete answer' to the *Nation;* but although I have watched your columns closely, I have not yet seen in them a line of the *Nation's* original accusation or of its reply to Mr. Phelps. If you went before a jury, you know the accusation would be heard first, then the answer, and then the reply, and you would be laughed out of court if you asked to have nothing submitted but the answer. What makes this the more remarkable is, that the *Nation's* reply contained Mr. Blaine's own letters, on which the case against him rests. The mere inspection of these ought, on your theory of the affair, to knock the *Nation's* accusations into flinders. Why then, brethren, do you not print them in their order, and, if you do not like the *Nation's* comments on them, insert some of your own?

"I know of course that your object in this concealment and evasion is to humbug somebody; but whom can it be? You are of course not straining your consciences for the benefit of the regular Blaine devotees. They do not need any vindication, because no accusation would produce the slightest impression on them. The people you are trying to convince must be the Independents, and the friends of other candidates. Do you seriously suppose that any of these who still feel any curiosity about the character of your Knight are going to rest satisfied with the Phelps letter and your flatulent applause? Of course they read the other side of the case, as presented by the *Nation* and other journals. What conclusion, then, do you think they draw from your reserves and exclusions? What inference does the world draw, brethren, about anybody who hides the accusation against him before he asks you to hear his defence? Could you get an old suit of clothes in that way from a charitable widow, not to speak of 'a nomination on the first ballot' from the Republican party?

"Would that I could dismiss you, dear friends, with these few and imperfect remarks. But there are one or two more of your capers which fill me with alarm for your temporal and eternal future, and about which I must say something. As you know, our ingenuous young friend here, Mr. Phelps, has been trying to show that Mr. Edmunds, in buying the bonds of a railroad which had three months previously benefited by Congressional legislation, did precisely the same thing as Mr. Blaine did in the Little Rock and Fort Smith case, for which he has been attacked. 'The cases were so analogous,' says our candid young friend, 'in all essential particulars, that it seemed proper to group them.' 'Mr. Edmunds,' reëchoes the *Tribune*, 'went just as far as Mr. Blaine and *no further*—made exactly the same sort of investment, after the same sort of action in Congress, within the same interval of time, *on the same terms.*' Brethren, this is dreadful. You know as well as I do, looking at the matter even from a low worldly point of view, that in lying, as in other things, safety lies in moderation. In this case your excess brings more trouble on your protégé, Mr. Blaine, for don't you remember that he, on the 25th of April, 1869, denied in Congress, in the most solemn and formal manner, that the Little Rock and Fort Smith Railroad was indebted to Congress for anything, and asserted that it derived 'its life, franchise, and value *wholly* from the State, and *not in any sense* from Congress'? So that either you are making Mr. Edmunds go much further than Mr. Blaine, and indeed do something which Mr. Blaine did not do, or else you are announcing to the world that your own candidate was guilty of deliberate and conspicuous falsehood. You didn't think of this when you were writing your letters and your articles? Well, but you ought to have thought of it. In the business in which you are now engaged, nothing is so important to you as a good memory. You ought, in fact, to block out your work together, agree on your story, and see exactly where it will land you, before you begin writing.

"But this, dear friends, is not all that troubles me about you. You have in your haste omitted one defence of Mr. Blaine, which, if it had no other merit, would have had the merit of truthfulness. You might have said that he never made any investment at all in the Little Rock and Fort Smith bonds, and in this way you could have proved triumphantly that he was not only as pure as Mr. Edmunds, but far purer. For there is not a particle of evidence, either in his letters or in the testimony before the Judiciary Committee, to show that he ever put one cent into the securities of the road. Warren Fisher swore he never sold him any bonds at all. In fact, all the securities he got he seems to have earned as commissions on sales. They were, in short, you might have said, the product of honest toil, unlike Mr. Edmunds's Burlington and Missouri bonds, which were simply purchased in the market for cash. I mention this by way of showing that if you would read the Mulligan letters and the testimony, you would not only avoid some damaging errors and inconsistencies, but often stumble on truths which you might turn to account. It is not unnatural that you should dislike reading them, but they ought in your present undertaking to be a sort of *vade mecum* for you. They contain everything that is of importance for you to know to make you successful as apologists, even if they do not wholly save you from sin and absurdity."

THE FALL OF PRICES.

All the leading European economists have been discussing during the last two months the cause of the widely extended fall in the price of commodities. The silver men, led by M. Laveleye, the Belgian, of course find it in the scarcity of money, owing to the repudiation of silver by the leading commercial countries. But this theory really finds little acceptance, and excites but little attention, outside the ranks of the small knot of zealots who have during the last few years made silver their hobby. Mr. Robert Giffen, the

Chief of the Statistical Department of the Board of Trade in England, has published an address, in which he shows that a considerable reduction has taken place in all the necessaries of life in England within the last forty years, except butchers' meat. In support and illustration of his thesis, he produces a table given him by the treasurer of St. George's Hospital in London, showing that the cost of everything needed by the patients, except meat and service, has greatly diminished within the last fifty years. M. Leroy-Beaulieu and other writers show that the same tendency to lower prices for all the necessaries appears on the Continent and has existed for many years, although just now a little more marked than heretofore. He, however, dismisses the silver explanation as "mystical," and maintains that in the presence of other powerful agencies which we see at work, there is no need of it. He ascribes the fall of prices, in fact, to four great and plainly efficient causes, the activity of which is not only not declining, but is likely to increase for a good while to come. The first is the opening and development both of new countries and of old countries formerly productive but since then relapsed into barbarism; second, the reduction in cost and increase in rapidity of transportation, combined with the lowering of custom-house tariffs; third, the increasing abundance of capital throughout the civilized world, and its increasing tendency to flow into the more backward countries; and fourth, the incessant improvements in machinery. These four causes, he says truly, are permanent, and will probably increase in power. In other words, the present period of industrial depression will probably soon pass away, but the high prices will not come back. Business will have to adapt itself to low prices.

M. Leroy-Beaulieu proves his case as against the bi-metallists by asking why, for instance, we should ascribe the fall in the price of grain to scarcity of money, when the increased production in America, in India, in Australia, and in Chili, and the great reduction in freight furnish so easy an explanation of it. So also as regards sugar, the enormous increase in the production in Germany, in Austria, and in France is sufficient to account for the fall in that. The fall in coffee, in petroleum, in cotton, in wool, in iron and steel, may all be accounted for in the same way. But things which are not capable of rapid multiplication, or of increased economy in production, and which cannot be made the subjects of international competition, such as houses, domestic servants, theatres and other amusements, diamonds, bric-à-brac, and the like, have not fallen, but have risen in price—a fact which seems to make the demonstration complete.

Turning to his own country more exclusively, M. Leroy-Beaulieu shows, as Mr. Giffen has shown in his paper on the cost of living in England, that the working classes have steadily profited by this fall. The statistics show that from 1866 to 1881 the consumption per head of population in the city of Paris of such articles as wine, bread, butchers' meat, poultry, fish, butter, eggs, and cheese has steadily, and in some of them enormously, increased, except butter, which has fallen off, and poultry and game, which have remained stationary. Clothing and furniture have also fallen, and, in fact, nearly everything except house rent. But high rents, in the face of considerable building, are in themselves a proof that other things are cheap, and that the competition for comfortable dwellings is great.

All this means, of course, that the future is increasingly dark for socialistic agitators. The probabilities are that we have entered on a period in which the population will fall far shorter than ever before of pressing not only on the means of subsistence, but on the means of very comfortable subsistence. The fall of prices means, in short, a superabundance of the fruits of labor such as the race has never before witnessed, and never until lately dreamed of—or, in other words, a state of things in which poverty will mean more distinctly than ever either laziness, or incapacity, or physical disability.

WOMEN AT THE BAR.

THE struggle of Mrs. Carrie B. Kilgore for admission to the bar has finally ended in a rather curious victory. She has for two years been going about from one court to another with a diploma as bachelor of laws, granted her by the University of Pennsylvania, insisting that the laws of that State give her the right to admission. These statutes, like those of most other States, say nothing about the sex of lawyers, and only require that the applicant should be "of an honest disposition and learned in the law." Judges, however, have hitherto been unanimous, or nearly so, in the opinion that the uniform practice and custom of the modern world in confining the practice of the law to men ought to govern in the interpretation of such statutes, and that the only proper way to change the custom is by an act of the Legislature. Three separate courts in Philadelphia have taken this view, and if there was any doubt as to its correctness a very slight examination of the opinion of Judge Thayer, who has finally admitted Mrs. Kilgore, would be enough to remove it.

He disposes of the numerous decisions with regard to the proper interpretation of the statutes by declaring that he does not see how a custom can arise out of a "mere negation," which is certainly a funny way for a judge to overrule his brethren on the bench; he then "declines to enter into a controversy on the subject of women's rights," and finally decides the case on the following grounds: First, that "if there is any longer any such thing as what old-fashioned philosophers and essayists used to call the sphere of woman, it must now be admitted to be a sphere with an infinite and indeterminable radius"; that she is "found in all the pursuits and professions of life"; that persons who talk of her admission to these with apprehension as of "an impending social change," are asleep, and ought to "awake from their slumbers" and recognize the fact that "the revolution is over"; and finally, that it would not be in the line of a "wise judicial discretion" to attempt to "turn backward the Wheel of Time to convince history that it is all wrong, and to say at this time of day that woman shall not be permitted to pursue the vocation that suits her taste, and for which her studies have qualified her."

It will be seen that what Judge Thayer has really done is, not indeed to go into a discussion of woman's right to admission to the bar, but to assume that it is all settled, and that the customs of modern society allow her to engage in any calling she may like. If this is a correct view, the statutes relating to admission to the bar must be interpreted in the light of these customs, and by this means we reach the necessary conclusion that Judge Thayer is right and the other judges wrong.

The male bar as yet shows very little disposition to interest itself in the agitation for the admission of woman, and this is, we believe, generally due to a belief that women will never be able to enter into competition with them as lawyers. But is this clear? The "law business" in this country is in a very curious state, and there seems to be a demand on it for every species of man—for the learned and ignorant, the lazy and energetic, the bright and the stupid, the scrupulous and dishonest, the truthful and the mendacious. Many of these qualities are found among women, and in certain branches of practice, especially jury practice, the effect of a speech by a leading female counsel might be powerful. It is said to be the custom of some attorneys in New York to retain special counsel solely on the ground that they are likely to be opposed to other counsel of a browbeating turn, whose wrath they do not fear. Pitting a very talkative woman against a loud, bullying lawyer would make such a lawsuit a very "even thing." She would not dread him—a woman, when her blood is up, fears no one; and his scorn would only stimulate her to renewed efforts. In "woman cases" it has long been the custom of all eminent lawyers to make use of the woman in the case as far as possible, bringing her into court, melted in tears, or shaking with suppressed sobs, so as to move the soft-hearted jurymen. This machinery might be greatly reinforced by the aid of a lady counsel, ready to take her erring sister by the hand and make a final appeal to the jury on behalf of "all the hearts that would ache" if they should hang her.

The fact is generally overlooked by those who insist on woman's admission to the bar, that it seems to involve, as a necessary consequence, her being enrolled for jury duty. It would, in fact, be much easier to show to the satisfaction of a court that a woman is fit to perform jury duty than that she can stand the tremendous strain that advocacy sometimes entails. She would merely have to sit a few days out of the year, in a perfectly comfortable chair, and then consult with her fellow-jurors, and put pieces of paper with "Yes" or "No," "Guilty" or "Not guilty," into a hat or bonnet. There is no question that she is as able to sit for a few days in court as a man, for she frequently sits there for days together; and jury duty, as every one knows, requires no special training or qualification of any kind. The enforced silence might be a hardship, but then she would make up for this by magnificent opportunities for simultaneous conversation and argument in the jury-room. If woman's sphere has an infinite and indeterminable radius, it must include jury service. Indeed, it seems to us that really high-minded women ought to ask for jury duty. To

debar woman any longer from it (training her as it would for public life and the use of the ballot) must be wrong, at least if she is going to practise at the bar. Man would gladly yield a great part of this useful field to her.

A TERCENTENARY UNIVERSITY FESTIVAL IN SCOTLAND.

LONDON, April 25.

THE Scotch have just been holding a celebration of a kind which neither Scotland nor England has ever seen before, and which is sufficiently remarkable in itself, as well as exceptional in Britain, to deserve the notice of American readers. The University of Edinburgh, which, although she is the youngest, is the largest and most famous of the four Universities of Scotland, has been commemorating the three-hundredth anniversary of her foundation by a gathering of distinguished men from all parts of Europe, and, indeed, of the civilized world. Anniversary celebrations are a comparatively new thing in Great Britain, much less frequent than either on the Continent of Europe or in America; and they have been supposed not to suit the genius or habits of the English people, whose notions of a ceremonial occasion scarcely go beyond a heavy dinner, with long speeches. There have been no University ter- or sexcentenaries in England for another reason: that the two old Universities of Oxford and Cambridge grew up gradually, and do not know the date of their birth; while of the three recent Universities, one (Durham) is insignificant, another (that at Manchester) is but four years old, and the last (that of London) is only an examining board.

Scotland, where she differs from England, generally differs in being more like the rest of Europe than England is, and this character comes out in nothing more clearly than in her Universities. The three great ones—Glasgow, Aberdeen, and Edinburgh—following the order of their date, are all placed in large cities, and have been associated with the daily life of the people in a way which was impossible to Oxford and Cambridge, where the towns are relatively small. Their students find their own quarters in lodgings wherever they please, while the great majority are, in Oxford and Cambridge, gathered into colleges in which a sort of semi-domestic life goes on. The instruction is given by University professors to large classes—classes sometimes three or four hundred in number; whereas in Oxford and Cambridge the main part still, and until lately the whole, of the teaching was supplied by the colleges through their tutors and lecturers. The students in the professional branches, such as theology, law, and medicine, but especially medicine, form a very large part of the total number in attendance, and employ a great many professors; whereas in Oxford and Cambridge professional schools barely exist, and are served by but a few teachers, nineteen-twentieths of the students seeking only to obtain instruction or degrees in arts. Education is cheap in the Scotch Universities, and still dear in those of England; and while the former have been long since freely open to students of any or no religious creed, the latter were till very recently restricted to members of the Established Episcopalian Church. Hence the Scotch Universities have had a practical and popular character which their wealthier, older, and statelier English sisters lacked, and have far more faithfully followed and reflected the tastes of the nation, and the tendencies as well as the needs of the time. The Scotch, moreover, have for the last three or four centuries cared more about education than the English. The typical Scottish youth has been poor, studious, industrious, ambitious; he has relied on his education to make his way in life, and he has gained so much by the cheapness and practical quality of his University teaching, that the whole nation has felt how largely its Universities have contributed to the position which this rugged little country has won in the world. All this made not only the city of Edinburgh, but Scotland at large, take an interest in the present celebration which England would not have taken in any similar commemoration at Oxford or Cambridge, and which surprised those Englishmen who came to assist at it.

The festivities extended over four days, and included a banquet, with speeches too many and too long; several receptions, a religious service, a meeting of the students, entertainments by public bodies, a torchlight procession, a solemn University meeting, in which delegates presented congratulatory messages and honorary degrees were conferred. As usually happens, the organizers tried to compress too many occasions of meeting into each day, and too many persons into one room. People parted a little fatigued, and having had, after all, no leisure to exchange ideas with those followers of their own studies whom they had chiefly desired to see. Nevertheless, there were at least three gatherings of rare and remarkable interest—the religious service, the conferring of degrees, and the students' meeting. The Scottish Universities, although all lay offices in them are now open to persons of all religious denominations, are substantially Presbyterian, not so much because the theological faculty is connected with the Established Presbyterian Church, as because the immense majority of the students, as of the Scotch people generally, belong to some one of the three great Presbyterian communions which divide Scotland. Now, Presbyterianism is a form of faith which does not readily lend itself to ceremonies or displays of any kind. It is as plain as plain can be, and, until this generation, used to pride itself upon its plainness, which was regarded as a relic and evidence of primitive Christian simplicity. No instrumental music; long extempore prayers; sermons delivered without notes; no architectural beauty—these were, during the last and earlier part of this century, the glories of Scotch Calvinism. Things have changed fast of late years. On this occasion the commemoration service was held in the ancient Church of St. Giles, in the High Street of Edinburgh, a little below that famous rock stronghold fortified by the Northumbrian King Edwin, under whose shadow the capital of Scotland has grown up. It was the cathedral church of the see in Roman Catholic days, and has now, after having been long deformed by ugly erections, and even partitioned off into three churches, been restored to its pristine beauty at an enormous cost. The service was conducted according to a printed form of prayer; the organ discoursed classical music; the choir chanted the *Te Deum*, probably never heard before in a Presbyterian church. As the long University procession, headed by the Chancellor, Rector, and Principal, each in gorgeous robes of office, with the graduates, the representatives of other Universities, the other distinguished visitors, and several of the Judges of the Court of Session and peers of Parliament, all wearing some academic or official dress, moved slowly up the aisle, to the places prepared for them, the spectacle was one which evidently delighted the Presbyterian congregation as much as it would have horrified their grandparents sixty years ago.

The meeting on the day following, when the delegates from other Universities were received by the Chancellor and Rector, in the presence of an immense throng, and presented the congratulatory addresses which these bodies had sent by them to the University of Edinburgh, was even more striking. More than forty Universities, and nearly as many other learned bodies, were represented, including not only the great schools of the United Kingdom, France, Germany, Italy, and the Low Countries, but also of Scandinavia, Russia, Hungary, Spain, the United States and Canada, Chili and Brazil, India, New Zealand, Australia, and Japan. After these addresses had been handed in, more than one hundred and twenty persons of eminence were successively presented for honorary degrees—persons among whom there were more names of European fame than were perhaps ever gathered together before in one room. Among the Frenchmen and Belgians there appeared Pasteur, Caro, Pressensé, Ferdinand de Lesseps, Émile de Laveleye; among Germans, Helmholtz and Virchow; among Russians, Martens; among Italians, Aurelio Saffi, once triumvir of Rome, and Pasquale Villari. From the English-speaking countries also there came many distinguished figures, perhaps the warmest welcomes of applause being given to Mr. James Russell Lowell and Mr. Robert Browning. Tennyson and Ranke, being unable to attend, received degrees *in absentia*. The sight of the faces of so many men whose books and fame they knew, roused the students to an enthusiasm unusual even in Scotland, whose youth are more demonstrative than the English; and the impressiveness of the scene was enhanced by the extraordinary variety of dresses, academical and official, in which the visitors were arrayed. All the colors of the rainbow were displayed in the gowns and hoods, while the Russian delegates wore a gorgeous semi-military uniform, the representatives of the French Academy their green palm-embroidered coats, and other Frenchmen strange costumes of the days of the First Empire. Even more interesting was the meeting at which the students, who had created from among themselves a representative council to make arrangements, invited some of the most distinguished guests to address them: Virchow, Pasteur, Lesseps, Laveleye spoke in German and French respectively; Helmholtz, Saffi, and the Dutch poet and theologian Beets ventured into English. Mr. Lowell gave a short address, and Robert Browning, who is usually most unwilling to make any public appearance, was compelled by the shouts of the meeting to break his silence and respond to their fervent greetings. Perhaps the most important of the speeches was that in which Virchow criticised the Darwinian theory, and defined his own position towards it; and though it was more a lecture than a speech, it interested those who could follow it as a specimen of the style in which an eloquent German professor can light up difficult subjects by the force of his oratory.

Out of the many reflections which the festival seemed to suggest to the English visitors, I will mention a few only. The most obvious was the popular and national character of the whole celebration. The University, instead of being a possession of the upper classes and the Established Church, like Cambridge or Oxford, was evidently the creation and the minister of the whole people, pervaded by that feeling of nationality which is still so strong in Scotland. The townsfolk of Edinburgh seemed to feel it to belong as much to them as to the professors. This might, perhaps, have been observed in Scandinavia or in Germany no less. But there was also a sort of religious character about the occasion which it would have wanted in Germany, and which excited the admiration of the Italian Saffi, who sadly contrasted the friendliness of all sects and classes with the bitterness which in

Catholic countries separated the clerical party from the leading spirits of the Universities. Yet so far from theology or even letters holding the foremost place at the celebration, it was chiefly natural science that was glorified, and the scientific men who bore away the palm of applause and curiosity. Edinburgh has been latterly, above all things, a great school of medicine, and this has given a scientific turn to the tastes of its students, and made physicists and physiologists their chief heroes. Philology, theology, law, and economics were represented among the visitors by very few names so eminent as those of the scientific men, nor did these literary names appear to be quite as familiar to the audiences. Lastly, it was impossible not to be struck by the fact that the Continental visitors seemed far more at home in Scotland and a Scotch university than they would have been in England. Scotland, although she lies remote among her northern seas, is much more truly a part of the general European commonwealth than England is. She has not so many peculiar institutions and habits of thought, and when her children travel or settle abroad they adapt themselves far more readily to the habits, and sooner enter into the ideas, of a foreign people.

Y.

BISMARCK'S STRUGGLE WITH THE REICHSTAG.

BERLIN, April 21.

IT is rather difficult to characterize our present political situation. To express it in a few words, it means that Prince Bismarck is desirous of a conflict, and strains every nerve to bring it about. One sinister rumor after another is afloat, one stupid statement follows another, and, moreover, there are plenty of people—the Merchants' Exchange at the head of them—who believe in all this nonsense detailed in the newspapers every morning. The consequence, of course, is a general bewilderment and confusion.

Like the Uhlans, who, during the last war, raised as much dust as they could, in order to conceal the real position and direction of the main body of the army, the reptiles of our press are ordered to publish dozens of conflicting reports for the sole purpose of hiding the real aims of the powerful Chancellor. Public opinion is so demoralized that it blindly accepts his dictates, even adoring them and bowing to them as destiny or fate. It is as if the "ruere in servitium" of Tiberian Rome were to find a parallel with us. The newspapers speak of his brother ministers as if they were his subordinates, and call them either *personas gratas* or *ingratas*. The other day, when Bismarck rode through the Thiergarten, I myself saw ladies and gentlemen facing about and saluting him like the old Emperor. A few years ago he was simply called by his family name; now men of standing and independent position speak of him as "His Highness," or "the Prince," or even "He." People whom he occasionally accosts on his way seldom fail to report the great event to the newspapers, and find a welcome in their columns. A prominent political writer conceived the idea of classifying the criminal prosecutions of offences against Bismarck. He stopped short, however, in his work when he found out that these prosecutions were all instituted according to four printed blanks drawn up by Bismarck, and that although numbering about 400, they were all alike, and consequently would have wearied the reader. The future historian of the nineteenth century will call its latter half the Napoleonic-Bismarckian era. Both men, Louis and the Chancellor, it will be said, worked with the same means for the same end; both tried to subject the world to their arbitrary rule by appealing to the lowest passions of men, and they attained their object by temporary expedients. They played with men like chess pieces, destroying any political harmony and party if not exactly serving their ends, in order to rule alone and supreme. There is no noble trait in their policy, and even Bismarck's great past services and grand merits are overshadowed by his arbitrary will and autocratic rule.

He is at present looking out for a good pretext for dissolving the Reichstag. An eminently practical man, with a rare intuition, he strikes a vein which promises him sure success. He demoralizes his political antagonists before the battle commences, and thus the more easily defeats them. No better pretext could he have found than the prolongation of the exceptional law against the Social Democrats. "Look at the venerable old Emperor," the Sentimentalists of all shades and the doughfaces in politics continually repeat, "who has deserved so nobly of his country, and who will be exposed again to the murderous attempts of the Socialists if the Liberals do not vote for Bismarck's measure. Out of party spite the Opposition is ready to sacrifice the most valuable life in the whole country." Such nonsense has the desired effect, and Bismarck fructifies it by declaring that he will dissolve the Reichstag if it does not vote unconditionally for the prolongation of the law. The Conservatives are willing to do so; the National Liberals, reduced to only forty members, have already been frightened into the humblest submission. The new Liberals are not yet and will not be unanimous in their vote, and only a majority of them will reject the measure. The smaller fractions, as, the Social Democrats, the Poles, the People's party, and the Alsatians, will, of course, likewise oppose the bill. Of the Liberals, the historian Mommsen wants to have it limited and amended instead of doing away with it without any restriction; but even he is willing to vote for the prolongation, as in so momentous a question as the dissolution of the Reichstag it does not suffice to be right: one should have the full appearance of being in the right. So he considers the continuation of the exceptional state of things as the lesser of two evils. No doubt other independent and conscientious members, from strategical points of view, will arrive at the same conclusion, but in my opinion they are mistaken. If the majority of the Reichstag follow the views and advice of Professor Mommsen, Bismarck in a very short time, after having been baffled in his present plan, will come out with a new scheme, and make his humiliated opponents swallow a still bitterer pill. He has no time to lose. Having failed to create anything new or stable in the field of social legislation, he must, with his restless mind, turn to extraordinary measures, to economic sorcery and miracles.

The men who have been and are working with him do not believe any more in good results emanating from wrong principles. The final decision, however, of the pending Anti-Socialistic Bill depends on the Centre, which at present, in order to get more concessions from the Government, fights it more bitterly than ever before. But in the present instance Bismarck does not care for the support of the Ultramontanes. On the contrary, he will be glad to be opposed by them, for if they vote for him, the bill in all probability will be carried, and that is exactly the thing which the Chancellor does not want, as he will not be able to find a more suitable pretext for getting rid of the present Opposition. What he really is driving at can easily be guessed from his occasional remarks and the comments of the officious press: he still wants to carry the tobacco monopoly and the doubling if not trebling of the duty on timber, corn, and wheat. A political loss or defeat can always be made good, while the consequences of such economical experiments, if remediable at all, are fraught with untold misery and ruin. In the meantime, Bismarck tries to discredit the tendencies of the new Liberal party as hostile to the reserved rights of the single States. In doing so he, of course, joins the centrifugal current, the strengthening of which forms the chief aim of the smaller sovereigns. The Liberals have inserted an article in their platform which demands imperial ministers to be made responsible to the Reichstag. Although this demand is a natural consequence of the organic development of the Constitution, and although as early as 1867 the National Liberals and Free Conservatives, headed by the late lamented C. Twesten and by Count Münster (our present ambassador in London), had, with Bismarck's consent, introduced a motion to this effect, now the same measure is branded as an attack on State rights, and as a kind of high treason against the legal basis of the Empire. The Bundesrath most cheerfully received this new proof of the Chancellor's paternal care for the welfare and peace of the high allies, and so eagerly availed themselves of his important concession that they at once unanimously voted their thanks.

I cannot take Bismarck's threatened withdrawal from the Cabinet as serious. The Emperor has put off his decision, as might have been anticipated, and will finally reject the demand. The Chancellor wanted to kill two birds with one stone. He had to exert a pressure on the National Liberals as well as on the Government and the Conservatives, and to intimidate them into his unconditional support. This end he has reached; the latter will, in the approaching elections, strictly execute his orders or disappear from the political scene.

In the game of bluff, Rome at present holds the trumps. The priest who stood longest in the way of a compromise satisfactory to the Prussian Government—Archbishop Ledochowski, of Posen, for the last year a member of the Papal household—has offered his resignation to Leo XIII. Thus far the latter has refused to accept it, for the evident reason that he desires to make as much political capital out of it as possible. His demands will, of course, not be modest, but calculated to make Bismarck reject them. The Pope can afford to wait. A refusal to come to terms at present will not hurt him, for he knows that he will ultimately succeed. At all events, he will have proved his peaceful disposition to the world at large and to the Roman Catholics of Germany in particular. This bidding high and low between the two antagonists is as undisguised as possible, and wholly unworthy of so great a Power as the German Empire. Let me, finally, state that all rumors of a Ministerial crisis are without foundation. Bismarck flatters the "outs," but is far from turning the "ins" out, who thus far have worked to the full satisfaction of their boss.

Correspondence.

MENDACIOUS PERSONAL GOSSIP.

TO THE EDITOR OF THE NATION:

SIR: Considering the deference in thought and conduct shown toward women in this country, perhaps the most malicious story set afloat in connection with the recent visit of Mr. Matthew Arnold is that for which a respectable Boston weekly journal made itself responsible, namely: that Mr. Arnold, from the vantage ground of a seat in a street-car in that city,

entered into conversation with a lady swinging by a strap in front of him, and, having inquired of her the location of the Hotel Vendome, promised her his seat when he should leave the car.

Mr. Arnold's attention having been called to this particularly spiteful publication, he replies, under date of April 18, as follows:

"The incident is a fabrication; but why give things of this kind importance by noticing them?"

The query accompanying the denial would indicate that Mr. Arnold does not quite understand us yet. Would it be subjecting him to further castigation to make a further quotation from his letter?

"Mendacious personal gossip is the bane of American journalism." ***

WASHINGTON, April 30, 1884.

PROTECTION OF AMERICAN ART.

TO THE EDITOR OF THE NATION:

SIR: It may be due to my comparative ignorance of high-tariff literature, but I cannot help regarding the *American Protectionist* as a unique publication. Its editor is a brilliant specimen of the class to which the woman belonged whose husband claimed that he had the most even-tempered wife in the world—she was always mad. While he may be a most amiable person in his social relations, an examination of some twenty numbers of his periodical affords sufficient evidence of the fact that, when he writes upon his chosen theme, he is always "in high dudgeon." Here is a specimen of high-tariff rhetoric, taken from the issue of April 8, which is sufficiently precious, I think, to be put before your readers. Speaking of the duty on works of art, the editor says:

"The advocates of the foreign-art policy—of foreign artists, foreign art, and foreign schools; the dudean critics of the New York press; the 'slap-dash' impressionists; the queer, kinky, wild-eyed students; the eccentric cranks of the pencil, brush, and modelling tool; the silent, nondescript draftsmen of the illustrated papers, all cry aloud for 'free art.' Then add to these enemies of the fine art and artists the millionaire; he wants to add to his collection and wait for a rise. Then last, and worst of all, is the unnaturalized art dealer, who wishes to sell only foreign works; who has a private salesroom, which he uses to abuse American art and artists, to tell his patrons that 'Nobody buys American pictures now,' etc. . . . These are the people, with a few honest exceptions, who are trying to make the Committee on Ways and Means in Congress believe that they represent the artists and the friends of art in America. Bosh! They represent American artists just about as much as the Territory of Utah represents the States of the American Union."

Verily, your artists and dealers in works of art must be "a queer lot," as the devil is said to have remarked about the Ten Commandments. It would doubtless be impossible to duplicate the collection from any other profession, if this description is any approach to accuracy. In the above representative quotation we have the employment, with a vengeance, of the maxim said to be current among the legal profession: "If you have a bad case, try to divert the jury from the main issue by abusing the opposing counsel." Can it be possible that anybody expects to make converts by such preaching? If this is the method of the high-tariff advocates, no wonder free-trade doctrines are gaining ground. No more effective propaganda could be made among thinking people than to put into their hands such arguments—it is a perversion of language to call them arguments; but its effect would not be what its authors intended. C. W. S.

ATHENS, O., April 28, 1884.

A LIBEL SUIT IN CYPRUS.

AN DEN HERRN HERAUSGEBER DER NATION:

SEHR GEEHRTER HERR: Sie werden mich verpflichten wenn Sie diesen Brief, sowie zwei Artikel des Cyprus *Herald* (einer vom 6ten October 1883, und ein anderer vom 24ten März 1884) baldmöglichst abdrucken. Daraus erhellt, dass Colonel L. P. di Cesnola mich zu verklagen beabsichtigt, zu welchem Vorhaben ich ihm den besten Erfolg wünsche. Nur fürchte ich, er (L P. di Cesnola) dürfte leicht auf Cypern verlieren was er in New York scheinbar gewonnen hat, oder gewonnen zu haben glaubt. Ich meinerseits bin vollkommen im Stande Punkt für Punkt das zu beweisen, was ich in meinem Artikel (Cyprus *Herald*, 6ten October 1883) aussprach. Ich begreife nicht wie nur Colonel L. P. di Cesnola so aufgebracht gegen mich sein kann. Im Gegentheil! Er sollte mir dankbar sein, da ich ihm die Wahrheit sage.

Nach dem heute auf Cypern unter England bestehenden Gesetz habe ich als Angeklagter das Recht den Kläger persönlich als Hauptzeugen herbeizurufen. Ich werde mir natürlich nicht das Vergnügen versagen, den tapferen Colonel persönlich kennen zu lernen und noch dazu auf Cypern, seinem Felde so anstrengender Thätigkeit während zehn Jahren. Hoffentlich wird das Vergnügen des miteinander-persönlich-Bekanntwerdens ein gegenseitiges sein. Wir können dann hier "con amore" (wie man auf Italienisch sagt) auf dem Eiland der Aphrodite von Golgos und Paphos und Idalion aber zugleich vor dem englischen Untersuchungsrichter (etwas prosaisch, aber praktisch) die Waffen kreuzen, und dieser englische Richter wird dann zu entscheiden haben, ob ich ein Recht hatte im Cyprus *Herald* (6ten October 1883) zu schreiben wie ich schrieb.

Einen grossen Fehler freilich habe ich an dem Ende jenes Artikels begangen. Wenn ich in diesem einen Punkte geirrt habe, so thut mir das ausserordentlich leid, und bitte ich den Colonel L. P. di Cesnola fussfällig um Verzeihung, zerknirscht wie ein echter Büsser. Ich habe nämlich in jenem Artikel der Hoffnung Raum gegeben, der wackere Herr G. L. Feuardent würde schon in erster Instanz seinen Process gegen L. P. di Cesnola gewinnen. Das war ein Fehler von mir, ein ganz grober Fehler. Alle übrigen Punkte aber, welche ich in jenem Artikel andeutete oder ausführlicher besprach, kann ich nur als wahr bezeichnen.

Nicht ist zu leugnen, dass auch viele Fehler von den Herren G. L. Feuardent, Cl. Cook und ihren Freunden begangen worden sind. Sie haben neben vielen erwiesenen Wahrheiten viele Dinge von L. P. di Cesnola behauptet, die sie entweder nicht beweisen konnten, oder die von Cesnola und der Gegenpartei als evident irrthümlich bewiesen werden konnten. Diese Punkte sind dann von dem geschickten Advocaten Herrn Choate zu Gunsten seines Clienten ausgenutzt worden. Immer werden wir besonders Herrn G. Feuardent zum grössten Danke verpflichtet bleiben, im Interesse von Licht und Wahrheit eine—und in diesem Falle die erste—Lanze gebrochen zu haben. Ich hoffe bestimmt, es wird nicht die letzte gewesen sein; und die zweite des Herrn Feuardent wird den Herrn L. P. di Cesnola so aus dem Sattel heben, wie es die treffliche Illustration im *Life* (New York, January 3, 1884; page 8 and 9) darstellte, aber für immer und ewig!—Das walte Gott im Interesse der wahren Wissenschaft und Alterthumskunde.

Hochachtungsvoll ergebenst,

MAX OHNEFALSCH-RICHTER.

DORF EPISKOPI, beim alten Curium,
29ten März 1884.

[We subjoin a translation of the above. The articles referred to deny the existence of a "Treasury of Curium," and hence attack the authenticity of the jewelry in the Cesnola collection ascribed to that source.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: You will oblige me by an early publication of this letter, as well as of two articles in the Cyprus *Herald* (October 6, 1883, March 24, 1884). They show that Col. L. P. di Cesnola intends to bring suit against me, in which undertaking I wish him the greatest success. I only fear that he may easily lose in Cyprus what he apparently won in New York, or thinks he won. For my part, I am quite able to prove every assertion made in my article in the Cyprus *Herald* of October 6, 1883. I do not understand how Col. L. P. di Cesnola can be so angry with me. He should, on the contrary, be grateful to me for telling him the truth.

In accordance with the existing law in Cyprus, under English rule, I have the right as defendant to summon the plaintiff personally, as principal witness. Of course I shall not deny myself the pleasure of making the acquaintance of the brave Colonel, and that, too, in Cyprus, the field of his so arduous labors during ten years. I hope that this pleasure will be mutual. In a somewhat prosaic but practical manner, we may then cross our weapons *con amore* (as the Italians say) on the island of Aphrodite of Golgos and Paphos and Idalion, but at the same time in presence of the English commissioner, who will then have to decide whether I was justified in making the statements that appeared in the Cyprus *Herald* October 6, 1883.

One great error, indeed, crept into that article at the end. If I erred in this one point, I am extremely sorry and beg Col. L. P. di Cesnola's pardon on my knees, with all the contrition of a genuine sinner. In that article I expressed the hope that the worthy Mr. G. L. Feuardent would win his suit in the first instance against L. P. di Cesnola. That was an error on my part—a gross error. But as for all the other points which I hinted at or discussed in detail in that article, I must insist on their truthfulness.

It cannot be denied that many errors were made also by Messrs. G. L. Feuardent, Clarence Cook, and their friends. Along with many proved truths, they asserted many things in regard to L P. di Cesnola which they could not prove, or of which the incorrectness could be proved by Cesnola and the opposite party. These points were then made use of by the clever lawyer, Mr. Choate, in favor of his client. We shall always be specially indebted to Mr. G. Feuardent for having broken the first lance in behalf of enlightenment and truth. I ardently hope it will not be the last, and that Mr. Feuardent's second attack will throw Mr. L. P. di Cesnola out of his saddle, as so well represented in *Life* (New York, January 3, 1884), but permanently! May God grant this in the interest of science and of archæology.—Respectfully,

MAX OHNEFALSCH RICHTER.

EPISKOPI, near ancient Curium,
March 29, 1884.

Notes.

DR. RICHARD T. ELY, of the Johns Hopkins Seminary of Historical and Political Science, Baltimore, is engaged upon a 'History of Political Economy in the United States,' in conjunction with two members of his advanced class. He will be obliged for any books, pamphlets, brochures, magazine articles, speeches, etc., which may be of assistance in this undertaking. These may be sent to the address above given.

In that excellent paper, the Chicago *Dial*, for May (now entering, by the way, on its fifth year), announcement is made that the first supplement to Poole's 'Index to Periodical Literature' for 1882–83 is ready to be put to press as soon as 300 copies are subscribed for. At this rate, the cost per copy will be about $6 50; and subscribers will get the benefit pro rata of any increase in the edition, as there is no question of anything but covering the expense of manufacture. It is expected that $3 will prove the maximum cost. To Dr. W. F. Poole, of the Chicago Public Library, subscriptions should be sent as early as possible. Hereafter, annual supplements will be attempted.

Macmillan & Co. will publish immediately 'Reflections in Palestine,' a mystical compilation from letters written by General Gordon during his recent sojourn in the Holy Land.

The articles in which Professor Jebb has discussed various aspects of the question of the site of Homeric Troy and Dr. Schliemann's claim to have discovered it, which have appeared in the *Edinburgh Review*, the *Journal of Hellenic Studies*, the *Fortnightly Review*, and elsewhere, are about to be collected into a volume, and will be published by Chapman & Hall in the course of the summer.

A new book of travel, 'At Home in Italy,' by Mrs. E. D. R. Bianciardi; 'Summer,' a new volume derived from the journals of Thoreau; and 'The Fate of Mansfield Humphreys,' by Richard Grant White, are in the press of Houghton, Mifflin & Co.

D. Lothrop & Co., Boston, will publish 'A Boy's Workshop,' a practical book of instruction, with illustrations.

R. Worthington, New York, has purchased the remainder of the edition of Commander Gorringe's costly and most interesting work on 'Egyptian Obelisks,' and will put it upon the market at about half the subscription price.

The third volume in the series of 'Stories by American Authors' (Chas. Scribner's Sons) contains short tales by Fitz James O'Brien, Mrs. Burnett, G. P. Lathrop, David D Lloyd, Celia Thaxter, and Brander Matthews.

An English translation of Daryl's 'La Vie Publique en Angleterre' has been made by Henry Frith, under the author's supervision ('Public Life in England'; New York: Geo. Routledge & Sons). We have so recently reviewed the original edition that it is only necessary to say here that its minor errors have been eliminated.

Busch's 'Our Chancellor' has been translated by William Beatty-Kingston, and the two volumes rolled into a single very comely one (Charles Scribner's Sons). The pagination of each volume has been preserved, the total number being about 700 pages.

Mr. Stephen Fiske's modest contribution to "Men of the Time," called 'Off-hand Portraits' (George R. Lockwood & Son), deals with the impresarios, "statesmen," financiers, lawyers, journalists, actors, clergymen, inventors, etc., of this State, and more especially of this metropolis. Useful as it is, in a certain way, its publication will be thought premature by one who reads the glowing anticipations of Mr. Abbey's recent unfortunate experiment with the Metropolitan Opera-house; or the untimely reference to Conkling's political destruction of Blaine, who, whatever may be thought of his prospects at Chicago or at the November polls, is certainly a much livelier corpse than the Sage of Utica.

Sir S. W. Baker's two great works on the Nile sources and tributaries have been boiled down into less than three hundred pages duodecimo, and published under the caption 'In the Heart of Africa' (Funk & Wagnalls). This epitome could hardly fail to be interesting, but the reader will obtain anything but a clear idea of the main expeditions or of the chronological sequence of events. There is no map.

To their "Classics for Children" Ginn, Heath & Co. have added 'Quentin Durward,' expressly edited by Miss Yonge, who furnishes a lucid introduction, foot-notes, and appendices.

There are some good things in the "Parchment Paper" selection of *vers de société*, 'The Parlor Muse' (D. Appleton & Co.), but the editor has not been very discriminating, and the result is rather dreary as a whole.

The April number of *Appalachia* (Boston: W. B. Clarke & Carruth) worthily completes the third volume, its contents being uniformly of a high excellence, and the embellishments embracing two photographic views taken in an ascent of Mt. Adams last winter on snow-shoes. The example of the Appalachian Society has, as was to be expected, excited a desire in other parts of the country to effect a similar organization—in Tennessee, naturally, and even in New Mexico.

Another periodical which, in the land of ice and granite, is engaged in fostering a love of outdoor life, is *Outing and the Wheelman*, now in its fourth volume, and already one of the handsomest of American magazines (175 Tremont Street, Boston). The May number is a very favorable specimen, and while the bicycle has perhaps a prior claim on its space, fishing, yachting, canoeing, and all invigorating sports are looked after. The review department is well conducted, and the illustrations are abundant, and, as in the present number, often exceptionally good work.

The *Bay State Monthly*, too, appears to hold its own, and we should call the May number (Vol. i., No. 5) quite the best that has yet appeared. It opens with a biographical sketch of President Arthur, by Ben. Perley Poore.

"Slavery in the Colony and State of New York" is the subject of a careful and very interesting article in the May number of the *Magazine of American History*, by Mr. Frederic G. Mather. The course of emancipation in the other Northern States of the old thirteen is also briefly indicated by this writer. Mr. James P. Baxter's paper on the great seal of the Council for New England, with an illustration, seems to dispose of the hitherto accepted identification of it with the arms printed on the reverse of the title-page of Captain John Smith's 'Generall Historie' of 1631.

The first number of the lately announced monthly *Bulletin of Massachusetts Natural History* (Amherst, Mass.) is before us. It is a modest octavo of sixteen pages. The purpose of its projectors is laudable, and we have no doubt it will be a useful addition to the minor scientific periodicals. The English of the writers needs a sharper revision, for we have met with such queer expressions as, "all the *sang froid* which we are capable of *exerting*," and "we take their word at once rather [than] to *impinge* the character of an Audubon," etc.

The *Archives of Pediatrics*, the only journal in the English language devoted exclusively to children's diseases, has been transferred to John E. Potter & Co., who will issue it from their New York office.

The *English Illustrated Magazine* for May (Macmillan) shows a noteworthy improvement in the illustrations over those of any previous number. The quality of the American wood-cutting, and the delicacy of the printing of the same, so long the distinction of our illustrated monthlies, is very nearly approached by the cuts which illustrate "A Woman's Keepsake," after drawings by Alfred Parsons.

The *Antiquary* for April (J. W. Bouton) is a number of unusual interest. An article upon the House of Lords, by Mr. James Gairdner, is the second part to Mr. Gomme's article with the same title in the February number. Mr. Gomme treated of "its origin," Mr. Gairdner treats of "its functions." This article possesses especial importance, because it deals principally with the period of the fifteenth century, which Mr. Gairdner has made peculiarly his own, and, moreover, because it goes counter to the accepted views upon the subject of the powers of Parliament. In a review, in the *Academy*, of Canon Stubbs's third volume, Mr. Gairdner expressed a qualified dissent from Stubbs's opinions on this head, and the present article continues the discussion more in detail. The conclusion reached is that, down to the time of the Tudors, the Lords "were the highest legal tribunal and the sole real legislative body." Another article of great value is by Mr. Gomme, upon "The Old Land-Rights of Municipal Corporations." This is to be continued, and it is enough to say here that it is in Mr. Gomme's special line of research, and aims to illustrate the growth of municipal institutions out of those of the village community. Besides these very solid articles we have the usual variety of interesting papers upon points of archæology and manners and customs—Cheapside, Piccadilly, Fairloss Fair, Walton & Cotton's Fishing House, Palæolithic Remains in Surrey, and Monumental Brasses of Cambridgeshire.

"British Interests" in Africa form the ninety-fourth topic in Mr. Foster's *Monthly Reference Lists* for April; the ninety-fifth being Tyler's Administration, in the important series which has so far exhausted the Presidencies.

Mr. Aldrich's 'Story of a Bad Boy' has been translated into French, with the author's consent, by Th. Bentzon, under the neutral title of 'Un Écolier Américain.'

The leading article in *Le Livre* for April is the second of two on German caricature contributed by M. John Grand-Carteret. This deals exclusively with the Southern or Munich school in a spirit of perfect sympathy and appreciation, and in a philosophic vein of contrast with the Northern school, already discussed. One cannot complain of the writer's Southern bias as political, even if there is to be read between the lines a certain pleasure on finding the Prussian humor inferior to the Bavarian. The Bavarians did their share of the fighting in 1880-81. M. Grand-Carteret contents himself with a bare mention of Wilhelm Busch, to whom he purposes devoting an entire article at some future time—a distinction which will appear to some excessive. He has also in reserve a paper on Austrian caricature. As all these, like the one to which we are speaking, will be freely illustrated, they will be worth looking forward to.

The Société de l'Histoire de l'Art Français has just added to its series of publications the fifth volume of the 'Procès-verbaux de l'Académie Royale de Peinture et de Sculpture, 1648-1793,' and 'L'État-civil des Peintres et Sculpteurs de l'Académie Royale; Billes d'enterrement de 1648 à 1713.' For the same collection M. de Chennevières is to edit the correspondence of Nicholas Poussin, and M. de Montaiglon the works of Bernard Palissy, both of which will, it is expected, add much new material to the history of French art.

A very concise and brief, but within its scope comprehensive, grammar of post-Biblical Hebrew ('Grammatik der neuhebräischen Sprache') has been issued by Professor Siegfried, of the University of Jena. It is chiefly devoted to the language of the Mishnah and the Midrashim. Connected with it is a bibliography of post-Biblical Hebrew literature ('Bibliographischer Abriss der neuhebräischen Litteratur'), by Professor Strack, of the University of Berlin, the two treatises together forming the first and second

parts of a 'Lehrbuch der neuhebräischen Sprache und Litteratur' (Karlsruhe and Leipzig, 1884; New York: B. Westermann & Co.). A chrestomathy and glossary are to form the third part. Strack's contribution occupies less than one-third of the little volume, and is, to say the least, very fragmentary; but its enlargement into a comparatively complete work is promised, in case the present joint publication should meet with success, which it fully deserves.

The new German Empire's *Culturkampf* against the supporters of Papal pretensions has given rise to a large number of writings on the *Investiturstreit* which raged between the German Emperors and the Popes in the eleventh and twelfth centuries. The history of that memorable contest over hierarchical investiture, during which the Emperor Henry IV. was compelled to do most humiliating penance, at Canossa, before Pope Gregory VII., was, perhaps, never studied more diligently than it has been since Bismarck told his Ultramontane opponents that they might rest assured he would never go to Canossa. Among the more learned contributions to the history of that period is Dr. M. F. Stern's 'Zur Biographie des Papstes Urban's II.' (Berlin, 1883), a sketch which places the abilities of that champion of Papal supremacy over the secular authority and of Christianity against Islam almost on a level with those of Gregory VII. Among the points now said to be completely settled by the investigations of Sybel, Kugler, and Hagenmeyer is, that Urban II. was the real initiator of the first crusade, and that the story of Peter the Hermit having been his precursor in that enterprise, which gave so lasting a new direction to the course of universal history, is a myth.

—Mr. Samuel Bancroft, jr., writes us from Wilmington, Del.:

"I would call the attention of your reviewer of 'The New English Dictionary,' in his notice of the use of 'Album' in the American and English senses, to the title of Browning's 'Inn Album' as an instance of the use of the word as a 'visitors' book' in England. I have never happened to meet with it in this country in that sense, but have always been used to thinking that it was regular English usage so to employ it."

— Mr. Julian Hawthorne's account of "The Salem of Hawthorne," in the May *Century*, seems to have attracted a good deal of attention in Massachusetts, where the illustrations are alleged to be devoid of local character. They certainly do not recall Salem very definitely, and many of them might be used to illustrate other articles than this. The fact is, that idealizing a scene illustrating Hawthorne or his works or life is open to serious objections as a matter of taste. Hawthorne himself idealized everything he touched, and for illustrations we do not want the idealization of some new hand, however clever, but the plain hard facts of New England life which the golden light of his imagination transfigured for us. To our mind, to be sure, the 'Blithedale Romance' or the 'Scarlet Letter' could hardly be illustrated at all, and the same thing is true of many of his other books. Salem, if given at all, might be given pretty literally. The essay is the best piece of writing which we have seen from Mr. Julian Hawthorne's hand, and begins with a mention of the curious fact that his father constantly missed his way in walking:

"This trait, or deficiency, is not without its reflection in his writings. It is of small importance to him what the topography of his story may be —whether his house faces north or south, whether his street turns to the right or to the left. He is willing to let these and analogous matters take care of themselves; and herein he differs markedly from the great French novelist Balzac, who wrote by the map and the rule, and who always knew precisely the income of all his people, and from what investments it was derived. On the other hand, the American possessed, to quite as great a degree as the Frenchman, the perception of the picturesque: his light and shadow, his color and atmosphere, have never been surpassed. But he shunned rather than sought to make his outlines and directions correspond too closely with palpable reality. The intensity with which he could convey the feeling of a place, a character, or a situation, was almost in inverse ratio to its literal resemblance to any material prototype; he was essentially a romancer, and the world of his imagination was like the material world only as the mind of man is like his body: a spiritual world of types, elements, and harmonies, rather than a physical world of accidents, individuals, and technicalities. When I was lately visiting the scenes of his stories, I was impressed by nothing more than by the manner in which he had contrived to escape from the rigid flesh and blood of his scenes, and to make everything plastic and significant, while fully preserving and indeed intensifying the spirit and sentiment which the scenes embodied. The subtle, artistic balance and structure of his compositions would have been distorted by the intrusion of photographic facts."

This is well put; but it must not be forgotten that Hawthorne was, as his "note-books" show, a close observer of nature, and his most imaginative and un-local descriptions were founded on the most minute photographic studies. Mr. Thomas Hughes writes an article on Trades-Unionism in England, and takes a characteristically cheerful view of this development of the labor movement. Trades-unions as we know them in this country would not, perhaps, give him so much reason for satisfaction.

—*Harper's* contains a very pleasant account of the Holy City of Kairwan, the Mecca of Africa, with numerous illustrations, by A. F. Jacassy. The picture given of African life does not contain many new features. In Tunis, as in other parts of the continent, we find a corrupt government, a degraded agricultural class, a juridical religion, a retarded and monotonous civilization, utterly different from anything known in any other part of the world, except Asia. The Kairwanese women—and it is in the position of woman, after all, that we find the key of any civilization—have no recreation or amusement except coloring their bodies with white and their lips with red, loading themselves with rich garments and jewels, and then going to sleep. The richest women, of course, get the longest naps; the poor look upon the stupor of sleep as the greatest luxury in life. A lady brings in the market as much as a hundred dollars; an ordinary woman, only twenty—the difference in price depending on the difference in social position. The priests lay down the law, and the judge sells it; the result being not what we should call justice, but not so far removed from it as, judging from what such a system would produce elsewhere, we should infer.

— *Lippincott's* also has its African article—the diary of "the last European who rode through the desert from Berber to Suakim." He was, it seems, Col. the Hon. J. Colborne, of Hicks Pasha's staff. The notes of his journey give a vivid idea of the nature of the country, and of the extraordinary difficulties likely to attend any management of a campaign in the Egyptian desert, by English statesmen, at a distance of several thousand miles. One or two quotations from the diary will show what it is:

"The next morning we entered the howling wilderness. Our way lay across a barren plain of reddish sand and grit; the pale, sickly, yellowish-gray weeds became more sparse, and soon disappeared. These had been preceded by scanty patches of reed-grass, and occasional thorny mimosa. Now not a blade of vegetation was to be seen. We halted at a point where this plain merges into a bewildering maze of shifting sand-hills, utterly desolate. I was glad to quit my *angareb* and the back of my camel, as I had been in torture the whole day, and the soft sand formed a delightful bed. So thankful was I to be rid of the nauseous jolting that I looked with kindly eyes even on this unlovely spot—unlovely, perhaps, but sublime and impressive as stupendous loneliness and vast space could make it. . . .

"The next morning we began the passage of the loose sand dunes above mentioned, the most painful and perilous portion of the two hundred and eighty miles of desert between Berber and the Red Sea. The camels labored through the yielding sand, sinking under their feet at every step. On this day the mirage was intensely real. Before me lay a lake, its blue waters laughing in the sun, studded with gem-like islets clad with verdure, and bordered by castles, high turrets, and battlements, and again by gleaming villages and smiling hamlets, the whole scene fairy-like in its beauty, and a painful contrast to the arid sand and fierce heat and consuming thirst from which I was suffering. It is in vain that one rubs one's eyes, and seeks to disabuse one's self of the illusion. The thing is there, undeniably, apparently solid and tangible; you know it is mocking you like an *ignis-fatuus*, but the most accurate knowledge of the physical laws which govern the phenomenon will not brush it away from the retina. There is small wonder that the ignorant and inexperienced should have frequently yielded to the delusion. Life is the price paid for such a mistake. Some years ago a company of soldiers perished from thirst in this region. Disregarding the warning of their guides, the poor fellows, fresh from Egypt, and mad with thirst, broke from the ranks and rushed toward the seeming lakes of transparent water which was presented to their eyes on all sides. They pressed on eagerly toward the ever receding phantasm, and one by one fell prostrate to leave their bones to bleach on the sand. . . .

"Later in the day the sky assumed a grayish tint, then a deep yellow, and the sun became darkened and appeared as a blood-red disk. I perceived a cloud of sand rolling up from the west. With a roar it was upon us, and I had to bury my face in my *burnous* to shield it from the cutting particles of sand. The camels floundered about, blind and helpless: the Arabs howled and cried 'Abdallah!'—the whole caravan was in a state of confusion. What track there had been previously was obliterated. The drivers had lost their way, and there was the ugly fact of our water being very limited in quantity; and water in the desert means life."

—Harper & Brothers have made a fresh imprint from the plates of their seven-volume edition of Coleridge of 1853. The interval is a long one, and, in obedience to the changed view of the bookbuyer as to what makes a complete book or series, the publishers have added to the last volume a general index, prepared by Mr. Arthur Gilman, which very much enhances the value of the set. Still more, however, is the lapse of years marked by Professor Shedd's introductory essay, which chose to treat of Coleridge rather as a philosopher and theologian than as a poet, in the belief that in the former character his influence was best and greatest, and destined to be most enduring. We cannot believe that the same writer would venture such a statement to-day. It is only necessary to ask if Coleridge's poetical reputation has faded, during the past thirty years, either at all, or in anything like the degree in which metaphysical speculation has fallen into disrepute. In fact, if there is any part of Coleridge's life product which his punning signature Ἔστησε—

"('Tis Punic Greek for 'He hath stood')"—

will certify to a distant posterity, it is beyond all question his verse. And of his prose, if we except his 'Table-Talk,' what is surer of a long lease of life than chapters xiv.-xxii. of the 'Biographia Literaria,' containing the critique of Wordsworth?

—Not to be led into a discussion with the stereotyped plates of this edition, let us take a concrete example of the perishableness of Coleridge's theologizing. Professor Shedd thus presents Coleridge's view of Sin:

"Sin, therefore, as involving a radical change in the character, development, and history of the human soul, originates in the Will. *If man*

were a mere creature of Nature, his development would go on with the same necessary uniformity with which a crystal or a tree is built up in accordance with the law of Nature. But he is also a Spiritual, *i. e.*, *self*-determined, creature, and hence that possibility of sinning which has become a dreadful actuality. By virtue of this power, man is capable of throwing himself out of the normal line of development prescribed for him by his Creator, etc."

For any one wishing to comprehend Coleridge's system, it may have been useful to pen these lines in 1853; but the appearance of the 'Origin of Species' six years later deprived the passage not only of any weight, but, may we not say? of any interest.

—Kegan Paul, Trench & Co. have in the press and will publish immediately, 'The Foundation of Death: a Study of the Drink Question,' by Axel Gustafson. It is an attempt to give an exhaustive account of the habit of consuming alcoholic liquors, and the author claims to have collated all the accessible works on the different aspects of the subject, physiological, pathological, therapeutical, and moral, to the number of over 3,000. A bibliography of some 1,300 of these will be given, arranged chronologically and also according to countries. The scope of the work may be judged from the following titles of the chapters: 1. Drinking among the Ancients. 2. The History of the Discovery of Distillation. 3. Preliminaries to the Study of Modern Drinking. 4. Adulterations. 5. Physiological Results, or the Effects of Alcohol on the Physical Organs and Functions. 6. Pathological Results, or Diseases Caused by Alcohol. 7. Moral Results. 8. Heredity, or the Curse Entailed on Descendants by Alcohol. 9. Therapeutics, or Alcohol as a Medicine. 10. Social Results. 11. The Origin and Causes of Alcoholism. 12. Specious Reasonings Concerning the Use of Alcohol. 13. What Can be Done? Considerable interest has been aroused in the book by the expressions of leading temperance reformers in England, to whom the proof-sheets have been submitted. Dr. Norman Kerr, the President of the newly-founded Society for the Study and Cure of Inebriety, said of it in a recent lecture, "This great work will, I feel convinced, have a profound and permanent influence on the educated mind and on the public opinion of America, Britain, and the Continent of Europe"; and the Rev. Stopford Brooke, who has lately become an enthusiastic advocate of teetotalism, writes that it is "seriously of great importance to the whole cause of temperance in England" that the book should appear as soon as possible.

—Backward in many ways modern Greece appears to the Western mind, and primitive enough is the Catalogue of the National Library, of which the first portion, covering the Theological collection, is before us—the work of Leopold Zahn, revised by Dr. Michael Deffner, the librarian. However, it would be out of place, and a little ungracious besides, to criticise the scheme of it. We have rather amused ourselves by strolling through the American alcove, so to speak, and noticing what chance drift has found its way thither. Not quite a dozen and a half of our native writers, as we reckon, are represented on the shelves. We find no work by Jonathan Edwards, by Joseph Buckminster, by Charles G. Finney, by Lyman Beecher, by Moses Stuart, by O. A. Brownson, by Edward Robinson, by Theodore Parker, by Emerson, Pierpont, Furness, May, Bushnell, Starr King, Chapin, Milburn, E. N. Kirk, Vinton, or Storrs. The most recent book is H. W. Beecher's 'Lectures on Preaching,' done into German (1874). F. H. Hedge's 'Primeval World' (1873) is likewise in a German edition. One of the two works of Channing is in the French of Laboulaye. One of two of T. H. Gallaudet's is translated from the same language into Greek. Leonard Bacon, Timothy Dwight, Nathaniel Emmons, Samuel Worcester (but not his brother Noah), and A. H. Judson eke out the little company. The redoubtable Parsons Cooke, of Lynn, is, by an unlucky transposition of names, entered under "Parsons," and so honored with a place next to Pascal; and a similar misunderstanding puts Lowell Mason among the L's. Finally, we take down an address to the Boston Young Men's Christian Association in 1859, by Robert C. Winthrop, the only layman on the list, with the exception of Dr. Mason.

—Some time ago (*Nation*, June 19, 1879) we called attention to a work of the eminent Belgian scholar, Professor Willems, of Louvain, upon the Senate of the Roman Republic—of which the first section, treating of the organization and composition of this body, was published in 1878. The second part, upon its powers, was published last year, and is, like the other, a work of exhaustive scholarship. It is in three books—the first treating of the powers of the Senate during vacancies in the executive magistracies; the second treating of its relation to the *Comitia;* the third, of its relation to the magistrates. If we consider that the magistrates were, not in theory but by the force of circumstances, the executive agents of this permanent body, it will be seen that this last book embraces the whole subject of the administrative powers of the Senate. It comprises much the largest part of the volume—657 pages out of 777—and is divided into eight chapters, in which the powers of the Senate in regard to the cult, the finances, the administration of the provinces, etc., are fully discussed. These chapters are upon questions less exposed to controversy. The first two books are chiefly controversial in their character, being devoted to the two important and obscure subjects of the *interregnum* and the *patrum auctoritas*. M. Willems agrees with Mommsen that both of these powers belonged to the Senate, but differs from him in holding that they belonged to the Senate as such, and not to the patrician Senators by themselves, as Mommsen holds. His arguments upon this are strong, and it must be confessed that, in the fragmentary character and obscurity of the testimony, it is impossible to establish either view by positive evidence. Nevertheless, we cannot think that he has satisfactorily answered all of Mommsen's arguments, and especially he does not touch the point—first developed, we believe, by Rubino, although presented from a different point of view—that the auspices were the inalienable possession of the original citizens, the patricians: they were forced, after a long struggle, to concede their temporary possession to plebeian magistrates, and even to admit plebeians to the college of augurs, which had the interpretation of them. But they never surrendered their exclusive right to them in theory; and when, by the failure of election, or from any other cause, there were no magistrates in whose hands the exercise of them was lodged, they returned to their original possessors—*auspicia ad patres redierunt*. The *patrum auctoritas*, too, according to this theory, was not a general right to give their consent to the action of the people, but, as those in whom the religious sanction of the state was vested, to watch over their action from this point of view, and to render invalid whatever votes of the people seemed to violate the religious constitution of the republic.

—Unless our memory be at fault, George Edwin Maclean is entitled to the distinction of being the first American to produce strictly original work in the field of Anglo-Saxon editing. This work may be found in the *Anglia*, vi. 425-473, vii. 1-59; it has also been reproduced in pamphlet form as a doctoral dissertation (Leipzig: T. H. Stauffer). We heartily commend it to every student of Anglo-Saxon. It is unmistakably the product of sound method and patient research, and does credit both to the author and to the Leipzig school of philology. The core of it consists of a thorough reëditing of Aelfric's Anglo-Saxon version of the well-known 'Alcuini Interrogationes,' *i. e.*, a set of answers composed (in Latin) by Alcuin, the friend of Charlemagne, to solve the perplexities of his English correspondent Sigewulf concerning the book of Genesis. The editor gives not only the Anglo-Saxon version, but the Latin original wherever helpful: Aelfric having abridged considerably, the full Latin text would have been superfluous. The Anglo-Saxon text followed is that of the Corpus Christi College MS. No. 178 (although the 'Interrogationes' are now bound up in MS. No. 162). Variants of four other MSS. are given in the footnotes. The editor's account of his finding the 'Interrogationes' in MS. 162 and restoring them to their rightful place in MS. 178, is as striking an instance of editorial acuteness as we have noted for many a year. Also, his introductory remarks upon the relative values of the MSS. and upon the question of Aelfric's authorship of the Anglo-Saxon version are full of valuable information. They give evidence of his having mastered the subject in all its bearings, whether literary or grammatical. In view of the preponderating influence exerted by Aelfric in shaping the later Wessex form of our early speech, we feel peculiarly grateful for such a valuable addition to our stock of knowledge.

—Recent researches by Dr. Spoerer, of the Astrophysikalisches Observatorium at Potsdam, bring into prominence a noteworthy feature of the behavior of the spots on the solar surface. Recalling the fact, long known, that these spots lie largely in zones on either side of about twenty degrees of solar latitude, Dr. Spoerer has deduced, from a thirty-year series of their positions and numbers, the remarkable law that from the time of one minimum of spots until the next the region of greatest spot-activity slowly drifts from the highest latitudes at which they are observed down toward the solar equator—being at a latitude somewhat less than twenty degrees at about the time of the intervening maximum. Instead, however, of the spot-frequency travelling back in the same way, the activity appears to be suddenly transferred to the high latitudes very soon after the second minimum has passed. These unique deductions cast a rather gloomy light upon those theories which ascribe the spot periodicity to extra-solar influence. Meanwhile, astronomers abroad are entertaining very dissimilar views with regard to the epoch of occurrence of the present maximum of the solar spots. While it appeared a most reasonable deduction from the past behavior of the sun's surface that we should have the greatest display in the year 1883, the foreign authorities are divided as to the interpretation of the observations lately made—some asserting that the solar energy has been waning since 1882, the true maximum thus being long past, while others are ready to prove that the sun's activity has been on the increase throughout the year 1883, with the maximum still possibly in the future. So long as the precise phenomena to be regarded as characterizing activity or quiescence of the solar surface remain unconventionalized, such differences of interpretation may well be expected—to say nothing of the intractable inability of astronomers to derive observational data from more than one solar hemisphere at a time.

—The frequent appeals to our picture-buying public to seize unrivalled opportunities to enrich themselves by purchasing the pictures of great modern masters at auction sales, indicate that the business prospers. At a most rational estimate of the average price of the pictures sold here in the course of a season, there must be a very large investment in pictures assured or guaranteed as by "the greatest modern painters." If the assurance were well founded, our picture-buyers would be fast growing rich. For, whatever may be said in the abstract of the uncertain or indeterminable value of pictures, nothing in investments is more sure than the pictures of men whose position is well determined in the annals of art. A Millet, a Rousseau, a Turner, a Delacroix, even a Meissonier, authentic and uninjured, will more certainly hold its value for the future than will the average mining or railway shares. The clever collector who can foresee the eminence of a young painter before the general public, will as certainly profit by his acumen as a clever land speculator; he will buy, at a small price, work which will rise in value as long as the civilization of our epoch endures. We have seen drawings, for which Turner in his life-time received eighty guineas, sold for £1,000, and a generation of shrewd dealers has grown rich on the rise in the values of works of men, some of whom are still living. The great drawback in this mode of investment is the difficulty of determining the authenticity of the works. A perfect counterfeit, as with bank notes, might circulate indefinitely, and maintain a value which was always *fictitious*—detected, it becomes worthless. To prevent the collector or investor from wasting his money in this way is at once a public benefit and a service rendered to the deserving artist. This may be done by pointing out to the purchaser that in every case where a picture is an important one and represents a considerable investment, a guarantee may easily be obtained in the shape of an authenticated history of the picture from the day it left the artist's studio, strengthened, if the artist is still living, by his own written statement, certified by the local authorities, as signatures are when they are to be used abroad. We have known too many cases of dealers who maintain a reputation for trustworthiness selling counterfeits, to make such a condition in all important sales a needless precaution, even in the case of the most honest dealers, who for the rest will be the most willing to accept it. We have under our eyes a collection of pictures to be sold at auction in which are some professedly the work of the most eminent modern painters, purchased originally with the most formal assurance that, if they were to be sold, it would be always at a profit, but in which the pictures ascribed to the men of established high reputation are, with very few exceptions, gross forgeries, for which the investor will not receive the price he paid, and, unless some one else is deceived equally with himself, not a fraction of the price.

A RUMANIAN NOVELIST.

Ein Fürstenkind. Roman von George Allan. Leipzig: Wilhelm Friedrich. Pp. 213. 1883.

Among the few Americans who have been long enough in Bucarest to be disgusted with its diet, its shabbiness, and its prices, there is no doubt a certain number of those who have looked below the surface and have found the city to be a rare puzzle of contradictions. Alongside of its Oriental character of squalid dilapidation, it has the Occidental features of border civilization. It is down at the heel like Constantinople, and yet ambitious as Denver. If the curious American has talked with Rumanians, he has been told that their race is more purely Roman than any to be found in Italy; that, amid surrounding barbarism, they have never lost the light of ancient culture, and that to-day the *salons* of Bucarest may vie with the most elegant of Paris. If the American has gone into society in Bucarest he will have seen graceful manners, and will have heard French spoken with singular ease and purity, but the representatives of foreign countries whom he may have met will have united, almost to a man, to befoul the fair picture the Rumanians have drawn of themselves. The purity of their race is but a conceit of their own, their culture is but the refuse of Paris and Vienna, in politics they are Oriental, and of their morals it is most frequently asserted that they do not exist. With all this there is occasionally a reluctant admission that the country is somehow making progress. Bucarest has the beginnings of a museum and a park, its principal street is paved in part of its length, it has a statue—two, in fact—and one has heard talk, if we are not mistaken, of a Rumanian picture. Less contestable proofs of civilization are the good dinners which may be had for a high price, *chez Hugues*, and the cabs, which are certainly the best in Europe. It might be added that, in spite of Orientalism, the Government is gradually making for itself a place in the world of Powers, that the railways and the King and Queen are, in their several ways, doing much for the country. Indeed, we should be glad to render a hearty tribute to the influence for good of a royal pair who, by a pure life, by a high sense of duty, by their solid culture, by real labor in many directions, promote the welfare of their kingdom. There is something touching in the contrast between the ideal of these noble workers and the seething mass of barbarism and corruption on which they seek to act. The force of the contrast can be felt only by those who have seen something of Rumanian society. For those who must judge from books, the novels of George Allan form a valuable body of testimony.

Mme. Kremnitz (George Allan is but a *nom de guerre*) is German by birth and culture, but has lived many years in Rumania. Nearly all that she has thus far written—and she is no novice in literature—has relation to the country of her adoption, and might have been the work of a Rumanian born. Novels, translations from Rumanian authors, a short life of the Queen, her collaboration with the Queen in stories and poems—which, if it be a secret, is yet a very open one—have combined to render her one of the foremost figures in the little circle of authors and persons of letters that goes far to redeem the emptiness of life in Bucarest. Mme. Kremnitz does not, then, write as a stranger; it is her own world that she describes. Neither has she any wrongs to redress, any party to serve: she does not even propose to satirize a state of society. She tells her story with perfect simplicity and directness; if it makes you detest the world depicted, that at least has been no part of her intention. Her objects are simply those of a literary artist of the realistic school. There is no mist about her characters to magnify or to soften their outlines. And yet the reproach cannot lie against her that her intellectual atmosphere is dry or hardening in effect. Transparent it certainly is, but there is still distance and charm. What is it makes the atmosphere of a novelist? What but a sense of proportion which settles the relative prominence of objects, the more or less of sympathy that colors them, the indefinable personal quality moulding the style in which they are presented? In Mme. Kremnitz the sense of proportion is keen, and exhibits a growing refinement in her successive works; the sympathy has a strange, quivering delicacy, resembling shyness at times, that has a peculiar fascination in it; and the style has a clearness and grace unusual in German writers. There is in it a certain mingled directness and reserve which at first may seem cold, until we discover that the one is the simplicity of art and the other but a finer sensitiveness. As the hand of the artist has gained confidence, however, the value of her manner becomes more apparent. On comparing 'Ein Fürstenkind' with an earlier work, 'Aus der Rumänischen Gesellschaft,' for instance, it will be seen that without changing her method the outlines have become clearer and stronger, the relief fuller. There is less work that is tentative, or, rather, an effect sought is produced by fewer touches, and is consequently by so much the more certain.

The present story is a painful one: it is of a young Princess with a lovely face, a charming nature, and great wealth. Her mother, however, hates her because her figure is deformed; the man who marries her is forced to the union by his father, and shoots himself rather than live with her. The father in-law extorts from the heiress a power of attorney, and squanders her wealth without even a pretence of accounting for it. A second marriage is made for so-called love, but the husband contributes to the ruin of his wife by incurring debts rather than go to the trouble of rescuing her fortune from her former father-in-law, and then deserts her for the most vulgar of fleeting passions. The miserable story is made up, we believe, from facts, as it might have been, indeed, anywhere else. The damning thing for Bucarest is that such facts would elsewhere have been exceptions, whereas they are there of every-day occurrence. The evidence of this may be found in the book. Not that Mme. Kremnitz makes any such charge; the evidence is rather in the absence of accusation—just as in the comedies of Wycherley, which are certainly anything but jeremiads, it is at once seen by the manner in which abominations are taken for granted that nothing but the atmosphere of the London world and the Court of Charles II. has made such comedies possible. We do not mean to imply that Mme. Kremnitz in any other way resembles Wycherley. He rejoices in the exploits of his Horners and Dorilants, while she, though she neither excuses nor accuses, shows that the world as she sees it is to her a very sad place indeed. In their quiet straightforwardness her pages preach a strong, a terrible sermon, one of the sort which allows no one to sleep. There is, in fact, not a dull page in the book. There appears to have been no intention of preaching. The authoress made her story out of the materials immediately around her, and because she has the art of telling simply, strongly, and truly, the result strikes you just as a good portrait does—one of Titian's, for instance—and bears its moral just as facts, when rightly seen, must.

One peculiarity of any such representation of human nature is to make you feel your kinship with it, no matter how bad it may be. So we must own to being struck, while reading Mme. Kremnitz, with a feeling that Bucarest, after all, bore some resemblance to cities nearer home. The frivolity, the surface brilliancy covering emptiness and corruption, the aping of Paris in those respects where Paris is most easily copied, the lack of either noble ideal or solid culture, the slippery sense of honor in money matters, the frailty of the marriage tie, show that the rottenness of Bucarest differs from that of portions of our society in degree rather than in kind. It is only that Bucarest is a worse sinner, not at all another creature. It is the extent to which certain evils are developed that is the monstrous thing. MM. de Goncourt, Zola, and

Huysmanns might gnash their teeth in despair if they knew what they had lost by not being born in Bucarest. To the credit of Mme. Kremnitz—we beg her pardon for naming her in conjunction with such a crew—it must be said that, even in Bucarest, she has made her picture faithful without stooping to the study of plague spots. She is a realist who has not lost all sense of proportion, for whom the sore does not hide the man. We cannot help thinking it a pity that writers who love dirt for dirt's sake, like the trio named above, had not lived in a city where their "naturalistic" studies would not have been such a flagrant outrage to general truth. As for Mme. Kremnitz, on the other hand, could she have lived in Paris she might have gained with the larger canvas a more cheerful view of life.

'Ein Fürstenkind' is a well-told story: one can reproach it only with having the "défauts de ses qualités"—it is painful because it is faithful. But Bucarest is fortunately not all of Rumania. The division of the kingdom into the provinces of Wallachia and Moldavia marks a corresponding division in the character of the inhabitants. Even Bucarest profits by the better portion, for Moldavia sends up to the capital the greater part of the brains and manliness to be found there. Mme. Kremnitz has offset what was painful in her novels by introducing us to a better Rumania in her two volumes of 'Rumänische Skizzen.' These are translations of stories by Moldavian authors, and give us a glimpse of a more agreeable world. Indeed, the tales of Slavici have a rare charm both in matter and manner. That they do not lose in the latter respect in their German dress is due to the skill of the translator. None of the stories read like translations. They are tales of peasant life, chiefly among the mountains toward the Hungarian frontier, and even beyond in Transylvania, in those parts where the population is chiefly or entirely Rumanian. We are transported to another world, a world where it is pleasant to live, and where one loves and believes in one's fellow-man. His faults are not disguised: he has an Old World ignorance and superstitions, but therewith all the Old World simple virtues. The Rumanian village furnishes idyls as natural and charming in their way as 'Cranford.' Of course it is a long way from the village to the city, but the idyl has truth in it as well as 'Vanity Fair'; and when one wonders at the progress which is visible in Bucarest, in spite of extravagance, frivolity, improvidence, trickiness, dissipation, corruption, one does well to remember that back of the capital there is a land where men work honestly and live cleanly.

It is no small merit in Mme. Kremnitz that, by introducing us to the two worlds, she has done much to help us to a proper understanding of Rumanian life. We may hope, too, that she will complete her work by giving us studies from the life of a third world now struggling into existence. The world of Mme. Kremnitz's novels is the aristocracy, that of Slavici's tales is the peasantry of the mountains. Formerly in all countries these were the only classes recognized by fiction. No doubt the phenomena of modern society will reproduce themselves here in somewhat the same sequence followed elsewhere. Modern physical well-being, modern education, have already developed between the proletariat and the old boyar caste a middle class. Naturally, this forms the strength of the Liberal party; it furnishes the ferment, the working leaven of society; it is pushing, striving, gaining for itself every day some new position; it has the virtues and the characteristics of a middle class anywhere. It is probably, so to speak, still in its hobbledehoy age; but it will gain repose and refinement, and will end, as in France or England, in claiming the domain of art as its own. To-day the mouthpiece of its aspirations is M. Bratiano, the leader of the Liberal party, himself a noble who has cut loose from the ties of his class; to-morrow it will be the turn of the poet and the novelist.

THE SCOURGE OF CHRISTENDOM.

The Scourge of Christendom: Annals of British Relations with Algiers prior to the French Conquest. By Lieut.-Colonel R. L. Playfair, H. M. Consul-General at Algiers, author of 'Travels in the Footsteps of Bruce.' London.

PEOPLE of a despondent habit of mind, who are apt to doubt the progress of the world from worse to better, would probably derive a good deal of comfort from the perusal of 'The Scourge of Christendom.' There is a great deal in the world amiss still, but at any rate the civilized world is no longer so out of joint as to tolerate a Dey of Algiers in the midst of it. The march of the ages has improved that potentate out of existence, and it is now almost as difficult to realize why he was ever permitted to exist as to believe in the reality of mythological monsters—a gorgon or chimæra dire. The strange history unfolded in the book before us is briefly as follows: For nearly three centuries the city of Algiers was held by an army of Turks, nominally 12,000 strong, but rarely reaching to that total. The Dey or chief among them was chosen by a popular vote, in which every soldier of the army had a right to participate. So long as the Dey remained Dey, he was possessed of arbitrary powers, and could bastinade, bowstring, or decapitate his subjects to any extent that seemed good to himself. But as soon as the electors got wearied of a Dey they had a very short method of dealing with him: they killed him and chose another. Sometimes a considerable number of Deys were chosen in the course of a single morning, and, failing to give satisfaction, were forthwith put to death. Thus, Colonel Playfair tells us that "On September 10, 1695, a change of government took place; Hadji Shaban Dey was murdered by the Janissaries; *several new ones were appointed and killed on the same day;* and eventually the choice fell on Hadji Ahmed, the poorest, the oldest, and the most infirm person they could find; the soldiery declaring that they would no longer be governed by a person of bravery or of administrative ability." For a Dey to die peacefully in his bed was the rarest event; these sovereigns were murdered with such punctual uniformity a year or two after their election that the wonder is that any one should have consented to become Dey.

These Turks and their Deys ruled with a rod of iron over a number of Arab tribes who, had they only been unanimous, could have eaten them up. These Arabs had no political privileges at all beyond those of being taxed, bastinaded, and plundered. The Turks maintained their authority by incessantly fomenting discord between one tribe and another, and, when a paltry quarrel had broken out, allying themselves with one party so as to insure the destruction of the other. But the singular part of the history of this small band of Turkish ruffians and marauders consists in the relations which subsisted between them and the nations of Europe. They were truly, as Colonel Playfair designates them, "the scourge of Christendom." Although never at any time possessed of a naval force sufficient to cope with that of the weakest European nations, for upwards of two centuries they set all the great Powers at defiance. Their privateers roamed over every sea, capturing merchant shipping, and dragging Christian men and women into a horrible slavery; and the great monarchies of Europe, instead of singly or in combination crushing this piratical pest once for all, were fain to purchase a temporary respite from their ravages by paying them tribute, and by sending humiliating embassies to form treaties of alliance with the Dey. The United States did not escape the attention of the pirates of Algiers. So many vessels became their prey that the Mediterranean trade was all but closed to their enterprise, and even the Atlantic they could not navigate in safety. We were at last obliged to conclude a peace on the best terms we could obtain. It cost us more than a million Spanish dollars, and we had to pay in addition a heavy annual tribute both in money and naval stores. In 1798, Mr. Playfair tells us that Mr. Eaton, American Consul at Tunis, was sent to Algiers in charge of four vessels as arrears of tribute. "Can any man believe," was the remark of this Consul after he had seen His Highness the Dey, "that this elevated brute has seven Kings of Europe, two Republics, and a continent tributary to him, when his whole naval force is not equal to two line-of-battle ships?" The insolence of these piratical ruffians, encouraged as it had been by centuries of impunity, can be imagined from what happened in Algiers, at a time when Great Britain was mistress of the seas, and her fleets were commanded by such men as Nelson, Dundonald, and Collingwood. At that very time, in Algiers itself,

"acts of tyranny were committed on Jews under British protection. British vessels were treated with the greatest injustice. The Consul was constantly insulted at his country house; the water was cut off, and finally guards were sent to turn him out. His demands to export to Malta prize and British goods were refused; he was not allowed to choose his own dragoman; all the bidders for the cargo of a Spanish prize were taken up, and had seven hundred strokes of the bastinade each; and he (the Consul) concludes: 'There is so much to say, that it is scarcely possible that it can be done by correspondence.'"

These pirates of Algiers made treaties and broke them according to a regular system. Their chief resources were derived from the sale and ransom of the slaves whom they captured; and they could not, with safety to themselves, pursue this particular industry if they were at war with a number of European Powers at once. They were, in consequence, always ready to enter into a treaty of peace with as many Powers as they thought best fitted for the particular operations which they had in hand. Thus, if they were at war with France—*i. e.*, were capturing French merchant ships—they were, in general, anxious to be at peace with Great Britain; but as soon as France had, by presents and other humiliations, purchased a period of immunity for her mercantile marine, the pirates began to prey upon English commerce, quite regardless of any preëxisting treaty. They flourished upon the gigantic selfishness of those on whom they preyed. These foolishly and ignorantly persuaded themselves that each in turn benefited by the depredations from which some neighbor was suffering; and in their delight at these depredations they overlooked, or at any rate heeded not, those of their own subjects who were enduring a miserable and hopeless servitude in Algiers. The lot of these slaves was dreadful in the extreme:

"They had to work from early morning till late in the afternoon, excepting on Fridays, when they were free either to take their repose or work for themselves. Their labor was exceedingly hard, and sometimes they had to perform their tasks laden with heavy chains. Some were sent to the quarry to break stones; others were harnessed to carts to convey building materials to the various public works. Those employed at the ovens were even more miserable, having hardly any respite day or night; the filth of these ovens was horrible, and the heat unbearable. Vermin swarmed everywhere. Those of the slaves who were able to act as

skilled laborers could hardly ever hope to obtain their freedom, save on most onerous conditions. The Dey sometimes sent a number of them to sea, and in that case they were allowed one-third of their share of booty. Others were allowed to keep taverns, paying duties proportionate to the quantity of wine they sold, and these sometimes amassed a sufficient sum to purchase their freedom. . . . If a slave ever dared to raise his hand against his master, the retribution was terrible. A young Christian, on one occasion, killed his master under provocation so gross as to justify the act. He was dragged to the place of execution over the rough and pointed stones, subjected to the insults of an excited and brutal crowd. On his arrival there, each of the spectators seemed to take a pleasure in assisting at the work. He was crucified against the wall with four large nails; a red-hot iron was thrust through his cheeks to prevent him speaking, and in this condition he was slowly burnt to death with firebrands. Such acts of cruelty were by no means uncommon, and even the simple bastinado, administered at the request of any Turk, was hardly less terrible in its effects than the most refined tortures."

Nothing could surpass the philosophic calmness with which the English Government contemplated the fate of such English men and women as were consigned to this awful destiny. They haggled long and parsimoniously over the sums demanded by way of ransom. A hundred pounds more than they liked sufficed to make them give up the attempt in despair, as occasioning too large an expenditure of money. Colonel Playfair gives us a treaty concluded with the Dey in the reign of James II., which provides that "the King of Great Britain shall not be obliged to redeem any of his subjects then actually in slavery; but it should depend absolutely on his Majesty to redeem such as he might think fit, agreeing for as reasonable a price as possible with their masters for their redemption, *without obliging the said masters against their will to set any at liberty.*" It was not until 1816 that Christian slavery ceased in Algiers, and its cessation then was due not to the united action of Europe, but to that of Great Britain and Holland. It was on the 27th of August, 1816, that the combined British and Dutch fleets, under command of Lord Exmouth, achieved that memorable bombardment of Algiers which destroyed the piratical power of the Dey, obtained the release of all the European slaves in his territory, and put an end to Christian slavery forever. Colonel Playfair quotes an interesting description of this bombardment from the official diary of Mr. Shaler, the American Consul-General:

"At 3 o'clock the British Admiral took his position, in most gallant style, within fifty yards of the mole-head, the other ships taking theirs in succession in the same manner. At this moment the Algerines opened their fire upon the Admiral, and the battle instantly became general. At about twenty minutes past 3 the marine batteries appear to be silenced. The cannonade endures with a fury which can only be comprehended from practical experience; shells and rockets fly over and by my house like hail. The fire is returned with constancy from several batteries situated at the N. W. angle of the town, and from one of four heavy guns directly under my windows. These batteries are exposed only to an oblique fire, and apparently have not suffered much. At 5 an attempt was made to renew the fire from the marine batteries, but it does not continue ten minutes. At half-past 7, the shipping in the port on fire. At half-past 8 the cannonade endures with unabated fury on the part of the English, and is returned from the batteries in this quarter. The upper part of my house appears to be destroyed; several shells have fallen into it; whole rooms are knocked to atoms. At 9 the fire slackened; at 11 it appears to cease, is fully renewed at intervals; at half-past 11 it ceases entirely. At 1, from my terrace, everything in the Marine appears on fire; two ships wrapped in flames have drifted out of the port, and appear to have driven the combined fleets from their position. Heavy thunder and rain. The lightning enables me to discover the combined fleets at anchor in the bay."

The narrative terminates with an account from an eye-witness of the capture of Algiers by the French, and the deposition of the Dey—one of the few conquests which even the most enthusiastic lovers of peace may remember with delight. French rule in Algiers is very far from being a model for all nations to follow, but, as compared with that exercised by the pirates of Algiers, it is excellence itself. Colonel Playfair is to be congratulated upon having written a book which is both eminently readable and a distinct addition to our historical knowledge.

SCHUYLER'S PETER THE GREAT.—II.

Peter the Great, Emperor of Russia. A Study of Historical Biography. By Eugene Schuyler, Ph.D., LL.D., Author of 'Turkistan.' In two volumes. Charles Scribner's Sons. 1884.

With the close of the seventeenth century the narrative before us becomes almost purely historical. The properly biographical element recedes. Charles XII. of Sweden, against whom the Czar has entered into an offensive league with Frederick IV. of Denmark and Augustus the Strong of Poland and Saxony, figures as conspicuously as the subject of the work, if not more so. Patkul, the Livonian nobleman, whose deadly hostility to Sweden was so cruelly revenged by Charles, and Mazeppa, the fickle Hetman of the Cossacks, are more prominently sketched than the foremost companions of Peter. Separate chapters are devoted to the battle of Narva, Charles's first victory over the Russians, in 1700; the negotiations for mediation and alliance, 1701; Russian successes on the Baltic coast, 1701–'4; Charles's movements in Poland for the dethronement of Augustus, 1702–'5; the campaign in Courland, 1705; the operations around Grodno, 1706; Charles's advance into Saxony and the peace of Altranstädt, 1706; the diplomacy of 1707; the war in Lithuania, 1708; and the battle of Poltava, which ruined the royal Swede, 1709. These first ten years of the Northern war, in which his career is mostly eclipsed by that of his younger Swedish rival, nevertheless show Peter in the best light in which he ever appears. His energy, perseverance, and determination appear indomitable. No reverse stuns him. In the midst of campaigns with varying success, he pursues his internal reforms, enforces his former Europeanizing decrees, establishes institutions of learning, enlists foreign skill and science, reorganizes the administration, regulates the monasteries, creates St. Petersburg in the marshes of the Neva—by forced labor and at the cost of more than one hundred thousand lives—and altogether gives a new direction to the course of his nation's history. He is indefatigable in acquiring knowledge, decreeing, and directing. His foibles and failings are less perceptible, although his character, temper, and habits hardly undergo a change. After the battle of Poltava, Europe looks upon him with mixed admiration and awe. Leibnitz writes:

"The Tsar henceforth will attract the consideration of Europe, and will have a very great part in general affairs. People greatly praise his humanity and his goodness in giving Swedish officers leave on parole. . . . It is commonly said that the Tsar will be formidable for all Europe, and will be like a modern Turk. But can he be prevented from educating his subjects and rendering them civilized and warlike? *Qui jure suo utitur nemini facit injuriam.* As for me, who am for the good of the human race, I am very glad that so great an empire is putting itself in the ways of reason and order, and I consider the Tsar in that respect as a person whom God has destined to great works. He has succeeded in having good troops. I do not doubt that . . . he will succeed in also having good foreign relations, and I shall be charmed if I can help him make science flourish in his country. I maintain even that he can do in that respect finer things than all other Princes have done."

Of the terrible oppression and extortion, legal and illegal, which, added to the never-ending conscription, ground down the Russian people, while the great empire was "putting itself in the ways of reason and order," the German philosopher probably never realized the extent. Nor is it likely that he knew how popular revolts in the remote interior, kindled by despair or delusion, were stifled and revenged by the Czar while he was doing his "great works" before the eyes of Europe. It was not long before his victory at Poltava that, of the Astrakhan rebels sent to the capital, "three hundred and sixty-five men were executed—many of them broken on the wheel." Another insurrection, in the region of the Don, was finally suppressed both by wholesale executions and widespread devastation. "The young men were sent off to other provinces. As to the aged, the women, and the children, Apráxin wrote to the Tsar, 'these will disappear of themselves.'" Peter would, perhaps, have been less cruel in his repression of these risings had they not been so threatening in the midst of his perilous campaigns. And scarcely was the Swedish invader vanquished—more by his own recklessness than by Russian strategy—when the Turkish war of 1711 brought the Czar to the very verge of ruin. Peter on the Pruth was no wiser as a commander than Charles on the Vorskla, and he was far from being equally brave. He was ready to save himself by flight, regardless of the fate of the army; he was ready to sacrifice former conquests and honor. But both himself and his army and almost all his acquisitions were saved by the supine indifference of the Grand Vizier—not by Catharine's jewels and nocturnal bribery, as less authentic history used to tell. Charles was furious at the escape of his foe, and in his fury and wonted stubbornness remained for years on Turkish soil, hoping against hope to be placed at the head of a Turkish army for another invasion of Russia; while Peter, active, energetic, and wide-awake as ever, carried the war into the enemy's territory, into Pomerania and Finland. All his new campaigns, even after Charles's return to his country, were offensive and easily successful, his antagonist remaining as reckless as ever in his fight against old and new enemies, as well as in his diplomacy, and the resources of Sweden, in men and means, being fatally exhausted. A bullet put an end to Charles's life in 1718, and Peter dictated peace to Sweden in 1721.

While his armies and Baltic fleet desolated the shores of the Swedish possessions, Peter found time to continue and extend his reforms. He had established a senate; he now reorganized the clergy and created a permanent supreme synod, which made him the virtual head of the Russian Church. He also found time for a two-years' journey abroad (1716–17), in company with Catharine, now his wife, during which he visited the courts of Berlin, Copenhagen, and Paris, and often showed himself so little divested of his earlier brutality that monstrous stories were told of his indecencies. The worst of these stories, that which induced Thomas Carlyle to apply to Peter the opprobrious epithet "Samoyedic," Mr. Schuyler discredits. On this point he evinces some eagerness, almost betraying a bias, to save as much of his hero's honor as can possibly be saved; but the closely-following account of Peter's treatment of his son Alexis is again a totally unvarnished picture of the autocrat's excessive barbarity, although the complete unworthiness of the unfortunate Prince to succeed even so barbarous a father is also fully exhibited. What is most harrowing in this narrative is not so

much the sacrifice of a child's life in itself—a sacrifice not wholly premeditated, and prompted by motives in which the fierce patriotism of a Brutus and the fierce selfish jealousy of a Herod appear mixed—but the sweeping fury with which it is carried out and followed up. Alexis was hounded, treacherously dealt with, and tried not for crimes but supposed evil intentions. The last interrogatory, "attended by torture, in the presence of the Tsar and most members of the court," lasted for three hours, and on the evening of the same day, July 7, 1718, he expired in his prison. The tortures and cruel deaths to which many of the sympathizers with the Prince, falsely accused of being his fellow-conspirators, were subjected, our readers may excuse us for not stating in detail. The day after the death of Alexis the anniversary of the battle of Poltava "was celebrated in the usual manner in the presence of the Tsar, ending with a banquet and a ball." Peter lived to celebrate that anniversary six times more; accepted, after the final peace with Sweden, the titles, bestowed upon him by his nation's gratitude and adulation, of "Emperor," "the Great," and "Father of his Country"; added to his conquests from Sweden annexations from Persia; and till his death, on February 8, 1725, at the age of fifty-two years and eight months, continued his constant activity as a passionate Europeanizer and merciless autocrat, as well as his occasional exhibitions of buffoonery. Even shortly before his death, "during the holidays, the Emperor, with the Prince Pope, the Drunken Synod, and a procession of maskers, went about from house to house with songs and congratulations."

Besides general accuracy in stating facts, Mr. Schuyler's work has the merit of accuracy in transliteration from the Russian. His index alone, with all the Russian names accented, is, to a friend of Russian history and literature, worth the price of the book. Deviations from his strict rules of transliteration, as in "*H*ilkof" (for Khilkof), "*H*olmogory," "Mi*ch*ailovitch," "Miloslav*s*ky" (side by side with "Zboro*f*sky," "Zamyslo*f*sky," etc.), or "Ossipovitch" (side by side with "Esipof), are rare, except in the map. Other slips in Russian, as "Preobrazhensky," as a noun, for Preobrazhensk or Preobrazhenskoe (*selo*, not *gorod* or *monastyr'*, being understood), are exceedingly rare. In non-Russian matters we have noticed "King Gedimin" (for Grand Duke Gedimin), "Countess Kozelska" (for Countess of Cosel), "Tikoczin," "Yawo-row," "*the* Zenta," "Tékély," "Wurtzburg," and a few other inaccuracies. On the whole, the revision of the book leaves little to be desired, though, in a solitary instance (vol. i., p. 114), we find three successive false dates: "in 1688, during the reign of the Tsar Alexis" (he died in 1676); "in 1870, on the celebration of the 200th anniversary of Peter's birth" (he was born in 1672); "and again in 1872." The mechanical execution of the volumes is also excellent.

What Shall We Do with Our Daughters? By Mary A. Livermore. Boston: Lee & Shepard.

ALL that good intentions and all that the aim at a high ideal could contribute, may be found in this little book, but it is not from these only that a strong argument can be constructed, or conviction enforced; least of all upon a subject in itself so involved, and now so confused by prejudices on the one side and over-sanguine hopes on the other. The book is late. The lectures when delivered, as the preface states, ten years ago, had their due purpose in awakening interest. Time has fulfilled some of the hopes, has answered some of the questions. It has altered the bearing of all of them. "What shall we do for our daughters to prepare them for life?" is a more accurate title for the book, since the writer has nothing new to say of their future. Many marry. Of the others, a minority live in more or less of ease. The rest support themselves. All that the book contains concerning ways and means has been said over and over again. A sound body, a well-trained mind with powers of practical adaptation, and pure, high moral purpose, are what every parent would desire for a daughter. To repeat this again is only harping upon an old theme. We have gone further than that, and there are other, later questions that are burning for an answer. There was probably never a time when the children of the rich were better cared for physically than now. How shall this improvement be extended to people of moderate circumstances? Opportunities for higher education, for special education, are multiplying far in advance of the numbers ready to profit by them. Why is this? Or, to put the same thing in another way, how can it be made worth while for a woman to give herself an expensive training? How is it that a woman undertaking an occupation above the rank of day-laborers (very many teachers, be it said without offence, are that)—any occupation that can be classed as professional in a man's sense of the word—finds the habits of her whole sex arrayed against her? How can it be helped that the whole body of women of leisure counts as a dead weight against those that must work? How can we prevent that sad waste which we witness almost every year—the failure and death of some choice woman because there is not power to discriminate, as successful men do, between work that is worth doing and work that must be left to inferiors? The list of questions grows under our hand, and the newspaper column is no place to answer them. Lamentation or invective is equally useless. Too much of all that has been said has started from the assumption that the present state of things is the result of a deliberate conspiracy for persecution on the part of men. Hence what was well meant to awaken interest, as in the book before us, has been only the sowing of seeds of bitterness in young, restless hearts. What is wanted is patient study of circumstances, based upon some philosophical theory of the development of the race through a struggle where it was inevitable that the strongest, and only the strongest, should come to the front first.

Martin Luther: a Study of Reformation. By Edwin D. Mead. Boston: George H. Ellis.

THE purpose of Mr. Mead's little book is expressed in the title. It is a study, less of the Reformation of the sixteenth century than of the principle of reform in general, as illustrated by the personality of Luther. It is a case of avowed hero-worship. The author's model, in plan and method, is Carlyle. He has lived into the peculiarities of his master so completely that he cannot or will not avoid reproducing them on every page. It is as if the worst blemishes of the great author's style—blemishes which we may forgive because without them Carlyle would have been some one else—had been purposely adopted here as real ornaments. The result is that the whole book has the stilted, artificial effect which an imitated style must necessarily produce. Invective and satire, to be effective, must seem to be the outward expression of an inward passion which can work itself out in no other form; not, as here, to be the props and stays of ideas not especially original or vigorous in themselves.

Yet the word here spoken by Mr. Mead is one much needed at the close of the debate called forth by the Luther anniversaries. Stripped of their rhetorical ornament, these chapters tell us, what is well worth hearing, that the Roman answer to the great demonstration of enthusiasm for Luther's memory has been nothing more than a warming over of the ancient dish of absurd and monstrous calumnies which, from Luther's time until now, has been served up for the satisfying of the faithful. It is good service to point out, as Mr. Mead has done, that what seems to many the failure of Protestantism is nothing more than the failure of certain schemes and certain combinations going under the name of Protestant, while the real thing, the spirit of Protestantism, is moving on in other forms to ever new victories.

The whole content of the criticism on Mgr. Capel is so sound that one may wish the author well out of his false ideas of style, and well started in the direction of a simplicity which would give much greater weight to his attacks. And his hero-worship is far from that blind reverence which sees only good in its object. He recognizes Luther's faults, and dwells upon them; only he insists that these faults, which have been seized upon as a reproach to the great cause, had really to do with the cause only in so far as they helped to make up the mighty individuality of the man. This is the sum of it, that the protest of Luther was the protest of individualism—even unconsciously to himself—the demand that every man should stand on his own power to read and interpret what seemed to him the word of God. Whatever sets itself in the way of that protest, no matter upon what claim it may rest, must, in the long run, give way.

The Historical Monuments of France. By James F. Hunnewell. Boston: James R Osgood & Co. 1884.

MR. HUNNEWELL'S impressive-looking volume is a kind of desultory guide-book among the *monuments historiques* of France—that is, those of her old buildings which have been enrolled and taken under Government protection as worthy of public defence against decay or despoiling. The author has apparently travelled much in France, and read of her buildings and history, and he gives us, in the language of an intelligent amateur, the description, the story, and often the gossip of such of the monuments as he has studied. His accounts are interesting, full enough to give the ordinary reader what he will care to know, and to show the travelling architect where to look for more. Two hundred and fifty 8vo pages are far from giving scope, at Mr. Hunnewell's leisurely pace, to traverse all the monuments on the roll, which are nearly two thousand; but the book is long enough for the reader, and the architect will find a valuable guide for his travels in the ample lists of the monuments which are given in an appendix, with short descriptions of the buildings, including many that are not "classed." In point of accuracy, this book seems to us better than most of like kind, after making allowance for a good deal of rather negligent proof-reading, and here and there an error which cannot be so easily accounted for. A quicker sense of historical and architectural relations would have made the book better; a knowledge of architecture would have enabled the author to pick out and duly emphasize facts which he now slurs over or omits. The few illustrations, selected mostly from familiar sources, and fairly reproduced by process, serve as embellishments rather than illustrations, being too scanty to furnish a commentary. We wish it had occurred to the author to add a reproduction of the map prepared for the Commission des Monuments Historiques, and appended to Hocquart's

'Archéologie des Provinces et Departments de France,' which is now hard to get. As it stands, however, the book is worth anybody's having, and ought to be of real assistance to architectural travellers.

The Game Fish of the Northern States and British Provinces, with an Account of the Salmon and Sea Trout Fishing of Canada and New Brunswick, together with simple directions for tying artificial flies, etc., etc. By Robert Barnwell Roosevelt. Orange Judd Co.

MR. ROOSEVELT is one of the very few American writers on angling who understand their subject and know how to express their knowledge and opinions clearly and interestingly. The book in question has had two previous editions, in 1862 and 1865. The present one, Mr. Roosevelt states in his preface, contains "a great deal of fresh matter, and the information and directions have been brought down to the present time." Nearly half the volume is devoted to the salmon and various kinds of trout, the chapters on the latter being so good that many an old fisherman might study them with advantage. We judge from what is said about large trout on page 21 that Mr. Roosevelt regards as apocryphal the stories of the monsters of 8 to 10 lbs., which are undoubtedly taken from the Rangeley waters in Maine. The chapters on sea trout, which are interspersed with narratives of personal adventures, are very good; but Mr. Roosevelt has given, for reaching the sea-trout and salmon rivers, the old routes, which have been, many of them, abandoned since the completion of the Intercolonial Railway connecting the Canadian Provinces, and reducing to a comfortable journey of two days what seven years since was a disagreeable one of a week. The Miramichi, Nepisiquit, Restigouche, or any of the Bay of Chaleurs rivers may now be reached from New York within two and a half days. There is opportunity for some difference of opinion with Mr. Roosevelt regarding the Canadian salmon rivers and their inmates. For instance, on page 94 he states: "The upper shore of the St. Lawrence furnishes the largest fish, but New Brunswick the most abundant." By the upper shore we suppose is meant the north shore of the river and gulf. The Romaine River certainly yields very large fish, but we doubt if a heavier average than the famous Grand Cascapediac, flowing into the Bay of Chaleurs, which, Mr. Roosevelt says, furnishes "*some* salmon and innumerable grilse." We know of no other north-shore river where the fish average so heavy as on the Restigouche and Matapediac in New Brunswick and Quebec; but the Natashquan on the north shore probably contains a greater number of small salmon than any river in Canada.

Following those on salmon are chapters on whitfish, cisco, bass, blue fish, "mascallonge," carp, etc., some of which might be open to question as being "game fish," but the information is none the less desirable. The "propagation of fish" is ably and interestingly treated, from the most modern standpoint, and, in addition to valuable information, hints and suggestions are given about the utilization of our barren waters that should be known and acted upon by all who have it in their power to do so.

The Relation of Animal Diseases to the Public Health, and their Prevention. By Frank S. Billings, D.V.S. D. Appleton & Co. 1884.

THIS work appears at a time when the subjects discussed in it are claiming attention at home and abroad. The first half of the book is devoted to the consideration of the contagious diseases peculiar to the domestic animals, the writer having gathered from various sources everything of value relating to them, and leaving little to be desired. The chapter on trichiniasis, partially illustrated, is very interesting, and well up to all that is known of the disease. The article devoted to tuberculosis of cattle is, in connection with the subject of diseased milk, full of suggestions for the physician. The writer very truly says: "If young animals can be infected by milk taken from tuberculous cows, what is there to prevent the same thing from taking place in babes brought up on the bottle?" The whole question of infection is studied carefully and thoroughly, the modern germ theory, with the experiments upon bacteria, receiving a large share of attention. The dog has a dozen pages, including some stringent but well-considered regulations guarding against an outbreak of rabies. The chapter upon glanders, more particularly as connected with its inoculation in man, will repay the careful attention of the reader.

The second half of the book is devoted to a history of veterinary medicine, with very full descriptions of the schools of France and Germany. Probably the pages on the use of horse-flesh will be new to many readers. The increase of its consumption for food purposes in Berlin is shown by the figures following: In 1853 the number of horses slaughtered for food was 686, while in 1868 the number had increased to 4,026. Apart from the fact that horse-flesh is specially nutritive and digestible, it is not liable to those verminous affections that produce the germs of the different kinds of tape worms of which the human body is the recipient. Rinderpest is made the basis of an appeal to the Government for public interference of the most searching character, and the book concludes with a demand for a national veterinary police system, together with a national veterinary school of an exceptionally high scientific character. The writer's arguments, in view of the important hygienic and financial interests involved in the diseases of domestic animals, are clearly and forcibly rendered. Animals are to receive the same care as men, while the veterinary surgeon is to occupy a position enabling him to take rank with the recognized physician. The author is plainly an enthusiast, and possibly the scientific character of the book may limit its interest for the beginner in veterinary pursuits; but for the more advanced student and for the general reader there is much valuable and well-arranged material. The volume, of 446 pages, is well printed, and will be an addition to the library of any lover of domestic animals.

Biography of Ezra Cornell, Founder of the Cornell University. A filial tribute. A. S. Barnes & Co. 1884.

MR. A. B. CORNELL, as the biographer of his father, has had opportunities such as are given to few sons who undertake similar tasks. The material of a singularly noble, useful, and generous life was before him, and there was nothing to be apologized for or glossed over. Ezra Cornell, until middle age, knew the hardships of long-sustained struggles with poverty, and when at last a fortune came to him suddenly and, as we may suppose, unexpectedly, he displayed admirable wisdom as well as the greatest generosity in its expenditure. His money went almost entirely for others, and there is no reason to doubt that the unfortunate railway investments spoken of in the latter part of this volume, and which cost him so dearly, were undertaken with the sole expectation of realizing a large additional sum for the University. The early history of the telegraph, with which Mr. Cornell was intimately associated, and the success of which was largely due to his indefatigable industry and enthusiasm, is the subject of an interesting chapter. During his political career in the State Legislature amid the stirring events of the war, he was honorably and prominently identified with many of the important measures considered. In 1863 Mr. Cornell began the erection in Ithaca of the Cornell Library Building, and three years later presented it "for the free use of all residents of Tompkins County." In 1865, by the offer of a gift of $500,000 as an endowment, he secured from the Trustees of the State Agricultural College the transfer of the income of the land-grant fund to Cornell University, adding a donation of 200 acres of land in Ithaca, on which the College buildings were to be erected. The United States land scrip which represented the fund in the hands of the Trustees of the Agricultural College was at this time worth, for the purposes of location of lands, only about 60 cents per acre, and in order to secure to the University the profits which might accrue from using this scrip to locate lands instead of selling it outright, Mr. Cornell made a contract with the State to purchase the scrip at 60 cents an acre, locate the lands at his own expense, pay the local taxes, and turn into the State Treasury for the benefit of the University all the profits that might be realized. To this contract of his is largely due the present prosperity of the institution bearing his name, and, as stated on p. 220, he advanced, in carrying it out up to September, 1874, more than $500,000, besides giving it years of hard work.

Many interesting minor episodes are related in the book, and the author must be praised for having taken advantage of his vacation from politics to write the annals of so good and beneficent a life.

La Cour Impériale à Compiègne. Paris: Charpentier; New York: F. W. Christern. 1884. Pp. 304.

IT is difficult to conjecture the object of this book, the point of view of its author, or his motive for writing it. It is a medley of the most incongruous materials, of various degrees of worthlessness. Pointless anecdotes, forgotten scandals, and long extracts from documents that have lost what little interest they ever possessed, alternate with tiresome descriptions of hunting parties at Compiègne and stale fulminations against Prussian "perfidy." It will give a sufficient idea of the magnificently impudent method of book-making pursued by the author to mention that, in censuring the defective organization of the French ambulance, he considers it appropriate to devote over thirty pages, one-tenth of his whole work, to a minute and detailed account of the Prussian order of the Knights of St. John, in a style that would do credit to one of our Sunday newspapers. Indeed, the book is remarkable as a rare exception to the rule that French books, if they possess no other charm, generally possess that of manner. It is a dreary performance throughout, and there is not a quotable sentence in it.

Successful Preachers. By the Rev. Geo. J. Davies, author of 'Papers on Preaching,' etc., etc. E. P. Dutton & Co. 1884.

SOME five-and-twenty years ago we read Mr. Davies's 'Papers on Preaching' with so much pleasure that we expected a great deal of satisfaction from the present volume, but our expectation was in vain. 'Papers on Preaching' was evidently written *con amore*, and only after long and diligent search into the history of preaching. It was bright and sensible, and the writer's "anecdotage" was never wearisome. His 'Successful Preachers' is a series of twenty

sketches, twelve of which have appeared in the *Guardian* newspaper at intervals during the year 1881–1882. A certain scrappiness and incoherency is the most characteristic note of each and all of them. They have no beginning, middle, or end, and they seldom leave a definite impression. Their poverty is especially noticeable in those instances where we have had full biographies of the preachers treated of. It is really astonishing that with such biographies as those of Kingsley and Wilberforce and the brothers Hare at his command, the writer could have made his sketches so dull and spiritless.

The general impression is not favorable to the preaching of the English Church, although among the preachers named are Samuel Wilberforce, Henry Melvill, Charles Wolfe, and Archer Butler, Robertson, Kingsley, and Stanley. There is a very meagre appendix on American preachers of the Protestant Episcopal Church, in which Mr. Phillips Brooks has special mention, but to little purpose, the emphasis being upon the collapse of a rush-bottomed chair under his weight when he went to Convocation at the Jerusalem Chamber. The Rev. Charles Bradley, the father of twenty-two children, one of whom is the present Dean of Westminster, was one of the greatest masters of "divisions," and several examples of his divisions are given, but they are not striking. Mr. Davies has a very interesting subject in the Rev. James B. Mozley, and is more successful than in some other instances in giving an impression of his power. There are various allusions to the custom, which would appear to be very common in England, of preaching MS. or printed sermons which are not the preacher's own. The waning popularity of the Rev. Charles Bradley's sermons is accounted for by the fact that they are labelled "dangerous," *i. e.*, they cannot be stolen with impunity. On one occasion the preacher, seeing Bradley in the audience just as he was concluding his discourse, added: "I have the more pleasure in having read you this excellent sermon of Mr. C. Bradley, as I see him an attentive listener." This is one of many pleasant stories in the book, but they do not redeem the general sense of dulness and inconsequence.

BOOKS OF THE WEEK.

Brownson, H. F. The Works of Orestes A. Brownson. Vol. VII. Containing the third part of the Writings in Defence of the Church. Detroit: Thorndike Nourse.
Butler, Samuel. Selections from Previous Works. With Remarks on Mental Evolution in Animals, and a Psalm of Montreal. London: Trübner & Co.
Church, Rev. R. W. Bacon. Harper & Brothers.
Croke, J. Greenbag. Lyrics of the Law. San Francisco: Sumner, Whitney & Co.
Dale, T. N. The Outskirts of Physical Science. Boston: Lee & Shepard. $1.25.
Eliot, George. Essays and Leaves from a Note-Book. Harper & Brothers.
Forbes, A. Chinese Gordon. A Succinct Record of his Life. Geo. Routledge & Sons. $2. Also, S. W. Green's Son.
Galdós, B. P. Trafalgar: a Tale. Wm. S. Gottsberger.
Gower, Lord Ronald. My Reminiscences. 2 vols. in one. Boston: Roberts Brothers. $2.00.
Griswold, W. M. Q. P. Index Annual for 1883. Bangor, Me.: Q. P. Index. $1.
How Much I Loved Thee. Washington: Raymond Eshobel. $1.25.
Keyser, Harriette A. Thorns in Your Sides. G. P. Putnam's Sons. $1.
Koehler, S. R. The United States Art Directory and Year-Book. Cassell & Co. $2.
Lalor, J. J. Cyclopædia of Political Science. Vol. 3. Chicago: Melbert B. Cary & Co.
Mott, R. F. Memoir and Correspondence of Eliza P. Gurney. Philadelphia: J. B. Lippincott & Co. $1.50.
"Nessmuck." Woodcraft. Forest and Stream Publishing Co. $1.
Raffalovich, M. A. Cyril and Lionel, and other Poems. London: Kegan Paul, Trench & Co.
Trowbridge, J. T. Neighbor Jackwood. New ed. Boston: Lee & Shepard. $1.50.
Yonge, Charlotte M. Scott's Quentin Durward. Boston: Ginn, Heath & Co.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

HENRY HOLT & CO., N.Y.,

HAVE JUST READY:

Stratford-by-the-Sea.

A Novel. 16mo (*American Novel Series, No.* 4), $1.00.

Called Back.

By Hugh Conway. 16mo. Leisure Hour Series, $1.00; Leisure Moment Series, 25 cents.

The Pagans.

A Novel. By Arlo Bates. 16mo (*American Novel Series, No.* 3), $1.00.

A Latter-Day Saint.

Being the Story of the Conversion of Ethel Jones, related by Herself. 16mo (*American Novel Series*), $1.00.

"Another Disagreeable Novel.

Disagreeable novels sometimes go in processions, and just now the new 'American Novel Series,' lately begun by Henry Holt & Co., seems to have a monopoly of the product. 'Stratford-by-the-Sea' is the fourth in the series. We do not know that it is any worse than 'A Latter-Day Saint,' which was No. 1; and we are quite sure it is not so very bad as 'The Pagans,' which was No. 2. With 'Esther,' the third in the series, we are not able to compare it, as that work of Hebraistic title has not yet come into our hands."—*Literary World.*

THE IMPERIAL DICTIONary. A complete encyclopædic lexicon, containing 130,000 words and more than 3,000 illustrations, in four large octavo volumes. Sold by all booksellers. *Specimen pages sent on application.*

THE CENTURY CO.,
33 East 17th St., New York.

THE BUREAU OF REVISION prepares authors' and publishers' MSS. for the press.
Dr. TITUS M. COAN, 110 East 56th St., N. Y. City.

The Best Books for School Prizes, etc.

I. PROSE MASTERPIECES from Modern Essayists: Comprising single specimen essays from Irving, Leigh Hunt, Lamb, De Quincey, Landor, Sydney Smith, Thackeray, Emerson, Arnold, Morley, Helps, Kingsley, Ruskin, Lowell, Carlyle, Macaulay, Froude, Freeman, Gladstone, Newman, Leslie Stephen. These essays have been prepared with reference to presenting as well specimens of the method of thought and the literary style of their several writers.

Three vols., 16mo, bevelled boards, gilt top, in box, $3.75; the same in extra cloth, with cloth box, $4.50; the same in Russia-leather binding and case, round corners, red edges, $10.00.

"In no other such small space can be found the masterpieces of modern essayists."—*Post, Hartford.*

II. PLUTARCH FOR BOYS and Girls. Selected and edited by Prof. John S. White. Quarto, with many illustrations, $3.

This edition contains all the "Lives" and "Parallels" in Plutarch's own words, with such omissions only as were necessary to adapt them for young readers. There is also an Introduction and Life of Plutarch by the editor. As a standard work, adapted to both boys and girls, its wealth of anecdote and faithful portrayal of character render it peculiarly valuable.

"It is a pleasure to see in so beautiful and elegant a form, one of the great books of the world. The best Plutarch for young readers."—*Literary World.*

III. THE UNIVERSE; OR THE Infinitely Great and the Infinitely Little. From the French of F. A. Pouchet. New and much cheaper edition. Octavo, with the original 262 illustrations, cloth extra, $3.75.

"A sterling work, thoroughly accurate, and fresh and vigorous in style."—*Popular Science Review.*

*** Putnam's new catalogue sent on application.

The Nation.

NEW YORK, THURSDAY, MAY 15, 1884.

The Week.

THE affairs of the firm of Grant & Ward grow more bewildering from day to day. "Ten millions of liabilities and no assets and no business," appears to be the showing of the bankrupt estate. It is now stated and generally believed that the "Government contracts" which the firm induced multitudes of innocent victims, male and female, to believe that they had under their control, yielding enormous profits, were altogether a myth, and that they never had a Government contract, great or small. The business of the concern consisted simply in taking in people's money and paying them large "profits" out of the principal as long as it lasted, and then going to smash. Its prototype may be found in the Royal Bengalee Life Assurance and Disinterested Loan Association, but whether the Montague Tigg of the concern is to be looked for in the person of Ferdinand Ward, or James D. Fish, or some less conspicuous but more cunning rascal, is not yet clear.

The failure seems to be the last efflorescence and crowning glory of Stalwartism. The name of General Grant was used as a general guarantee of firmness, solidity, and success in all the relations of life. The Government contracts upon which such tremendous profits were coming in were supposed to be awarded through his influence and that of his immediate friends and followers in politics. When this mine had been worked out, a lot of city contracts, quite as imaginary as the Government contracts, came to the front, and more money was got in by the promise of large profits from that source. How these profits were actually realized may be guessed by glancing at the city's deposit account in the Marine Bank. The city was issuing 3 per cent. revenue bonds, and Grant & Ward were bidding higher prices for them than anybody else would pay. Fish was a partner in the firm, and was also President of the Marine Bank, and the Marine Bank was one of the city's depository banks. The *modus operandi* for the realization of profits in city contracts was evidently to buy say $100,000 of city bonds, pay for them, and have the money deposited in the Marine Bank, then use the same money to buy another $100,000 worth, and have the money again deposited, and so on, selling or hypothecating the bonds meanwhile, and finally bursting and leaving no assets. The failure is the most colossal that ever took place among merely private firms in the United States and one of the most disgraceful.

The stock market has been in a state of nervous prostration ever since the collapse of the Marine Bank and Grant & Ward. So many bad things have cropped out one after another that the bulls are thoroughly demoralized. The failure of the Northwestern Car Company, of Stillwater, Minn.; the reported passing of the Union Pacific's dividend, which, although premature, is none the less believed to be inevitable; the prospect of a receivership for the Wabash Railway—which, however, is contradicted by a telegram from St. Louis—and a series of Canadian failures, have conspired to depress the whole list with slight exceptions, and to an extent hardly warranted by the general condition of trade and industry. It can no longer be said that trade is in a declining state. Low-water mark was evidently reached three months ago. Trade journals are pretty generally agreed that, although there has been no marked revival of activity, the shrinkage has ceased. The Marine Bank and Grant & Ward explosions were not due to general causes, but to transactions even worse than ordinary "kite-flying." They betoken no deep-seated disease in the financial world. Their effect upon the currents of business in Wall Street has been exaggerated to this extent. Yet it would be unsafe to predict anything like an early recovery from the feverish condition which that phenomenal catastrophe has produced.

An analysis by sections of the vote on the Tariff Bill shows that protection sentiments are making very little headway in the South. Of the forty-one Democrats who voted with the Republicans in favor of killing the bill, only four come from the South—one each from Virginia, West Virginia, Maryland, and Louisiana. The State of Georgia, in which the growth of manufacturing interests has been especially marked, is not represented by a single protection vote, and South Carolina has only one, that of a colored man. Twelve of the forty-one are from Pennsylvania, ten from Ohio, six from New York, four from California, three from New Jersey, one from Illinois, and one from Connecticut. Of the 151 Democratic votes cast for the bill, eighty three are from the South and sixty-eight from the North.

Mr. Hewitt's tariff bill is a very meritorious measure, and is designed evidently to meet the objection raised against the "horizontal" feature of the Morrison bill. It seeks to accomplish tariff reduction with special reference to existing conditions, or what Mr. Hewitt considers to be existing conditions. Of course the views of other people may differ widely from his as to these conditions, and this difference of opinion will bring up the whole list of dutiable imports for debate seriatim—too wide a range of controversy to be entered upon with any prospect of success at so late a day in the session. The Republicans will oppose Mr. Hewitt's bill as strenuously as they opposed Mr. Morrison's. With them the tariff is not an economical question at all, but a game of political fence. Reduction of the revenue is nothing to them at the present time as compared with the chance of creating a division in the Democratic party in the Presidential campaign. Therefore Mr. Hewitt must look for no help on that side of the House. Judicious and discriminating reduction has no more attractions in that quarter than horizontal reduction. Nor is the bill likely to prove more satisfactory to Mr. Randall and his followers than the Morrison bill was. They are opposed to "meddling with the tariff." They desire to leave things as they are. Any bill which disturbs the existing status is as bad in their view as any other bill. There is little prospect, therefore, of any change in the aggregate vote favorable to Mr. Hewitt's bill as contrasted with Mr. Morrison's, while the element of time in which to consider it is now wanting.

The House Judiciary Committee are now considering various forms of the proposed constitutional amendment to prohibit the issue of legal tenders, and it is said by those who are active in the matter to be very desirable that there should be public expressions of opinion on the subject by bankers, merchants, savings-bank depositors, and all classes interested, without distinction of party. The fact is that there is no class not interested in the matter; but the subject presents two difficulties that are very serious: the first is the fact that the class which suffers most from paper money—the laboring population—the class most pinched by any fluctuation and unsteadiness in prices, is the class in which the belief in and longing for "fiat" money is now most prevalent. There is no large number of bankers, merchants, or business men who are hoping for an inflation of the currency by Congress, to remedy the stagnation in business, as there was several years ago. It is the labor-reformers, the anti-monopolists, and demagogues like Butler—that is, politicians who live on the delusions of the "toiling millions"—who represent the present paper-money movement; and the movement before the recent decision of the Supreme Court appeared to be making very little headway. What vitality it now has is due to the adhesion so suddenly and unexpectedly given by the Supreme Court to the extreme paper-money view of the Constitution; and any amendment introduced into Congress to deal with the difficulty must be directed in a certain sense against the court itself.

The newspaper members of the anti-Blaine syndicate of 1876 seem to be experiencing a good deal of annoyance from people who wish them to explain their conversion into admiring Blainites. It is not a pleasant or easy task, but they are slowly pulling themselves together for it. Mr. Halstead, who is also still suffering from the exhausting effects of his conversion on the silver question, writes a letter to the Washington correspondent of the *Herald*, in which he says that he is really not a Blaine but a Sherman man, and that the reason he does not now believe the charges against Mr. Blaine which he did believe in 1876, is that he thinks worse than ever of the Democratic party, has "lost faith in the efficacy of independent movements," is grateful to Mr. Blaine for defeating the third-term movement, and found when he sought to hunt up the facts against Mr. Blaine that "they failed to materialize." Moreover, he is inclined not to believe the charges against Mr. Blaine touching the Little Rock and Fort Smith Road, or the

Northern Pacific and other railroads, because President Garfield told him that Mr. Blaine fully acquiesced in his suggestion, made at his first Cabinet meeting, that every member of the Cabinet should mind his own business, and also that he himself (President Garfield) made the appointments on which Conkling resigned. This, like much of Mr. Halstead's ratiocination, seems to contain a deeply suppressed premise of gigantic dimensions. That Mr. Blaine's own letters "failed to materialize" is a grotesquely humorous way of saying that Mr. Halstead is determined, for reasons of his own, not to be influenced by them this year.

We understand that some of the promoters of the Dorsheimer Copyright Bill have made up their minds that there is little hope of passing the measure at the present session of Congress, and are now considering whether it will not be better to tack on to it a clause protecting the American publisher, thus changing the measure from an authors' to a publishers' copyright bill. On the principle of taking all that you can get, when you cannot get all that you want, it would certainly be foolish for the Authors' League, which now embraces every literary man of much distinction in the United States, to prevent Mr. Dorsheimer and the publishers from getting such a bill through Congress, if they wish to do so. But all that can be fairly expected of the League is that it should refrain from active opposition. What it has undertaken to do is not to make the business of publishing books in the United States more profitable, but to secure a right of property to a class long defrauded of it by the apathy and indifference of the public. Let the authors stick to this, and their final triumph is certain, though it may be delayed.

We think it may be worth while to suggest to Mr. Dorsheimer the fact that it is at least very doubtful whether such a bill as his can, in the existing state of the English law, be transformed into a publishers' copyright bill. The English law provides for an international authors' copyright with any country which will provide for the same in return. It has nothing to say on the subject of publishers, nor of protection, nor of the manufacture of books, and therefore, without a new special act of Parliament, a publishers' act passed here calling for reciprocity abroad would be so much waste paper. But is there any reason to believe that the English Parliament would pass such an act? The English publishers have no special desire that American publishers should take any of their business away from them, and they might fairly protest against the Legislature of a free-trade country making bargains with that of a protectionist country calculated and intended to build up a flourishing foreign business at their expense.

Charles O'Conor, whose long-expected death is announced, was the last of a great generation of lawyers. He was remarkable even among a host of distinguished competitors for legal attainments and mental vigor, but he was remarkable also for something rarer, and which grows rarer still in his profession, as in most others, as the years run by—an independence of character on which neither fear nor favor ever made the smallest impression. There have not been many conspicuous men in any calling in this State, or in any other, who remained through a long and laborious life so true to their own ideals of character and aim as he did, and who had, at the close of an illustrious career, so little to look back on in the way of compliance or pursuit which they would have been ashamed to own. It is not often that a lawyer is so successful in reaching the "shining table lands" of professional fame, or, in other words, in becoming and remaining the kind of advocate whom the books and the commencement orator describe for the benefit of the neophytes who every year enter on the thorny paths of the law. He owed no money and no reputation to any arts, as Burke said, but manly arts. No man ever paid him a fee for anything but the honest service of his brain, or ever long expected from him any service which a member of the bar ought not to render. He took with him into every court which he entered something which no client could bargain for, and which could not be estimated in dollars and cents—a self-respect which made base shifts and devices impossible to him. He was wanting in many of the things which in our time, or perhaps in any time, give a man what is called influence. He took but little account of the forces which at the present day make the road of the good man who seeks to leave his mark on his generation so full of deflections. His political ideas were worthier of Sir Thomas More than of the modern American statesman. But he was a great example of something which is much scarcer and more precious than any sort of practical talent, and that was a character which always rang true to the strokes both of good and evil fortune, and a simplicity of heart which lasted into extreme old age, and survived all the honors and rewards of a chosen and dearly loved calling.

Judge Reid, the Kentucky judge who was brutally assaulted in his chambers by a member of the bar, Mr. Corneilson, who suspected him of deciding, or helping to decide, against him in a case before the court, has refused to comply with the earnest solicitation of a large number of his friends and of the public, that he should murder or attempt to murder Corneilson. He is a candidate for the Court of Appeals, and it has been supposed that refusal to commit murder under these circumstances would lead to his defeat at the polls. The situation was rendered all the more embarrassing by the fact that he is an elder in the Presbyterian Church; but church membership does not in Kentucky relieve a man from his homicidal obligations. Judge Reid, however, to his honor be it said, has publicly refused either to take life or attempt to take it, or expose his own life in a private quarrel. He says he will not do it, be the consequences what they may. If he cannot be elected to the Court of Appeals without blood-stained hands, he will submit to defeat. This is probably the bravest thing done in Kentucky within the present generation. There is not a murderer in the State who would have the pluck to do it, even in liquor. It is gratifying to hear that warm congratulation and approval is pouring in on him from some of the best men in the State. To make the affair complete as a sign of advancing civilization, the lawyer ought now to get about two years' hard labor in the penitentiary.

Another good sign in the same State is an action brought in the United States Circuit Court by a prominent lawyer named Garrigus, formerly of Russellville, Ky., against two other members of the bar, Messrs. Stanley and Frazier, of that place. They tried to murder him last year, and instead of trying to murder them in return when he got well of his wound, he moved to Indiana, and having become a non-resident, now brings his suit in the United States Court for $80,000 damages. This also is a brave act, but of course it is not so brave as if he had remained in the State. It shows, however, the slow dawning in the Kentucky mind of the idea that it is honorable and patriotic for the civilized men in a civilized community to leave the redress of private injuries to the law, and that no man should be judge in his own cause.

It looks now as if the English Conservatives were coming to the caucus at last, in spite of the horror which the spectacle of its working among the Liberals has excited among them. The revolt of Lord Randolph Churchill against the leadership both of Sir Stafford Northcote and Lord Salisbury, which is said to have led to a sharp quarrel with the former, is leading pretty plainly to a compromise which will turn over the party management to some sort of representative body, which of course will be a caucus, with all its attendant horrors. Lord Randolph's head appears to be filled with Disraeli's idea of a Conservative democracy—that is, of a democracy which would let itself be governed by "its betters"—as nearly as possible a contradiction in terms. He thinks that active steps should be taken to get hold of the new voters who are coming in under the impending Franchise Bill, so that they would use the vote simply to put gentlemen of the Tory persuasion in power. This is a close approach to the Bonapartist idea in France, which consists in the inalienable right of every citizen to elect the eldest male of the Bonapartes to the throne. The difficulty which all Tories have in dealing with any kind of democracy is that they cannot admit the doctrine of equality, and yet this is now the only political doctrine which modern democracy seems to care much about.

When a steamship comes into collision with a sailing vessel, the rules of the sea settle it that the steamer is to blame unless there is a thick fog or the ship's lights are not burning. It is the duty of the steamer to keep out of the sailing vessel's way, and to run no risks about it. Consequently, there is no doubt that some one on board the *State of Florida* neglected his duty, particularly as the collision occurred on a bright starlight night, when the sailing vessel's lights were plainly visible. The question concerning the accident

which is now of most importance is, why "water-tight compartments" do not keep ships afloat for a longer period after the hull has been seriously damaged. We can recall no case in which they proved to be of much use except that of the *Arizona* when she ran into an iceberg. In every other the ships with the water-tight compartments seem to go down as easily as if they were open within from stem to stern. The common explanation is that the communicating apertures between the compartments are usually left open, the intention of the captain being to have them closed whenever he sees that there is going to be a collision, or that his vessel is going to strike on a rock or an iceberg, and that then, being otherwise occupied at the moment of the accident, he forgets all about it until the ship is full of water, or until he is in the water himself. If this be true, it would seem as if there ought to be a committee of passengers to see that the bulkheads are kept closed up.

The municipal elections in Paris have been going badly for the Moderate Republicans. The extreme Radical or Socialist element has made heavy gains. Curiously enough it was not Radical but Monarchist gains that the Republicans seem to have been afraid of before the election. It was against the Monarchists that the Republican newspapers urged the electors to be on their guard. The Monarchists had in the last Council ten members all told. They hoped to gain about as many more, which would, they thought, give them the balance of power between the Republicans and the Intransigeants. They could, of course, make no use of this in a body whose powers were so restricted, beyond advertising their existence and slightly increased strength; but they attach a good deal of importance even to this. As a matter of fact, they have gained about five members, while the Intransigeants have gained heavily, so that probably there will be no "balance of power" after all. In truth, the Monarchists have been so anxious to show themselves that in some places—Corsica, for instance—they have made common cause with the Reds, and issued combination tickets. In Paris, too, the Socialists undoubtedly received a good deal of encouragement from them, open or secret. The result of the election thus far, and particularly the heavy increase of the Intransigeant vote, seems to fill the Republicans with dismay.

As regards immediate practical results the affair is of no great consequence, because the legislative powers of the Municipal Council are very limited. It votes the municipal budget, but under the strict supervision of the Prefect of the Seine, who can disallow any items he pleases. If it had a chance, it would make large donations to workingmen in support of strikes, if not set up public workshops. During the past winter it has made more than one attempt to vote money in aid of the strikers in the Southern coal mines. The election means, more than anything else, that the discontented working-class population of Paris has greatly increased, and that it wants something—it does not well know what—out of the Government. To the Royalists and Bonapartists all this seems clear gain. They know that the Government will not be allowed to fall into the hands of the Communards, but they think that if property should become alarmed again by the apparent increase of their power, the Republic would be seriously endangered.

One of the most curious state papers of recent date is the Pope's Encyclical against the Freemasons. To most people who do not belong to the order, the Freemasons are a harmless body of persons, who amuse themselves with secret and pompous ceremonies, and practise brother kindliness with somewhat more emphasis towards their fellow-members than towards the rest of the world. But the Pope's opinion of them, like all Papal opinions, is traditional—that is, comes down without change from a period when secret societies were formidable and had political aims. The Church began denouncing the Freemasons in 1738, and every Pope since has considered it a duty to show them up as enemies of religion and morals. Leo XIII., in the present Encyclical, handles them without gloves, and takes no note of any change either in them or in the world which supports them. They are the children of Satan. They are trying to ruin the Holy Church and deprive Christian nations of their religion. They have made in recent times incredible progress. They resort both to audacity and cunning to make their way. Their power now in modern states amounts almost to sovereignty. They are trying to substitute for the religious and social discipline of Christianity a new one, of which the fundamental principles or laws are borrowed from "Naturalism." They advocate the separation of Church and state. They attack the Catholic religion. They would like to cut down the number of priests. They are opposed to the temporal power of the Pope. They are ready to destroy the Papacy itself. They treat the existence of God as an open question. They deny the fall of Adam. They are the authors of "realism" in literature and art. They treat marriage as a civil contract. They say that all men have equal rights. In fact, they are the enemies of everything that is sacred or valuable in modern society. The document is enormously long, and concludes with a call for energetic resistance to these wretches, and invokes for that purpose the assistance of the Virgin Mary, St. Michael, St. Joseph, St. Peter, and St. Paul.

Recent statistics show that the cost of living at German universities, notwithstanding the fact that the Germans are becoming fonder of spending money than they once were, is still very low as compared with that in America. Rent, food, and clothes are all cheap, and there it is not the fashion, as with us, to be lavish, so that the competition in expenditure, of which so many well-meaning but weak-minded American undergraduates are the victims, is practically unknown. A thousand dollars a year is the figure now generally given in estimation of the ordinary expense at a "crack" American college; and probably a considerable part of this is to be attributed to the general lavishness prevailing outside. The tone of American life is not simple, and comparing the general scale of living, inside and outside, now and twenty years ago, we doubt if the undergraduates have done more than keep up with the rest of us. The only people whom we discipline into plain living and high thinking are those engaged in the work of teaching; we make that calling as unattractive to men of ability as possible. An able professor, with a family, screwed down to $4,000 or $5,000 a year, and surrounded by undergraduates living in splendor and luxury, may be pardoned if he sighs when he thinks of the position of the learned in Germany.

Midhat Pasha, who has just died, was probably the last statesman, in the ordinary sense of the term, that Turkey will produce. He figured prominently on the scene as long as anybody thought reform and resuscitation were possible in the Ottoman Empire. Since his retirement the only question about Turkey which interests observers is, How long will it last? That will not be answered in Constantinople, and probably no attempt will be made to answer it until after Bismarck's death. Austria and Russia will then undoubtedly have something to say about it, and will try to say it.

Coloman Tisza, who, since 1876, has stood at the head of the Hungarian Cabinet, has been extraordinarily successful in his dealings with the nationally disaffected portions of the population. He has recently brought about a reconciliation between the dominant element of the country, the Magyars, and the Serbs of southern Hungary, heretofore defiantly hostile to the Magyar hegemony reëstablished by the agreement with Austria, which Beust and Deák carried through in 1867. These Slavs had, in 1848–9, waged a Vendean War against the revolutionary government of Hungary, and had subsequently been rewarded for their reactionary services by the erection of their territories into a separate crownland of Austria, under the name of Serb Voivodina. This creation lived only a decade, but the national aspirations of the Serbs of Hungary, fomented by the success of their brethren beyond the Turkish border, survived in full force, being fanned by the clergy on one side and by radical agitators on the other. Tisza has, for years, unyieldingly fought against both of these, not without occasional stretching of his constitutional powers. A considerable recent change in the disposition of the royal government of Servia toward Austria-Hungary finally gave him an opportunity of using conciliation and the blandishments of patronage, and, with consummate skill, he has succeeded in creating a strong Serb party ready to recognize Magyar supremacy and the fundamental laws of 1867, and to support the present Government party, on condition that the Serbs and their Church shall fully enjoy all the fruits of national and religious equality guaranteed by the Constitution. The new Serb programme was adopted at an assembly of notables convened in Buda-Pesth at the close of March, and was confirmed last month by a larger and more popular gathering at Great-Kikinda. This event promises to be of the highest importance in the history of Hungary.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 7, to TUESDAY, May 13, 1884, inclusive.]

DOMESTIC.

THE failure of the Marine Bank and of Grant & Ward, of this city, continues to be the principal topic of interest in financial and business circles. Although more than a week has elapsed since the failure its extent is still indefinite. During the week the Grants, Ward, and James D. Fish have made assignments of their property. The amount involved in the failure of Grant & Ward is variously estimated at from eight to ten million dollars. Their affairs are in such confusion that definite figures are as yet unavailable. Mr. Ward, the member of the firm to whose wild schemes the disaster is ascribed, is aiding in the work of investigation. He is constantly under the supervision of detectives, and it is asserted that he will be arrested on criminal charges. The affairs of the bank have been in the hands of Examiner Scriba, whose report has been forwarded to the Government in Washington. It is believed that the stockholders have lost everything, and that the depositors will not be paid in full. Walter S. Johnston, of Philadelphia, was on Tuesday appointed receiver of the bank.

The financial situation was still further complicated late on Tuesday by the report that the Second National Bank, of this city, had lost about $2,000,000 through the speculations of its President, John C. Eno. About midnight the Directors issued a notice that whatever loss had been incurred had been made up; that the capital stock was intact, and that the bank was prepared to meet its obligations on demand. No doubt is expressed as to the solvency of the bank.

The Northwestern Car and Manufacturing Company of Stillwater, Minn., of which United States Senator D. M. Sabin is President, has been put into the hands of a receiver. The failure of the Marine Bank of this city precipitated the trouble. The liabilities are roughly put at $1,000,000, and the assets at $4,000,000. Senator Sabin on Monday said that the company would pay its debts dollar for dollar, and that, with the extension that would be asked, it would be able within a reasonable time to resume.

Mr. Edmunds introduced on Wednesday a bill in the Senate to place General Grant on the retired list, and in doing so significantly said that he commended the measure to the Military Committee for reasons which every one could understand. Mr. Edmunds clearly referred to the New York failure. Mr. Cox introduced a similar bill in the House on Monday.

The Senate on Tuesday passed without debate the bill providing that "in recognition of distinguished services rendered to the United States, General U. S. Grant, late General of the Army, be placed on the retired list with the rank and full pay of General of the Army."

The United States Senate on Thursday passed the House Shipping Bill, amended so as to give the Secretary of the Treasury power to appoint the Shipping Commissioners.

Mr. Hewitt (Dem., N. Y.) introduced in the House on Monday a tariff bill which proposes a reduction of from 10 to 20 per cent. on a number of the existing schedules, and makes a number of additions to the free list. A bill for the abolition of the tobacco tax was introduced on the same day.

The House of Representatives on Wednesday non-concurred in the Senate amendments to the Fitz-John Porter Bill restoring him to the army, and the bill went to a conference committee.

The River and Harbor Bill reported on Wednesday in the House appropriates $12,619,100 upon the engineers' estimates of $35,301,885. This is about $6,000,000 less than the bill which was passed in 1882 over the President's veto.

One million dollars for the New Orleans Industrial and Cotton Exposition were appropriated by the House on Thursday.

Now that the Morrison Tariff Bill has been defeated, the programme of the majority of Democrats in the House is to finish the absolutely necessary business as soon as possible, to attempt to transact no other business, and to adjourn.

Ex-Senator Spencer has decided to bring suit against Attorney-General Brewster for causing him to be arrested on a telegraphic order in Nevada, and bringing him to Washington on a charge of contempt of court in connection with the Star-route cases. He places the damages at $20,000.

The Kentucky Democratic State Convention, held on Wednesday, recommended Speaker Carlisle as the Presidential candidate. The platform denounced the present tariff. Free-trade delegates-at-large to the Democratic National Convention were elected, one of whom is Henry Watterson.

The Independent Republicans of this State have issued an address to the delegates to the Chicago Convention, urging upon them the necessity of nominating a candidate who will not "provoke popular distrust and create bitter dissension within the party, as well as give impulse and strength to the opposition outside of it." It points out that any candidate would come within this category who (1) has been prominent in faction fights, (2) whose record is tainted with an unsound money system, (3) who is likely to launch the Government into a fantastic foreign policy, and (4) whose record is unclean or justly assailable.

In the Assembly at Albany on Wednesday, when Mr. Oliver's proposed amendment to the Constitution, guaranteeing to cities the right of municipal self-government, was announced, Mr. Roosevelt opposed it. Its passage would, he said, practically prevent the enactment of such reform bills as were passed this year. He believed the passage of the bill would be disastrous to good government. The measure was virtually killed by being recommitted to the Judiciary Committee. On Thursday the Assembly defeated the Woman Suffrage Bill, 57 to 62.

Governor Cleveland sent a message to the Assembly on Monday night, calling their attention to defects in the New York municipal reform bills, and asking that they be remedied.

Mr. Roosevelt's bill for reforming the Bureau of Elections in this city was defeated in the Assembly on Tuesday by a vote of 58 to 63. Thirty-nine Republicans, under the influence of John J. O'Brien, cast the votes which killed the bill. On the same day a bill was passed which provides that all telegraphic, telephonic, and electric-light wires and cables in New York and Brooklyn must go under the surface before November 1, 1885, and all poles must be removed from sight. Two of the city reform bills which the Governor sent back were corrected as he desired and passed by the Assembly on Tuesday night. The Arcade Railroad Bill was vetoed by the Governor.

A bill to make the Brooklyn bridge free to foot passengers was defeated by the State Senate on Friday.

The State Senate on Thursday concurred in the Assembly resolution to adjourn on May 16 at noon.

The *Alert*, the last of the Greely Relief Steamers, sailed from the Brooklyn Navy-yard on Saturday for the North.

The steamship *Titania*, of Glasgow, arrived at Quebec on Wednesday, having on board twenty-four of the crew of the wrecked steamer *State of Florida*. They brought word that the *State of Florida* had been sunk by collision with the bark *Ponema*, from Chatham, N. B. One hundred and twenty-three souls went down with the steamer, and twelve with the bark, making the total loss of life 135. Forty-four of those on the steamer were saved and twelve of those on the bark. The stories of the survivors show that the collision occurred about 10 o'clock P. M. on April 18th, in mid-ocean. The night was clear and the sea was calm. The bark crashed into the steamer amidships. A scene of great confusion ensued. Four boats were safely launched, but the majority of those saved were members of the crew. The steamer went down in twelve minutes after the collision. The boats kept well together, and on April 20th they were picked up by the *Theresa*, bound for Quebec. Twenty-four of the forty-four rescued were transferred to another bark two days later, and later thence to the *Titania*. Surgeon Steele exonerates the captain from all blame. It is said that after the collision the chief-engineer started the steamer ahead at full speed in order to keep her afloat by means of the steam pumps. This made it difficult for any one to get into the boats after they had been launched.

On Thursday morning the coasting steamer *City of Portland*, plying between Portland, Me., and St. John, N. B., struck on Grindstone Ledge, Owl's Head. She had seventy passengers on board, who, with the crew, were all rescued by another steamer. The vessel and cargo are a total loss.

A statue of Chief-Justice Marshall was unveiled in Washington on Saturday. Chief-Justice Waite delivered an address.

The body of Dr. Samuel D. Gross, the distinguished Philadelphia surgeon, was cremated, in accordance with his wishes, on Thursday at Washington, Pa.

John F. Slater died in Norwich, Conn., on Wednesday, aged about sixty-eight. He was a son of one of the pioneer cotton manufacturers of this country, and amassed great wealth. In 1882 he attracted attention by giving $1,000,000 for the education of the negroes of the South. This sum is in charge of a Board of Trustees, of which ex-President Hayes is a member, and the income of it is distributed under their direction to the deserving institutions of the South. The Rev. Atticus G. Haygood is the manager of the fund under the trustees.

Charles O'Conor, the distinguished lawyer, died at his residence in Nantucket, Mass., on Monday afternoon, from the effects of a severe cold contracted about three weeks ago. His mind was clear to the last. In 1875 he suffered a prolonged and serious illness, and was several times reported dead, but his remarkable constitution saved him. He was born in this city January 21, 1804, his parents being Irish. He had an elementary education and studied law, being admitted to the bar in 1824. As early as 1829 he achieved prominence in the courts, and from that time forward he was employed in some of the most celebrated cases, notably the Jack slave case in 1835, the Lispenard will case in 1843, the Forrest divorce case in 1851, the Lemmon slave case in 1856, and the litigation connected with the Jumel estate. In 1873 he was prominent in the prosecution of the Tweed ring cases in New York city. He served in the constitutional conventions of 1846 and 1864. In 1872 he was nominated for the Presidency by the Independent Democracy and labor reformers. He declined both nominations, but received about 20,000 votes.

Cyrus H. McCormick, the inventor of the reaper, and one of the richest men in Chicago, died on Tuesday at the age of seventy-five.

FOREIGN.

In the House of Commons on Monday night Sir Michael Hicks-Beach moved again his motion of May 2, censuring the Government for its course in refusing to rescue General Gordon. In the course of his speech he charged the Government with deserting a brave soldier and Christian hero in his hour of peril. When Mr. Gladstone rose to reply he was greeted with prolonged applause. He strenuously denied that the Government had deserted General Gordon. "The demand of the honorable

gentleman," he insisted, "amounted to a war of conquest against a people struggling to be free. The war which the Mahdi is waging is a war for freedom. It is that which the honorable gentleman wishes England to put down." The real object of the motion was, Mr. Gladstone declared, to displace the Government. He read official despatches to prove General Gordon's present security and to justify the Government's course. "I have a duty," Mr. Gladstone said further, "to General Gordon and a duty to the country; both will be performed. The Government declines to enter upon a vast scheme of conquest to please a captious Opposition." Mr. Gladstone spoke for more than an hour. On Tuesday Mr. W. E. Forster, late Chief Secretary for Ireland, violently attacked the Government's Egyptian policy. The Marquis of Hartington replied. After a vigorous debate, which was closed by Sir Stafford Northcote, the motion of censure was rejected by a vote of 303 to 275. Thirty-two Parnellites voted with the minority. A number of Liberals, including W. E. Forster and Mr. Goschen, abstained from voting. The small majority is a disappointment for the Government.

Mr. Gladstone was greeted with hisses and groans at the opening of the Health Exhibition on Thursday, in token of disapprobation of his treatment of Gordon.

A private meeting of the Conservative members of the House of Commons was held on Friday in London, at which Lord Randolph Churchill intimated his decision to support the leaders of the party. He strongly advocated unity, and the general impression is that he gained a substantial victory. The Tories believe that the split in the party is ended, but the Liberals expect that it will soon reopen. It is understood that Lord Randolph has withdrawn his resignation of the position of Chairman of the Conservative Union.

The House of Commons on Thursday, by a vote of 124 to 21, passed the Cattle Disease Bill to a third reading.

Daly, Egan, and McDonnell were given a further hearing at Birmingham, England, on Saturday. They were charged with treason-felony, and were committed to jail to await trial at Warwick.

It is said that a convention of Irish-American delegates will soon be held in Paris, under the presidency of James Stephens, for the purpose of forming a new organization, which will probably be called "The Irish Liberators." The objects of the Convention will be to consider exhaustively the Irish question, and to denounce the nefarious operations of the dynamite invincible factions. The Convention will endeavor to seek a medium ground between extreme and immoral violence and constitutional agitation. Stephens has issued a circular to Irish Nationals in America stating that he has consented to place himself again at their head, because the moment has arrived when a union of all Irishmen is possible. As soon as he receives answers from America the new conference of Irish leaders will meet in Paris. Stephens declares that Ireland shall be an independent republic before he dies.

Mr. James Russell Lowell presided on Thursday over the annual meeting in honor of Wordsworth, the poet, in London. In the course of his address Mr. Lowell said Wordsworth had no sense of proportion, and no instinct of discrimination or subordination. All his thoughts, emotions, and sensations were of equal value in his own eyes. Mr. Lowell pointed out that, if Wordsworth was not a great artist in the technical sense of the word, he had the gift in some respects. He was a rare being, greatly and suddenly inspired.

Mr. Herbert Spencer says that on account of his health he will not visit Australia.

Judah P. Benjamin, the distinguished lawyer and ex-member of the Confederate Government, died in Paris on Wednesday, at the age of seventy-two. He was born in the West Indies, of Jewish parents, who in 1816 moved to North Carolina. After rising to early eminence as a lawyer in New Orleans, he entered politics, and, when only forty years of age, was elected to the United States Senate, where he gained reputation as an orator and constitutional lawyer. He withdrew from the Senate in 1861, and became Attorney-General of the Confederacy. Later he was appointed Acting Secretary of War, but he resigned in February, 1862, because he had been censured by a Congressional Committee. President Davis, however, held him in high esteem and made him Secretary of State, which position he held until the downfall of the Confederacy. He escaped to the Bahamas in an open boat, and soon after went to England, where he was admitted to the bar in 1866. His book on Sales (1868) attracted attention to him, and he soon became one of the most distinguished advocates of the English bar. He retired from practice last year and was honored with a banquet by the bench and bar of England.

The preparations for the relief expedition to Khartum are being accelerated with a new vigor. It is now decided that the expedition will start in July. The strength of the force has not yet been determined, but will probably number 8,000 men, including the Indian contingent. The Intelligence Department of the British War Office has instructed the authorities at Cairo to send survey officers to report upon the relative advantages of the routes by way of Suakim and by way of Massowah. From this it is supposed that there will be two lines of operations—that the main expedition will proceed up the Nile and the other by the Red Sea.

Messengers who have been carrying letters to Khartum reported on Saturday at Cairo that they were unable to reach that place. They state that dense masses of Arabs surround Khartum. General Gordon made an attack upon the rebels on the White Nile, between the 13th and 15th of April. The rebels were driven out of their encampments.

It is said that Zebehr Pasha has declared that he will not rest until he has killed General Gordon. The Mudir of Dongola telegraphed to Cairo on Monday that the situation there is alarming, and the inhabitants are in a state of panic.

The Porte, it is said, has replied to the Powers, expressing adherence to the Egyptian conference, provided it shall embrace the entire question. Italy is desirous of occupying a leading position in the approaching conference. All the Powers, with the exception of England and France, favor this. Indeed, Austria and Germany wish to place Italy on a perfect equality with France in the discussion of all Egyptian questions.

The Italian Government will support the demands of France in the Egyptian Conference, to the effect that the Conference shall have power to discuss fully the question of the international control of Egypt.

Several points of disagreement have arisen between the Porte and the United States. The American squadron recently arrived at Tenedos. From there Rear-Admiral Baldwin, the commander, telegraphed to General Wallace, American Minister to Turkey, that it was his intention to come to Constantinople. On account of the size of the *Quinnebaug*, which is larger than the vessels allowed by the treaties to remain stationed in the Bosphorus, a firman was necessary, and was granted. The Sultan has shown Admiral Baldwin a number of notable courtesies.

Midhat Pasha died in Constantinople on Sunday at the age of sixty-two. He early entered into official life, and first came into prominence by the effective measures with which he put down brigandage in Rumelia. For this he was made a member of the Grand Council when only thirty-five. He travelled in Europe, studying the different constitutions with a view to administrative reforms. In 1860, on his return to Turkey, he was made a pasha and Governor of several provinces. The reforms which he immediately instituted were so successful that the Government resolved to extend them throughout the Ottoman empire. He aided in framing the law of the Vilayets, which is now the basis of local administration and which was an important reform measure, as it gave to Christians certain necessary civil rights. While Grand Vizier he was deposed from office by palace intrigues, and finally in 1875 he joined in the movement by which Sultan Abdul Aziz was deposed and probably murdered. Soon after, he was made Grand Vizier, but was deposed in seven weeks and banished. In 1878 he was made Governor of Syria. An investigation into the death of Abdul Aziz was begun, but was not pursued for fear of implicating Midhat and other pashas.

Advices from China received on Sunday say that Captain Fournier, acting on behalf of the French Government, and Li Hung Chang, for China, have signed a treaty, under the provisions of which China recognizes a French protectorate over Tonquin and Anam, with the existing frontiers. The provinces of Quang-Tung, Kuang Hi, and Yunnan will be open to trade with France. No indemnity is to be paid to France. China will at once withdraw her troops from Tonquin. The treaty has been ratified at Peking.

The latest Chinese advices state that Li Hung Chang has been invested with full powers for dealing with the whole Anam question. The preliminary negotiations regarding the affairs of Tonquin are making favorable progress.

Dissensions have arisen between the Chinese and Black Flags in Tonquin, and desperate fighting has taken place.

France has refused to recognize the Iglesias Government in Peru.

Prince Jerome (Plon-Plon) in replying to the request of his partisans to explain the position of his son, Prince Victor, said: "Inasmuch as Prince Victor has already declared his respect for and submission to his father's will, it is needless to submit any further question to him. The question whether France shall be an empire or a republic is of secondary importance. The people will settle this. A republic cannot be displeasing to a descendant of the First Consul."

In the elections for Municipal Councillors now proceeding in Paris, the Revolutionists have made large and the Monarchists small gains. The Ministry has been rebuffed.

Michael Sturdza, ex-Prince of Moldavia, is dead at the age of eighty-nine. He was reigning Prince from 1834 to 1849.

During the debate on the Anti-Socialist Law in the German Reichstag on Friday, Prince Bismarck, in the course of his defence of the measure, said if the bill should be rejected the Government would discuss it with another Parliament. If another Parliament should likewise reject the bill, the Government would be exonerated from all responsibility, and could regard the further development of social democracy with a quiet conscience. The bill was passed to a second reading on Saturday by a vote of 189 to 157, and was finally passed on Monday night.

The Grand Duke of Hesse-Darmstadt has contracted a morganatic marriage with a Russian Countess. He was the husband of the late Princess Alice of England, and, it is asserted, would have married Princess Beatrice if the British Parliament had passed the Deceased Wife's Sister Bill.

The steamer *Faraday* began to lay the shore end of the Bennett-Mackey cable, in Dover Bay, N. S., on Wednesday.

Holmes and Bracken, the two Americans arrested in Halifax about eight months ago with dynamite in their possession, were sentenced on Wednesday to six months' imprisonment.

THE WALL STREET SCANDAL.

THE affairs of Grant & Ward continue to be the chief subject of public interest, overtopping for the moment the struggle for the Presidential nomination. The enormous liabilities and the paucity of assets disclosed give a unique character to the failure, and lead to the inquiry how it was possible for General Grant and his sons to be so egregiously deceived as to the nature of the business they were doing, and the sources of the profits they were receiving. That they were deceived there seems to be no doubt. It would appear that ex-Senator Chaffee, of Colorado, an experienced man of business, and one not unfamiliar with the ways of Wall Street, was deceived to the extent of at least half a million dollars, and that other capitalists who have never been accounted fools were taken in by the promise of profits far in excess of any legitimate or honest returns in any department of business.

The principal bonanza paraded before the eyes of greedy investors consisted of profits derived or expected from Government contracts. It was pretended that General Grant had facilities for controlling such contracts which no other person could command; but what these contracts were, none of the victims, not even Mr. Chaffee himself, who had had abundant experience in public affairs, took pains to inquire. It is related that one man, who had incautiously invested $200,000 in Grant & Ward, on the strength of Government contracts, did go to Washington and endeavor to get a list of these contracts, in order to learn how much profit might be expected from them, and that he returned to New York and drew out his money in breathless haste. It is presumed that this prudent gentleman found that there were no Government contracts standing in the name of Grant & Ward, either as principals or assignees, and that the whole story was a fiction invented to entrap the unwary.

It seems not to have occurred to anybody except this gentleman to inquire what is the common rate of profit derivable from Government contracts, or what great works the Government was carrying on, involving the disbursement of large sums of money. It was well known that all Government contracts have to be let to the lowest bidder, and that competition in securing them is as active as in any other line of business. It was well known that the last River and Harbor Bill failed, and that the Star-route contracts had come to an untimely end. What other Government contracts were available to constitute a basis for the operations of Grant & Ward? The steel cruisers were known to be under the control of John Roach and other well-known ship-builders, who are not in the habit of paying more than six per cent. per annum for the use of money. The horizon of possible Government contracts may be scanned without disclosing any but the scantiest source of gain for a private firm in Wall Street, yet it is clear that these supposed profits constituted the chief attraction to gullible investors. The fact that they were undefined and mysterious was an allurement in itself: *omne ignotum pro magnifico.* Another allurement, undoubtedly, was the supposition that the Government is in the habit of paying two prices for everything it wants—that is, of being swindled on its contracts; for nobody could suppose that profits ranging from 3 to 5 per cent. a month could be made out of the Government without fraud somewhere.

The conclusion is irresistible that a large number of persons were drawn into the maelstrom by a belief held out to them that General Grant's influence was used, in some highly improper way, to the detriment of the Government and the benefit of Grant & Ward, and that they were induced to part with their money by a desire to share in these illicit gains. How these misrepresentations came to be made will probably be shown in the sequel. That Gen. Grant was as much deceived as anybody else is evident from the fact that he lost his own money in common with others. But how the Government-contract fable could have got such wide circulation and wrought such enormous mischief without his knowledge, is an unsolved problem.

The insolvent firm, consisting of General Grant, Ferdinand Ward, U. S. Grant, jr., and James D. Fish, on Thursday made an assignment of their property for the benefit of their creditors. The assignment, like everything else connected with this curious concern, is surrounded with mystery. It secures a list of preferred creditors, but without fixing the amount of their claims or describing their nature, except that they grow out of certain notes, checks, and contracts made by the firm. The holders of these claims, of course, know what they are, and some of the members of the bankrupt firm may know too, but the other creditors must be almost as much in the dark as to their position as they were before the assignment. Jesse R. Grant and Frederick D. Grant also made assignments, the former giving preferences amounting to $95,000, the latter's amounting to over $243,000. Mr. Fish, too, made an individual assignment for the benefit of his creditors to a separate assignee, providing that his estate shall be first applied to the discharge of his liability "as sole principal debtor to any person or persons, individual or firm, which is unsecured for any loans or advances, or for personal or professional services, or for personal bills incurred by him, and also to the payment and satisfaction in full of any obligation and liability to or in respect of any trust fund or estate"; second, to the payment of all his obligations to the Marine Bank; third, to the payment of any obligation or liability of the assignor as endorser or guarantor upon notes or obligations of the firm of Grant & Ward, which were discounted for him or at his request, and of which he received the proceeds, by whomsoever held other than the Marine Bank; and fourth, to the payment of any other individual obligations or liabilities not before provided for.

These preferences may all be perfectly honest, although it is, of course, impossible for active partners of a man like Ward—one of whose transactions on the eve of his insolvency was to draw for $215,000 on a bank in which he had a deposit of a few hundred dollars—to escape the suspicion naturally produced by their close connection with him; and the case will serve all the better on this account to show the necessity which exists for the abolition, through the passage of a bankrupt law, of the whole system of preferences. These are by the laws of this State made legal, because, as long as a man is not actually insolvent, he may do what he pleases with his property. He may, for instance, and does every day, secure particular creditors by pledges of property of which there is no recorded evidence; and he may go on doing this until he has no property left. This being the case, there seems at first to be no reason why he should not be entitled to prefer, in an assignment embracing his whole property, the creditors whom he might have preferred without an assignment at all. But the difference is, that few people make an assignment until they have reached a hopeless position; they resort to an assignment almost entirely for the purpose of freeing themselves from liabilities and starting afresh.

The theory that under these circumstances a debtor will sit down, make out an inventory of his assets, and then arrange his preferences so as to secure those creditors who, as a matter of justice and fair dealing, ought to be secured, postponing his friends and family and himself, could only be true in a society in which the golden rule, or what the scientific people call "altruism," was the ordinary governing motive—in which each party to a commercial transaction looked out for the other's interest as his own. As a matter of fact, what happens in the case of insolvency when the law permits preferences, is that the debtor has simply an additional weapon for his own protection in his battle with the enemy, which he ought not to have, and of this he avails himself as far as he can. The limit is fixed entirely by his own conscience or that of his lawyer.

The less conscience he has, the more disposed he is to swindle, the more certain it is that he will use the law as a cover for some kind of cheat. In most cases he carefully prepares a confederate beforehand to play the part of preferred creditor when the crash comes: the law is used most often and most successfully by the very class against whom the mercantile community ought to be most thoroughly protected. If there were no law on the subject, the question of the distribution of an insolvent's estate would be simply one of common honesty and fair dealing, to be determined by the courts, in which the careful and prudent creditors would come off best, and the imprudent ones lose by their reckless confidence. In many cases the insolvent would not be discharged, and he would have to go to jail, and there he would remain until he found some friend to take him out. To enable him to get rid of his debts by turning over all his property to his creditors is no doubt a much more sensible plan, but to permit him at the same time to distribute his property as he pleases is a mere premium on fraud, and is one of the things which tend to make any place where they are permitted a swindlers' paradise. A bankrupt law may not work perfectly in practice, but it is at least vastly better than this system; for it prevents the debtor, as far as possible, from being a judge in his own case.

THE NEW YORK INDEPENDENTS.

THE size and character of the Independent vote in this State has for some weeks past been the subject of much undisguisedly anxious discussion among the friends of Mr. Blaine. The Philadelphia *Press* and *Times* have taken the most prominent part in it. The subject is a very difficult one to handle with safety. The reason they discuss it at all is, of course, that they think that Mr. Blaine has something to fear from the New York Independents, and yet it will not do to admit this openly. It is, however, no easy matter to keep talking about a thing because you fear it, and yet not let it be known that you fear it. Then, again, they have to make it appear that the Independents are after all a small body, but have to do this in such a way as not to offend them in case they should turn out to be a large body. They are trying, in short, to imitate the sportsman who, being uncertain about what he saw among the trees, shot in such a way as to miss if it was a cow, but kill if it was a deer.

Of course this produces a great deal of rather amusing hypothesis and qualification and reserve, but it makes very interesting reading. Occasionally, in a spasm of audacity, as if they could not bear the nervous strain a minute longer, they boldly declare that the only Independents Mr. Blaine has to fear are a small party of free-traders—generally "a cab-load"—and that their true and only objection to him is that he is a protectionist. A day or two later there will be another article admitting that the Independents are not all free-traders, but are really a cab-load of cranks. Then there will be another admitting that there are more than a cab-load, but that what they dislike is not Mr. Blaine, but "the Machine," and Mr. Blaine, as everybody knows, has no machine and is the foe of all machines. Therefore, it cannot be true that the New York Independents will not have him. Still, if they will not have him, it is of no great consequence, for everybody knows they do not number over "20,000 all told between Boston and San Francisco." And so it goes on day after day.

The address of the Independents, published on Tuesday, contains a great deal of weighty matter, but there is one little passage in it which we commend to the careful attention of all persons who, for any reason, are interested in speculating what they amount to as a political force in this State. It is this:

"The undersigned emphatically disclaim any purpose of dictating the nomination to be made by the Convention or influencing its action by threats. There are those among us who, having always voted the Republican ticket, would now support any fairly nominated Republican candidate. But they know also that, in the event of an unwise nomination, a very large number of their Republican friends would not be governed by the same idea of party loyalty, and that as the change of only one Republican vote in each school district in this State would wipe out a Republican majority equal to that of 1880, and as the large Independent vote would inevitably become hostile, the overwhelming disaster of 1882 would, in such a case, be very likely to be repeated."

This is the whole matter in a nut-shell. Nobody knows how large the Independent vote of this State is. In 1882 it developed enormous strength. The lesson of the election of that year was not that it could be counted on for such a majority again, but that there is in New York a body of voters of unknown amount who cannot be looked to for strict party fidelity, and who, owing to the nearly equal strength of the faithful in both parties—so nearly equal that a change of one vote in each school district is enough to give victory to either side—can, if they exert themselves, not only defeat either party, but defeat it overwhelmingly. It may be that they only number 20,000, or that they number 200,000, but it makes no difference which. The important thing to know is that they number *enough* to give the State to whichever party they please. In warning a man not to put his fingers under a trip-hammer, it is mere waste of time to explain to him in figures the exact force of the blow which the trip-hammer delivers. It may be only 100 pounds, and it may be 20,000 pounds, but, whichever it be, his duty to his fingers is clear.

Therefore, our advice to all friends of candidates who doubt whether they can carry this State is, not to waste any more time in arithmetical calculations, but to read the warnings and advice contained in the address of the Republican Conference Committee. What it says is, that anybody connected with the Republican Machine in this State would probably not receive the Independent vote; that anybody who held shaky or wild views about currency would probably not receive it; that anybody who was likely to try to distract public attention from home affairs, and increase business uncertainty, by complications with foreign Powers, would probably not receive it; that any one whose personal character was assailable, or surrounded by "scandals," would probably not receive it. Now, these are not assaults on anybody. They are homely and useful truths. The way to turn them to account is to look round for candidates who are not open to these objections. There are in the Republican party at least twenty or thirty conspicuous men to whom no rational person would object if nominated by the party. So that there is really no difficulty in the situation, except such as the friends of one candidate make for themselves. And from this difficulty no study of the Independent vote in New York will deliver them. That vote is very like the "strong calm Angel" whom Huxley describes as playing the game of life with us from behind a curtain, and who, though he would rather we should win than lose, always exacts remorselessly the consequences of our mistakes. We cannot find out how strong it is, but woe to the politician who acts as if it had no strength at all.

THE HIGHER EDUCATION OF WOMEN IN ENGLAND.

A FEW weeks ago the University of Oxford did for women what Cambridge had already done, in admitting them to the examinations for honors in history, classics, mathematics, and science, on precisely the same terms as men. The concession was made very slowly and after much agitation. Some years ago Oxford agreed to examine women and give them "certificates" of proficiency, but though the examination papers may have been as difficult as those of the men, the certificates did not carry the same weight with the public as degrees would have done. They were a second-rate thing, the value of which people had no means of estimating. There were, it appeared by the last census, 120,000 women in Great Britain and Ireland earning their living as teachers. To these a University degree is of the highest importance. It not only secures to those holding it immediate employment, but higher pay than is obtainable by others. This fact was established clearly enough by the experiment at the Newnham and Girton Colleges at Cambridge, to the students of which the University opened its lecture-rooms twelve years ago. The graduates have always enjoyed exceptional advantages in obtaining situations either as school teachers or as governesses. In fact, of late years it has been increasingly difficult for women not holding some sort of University certificate to obtain any of the well-paid places.

In 1881 Cambridge threw down all restrictions by admitting women to the Tripos or honor examinations in classics and mathematics. Oxford has been slower. The "Congregation," composed of the resident Masters of Arts, agreed to the admission some time ago, but its decision is not final. It is the "Convocation" which has the last word in the government of the University, and the Convocation is made up of all holders of the M.A. and higher degrees, wherever they reside. A very large number of these are country clergymen, of whose hostility to classical and mathematical women dreadful stories were told. But in spite of everything the women on the 29th ult. carried the day. Convocation voted by a heavy majority to let them in for honors. Now they can get as much out of the University in the way of testimonials as the men can. It is worth mention that the honor examinations in the English universities are the important thing, as a feather in the cap. The degree simply, without honors, amounts to very little as a sign of anything but residence and success in an examination which only the most stupid or idle find too much for them.

Of course, a valiant fight against the change was made by some of the older men, many of whom seem to see in it the approaching end of a world in which at best they never found much comfort or satisfaction. One of the Oxford "Dons," who has been interviewed on the subject by the *Pall Mall Gazette*, gives it as his opinion that "matrimony is at the bottom of the whole thing." When the Fellows were not allowed to marry, he says, they were content with the incomes they got from teaching men. Now they are mostly married and find it difficult to make ends meet, and as no more money than ever is to be made out of the men, it is only by letting the women in that they can increase their means. On the other hand, the women who will come to Oxford to study will do so, he is satisfied, with the view of marrying either their teach-

ers or fellow-students. So that to him the movement is simply the conversion of an ancient and honored seat of learning into a vast matrimonial bureau.

The well known Dean of Chichester, Dr. Burgon, a fighting man from his youth, comes out against it in the newspapers, somewhat in the Dr. Dix style. His main argument is that it will destroy "the unbounded deference with which Woman is now treated by Man," and, what is worse, will "unsex" her. What this means has never been clearly stated, but there is no doubt it is something very dreadful. It will, moreover, he says, corrupt the women by introducing them to "the filth of the old civilization" in the Greek and Roman classics. But, as a writer who answers him in the *Daily News* justly remarks, the vast army of ill-equipped women, the 120,000 teachers, for example, who now have to fight the battle of life as best they can, care but little for "the unbounded deference" of Man. It does not give them their bread and butter, or help them to support their mothers or sisters. In fact, whenever anybody is pressed in England to say exactly what Woman, without the advantages of wealth, or rank, or great beauty, gains by "the unbounded deference" of Man, he is seldom able to produce anything but Man's practice of opening the door for her when she leaves the room.

It is melancholy, from one point of view, to think that the example of the English universities—rich, conservative, time-honored as they are, nurseries as they have been of some of the greatest men by sea and land of the modern world, statesmen, scholars, and soldiers—should have no value whatever for our own university, Columbia College. But we may all well feel proud that she should be left now almost the sole guardian of the framework of modern society and of Woman's place in nature. As long as Columbia stands firm, the final plunge of the weaker sex into vice and irreligion, the dissolution of the family bond, and what is, perhaps, more to be dreaded than either, the degradation in their own eyes of the male undergraduates, will not take place.

STAGE ILLUSION.

Mr. Boucicault, on Thursday afternoon, gave an interesting "Conference" on the "Art of Acting," in the course of which he said many interesting things, and made many suggestions likely to be of practical value to actors; but at the same time he does not, from the published reports, appear to have attempted to answer what is to most people the most interesting question connected with the subject—in what the art of acting consists. Any one who has followed the discussion to which the recent visit of Mr. Irving gave rise, must have noticed that the various estimates formed of his rank as actor depended in the last resort mainly on the theory of the art held by the critic; and, at the same time, that the critics themselves had generally no clear idea of what their own theory was. This was certainly not because there is any lack of current theories about the drama, for the present age, if not remarkable for anything else, would still be memorable for its remarkable fertility in the production of theories about both art and literature. It is a commonplace to say that art and literature have become conscious in modern times—that is, that the painter or writer, musician or actor, does his work not merely in obedience to some internally perceived law of beauty or of harmony or of expression, but that he knows what the law is, and aims at producing effects in accordance with it.

In recent years, too, it has become more and more common for the development of art or literature to be given suddenly a new turn by a conscious critical effort. People have, in fact, fallen into a way of attracting public attention to new and startling performances by advertising them in connection with a brand-new literary or artistic theory, which, as soon as it gains a name, is sure in a critical generation to have followers merely because it is a theory. The Romanticists, the Realists, the Impressionists, the Pre-Raphaelites, the followers of Wagner, the Naturalists, the admirers of Walt Whitman, have, apart from all question of the merits of the various theories, derived immense support from the fact that they had a theory to fall back upon. To take the last instance, nine-tenths of the readers of Whitman have been repelled, just as nine-tenths of the readers of Zola have been, by what they regard as indecency. To this, however, Whitman and Zola have a reply—that in literature there is no such thing as indecency or foulness, good or evil, but that all the novelist or poet has to do is to tell what he has seen, or express whatever emotions arise within him. If he is a poet, these, however repulsive they may be, must be poetry, while, if they represent in narrative form any sort of life, however degraded, he must be a novelist. An objector who cannot overcome his disgust is therefore often reduced to silence, by the mere fact that he dislikes to set up what he is assured is mere individual squeamishness of stomach against an everlasting theory of art.

We might expect to find something of the same sort in the drama, and, unless we are much mistaken, a theory has taken hold of the stage in the last fifty years which has already nearly revolutionized it, and which bids fair to invert some of the most fundamental maxims of the dramatic art. Originally, like most theories, it represented a reaction. Realism was in France a protest against Romanticism and Classicism, and as a protest it was undoubtedly needed; but, transplanted into England, it has become one of the active principles of the modern drama, and has produced consequences of a most startling sort. Meanwhile it has been seized upon in Germany by one of the greatest theorists of the day, and pushed to a point hardly dreamed of in England.

To understand fully what Realism has done for the stage, we have only to compare, let us say, a French classical play, such as Sarah Bernhardt is accustomed to act in, with a Wagnerian opera like "Lohengrin," or "Parsifal," or "Tannhäuser." It is not unfair to compare those operas with dramas, for it must be remembered that Wagner's pet theory is that the stage should be used by the composer exactly as it would be by a dramatist. Apart from the acting, then, the chief difference between the two periods is that in such a play as "Phèdre" we have a stage in which hardly any attempt is made at visible illusion—an interior that merely suggests, not represents, a room in a palace, at which one might look for hours without seeing anything before him but a scene in a theatre. Nor does this change from act to act. It remains the same nearly, if not entirely, throughout the play, although in real life it would be impossible without frequent change of scene for the action of "Phèdre" to take place. On the other hand, in the Wagnerian opera-drama we have a stage in which ingenuity is racked to give us the closest imitation of the scene. If a room in a palace is to be given, the attempt is made to deceive us into believing that we see one before us. If the action takes place in a street, the houses must not be mere fronts, but have substance and form; if a procession occupies the stage, we are shown real chariots and live horses. In "Siegfried" this realism has been carried to the point of providing an apparently live dragon, and there is said to have been great difference of opinion in the audience as to whether the animal was a success as a "real dragon" or not.

We have taken Wagner as an illustration because he has carried his theories further than almost any one, but examples may be found nearer home. No actor who respects himself will, we believe, play "Hamlet" unless the management provide "real" earth for the grave, and in the Shaksperian revival by Irving and others extraordinary pains are taken to secure what is called historical accuracy in the costumes. In "Romeo and Juliet" we believe there has been a grave discussion as to whether in one of the scenes realism does not require *Romeo* to appear in a night-gown; and everybody remembers the great display of realistic French and English soldiery in Henry V., which the management so handsomely provides. Shakspere, who had never heard of Realism, adopted a very simple device to eke out the want of "supes," the terrible lack of a real army, by letting *Rumor* bid the audience imagine one, in some very practical and business-like lines, which contain, perhaps, the best criticism of stage-illusion in the language:

"——can this cock-pit hold
The vasty fields of France? Or may we cram
Within this wooden O the very casques
That did affright the air at Agincourt?
O, pardon! since a crooked figure may
Attest, in little place, a million;
And let us ciphers to this great accompt
On your imaginary forces work.
Suppose within the girdle of these walls
Are now confin'd two mighty monarchies,
Whose high upreared and abutting fronts
The perilous, narrow ocean parts asunder.
Piece out our imperfections with your thoughts;
Into a thousand parts divide one man,
And make imaginary puissance;
Think, when we talk of horses, that you see them
Printing their proud hoofs i' the receiving earth:
For 'tis your thoughts that now must deck our kings,
Carry them here and there, jumping o'er times;
Turning the accomplishment of many years
Into an hour-glass."

Shakspere was a manager, and he understood his audiences as well as any manager who has appeared since his time. Now, let us imagine a modern manager making this sort of appeal to the imagination of the critic. It is safe to say that the critic would turn a deaf ear to his entreaty. How absurd, he

would say, for a manager bringing out a new play like this, full of sensational battle business, to ask us to come here and imagine the soldiers and horses! If his treasury is so empty that he cannot engage a respectable force, he ought either to close his theatre or to give some piece requiring less expenditure.

The fact is that the tendency of the modern stage is to produce a wholly new theory of the dramatic art, which may be called the materialistic, as opposed to the old imaginative theory, evidently prevalent in Shakspere's time. It is that the curious feeling called stage illusion—the touch of nature that makes us kindle into sympathy, or emotion, or humor, the reality which blinds us for the moment to the fact that the whole spectacle is a puppet show—is produced by the exactness with which the scenery and costumes are presented to the eye; that illusion is a mechanical matter; that such means will accomplish for our imagination exactly what Shakespere insisted that our imagination, under the influence of the acting, ought to accomplish for them. The importance of the difference can hardly be overestimated. If the imagination is touched primarily by the scenery and the costumes, then managers and critics are perfectly right in lavishing their attention on them. If, on the contrary, what suddenly gives the air of reality to the whole scene is the ability of the actor to simulate real emotion by the voice and eye and gesture, if through this appeal to our feelings the imagination deceives the eye itself, then criticism of the dramatic art ought to be directed to a consideration of such questions as whether an actress who undertakes to simulate grief really makes us grieve with her, or whether what we are chiefly interested in is the cut and material of her dress; not whether *Shylock* is dressed exactly like an aged Jew, but whether the tones of his voice, his looks and gestures represent the ideas and emotions conveyed in the words of the part. If excellence in dramatic art depends primarily on the acting, then it does not depend on the scenery, and in this respect the French have a great advantage over us—that they still have a school from which dependence upon scenery is rigidly excluded.

RESULTS OF THE WAGNER CONCERTS.

Mr. Charles E. Locke, projector and manager of the recent Wagner concerts, and Mr. Theodore Thomas have every reason to be satisfied with the financial and artistic success of these concerts, which has been greater than any one had anticipated, and which is perhaps without precedent in this country when it is borne in mind that the highest artistic standard alone was considered in every detail. The very best local and foreign talent that could have been secured for this special purpose was employed, and, notwithstanding the great disadvantages resulting from the absence of scenery and action, and the unfavorable acoustic properties of the hall, it must be said that never before has such a good opportunity been given American audiences to understand the real significance of Wagner's art-work. However much a concert performance of his dramatic music may offend against Wagner's principles, it is far better to hear such superb interpretations of his works as were given at the Metropolitan concerts than to endure the parodies of "Lohengrin" and "Walküre" that have been inflicted on us by Italian and special opera companies. Most of the selections given had been heard before, but the love duos from "Tristan" and "Siegfried," the "Story of *Siegfried's* Life," and the scene between *Siegfried* and the Rhine maidens from the third act of "Götterdämmerung," *Kundry's* Solicitations from "Parsifal," and *Brünnhilde's* Supplication from "Die Walküre" were fully equivalent to novelties. Each one of the concerts bore witness to Mr. Thomas's skill in managing large forces and in programme making, as, for instance, at the first concert, where the story of *Siegfried* and *Brünnhilde* was told without interruption by connecting the third act of "Die Walküre" with the third of "Siegfried"; or at the fifth concert, where "Lohengrin" and "Parsifal" were brought together as being closely related in subject, but widely different in style, thus illustrating (in an imperfect manner, necessarily) the development of Wagner's genius. To those familiar with all the music dramas of Wagner the most interesting selections were those from "Tristan," "Siegfried," and "Götterdämmerung," while the majority of the audience doubtless preferred the excerpts from "Lohengrin," "Tannhäuser," "Meistersinger," "Holländer," and "Walküre." The least interesting of the concerts was that given on Friday, which, however, attracted the largest audience, owing to the immense popularity of "Lohengrin" and the addition of Mme. Nilsson to the Wagner singers.

At the first five concerts, extracts from all of Wagner's operas and dramas were given except from "Rienzi" and "Rheingold." The last concert, on Saturday afternoon, was wholly devoted to "Rheingold" and "Die Walküre," so that, in the whole series, "Rienzi" alone was neglected. Saturday's concert was perhaps the greatest popular success of all, for the Walhalla and Rhine daughters' music, and the impassioned strains of "Die Walküre" are among the favorite pieces in our concert halls. Never since the Bayreuth festival in 1876 have we heard the trio of the Rhine daughters sung with such admirable purity and splendid effect as on this occasion by Miss Emma Juch, Mrs. A. Hartdegen, and Miss Emily Winant. Mr. Toedt was not equal to his task in so large a hall, and "*Loge's* Tidings," therefore, did not make the customary impression, while the "Rainbow Scene" and the "Maidens' Lament" provoked storms of applause, as did all the "Walküre" selections, at the close of which Mr. Thomas and the Vienna singers were repeatedly called out and greeted with applause, cheers, and waving of handkerchiefs.

In reviewing these concerts there are three points that deserve special attention. The first is the intelligent and refined quality of the audiences, and the evident determination on all sides to *learn to enjoy*, in those cases where such enjoyment did not lie on the surface but required special attention and study. Some years ago, no doubt, a majority of the audience would have left the house before the conclusion of the long "Parsifal" selections, which may well have been somewhat tedious on account of the absence of scenery and the unfavorable acoustics. But Friday's audience remained to the end, doubtless from a conviction that at a second hearing light would be thrown on much that at first seemed obscure. They had read the enthusiastic letters of Bayreuth pilgrims, and were bound, if possible, to share in their pleasure. This marks a great advance in culture over the disposition formerly shown to decry everything as chaotic and unintelligible which did not please at first hearing.

Less gratifying is the second lesson taught by the festival—the conclusion that the Metropolitan Opera-house is unfit for concert purposes. Here was an orchestra of 150 musicians, a chorus of 600 or 700, three Wagner specialists who have voices of extraordinary power and volume, and music of greater sonority and richness than has ever been written by any other composer; and yet the result was less favorable than it would have been in any other hall in this city with half of these forces. These concerts are the first and probably the last that will ever be given in this house, unless it is remodelled; and the Philharmonic Society would simply commit suicide by moving to the Metropolitan. Except in passages where the brass is freely employed, the music at these concerts appeale l to the intellect much more than to the feelings, whereas, under proper conditions, it is the feelings preëminently that Wagner's music appeals to, as was shown at the concert given in Brooklyn, which stirred the audience to a pitch of enthusiasm never before witnessed in that city.

But by far the most important result of the Wagner concerts is that it has revealed to thousands the existence of a new vocal art, which differs from the older style as dramatic differs from lyric poetry. It cannot be denied that the three Vienna singers, who have no superiors in this new style, have their imperfections, like all other vocalists. Herr Winkelmann's lower notes are not as sonorous as his higher ones. Frau Materna has an occasional tremolo, and Herr Scaria has a tendency to sing out of tune, although we have heard him thirty times in opera at Vienna and Bayreuth when he never once sang a false note. Such anomalies find their explanation in the fact that these dramatic singers are ill at ease in the concert hall. Wagner taught them that action and pantomime are quite as important as their song, but here they were obliged to repress constantly all instinctive tendency to act and make gestures, and this gave a conscious air to routine work which can be done better unconsciously. But these faults were by no means constant. In more than three-fourths of the work done by these singers the technical portion was not open to such criticism, whereas everything they did was worthy of the highest admiration for the unprecedented distinctness of enunciation, passionate fervor, and intelligent phrasing.

It is important to bear in mind that for some of their utterances which did not seem sweet and beautiful the vocalists were not to blame. Wagner matches sweet sentiments only with sweet sounds, and harsh sentiments with harsh sounds. Such dramatic realism of course is not in place in the concert hall, where the beautiful should predominate, whereas in the drama the beautiful must often yield to the grand, terrible, and awe-inspiring, to angry and dissonant passions. The part of the wicked *Alberich*, for instance, in Saturday's concert must have sorely puzzled many of the hearers. Mr. Remmertz did not sing it particularly well, but even if he had, it would not have pleased those who think that all vocal music should be beautiful. In the drama we are all sufficiently educated to resist the tendency to thrash the "villain" of the play, and we applaud him if he acts his wicked part well; but in the music-drama this point is not so clearly understood as yet. The following extract from Wagner's review of the Bayreuth Festival ('Gesammelte Schriften,' vol. x., p. 153) will make it clear, and may appropriately close this article:

"To the present day I am astonished that the performance of Karl Hill as *Alberich* was far from being appreciated at its full and eminent value. This experience confirmed my view of the ordinary judgment of our public, in so far as it always depends more on ethical than on artistic impressions. The fact that Hill so

completely performed the task which I urgently pressed on him, namely, to avoid every accent of kindly feeling (otherwise so natural to him), and to show only eagerness, greed, hatred, anger, even then when as a scarcely visible spectre he must only whisper—the fact, I say, that this remarkably gifted artist herein gave a characteristic performance of preëminent mastery, such as has never before been seen in the province of the drama, was overlooked, on account of the unpleasant impression which an evil spirit, for instance, makes on the hearers when some one tells a fairy story."

THE LATE MINISTERIAL CRISIS IN EGYPT.

CAIRO, April 22, 1884.

EVENTS just now move so rapidly in Egypt, that before these lines appear in print it is probable the acute crises of the past fortnight will be scarcely remembered. Nevertheless, they are so illustrative of the permanent obstacles to good government here, that they are worth while examining with some precision in order to understand the solutions which the future may have in store.

In a previous letter I have had to draw attention to the radical opposition of the two theories of Egyptian government of which, till within a few days ago, Sir Benson Maxwell and Mr. Clifford Lloyd were the representative champions. These two theories may be styled, for the moment, the judicial and the administrative. According to the judicial theory, the new quasi-French Codes, the French Procedure, and the judicial staff, with Sir Benson Maxwell himself at its head as Procureur-Général, were to supersede all the ancient administrative and judicial authorities, and to subordinate to themselves all the most modern administrative authority represented by the centralized gendarmerie and police under the Minister of the Interior, or, rather, his "Under Secretary," Mr. Clifford Lloyd. The "administrative" theory of Egyptian government reverses this relationship so far as all the lower departments of judicial machinery are concerned. The first stages of the investigation of crime are to be taken away from the *juge d'instruction*, and either restored to the mudir or retained in the hands of the centralized police, who are English inspectors. The mudirs are to be revitalized and invested with a considerable amount of independent magisterial power, always under the strict supervision of the Minister of the Interior, but with only a remote responsibility to courts of justice. If legal help is needed, that help is supplied, as required, by the Procureur-Général; but the mudirs, the police, or the Ministry of the Interior are to dispose of it, control it, or dispense with it, as one or other or all of them jointly think best, the Procureur-Général and the courts of justice having nothing to say in the matter.

There seemed, for a very brief interval, at one time a prospect that Sir Benson Maxwell and Mr. Clifford Lloyd would have made up their difference, and a scheme was, indeed, on the tapis, which was accepted by both of them, by which the *juge d'instruction* was abolished and the mudir had a legal assessor assigned him by the Procureur-Général, the two sitting as magistrates having coördinate jurisdiction. But this was a concession extorted reluctantly from Sir Benson Maxwell, and nothing could have turned it into a working scheme but a sincere and earnest desire on the part of Nubar Pasha, the head of the Government, to help the two English officials in their arduous task of coöperation, and not to play one of them off against the other.

All at once, when these and other similar problems of great intrinsic difficulty, quite independently of all personal considerations, are still pending, and when Mr. Clifford Lloyd is away at Alexandria, organizing the new municipality there, Nubar threatens resignation on the ground of the impossibility of his further coöperating with Mr. Clifford Lloyd. How far the desire for resignation was real, or feigned as a ruse to force the hand of England, or in order to render the tenure of his post by Mr. Clifford Lloyd an impossibility, is matter of dispute and is of little importance elsewhere. Anyway, Mr. Clifford Lloyd instantly returned from Alexandria, and things continued in a state of extreme tension for some days. Nubar's position inclines, for the moment, to Sir Benson Maxwell's side, so far as the opposition to Mr. Clifford Lloyd's intense system of centralization round the Ministry of the Interior is concerned. But Nubar also is opposed to the annihilation of the ancient mudir as a local magnate, and thinks the work of reform in this direction has gone dangerously far. Indeed, there is a sense in which all three parties concerned are agreed that the mudiriate, reduced to impotency by the joint operation of Lord Dufferin's constitutional, judicial, and constabulary reforms, must, to some extent, be rehabilitated. But Nubar flinches from the bold, imperious process dictated by Mr. Clifford Lloyd, by which half the mudirs are to be new men and to be subjected to the sharp control of the Ministry of the Interior and English inspectors of police. Nor, though for the moment Nubar is willing to pit Sir Benson Maxwell against Mr. Clifford Lloyd, and is, by training and disposition, a favorer of French law and procedure, is he at heart very friendly to the severe system of legal responsibility to which Sir Benson Maxwell would subject the mudir as well as every other authority in Egypt. Nubar is said to be taking his stand on a ground in which he has Sir Benson Maxwell with him—that is, the decentralization of the police, with a view to placing them again under the local control of the mudir, and removing the administration of its prisons from the Ministry of the Interior to the Ministry of Justice.

On the face of them, Nubar's projects, which just now are undoubtedly in the ascendant, are vehemently reactionary. The worst sources of corruption and oppression in Egypt have been time out of mind the local despots, and hitherto almost the only beneficial form of English influence has been directed to weakening or destroying them. It may be that, through some personal shortcomings, Sir Benson Maxwell has trusted too much to legal checks, Mr. Clifford Lloyd to precipitate and arbitrary arrangements, Lord Dufferin to an English-managed constabulary and a written constitution. It is natural that the aggregate operation of all these efforts in the cause of decent government should have generated a stern and persistent opposition on the part of the hereditary governing class in Egypt. This class is not Egyptian but Turkish, in the broad sense of the word—that is, coming from provinces of the Ottoman Empire other than Egypt. Nubar himself is Armenian and Christian, and some of the strongest elements of the class are Albanian. It is not so much the men at the top who are injuriously affected and outraged by the superseding of all the time-honored authorities (because they have intelligence enough to be able to coöperate with Europeans, and, if loyal and trustworthy, are too valuable intermediaries to be dispensed with by any European Power in command of the country), but the dispossessed or discredited mudirs themselves, as well as the younger aspirants to office of the "Effendi" class, sons and relatives of Ministers and ex-Ministers, and the whole hierarchy of routine officials having little to hope for from the predominance of an European Power. Their whole *avenir* is cut off. A centralized and economically managed administration is injurious to their chances of employment, while the policy which England, at all events, would pursue of raising up a purely national party, hereditarily attached to the soil, and having no allegiance elsewhere, must tend to their gradual displacement. This party has among its members numerous persons who have passed some years, for educational purposes, in France. They have a good colloquial knowledge of the French language, and, so far as they know anything of the Western world, it is the French world they alone know and care for. Hence this whole class go far to swell the disaffection against the English, and, at such a crisis as the present, form important allies to any recalcitrant Egyptian Minister in his battle with English reformers.

The latest important news from England is that she is addressing a communication to the Powers which are parties to the Law of Liquidation, and making a series of recommendations of which the abolition of the present Egyptian army is one. Too much importance, however, cannot be attached to this announcement, for simultaneously Sir William Harcourt has been enforcing, in a speech delivered during the Easter recess, the inconveniences which would follow from an extension of English responsibilities in Egypt. Furthermore, the last undulation of the political wave here has been in favor of Egyptian autonomy and against English interference. It is said that the compromise on which Nubar Pasha and Mr. Clifford Lloyd both retain their seats is that Mr. Clifford Lloyd is henceforth to confine his activity to such tasks as properly belong to an Egyptian Under-Secretary of State. If it is true, as it must be feared, that Nubar is bent upon undoing all that Mr. Clifford Lloyd has done in the reform of the Egyptian prisons, and is further devising how to subject afresh a localized police to the mudirs, it is simply undoing the only clear and unmistakable benefits which the English Government has conferred on the country. It seems impossible to get Mr. Gladstone to understand that, while it is quite possible to administer Egypt in the sole interests of the inhabitants of the country, and by the use, mainly, of native instrumentality, it is not possible to do this without first overpowering all Turkish influences and counteracting Turkish modes of rule. England can do this—or France could and would.

A.

JOHN DE WITT.

PARIS, April 25, 1884.

M. ANTONIN LEFÈVRE-PONTALIS has just published two volumes on John de Witt, the Grand Pensionary of Holland. This work is his first historical effort. He was elected in 1871 Deputy of the Constituant Assembly, and was among the members of what was then called the Left Centre. For a long time he followed the leadership of M. Thiers and became a Republican—a Conservative Republican—with many other Orleanists, for he had begun life as an Orleanist. Having lost his seat in the new Republican Assembly which replaced MacMahon by M. Grévy, he returned slowly to the monarchical party, and, since the death of the Comte de Chambord, has become an advocate of constitutional monarchy. For many years he had collected documents on John de Witt, and we have now before us the result of his long work. He has used the documents preserved in the archives of the Hague, the public and private correspondence of the Grand Pensionary, the family papers preserved by Mrs. Hoog and her son, who are the last direct heirs of John de Witt, the archives of Paris, the archives of Chantilly, where he

found the correspondence of Condé during the preparation of the war of 1692.

The work of M. Lefèvre-Pontalis begins with a picture of the Republic of the United Netherlands, the chief traits of which are taken from the great work of Motley. The seventeen provinces of the Low Countries, once united against the tyranny of Spain, had not been consolidated into one single state. The Duke of Parma, by his diplomacy and by his arms, had succeeded in severing from the Union Artois and Hainaut; he had, in fact, given existence to a Belgium separated from Holland. For many years Spain, and the Provinces united under the leadership of Orange, disputed with each other the possession of Brabant. By the treaty of Münster, Spain was obliged to recognize the independence of the United Provinces: the little Republic had brought the great Empire to terms.

In this new state an internal struggle had begun between the republican and the monarchical principle. The Princes of Orange considered themselves, and were considered by the people, the representatives and the natural defenders of the new liberties. The Stadtholders were not kings, but they had the character of kings, in so far as they were not ordinary magistrates and their interests were entirely merged in the national interests. Motley has told us the history of the first struggles of the Stadtholders against the States of Holland. William the Second attempted a real *coup d'état*, and among the deputies whom he arrested we find the name of De Witt. He failed, however, in his designs, and his early death gave the power to his enemies during the long minority of his son. A reaction against the monarchical principle hidden in the function of the Stadtholder began; the great Assembly of 1651 gave to the Republic a new Constitution, organized the States-General, the municipal councils, and fixed the Hague as the seat of the States-General, as well as of the States of Holland. John de Witt was the son of the De Witt who had been thrown into prison by William the Second. He entered public life at a very early age, was chosen Pensionary of Dordrecht, and sent to the Constituant Assembly of 1651, and was among those who succeeded in reducing to obedience the towns which attempted to rise against the States General in favor of the young Prince of Orange. He showed so much energy in Zealand that he was rewarded with the title of Pensionary of Holland; at the age of eighteen he received the nickname of "the Wisdom of Holland."

His task, in the high post, was a difficult one, as he found the United Provinces engaged in a dangerous war with England, and the new Constitution was obnoxious to the powerful Orange party. Elected for five years only, but always eligible again, the Grand Pensionary of Holland was the President as well as the Minister of the States. He directed all the debates, and all the interior affairs of the province were under his jurisdiction. He was almost the sole inspirer and director of foreign affairs; he conducted all the negotiations and wrote all the correspondence with the Ministers. This diplomatic correspondence fills forty volumes (it has only been partly published, up to the year 1669). John de Witt always had about him two pocket books, which are preserved in the archives of the Hague. One was the collection of the resolutions of the States of Holland and of the States-General which established the principal attributions of the public powers; the other showed him the state of the finances. He was methodical in the extreme, and worked with constant diligence. An Ambassador once asked him how he could do so much, though he spent the afternoon in the visits which his function imposed on him. He answered that he ate and drank with moderation; that he went to bed early, without thinking any more of his affairs; that he rose early and worked at once, never doing but one thing at a time, and having for his maxim, "Age quod agis." Somebody once wondered how he could sleep so well amid so many preoccupations. "From my youth," said he, "I have been so fortunate that, the moment my feet enter my bed, all care abandons my mind." His wife, Wendela Bicker, who belonged to one of the first families of Amsterdam, was the type of the submissive and domestic housekeeper; she was familiarly called "the good sheep." At the age of twenty-eight John de Witt had inspired several important statesmen with great admiration; he had his lieutenants, completely devoted to him and following his directions almost blindly. He owed his influence to his integrity, to his austerity, and to his firmness.

The Orange party became very turbulent during the unfortunate war which the States had to carry on by sea against England; and Cromwell was not anxious for peace, as he feared the reëstablishment of the House of Orange, which was related by family ties to the descendants of Charles I. He did not consent to it till he felt assured that the son of William II. would not inherit the civil and military dignities of his ancestors. The States were obliged to recognize the maritime supremacy of England, to consent to the limitation of their naval forces in British waters, and to accept many other humiliating conditions. The treaty of Westminster has sometimes been criticised from an English point of view, but only by those who wished to make of the United Netherlands a mere dependence of England; it was really very humiliating for Holland, and De Witt's only excuse in proposing it was the absolute necessity of peace. The Orange party attacked the treaty bitterly. By the act of exclusion of Orange, Holland had made herself dependent on a foreign Power. The States of Holland had also usurped, diplomatically, powers which, by the terms of the Constitution, only belonged to the States-General. De Witt had bought peace somewhat too dearly; he worked hard to make that peace advantageous to his country. The history of his administration is given in the most minute details by M. Lefèvre-Pontalis. I content myself with saying that after a few years the United Provinces again regained wealth and influence in Europe.

Meanwhile, the Prince of Orange was growing. During the dangerous war with England his party had been very unruly, but De Witt succeeded in persuading his country that a restoration of the nephew of Charles II. would be a great danger for the state. After the restoration of Charles II. he was obliged to change his language. Fortunately for him, the Orange party had no longer any direction. The young son of William II. had no powerful protectors; but the province of Zealand was faithful to him, and he had secret or avowed friends in the Calvinistic clergy of all the States. The ministers of the Hague openly preached on ingratitude, and imputed all the misfortunes of the country to its oblivion of the past services of the House of Orange. It was felt by all that when the young Prince should come of age a restoration would be possible. Wherever he went he was received with popular demonstrations. Without having any power, he had already a court; though he was only sixteen years old, his friends claimed for him the post of Captain-General, or general of the cavalry. The Prince looked upon the States of Holland as usurpers of his natural authority. In vain did De Witt separate him from those who lived with him and nursed his ambition; Orange concealed his anger, and learned the art of dissimulation. He affected much deference for De Witt, who had made himself his tutor and companion, and gave himself out as his patron.

When Louis XIV. invaded the Spanish Netherlands, it became evident that the States-General were themselves in danger of coming into conflict with France, and it became necessary to make preparations for it. De Witt was very anxious that the young Prince should not unite the powers of Stadtholder to those of Captain-General and of Admiral; he wished to make these great offices incompatible. The States of Holland went even further, and abolished completely the dignity of Stadtholder. Their decision was embodied in an act which bears the name of Perpetual Edict; this act seemed to give to the republican principle a complete triumph. "Morte la bête, mort le venin," says a French proverb. The States imagined that the suppression of an office would destroy forever the sentiments of the people. While the Edict was being discussed, a deputy was cutting the binding of a book with a knife. "What are you doing?" asked John de Witt, who stood by him. "I am trying what steel can do to parchment."

De Witt tempered, so to speak, the Perpetual Edict by a formal promise to reserve for Orange the command of the troops of the republic. He represented to the young Prince that, as there was not in the States a single deputy who did not look upon him as the future commander of the armies of the States, so there was not one who did not detest the memory of the enterprise of his father. The Perpetual Edict was voted between the treaty of Breda, which was imposed on England after an audacious and successful expedition, and the Triple Alliance, which had practically made the States General the arbiters between France and Spain. The republic, which a few years before was in such distress, seemed now in the ascendant, and in the eyes of all foreign Powers John de Witt was its real representative.

This Dutch republic was in reality the first experiment on the Continent of Europe of parliamentary government, and the famous hall of the Hague, which is still preserved with pious care, was the cradle of liberty; but the days of parliamentary government were not yet arrived. It was hardly possible when the limits of the European states were not fixed, when their national existence had hardly begun, to expect that the powers of the States should be kept in an equilibrium which can only be preserved by the most elaborate constitutions, by the wisdom of the people, and by the concurrence of parties, which on some points must always unite, though they may divide on all others. The House of Orange had remained in the imagination of the people as a personification of a dearly-bought independence, and all the combinations of the States General could not undo what history itself had done. The struggle between Orange and De Witt was really a struggle between government by force and government by persuasion, and force had not finished its work in the Low Countries. The person, the character, the virtues of John de Witt cannot but inspire much sympathy; but if we look at events from a philosophical point of view, we may well ask ourselves who best understood the situation of Holland—De Witt or the Prince of Orange? Who did most to secure its independence? Who judged best who were its natural allies and its natural enemies? M. Lefèvre-Pontalis has an open and philosophical mind and, though he has a natural preference for the civic hero of his choice, he does full justice to the Prince who was soon to play such an important part in the history of the world.

Correspondence.

WHAT THE DEMOCRATS HAVE DONE.

TO THE EDITOR OF THE NATION:

SIR: In your facetious way, which your subscribers have all learned to admire, you have spoken several times lately of Democratic incapacity and Democratic ardor for civil-service reform. Permit me to call attention to a few facts on the serious side of these subjects. Without going back to ancient history or recalling how Harrison and Taylor, Lincoln and Grant followed the bad example of Andrew Jackson, let us speak of modern times.

The Federal Civil-Service Bill was introduced by Mr. Pendleton. A majority of Democrats in both houses voted for it. It is now a law binding on every citizen, and not a Democrat in either House of any note can be named who would vote for its repeal. Perhaps the same thing can be said of the Republicans. But the point is that the bill was supported by men of character and ability in both political parties, and that is the guarantee for its permanence. It is strictly analogous to an agreement on the part of a belligerent to abstain from the pillaging or sacking of captured cities, or any other enormity which was practised long ago, but which modern civilization revolts at. If either party to the contest resorted or proposed to resort to the plunder of office as a reward for successful party services, it is certain, in the nature of things, that the other would. The civil-service reformers who claim for the Republican party the sole credit of reform and seek to make it a party question, are really injuring the merit system.

Take another illustration. After many years of partial exile from power in the State of New York, in 1883 the Governor and both branches of the Legislature were Democratic. This Legislature made the most pronounced civil-service reformer among its adherents (Mr. Chapin) Speaker. Without alteration, the Civil-Service Bill recommended by the New York Association, was passed, and the Governor, instead of delaying, as he might, to sign the bill until it would be too late to appoint commissioners, signed it the moment it was received, immediately sent in his nominations to the Senate, and it thereby took effect a year sooner than otherwise it would.

Mark the contrast in 1884. The amended bill recommended by the New York Association was lost in the Republican Assembly, and it required the most vigorous efforts to bring about its reconsideration. Then the spectacle was witnessed of John J. O'Brien on the floor of the Assembly urging that the Police Department be exempted from the operation of the bill, and threatening that if this were not done the bill would be defeated. Moved by these threats, some friends of the bill voted for the amendment O'Brien asked, and the Police Department was accordingly exempted, leaving to the two Republican Commissioners that half of the vast patronage of the department which the bill proposed would have taken from them as well as their Democratic associates. The bill went to the Senate, and there a prominent Republican introduced and carried through another amendment exempting soldiers and sailors altogether from the operation of the bill. It was only by herculean efforts that this proposition was stricken out, and the bill restored to its original form. It does not follow that the Republican party as a party is opposed to civil-service reform, but it does follow that many Republican politicians detest it, because it takes away their stock in trade. No doubt, Democratic politicians of the same stripe are equally opposed, no more and no less; but the fact remains that when, for the first time in many years, the whole Government of New York passed into Democratic hands we had the first State Civil-Service Reform Bill. The same year similar measures failed to receive the support of Republican Legislatures in Pennsylvania and Massachusetts.

You speak of Democratic incapacity. Let us again turn to facts. This same Democratic Legislature of 1883 was by universal agreement the most honest and able Legislature that we have had for years. No man who has watched the contest over the railroad bills this winter can deny that there has been more corruption in the present Legislature than has been witnessed since the days of Tweed and his Republican associates. The same Democratic Legislature of 1883 put the building of the new Capitol on a business basis. That structure had dragged along for many years, with its patronage in the hands of one of those commissions which have been the usual result of Republican government since 1857. Democrats abolished the commission and put the management of the building in the hands of one person, to be appointed by the Governor. Immediately an architect of skill and experience was selected, who carried this work on at less expense and with greater speed than has been the case since the first stone was laid.

Another instance. Up to the time of Governor Tilden's administration the prisons of the State had been a source of expense—a nest of patronage and corruption. Their government had been in the hands of officers nominally elected by the people—really selected by a political caucus. Governor Tilden was one of the first public men who had the courage to avow his conviction that it was a detriment and not a benefit to the public that so many executive officers should be elected by the people. Governor Tilden advocated the passage of the constitutional amendment which gave the appointment of a State Prison Inspector to the Governor. Upon its adoption a Democratic Governor selected from among the men in the State who had had experience in the management of public prisons a man who managed them with honesty and efficiency. They ceased to be an expense to the State; their discipline was improved and their whole morale elevated. Then came a change of politics, and a Republican Governor displaced the Democratic Superintendent and appointed a man devoid of experience in prison discipline, but familiar with the management of the party machine.

The Roosevelt bills of this winter simply undo what Republican Legislatures have done, and restore the government of the city to nearly the position in which it was before Albany legislators commenced to pass laws by which the patronage of the city government would be secured, in part at least, for members of their own party.

Again, one object of political parties is to intrust the management of political affairs to men of ability and integrity. There have been many such men in the Republican party in this State since its organization. Who of them all since Governor Seward resigned his seat in the Senate has been sent there by his party? Who can name a single statesman among all the Republican Senators from New York since 1861? How do Blaine and Keifer compare with Carlisle, or even Randall?

Can anything worse be said of a party than that its whole scheme of taxation is shaped to promote the pecuniary profit of a few individuals at the expense of many? Is not this true of the existing tariff? Have not you and the *Times* said the same repeatedly? You complain that the Democrats have done nothing. They have not, it is true, done much, because they have not had the administration, but whatever has been done they have done. It was they who repealed the infamous Moiety Law. When the merchants of New York could get no help from the Republican Senators, they found in Bayard a defender and an advocate. It was they who put hides and quinine on the free list. It was the Democrats in the Senate who sent down to a Republican House, after the report of the Tariff Commission, a tariff bill which may fairly be considered as a Democratic measure. It was mangled and mutilated by the Republicans in Conference Committee and resulted in the present tariff. The Republican system of taxation simply carries out Mr. Boutwell's small shopkeeper policy of taxing the people enormously to hasten the extinguishment of the national debt, forgetting that our whole national banking system is based on the national debt, and that no man has yet ever suggested a substitute for it. Yet no man can possibly think of going back to the banking chaos that existed before the war. Thus our financial system has been rushing towards Niagara, and the Republican managers have carried every pound of steam that the boiler would hold, and spread every inch of canvas to accelerate its speed.

To sum up, is there one man in Congress except Edmunds whom the independent Republicans could cordially support? On the other side we may justly say that in Bayard, in Pendleton, in Carlisle, and in Morrison, we have statesmen of experience, of integrity, of broad views, and far-sighted policy, of any of whom the country might well be proud.

We have been hampered by enemies in our own party who have combined with Republicans to hinder every good work we have undertaken! This is my last charge for the present against the Republican party: that their leaders have always been ready to combine with the most corrupt elements in the Democratic party, and oppose, for the mere sake of temporary success, the most beneficial measures. Such a coalition in the "brown-stone district" of New York so far forgot all sense of decency and morality as to elect in 1877 to the Senate of the State of New York a professed gambler, who had made his living by the violation of law, and whose only quarrel with his own party was that it would not give him the power and influence that he thought his due.

The question I desire to put now to every Republican who believes in tariff reform is this: How can you honestly support a party which this year in New York, Ohio, and Pennsylvania, and in all its national platforms since 1864, has taken ground in favor of a high protective tariff, which has formulated and crystallized these platforms into legislation, and which cannot point to one single measure of tariff reform which it has carried out? Nominate if you will an independent candidate, but do not any longer demoralize the public conscience by talking one way on the platform and in the editorial, and voting the other way at the polls.

DEMOCRAT.

NEW YORK, May 12, 1884.

THE KEY-NOTE OF TARIFF REFORM.

TO THE EDITOR OF THE NATION:

SIR: The failure of the Morrison bill destroys, it may be supposed, all hope of reduction in the tariff this year, and the only chance, small as it is, of diminishing the surplus revenue seems to lie in the worst of all possible methods, the removal of the excise upon whiskey and tobacco. The failure of that bill also leaves the whole work to be done *de novo;* the labors of the Tariff Commission and of this winter leaving absolutely no result unless in arousing a certain amount of popular indignation and de-

mand that something shall be done. Nor is anything determined as to who shall do it. As your Southern correspondent has well pointed out, neither the Democrats nor the Republicans are identified with any positive action, and you yourself admit that "there are both Democratic protectionists and free-traders and Republican protectionists and free-traders." Nor is there, again, any sign as to how the Presidential election is to affect this question. Undoubtedly the financial is the most important problem now before the country. Yet how does this element enter into the discussion of the personal candidacy of either Blaine or Arthur or Edmunds or Tilden? In fact, nearly all the discussion that I have seen turns upon the private history of these men. There is certainly some reason for this, inasmuch as, to all appearances, none of them can have much more influence in the settlement of the question than any other of the fifty millions of the citizens of the United States.

Still further, there seems to be no definite objective point in view. A free-trade league is all very well, but nobody can expect that we shall have anything like full free trade for many years to come. A moderate "horizontal" reduction in the tariff is very likely to result in an increase rather than a decrease of revenue, while any reduction which would materially decrease the revenue would be very likely, by a large increase of imports, to affect the specie reserve upon which our whole system of banking and currency is based. In fact, our protective tariff has been a large element in building up this system, and the sudden withdrawal of the barrier would involve grave danger of bringing on a financial crash and widespread ruin. If the tariff has also built up artificially a great many manufacturing and mining industries, the decent regard for vested interests which ought to characterize a civilized government demands that they should be let down gradually. Once more a "horizontal" tariff reduction recalls the old fable of the bundle of sticks which could not be broken when tied together, though they might all be if taken separately.

The inference from all this is, that the tariff should be taken up in detail, those duties being first eliminated which neutralize each other, and other items being taken up in succession, and thus a definite and continuous policy maintained for a series of years. This can never be done by shifting and irresponsible committees of Congress, made up of local and frequently new representatives, taking up the subject afresh every year. It requires public, responsible, individual, and national leadership. The Secretary of the Treasury is the only man in the United States who can carry through a reasonable, consistent, and successful reform in the tariff. The history of such a reform in Great Britain conducted by Sir Robert Peel and Mr. Gladstone, and extending over a quarter of a century, is open to any one who cares to study it. The first effective step to such a reform in this country is the admission of the Secretary of the Treasury, charged with the conduct of the national finances, and the representative of the nation against local and private interests, to the floor of Congress and a share in public debate. The French say, *Qui veut la fin veut les moyens;* but it seems as if, in this country, we could never think of anything but results, without any regard to the means of attaining to them. G. B.

Boston, May 12, 1884.

INTEREST AND CIRCULATING CURRENCY.

To the Editor of The Nation:

Sir: On page 374 (No. 983) you say, speaking of the gold export:

"It has had little effect upon the rates for money as yet—proof sufficient that the loss of it is not harmful to any legitimate interest. It will continue, undoubtedly, until the amount of loanable funds is reduced to the actual requirements of business. Nobody need be alarmed about it until there is a marked rise in the rate of interest, and when this happens it will stop."

Now, if the language quoted does not imply the truth of the popular notion that the rate of interest depends upon the abundance or scarcity of currency in circulation, I do not understand it. And this is not the first time I have seen language in your columns on this point which I could not reconcile with what I have learned from the standard books on political economy. Three or four years ago I called your attention to the matter in a brief communication, and your reply was the least satisfactory thing that I have ever seen in your columns. With your kind permission I will state the question as briefly as possible and ask you to try again.

The popular belief, then, is that the rate of interest depends mainly upon the volume of currency in circulation. Inflation makes low interest, and contraction (whether by exporting gold or otherwise) makes high interest.

In the recent tremendous contest with greenbackism, this doctrine seemed, at least here in the West, to be the leading argument on that side. It was repeated in the press and on the stump, with endless iteration, that contraction would place borrowers at the mercy of the money-lenders (who were consigned to eternal perdition), and would enable lenders to exact whatever rates they pleased for loans. Inflation, on the other hand, would give us low interest; plenty of "money" would make it "cheap," just as plenty of hogs makes cheap pork. I need not call your attention to the old fallacy lurking in the ambiguous phrase "cheap money."

Now, all this I was taught years ago by standard writers on political economy to regard as totally fallacious. They reject utterly the notion that the rate of interest depends upon the amount of "money" in circulation, whether by "money" is meant whatever goes by that name or the precious metals exclusively. According to their teaching, if I read them rightly, contraction would not cause high interest, nor would inflation cause low interest. The tendency of inflation would, on the contrary, be rather to raise the rate of interest by impairing security. Lenders would be compelled to reimburse themselves for the robbery they would suffer by the degradation of the standard of value, by charging higher interest. The exportation of gold would have no more effect on the rate of interest than the exportation of wheat, or pork, or cotton. And if the gold goes to buy things we need more than it, the amount of loanable funds is not reduced, it is rather increased by the exportation of gold. For "loanable funds" are not money. "Loanable funds" means, I suppose, capital seeking investment; and it is, if you will pardon me, the capital fallacy of political economy to confound capital with money. The bulk of capital everywhere is wealth in some other form than money. Buildings, machinery, engines, tools, horses, cattle, food, ships, railroads and their equipment—all these and many other things are capital, and it is for the use of these, and not of money, that interest is paid.

In the operations of lending, money really cuts but an insignificant figure. It forms only a small part of the "loanable funds" at any time seeking investment. In the language and imaginations of merchants, brokers, bankers, and business men generally it is everything. They are perpetually talking of the "money market," the "value of money," etc. But as a matter of fact, what is loaned is usually not money at all, but capital in some other form; and for the use of this, and not of money, interest is paid. Abundance of "loanable funds," or capital seeking investment, tends, of course, to reduce the rate of interest, and vice versa; but abundance of money is not an abundance of "loanable funds," for "loanable funds" is a much wider term than "money." Money is a part of the "loanable funds" in the market; so are shovels; and it seems just as reasonable to expect high interest from the exportation of shovels as from the exportation of gold. If gold is "loanable funds," so are shovels, and cotton, and steam engines, and cattle, and wheat, and ploughs, and reapers; and all these are as necessary in their places as money is in its place. Yet we never hear high interest predicted from a scarcity of steam engines or reapers.

Why is it that men who are perfectly rational on every other subject, lose their mental balance as soon as they begin to talk about "money"? The way men's imaginations are filled and dominated, their thinking vitiated, and their reasoning turned topsy-turvy by this mighty and marvellous word "money," is to my mind a wonderful psychological phenomenon.

I have stated at some length what I regard as scientific doctrine on this point, because I have never seen the subject discussed at any length in the *Nation*, and because, in my opinion, the popular fallacy does infinite harm. H.

St. Louis, Mo., May 8, 1884.

[The incongruity to which "H." refers is examined and explained by Professor Sidgwick in his work on 'Political Economy,' published last year. His conclusion is that the rate of interest is immediately enhanced by the exportation of gold, but that the effect is transitory. In other words, the rate of interest is governed in the long run by the demand and supply of loanable capital in whatever shape it exists; but the first effect of gold exportation is to raise it somewhat above it natural rate. This explanation is in accord with observed facts. It is also in accord with the paragraph which "H." quotes from our columns. Of course no analogy can be drawn from the quantity of irredeemable paper currency afloat, since the increase of such paper adds nothing to the capital of a country. The increase or decrease of gold is an increase or decrease of capital, and its peculiar character as a medium of exchange instantly available for any purpose—*i. e.*, instantly marketable—gives it a higher, or at all events earlier, potency as affecting the rate of interest than any other commodity possesses, since other commodities require to be sold and brought into actual use before they become available for loans.—Ed. Nation.]

THE SALE OF PUBLIC DOCUMENTS.

To the Editor of The Nation:

Sir: "Many young men who serve Congressmen as secretaries," you say in the *Nation* of April 10, "are said to be recompensed for their services wholly or chiefly by the gift of documents." This statement, so seriously made, has created much amusement here, for all the current documents which a Senator or Representative might bestow on a clerk would not bridge a week's board bill, so small a selling value have these books. They are really valuable only as "remembrances" to constituents—and Congressmen see to it that their allowances are well

distributed. I have not been able to discover an instance of a private secretary selling documents. Anglim, the well-known dealer in second-hand books here, informs me that Senators never, and members rarely ever, dispose of the Government publications; and then only to exchange them for other public documents of more interest to their constituents. Congressmen from the city will trade agricultural for tariff reports; members of the present Congress, who have no allowance of the early volumes of the Official Records of the Rebellion (which were all appropriated by the Forty-Seventh Congress), will sometimes exchange a lot of minor publications at Anglim's for a set of this important work to present to some constituent; the Medical and Surgical Records are obtained in like manner. I have been told, and by employees who should know, that a Congressman occasionally, failing of reëlection, will, in pique perhaps, put in the hands of a dealer all books remaining to him, rather than have any remain to his successor.

But there is a wide difference in this practice between House and Senate, and as a Senator's secretary I must protest against the wholesale charge you make. Senators, in for six years and representing the State at large, have uses enough for their books beyond paying secretaries with them. And perhaps it has slipped your notice that all Senators now have secretaries at six dollars a day, whether chairmen of committees or not.

CLEMENT CHASE.

UNITED STATES SENATE,
WASHINGTON, D. C., May 6, 1884.

CLUB LAW.

TO THE EDITOR OF THE NATION:

SIR: In the article on "Club Law," in your issue of April 10, you do not mention the American case of Evans *vs.* The Philadelphia Club (50 Pa. St., 107), decided by the Supreme Court of Pennsylvania in 1865. The question raised was whether a member who, in an altercation within the walls of the club, struck a fellow-member, could be expelled. The Supreme Court said he could not, because the power to disfranchise members for such offences had not been expressly given to the club by its charter. A member had an ownership in the property of the club, of which he could not be deprived except by express authority of law. In the absence of a provision in the charter, it was a general rule that members could be expelled only on conviction in a court of justice of an infamous offence, or for committing some act against the society which tended to its destruction or injury. The offence complained of, though disorderly, was directed more against the fellow-member than against the society, and was not alleged to have been habitual. The Court said also:

"That the power of disfranchisement which does destroy the member's franchise must in general be conferred by statute."

"That the power to make by-laws is incidental to corporations, and generally expressly conferred by statute; but by-laws which vest in a majority the power of expulson for minor offences are in so far void, and courts of justice will not sustain expulsions under them."

It is very rarely that courts allow a man to be expelled from such societies except for gross misconduct. An instance of an expulsion sustained by the courts is to be found in Commonwealth *vs.* Philanthropic Society (5 Binney, 486). The expelled member had presented to the society a physician's bill which he had altered from four dollars to forty.—Truly yours,

S. G. F.

PHILADELPHIA, April 28, 1884.

[The Evans case related to a Pennsylvania corporation, and was decided by an evenly divided court, and consequently can hardly be regarded as of high authority in questions relating to unincorporated clubs outside of Pennsylvania. Besides this it goes too far. A club in which the right of assault and battery among the members is protected by law, would be an oddity anywhere.—ED. NATION.]

Notes.

WE learn from the Boston *Advertiser* that a memorial of the life of the late George Fuller has been determined on, and that Mr. Howells has engaged to write it. It will be copiously illustrated from the artist's own works, and will be limited to 300 copies. The profits that may accrue are to go to Mrs. Fuller.

The *New Amsterdam Gazette* of this city, a monthly journal exclusively devoted to things Dutch, calls attention to the movement making in Holland to present a testimonial to Prof. Nicholas Beets on the double occasion of his attaining his seventieth birthday and relinquishing (by law) his chair in the University of Utrecht. The venerable poet, it will be remembered, was among the honored guests at the recent tercentenary celebration of the founding of the University of Edinburgh. The Consul-General of the Netherlands, at 47 Broad Street, will receive the contributions of American admirers of Beets who wish to join in doing him honor.

'Property and Progress' is the title of a work by Mr. W. H. Mallock in reply to Henry George, which will be published by the Messrs. Putnam.

Roberts Bros., Boston, have in press a California story by Miss Maud Howe, entitled 'The San Rosario Ranch'; an historical Japanese romance, 'The Usurper,' by Judith Gautier, the daughter of Théophile, translated into English by Miss Abby L. Alger, daughter of the Rev. W. R. Alger—a double inheritance of literary talent; and 'The Boston Cook Book' (a title not so alluring as the universality of "Boston brown-bread" might warrant one to infer), by Mrs. D. A. Lincoln.

S. W. Green's Son announces the immediate publication of 'Amateur Photography,' by D. J. Tapley. The book will be profusely illustrated.

Ginn, Heath & Co., Boston, will publish in July 'A Method of English Composition,' by Prof. T. Whiting Bancroft, of Brown University; and, in December, a 'Grammar of the Middle High German Language,' with a reader and a glossary, by G. Theodore Dippold, Ph. D.

Funk & Wagnalls will be the American publishers of Dr. Robert Young's 'Concordance to the Greek New Testament,' including the 8,000 changes in the Revised Version.

Le Français, after a struggle for existence in which it has never lowered its standard of excellence, at last succumbs to the fate of its predecessors. With the June number, according to the philosophic announcement of its editor,

> "— Encore une feuille qui file,
> Qui file, file, et disparaît."

We were wrong in guessing that Dr. Coues penned the humorous description of Potomac rail-shooting in the 'Avifauna Columbiana'—it was his associate, Dr. Prentiss; and in predicting a temporary lull in the former's activity on account of his approaching voyage to Europe. On the contrary, he expects before leaving to receive from the press of Estes & Lauriat, Boston, copies of the second edition of his 'Key to North American Birds,' revised to date and entirely rewritten, and incorporating for the first time the author's 'Field Ornithology,' published ten years ago. The new 'Key' will contain 900 pages, against 361 of the old, and 562 cuts, against 238. The whole work will form a complete incentive and guide to the pursuit of the science, theoretically and practically.

The International Library Conference has been fixed for September 3-6, at Toronto.

Archibald Forbes's 'Chinese Gordon' is now procurable in still a third imprint, that of Harper & Bros., who have added it to the Franklin Square Library.

The fourth edition of the 'Globe Pronouncing Gazetteer of the World' (G. P. Putnam's Sons) has been wholly renewed with the aid of the leading censuses which have been taken since the edition of 1879. The work, of English make, is a compact duodecimo, neatly printed, and furnished at the end with convenient maps by Bartholomew, of Edinburgh. The articles are extremely brief, but carefully prepared. In addition to the pronunciation, the derivation of names is indicated in many cases. Completeness is not aimed at. Thus Beaufort, Cohoes, Duluth, Seattle (to take American examples in which the pronunciation might seem perplexing), are not entered; and we have observed some other omissions, as of Cape May, which are less easily accounted for. There is a slip in bounding Massachusetts on the South by *Long* Island; and Cohoes Falls (mentioned incidentally under Mohawk River) is printed *Cahoes*. But on the whole the work is meritorious as well as handy.

The editor of the 'Satchel Guide to Europe' (Houghton, Mifflin & Co.) has for its thirteenth edition only stereotyped phrases by way of introduction. We shall be more particular, for it is evident on a cursory examination that the guide has been made fitter for the satchel by paring down the margins; that about two pages have been dropped without loss from the appendix; and that three folding maps of Central Europe, Switzerland, and Paris have been added to the volume. All these are substantial improvements.

The death of Chevalier Wikoff has prompted the publishers of his 'Reminiscences of an Idler' to bring out a new edition of that work (Fords, Howard & Hulbert). In the four years since its first appearance it will be found to have acquired a fresh interest in consequence of the publication of the memoirs of Lord Lytton, whose wife was one of the numerous women in confidential relations with the obliging Chevalier. Many of her letters to him are given in the concluding chapters.

Alice Carey's series of stories, filling two volumes, called 'Clovernook; or, Recollections of Our Neighborhood in the West,' just reprinted by A. C. Armstrong & Son, seem to us no longer tolerable reading except as landmarks of the taste of another age. That age is symbolized either by *Graham's Magazine* or *Godey's Lady's Book*. Some phases of early Western life are no doubt recorded here with fidelity, but the writer's art was unequal to the task of making them interesting as studies. The critics, she acknowledged, found her tales too sombre in tone, and such they will be found to-day. One feels, moreover, that she was too much the victim of her environment to view it objectively, and too little humorous to paint the sordid rural life to which she was accustomed otherwise than in depressing colors.

Mr. Edward L. Anderson's 'Modern Horsemanship,' though published in Edinburgh (David Douglas), is the work of an American, who adopts the general opinion of a high French authority when he says that "every one who wishes to *excel* in horsemanship should study Baucher's work as the fountain-head of all that is best in the art." Mr. Anderson has taken a step in advance, for while cordially endorsing the value of the

methods recommended by the standard authorities which he freely uses in writing his book, he presents a new method of teaching riding and training by means of twenty eight pictures, or figures, taken from the life by instantaneous photography. These pictures, together with six diagrams, are of great value, and cannot fail to encourage a new departure from the usual course of instruction. The work is divided into two parts: first, riding; second, training. Each part seems to be carefully and conscientiously treated. Some of the author's excellent suggestions deserve the thoughtful attention of army officers as applicable to our cavalry. For the rest, Mr. Anderson is an advocate of the "close-seat" (which is a characteristic of American cavalry), and of nearly all the essentials of good horsemanship, both in theory and practice, as taught and daily employed in the American cavalry service.

The nice paper, the beautiful print, the convenient size, the accurate scholarship, and many other enticing characteristics of the "Clarendon Press Series" of text-books have often been mentioned in these columns. The last specimen we have received is 'Aristophanes: The Frogs,' with Introduction and Notes by W. W. Merry, M.A., Fellow and Lecturer of Lincoln College, Oxford. In some respects this is the best edition of a Greek play which has been published in the course of the series. In noticing some of the previous volumes of the series, among others Mr. Jerram's edition of the 'Helena' of Euripides, and also in reviewing some American editions, we censured the practice of referring to some other work for an explanation of a difficult passage, and more especially the practice of referring to parallel passages, without quoting the words. In a review of Professor Seymour's 'Selected Odes of Pindar,' we stated somewhat fully our objections to this kind of commentary, and mentioned among the excellencies of that work the scrupulousness with which were quoted the exact words of such passages as were thought likely to be advantageous to the student to compare. Whether or no our remarks have come to the notice of Mr. Merry, we of course cannot say, but certain it is that he has in a very marked manner avoided the fault. The number of illustrative and parallel passages cited is very large, but, so far as we have noticed, they are in all cases quoted with sufficient fulness to enable the student to make the comparison without starting on a hunt for some other perhaps inaccessible volume. There are some other defects of English editions of the classics for the use of students from which Mr. Merry's work is free, but we have not space to enter into details. The index of proper names and words and phrases explained in the notes is more than ordinarily full. This edition of 'The Frogs' is appropriately bound in green.

In a handsome octavo of 650 pp. (Macmillan & Co.), Mr. Alfred Daniell, M.A., Lecturer on Physics in the School of Medicine, Edinburgh, has attempted to furnish 'A Text-book of the Principles of Physics.' In his preface Mr. Daniell says his "aim has been to produce a work useful at once to the student of medicine, the student of science, and the general reader." In so far as regards the author's attempt to give no undue prominence to the physiological aspects of the science of physics is concerned, it must be regarded as entirely successful. Thus, of the sixty-five pages devoted to "sound," only six treat of "The Human Ear," and a considerable portion even of these could hardly with propriety be omitted from any treatise on acoustics which made any pretensions to completeness. To those who have never studied any of the more elementary treatises on physics, we do not think this work would prove satisfactory. As a summary of the principles of physics it is very complete, but the attempt to embrace so much within the limits of a single volume has rendered necessary a degree of condensation which makes it often read like an abridgment of a larger work or a syllabus of a course of lectures. But the work seems admirably adapted to the needs of a more mature class of students under the guidance of a competent professor. The numerous problems inserted in the course of it are generally well chosen and will prove of great advantage to those who have the patience and resolution to work them out. A bibliography is appended containing the titles, not only of the most important recent works on the various branches of physics, but also of many in course of publication and of several "in press." The index to the book is very full, and though we have consulted it many times, we have never failed to find what we were looking for.

Frederick Keppel sends us a delightful etching by Peter Moran, "A Summer Afternoon"—cattle in a river scene, etched in an excellent style and with a picturesque subject. It is free from the delusions of artificial printing, and owes a by no means common brilliancy to honest use of the line, being in this respect an example to our increasingly numerous body of young etchers. A fault which is almost universal, however, among the etchers of the day is the violation of the law of reflection, here shown chiefly in the images of the cattle in the foreground, which are, for water so broken, far too distinct. In rippled water, all the lines tending to horizontal are in proportion to this tendency lost as form, while the vertical lines are conversely distinct. If the landscape painters would take the pains to study the reflections in water as carefully as they do the objects reflected, they would find that, as Da Vinci says, speaking of reflections, "Man sees the object from one side, nature from the other." The little herdsman in this etching is lost in light and shade, and insignificant in stature. Mr. Moran would advantageously make a "second state" of his plate by putting him out or giving him a better innings. He is either too much or too little.

We note the appearance of the first number (for May) of the *American Meteorological Journal*, published monthly by W. H. Burr & Co., Detroit, Michigan, and edited by Prof. M. W. Harrington. It is spirited and clear of purpose beyond the average of first numbers, and promises to attract the most able collaboration in the country, while not neglecting foreign phases of the science. Here will be found some curious particulars of the new branch of underwriting at the West—against cyclones and wind storms. Editorial reference is made at p. 3 to a popular belief, in the States adjoining the upper lakes, "that high water in wells is propagated from the lakes southward, though slowly and at irregular intervals."

Bulletin Astronomique is the name of a new French periodical devoted to astronomy and published under the auspices of the Observatory of Paris. The appearance of the first two numbers augurs well for its success. It is designed primarily for French astronomers, and consequently will doubtless be somewhat provincial in its character, but not to such an extent as to preclude foreigners from being interested in its contents. It will contain papers on theoretical astronomy, and one of its most interesting features is the review of the contents of the principal astronomical periodicals, English, German, and American. It will undoubtedly contain the most interesting part of the astronomical section of the *Comptes Rendus*, and thus render much valuable material more accessible. It is edited by M. Tisserand, with the assistance of MM. Callandreau, Bigourdan, and Radau, all of the Observatory of Paris. Private enterprise, by the way, has recently fitted the National Observatory with a large and powerful instrument of a novel construction; the larger observatories have laid out elaborate courses for instruction in the science; and the establishment of this journal is to be considered as an index of a new awakening.

M. Janssen, Director of the Astro-Physical Observatory at Meudon, near Paris, has recently presented to the Washburn Observatory at Madison, Wis., a large photograph of the sun on glass, taken at his observatory. This gift is noteworthy, not only from the fact that M. Janssen has been more successful than any other person in researches in solar photography, but also because this picture, with one exception, is the only specimen of M. Janssen's handiwork in this country.

Professor Brachelli, Chief of the Statistical Department of the Austrian Ministry of Commerce, has nearly completed the fourth revised edition of his highly important publication, 'Die Staaten Europa's,' a comprehensive work of comparative statistics, of which the first edition appeared in 1853—when the author was only nineteen years of age—and the third in 1876. Though forming but a single volume, it treats exhaustively, in ten chapters, of areas and populations, agricultural and mining production, commerce and communication, education, ecclesiastical affairs, government, administration, the army, the navy, and finances. It is hardly necessary to add that the revised statistics of this work are based on the very latest and most trustworthy data. The place of publication, like that of the former editions, is Brünn. Of Brachelli's 'Statistical Sketch of the Austro-Hungarian Monarchy' the ninth edition appeared in 1883.

The fifth and seventh volumes of Professor Bartoli's valuable 'Storia della Litteratura Italiana' have been lately put forth. The life of Dante is the subject of the first of them, and an effort is made by the author to separate the facts of Dante's career from the conjectures that have grown up about it; the poet's intellectual life is to be considered in the sixth volume, not yet published. Petrarch's life is the subject of the seventh volume, the features of his life and work being viewed in chronological order, under the captions Character; Mysticism; Petrarch and the Papacy; Colas di Rienzi; Petrarch, Italy, and the Empire; Petrarch, the Princes and Signori of Italy; Petrarch and the Renaissance; Petrarch and Laura; The Friends and Followers of Petrarch. The Dante study, it is thought, will excite some opposition among students, the ideas expressed being in some instances destructive of prevalent opinions.

—George Redway (London) has lately reprinted, under the editorship of Mr. Richard Herne Shepherd, Poe's first book—'Tamerlane and Other Poems. By a Bostonian. Boston, Calvin F. S. Thomas, 1827'—of which no copy is known to exist in this country. The edition, which is limited to one hundred numbers, is very prettily printed on Whatman paper and bound in thick vellum boards, so that it is by no means a reproduction of the original Boston issue, which was distinguished by its mean appearance. The text, however, has been carefully edited on the basis of the British Museum copy, and a list of emendations is given under the head of "Errata in Original Edition," in which the editor has been almost humorously just in acknowledging his obligations to Mr. Ingram, who once printed some of these poems in a magazine article. There is no reason to doubt the trustworthiness of Mr. Shepherd's version, notwithstanding Mr. Ingram's irascible criticism of it, both before and after its publication; and

lovers of Poe in this country will be very glad to own, in so convenient and beautiful a form the boyish verses which, although some of them much revised, were included in his last edition, have been hitherto inaccessible to the public. Students of poetic art, too, will find much of interest in the crude product of Poe's genius, for no poet was ever developed more by art than was he. If Mr. Shepherd is encouraged to add to this volume, as he half promises to do, reprints of Poe's 1829 and 1831 editions, of each of which not more than half-a-dozen copies survive in America, the series, taken in connection with the 1845 edition, would furnish a very interesting illustration of the growth of a poet's mind, and prove by the successive corrections how much surer was Poe's artistic sense than his original inspiration.

—Dr. George Hand-Smith, an American resident in London, has just opened there an exhibition of "endoliths," which, if the inventor's claims for them prove well founded, are probably destined to mark the beginning of a new epoch in decorative art. These endoliths are paintings *in* marble, depending—to use his own words—upon "the development, within the substance and below the surface of marble, of painting or designs in monochrome or color, whereby the art of painting is combined with the durability of sculpture." Dr. Hand-Smith states that, after long experiments, he has succeeded in discovering the principles of the movement of molecules or atoms of color within marble, ivory, or other dense substances, and in so controlling this movement as to induce designs in every variety of color to penetrate unchanged to the depth desired, and finally to become imperishably combined with the stone. The actual penetration is proved by the fact that the designs may be made upon the rough marble, and this afterward ground down and either polished or left with a dead surface. Even cross-sections of marble so treated may be cut off, and one or more duplicates thus produced. Most of the pictures in marble in the exhibition have been "driven in" to the depth of about three-eighths of an inch, and several of those in ivory have penetrated so completely that it is impossible to tell upon which side they were originally painted. So far as the discoverer cares to make the details of his process intelligible to outsiders, it seems to depend upon some affinity between oxides employed in the colors and the carbonate of lime of the marble, the two combining under the influence of what he calls the "differentiation of heat" within his apparatus. The explanation is not very clear, but the fact remains that he exhibits paintings of all kinds, portraits, decorative designs, inscriptions, and simple coloring, indisputably below the surface of marble of all kinds and ivory, and that these cannot be affected by anything applied to the surface, and can only be destroyed by grinding away the material itself. The discovery is attracting a good deal of attention from prominent English artists, several of whom have promised to execute paintings on marble for Dr. Hand-Smith to render permanent by his process. The exhibition contains a bust of Carlyle by Mr. J. E. Boehm, R.A., which has received a tint of cream-color, to remove the coldness of pure white marble, and in which the high-lights have been chiselled white again by the sculptor. There is also a beautiful and effective section of his designs for the great dome of St. Paul's by Mr. E. J. Poynter, R.A., which furnishes an admirable illustration of the possibilities of the new method, with which we understand Mr. Poynter is so pleased that he intends to make considerable use of it in the work upon which he is engaged. Besides its value in the production of absolutely permanent paintings and decorations, Dr. Hand-Smith's process opens up a wide field of possibilities in polychromic architecture. It has also, of course, great value from a commercial point of view, but the discoverer intends to take no steps in this direction until its position and worth as an adjunct to the fine arts have been fully determined.

—The American Oriental Society held its annual meeting on the 7th inst. in Boston. Professor Whitney, of Yale, spoke of the life of Dr. S. Wells Williams, the President of the Society, calling to mind his eminent services as a pioneer in opening a knowledge of China and the Chinese language to the Western world, and also his great usefulness to our country in the conduct of its diplomatic relations with China, and especially his agency in introducing the "toleration clause" into the treaty of 1858. Professor Joseph H. Thayer paid fitting tribute to the memory of Dr. Ezra Abbot, who was the Recording Secretary of the Society for about thirty years. A paper upon the Northern barbarians in ancient China, by President Martin, of Peking, was read to the Society. Professor Lyon, of Harvard, gave an account of recent Assyriological publications, and Doctor Lehmann, of Baltimore, spoke upon certain phonetic changes in ancient Babylonian. Professor Isaac H. Hall discussed the Cypriote inscriptions, and also a roll in Philadelphia which came from the late Shapira. It was claimed by Shapira and believed in Philadelphia that the roll was a thousand years old; but Doctor Hall reduced the claim to two or three hundred years. Professor Lanman, of Harvard, read a paper on a passage in the Rigveda, and gave an account of a society in Calcutta for the printing and gratuitous distribution of the Sanskrit classics. Professor Avery, of Bowdoin, gave the results of a detailed investigation of the unaugmented verb-forms in the Vedas. Professor Whitney read a paper on the study of Sanskrit *versus* that of the Hindu grammarians. In this he showed the prime importance of studying the actual phenomena of the language, and not the Hindu statements respecting what the language ought to be: these statements are indeed worthy of being tested by the facts of actual usage, just as the Hindu astronomical works might be tested by the known facts of the science of astronomy of to-day; but they are in themselves of very subordinate importance when compared with the results of our own observations made in accordance with modern scientific methods. The election of officers occurred at this meeting. Professor Whitney was chosen President in place of the late Doctor Williams, and Professor Lanman was made Corresponding Secretary in place of Professor Whitney. For over twenty-seven years the duties of Corresponding Secretary have been performed by Mr. Whitney with the utmost fidelity and zeal. He has given freely to the Society his time, learning, and literary labor. His contributions to volumes vi.-xii. of the *Journal* amount to more than those of all others combined, and include the great work on Hindu astronomy, the Taittiriya and Atharvan Prati-çakhyas, the index to the Atharva-veda, and various important papers on Indian astronomy and chronology, and on phonetics. To him more than to any one else is due the high position which the Society now enjoys among Oriental scholars throughout the world.

—Prof. Heinrich Leberecht Fleischer, of the University of Leipzig, whom the unanimous opinion of learned Germany acknowledges as the highest authority in the field of Arabic scholarship, received an ovation on the 4th of March, the sixtieth anniversary of the day on which the institution whose Professor of Oriental Languages he has been for nearly fifty years, bestowed on him the title of Doctor. The King of Saxony raised him to the dignity of Privy Councillor. The little town on the Elbe where he was born in 1801; the gymnasium at Bautzen, which he entered in 1814; the German Oriental Society, of which he was one of the founders; the Saxon Academy of Sciences, of which he is one of the secretaries; the Orientalists of the Finnish University at Helsingfors; and the University of Edinburgh showered congratulations upon him—the last-named institution sending him a diploma as LL.D. Among the disciples who appeared before him was a young Turk, the hearer of his lectures on the Koran. Professor Fleischer numbers among his former disciples some of the most eminent Orientalists of Germany, and books of distinguished philologists containing additions from his pen are frequent. Thus, for instance, his supplemental notes to Levy's 'Neuhebräisches und Chaldäisches Wörterbuch über die Talmudim und Midraschim' form a large portion of that extensive work. Among books dedicated to him we may mention Franz Delitzsch's 'Jüdisch-Arabische Poesien aus Vormuhammedanischer Zeit,' published as "a contribution to the celebration of his jubilee" in 1874, and 'Die Sprache der Kossäer,' by Friedrich Delitzsch (1884). Both father and son are Fleischer's colleagues at the University of Leipzig, and both express in their dedications a boundless reverence for him as their teacher. "Accipe quod tuum est," says the famous Hebraist (born in 1813). "Over the vast domain of Arabic philology," says the equally famous Assyriologist (born in 1850), "one man reigns an autocrat, of whom I pride myself on being a pupil." And the autocrat of that domain, of which "Persian and Turkish are dependencies," continues to be active as teacher and learner in the eighty-fourth year of his life.

— M. Maspero has come back from his last official Nile trip, Miss Amelia B. Edwards reports in the *Academy* of April 26, "rich in new acquisitions for the Boolak Museum, and richer still is the yet untold wealth of one of the most extraordinary discoveries ever made on Egyptian soil." Close to Ekhmim (the ancient Chemmis or Panopolis), on the right bank of the Nile, about 130 miles below Thebes, he has discovered an entire necropolis, untouched by tomb-breakers, ancient or modern. It appears to belong to the Greek period, though a Pharaonic substratum of interments may yet be disclosed. The sepulchres seem to be family vaults or catacombs, not isolated tombs, as elsewhere. M. Maspero had five of the vaults opened, and in these he found about 120 perfectly preserved mummies, as he writes to Miss Edwards, and in the course of a few hours he recognized the existence of about a hundred other vaults, all inviolate ("une centaine d'autres puits encore vierges"). Supposing that the still unexamined portions of the necropolis have also been preserved intact, he calculates that the whole must contain five or six thousand mummies. Even if only a comparatively small number of them should prove to be of value, as specimens or for the objects buried with them, the enthusiastic Honorary Secretary of the Egyptian Exploration Fund expects the unearthed necropolis to yield "more treasures in the way of papyri, amulets, and jewels than have ever before been discovered." Remembering that in tombs of this period papyri containing fragments of Sappho, Anacreon, and other ancient poets have been found, she even indulges the hope of "the discovery of some of the lost works of the cyclic and other Greek poets." This, of course, is an "interesting possibility," but hardly more than that. In other fields of excavation, too, interesting discoveries have

been made. In the burial-fields of Sakkarah and Dashur, an inviolate tomb of Pepi I., of the sixth dynasty, was found in the beginning of April, containing three sarcophagi, and, among the funerary objects, seven little model boats. A fine golden necklace or collar, with clasps formed of hawks' heads, is among the trophies. At the same time excavations are being vigorously carried on also in Lower Egypt, in "the field of Zoan," or San, under the direction of Mr. W. Flinders Petrie, on behalf of the Egyptian Exploration Fund. A late number of the London *Times* has a long account of the way that explorer has begun his work, to which great expectations are attached, but no find of importance has as yet been reported.

THE FLOWER OF QUAKERISM.

James and Lucretia Mott. Life and Letters. Edited by their granddaughter, Anna Davis Hallowell. With portraits. Boston: Houghton, Mifflin & Co. 1884.

It goes hard with some women to sink their maiden name on marrying. Lucretia Coffin had neither sentiment nor scruple in this particular. Her husband's surname was at least as euphonious as her own, whose signification, moreover, could have been little relished by one so conspicuously tenacious of life as she. On the other hand, while she, more than the heir of the Motts, gave lustre to the name of her adoption, this double biography shows that the reformatory tradition and example came rather from his side of the house than from hers. His paternal grandfather and great-grandmother were early emancipators of their own slaves, while his maternal grandfather and namesake strictly abstained from the use of slave-labor products. There was greater cultivation, thoughtfulness, and gift of literary expression in the immediate ancestors of James Mott than in those of his wife, strongly marked as was the character of the Coffins and the Folgers (involving relationship with Benjamin Franklin). James Mott himself appears in a very favorable light in these pages, especially where he speaks for himself. His letters are full of good sense, and his style is emphatically the man—simple, frank, weighty. In 1815 the subject of slavery was already a concern to him; in 1826 he became an agent for Lundy's *Genius of Universal Emancipation*, at the same time associating himself with Friends who wished to procure free-labor products; in 1830 or 1831 his conscience compelled him to give up a flourishing business in cotton; in 1833 he and his wife shared in the formation of the American Anti-Slavery Society. On another side, we find him, as early as 1820, criticising sharply the distinction made in the power of the men's and women's meetings for discipline in his Society, derived, as he supposed, "from an opinion prevalent with the 'people of the world,' that a woman should not be suffered to speak in the church." When division arose in the Society, he was ready sooner than his wife to join the Hicksite wing.

Once this step having been taken, Lucretia Mott resolutely refused to go further: she would not, in an epoch of come-outism, among Friends as among other denominations, cast off the Society in which she had been reared, nor would she be cast out of it. Her "going out in the mixture," as her philanthropic collaboration with abolition and other reformers was called, brought much persecution upon her from her Hicksite brethren in the Southern trade, and they would gladly have forced her withdrawal from the Select Meeting of Ministers and Elders; "but this would have constituted her an 'offender,' and have rendered her liable to be 'dealt with' and deposed as an acknowledged minister. She was careful to give her opponents no legitimate cause of action against her, for she greatly desired to remain not only in the Society, but as an 'approved minister' in it." It is very probable that she clung to her ministry from considerations quite distinct from those which made separation from the Society repugnant to her, as, the force of old associations, the thinking it handsomer (in Emerson's phraseology) to remain in the establishment better than the establishment, etc. She must have been conscious of certain natural limitations which would have made her less conspicuous and less useful outside the Society; of certain advantages within for gratifying two very strong propensities—the love of travel and of social intercourse. As a preacher she was far superior to the average of her denomination, yet her speech was desultory, and, apart from her winning personality, would hardly have made her eminent in any purely intellectual competition. She had an acute but not an original mind, nor an orderly one. "She thinks and reads much," said an admiring friend, "but does both without system." In Dublin, Richard Webb, himself a Quaker (and by and by a come-outer), noticed that at the Royal Exchange, in 1840, "her remarks were discursive: the anti-slavery enterprise, moral reform, temperance, and the promotion of peace, were all touched upon, not forgetting another of her favorite themes, the exaltation of the moral and social condition of women." This was perfectly characteristic, Mrs. Mott's speeches consisting of a round of "testimonies" bound together only by their relation in a common morality, and by the beauty of her spirit shining through her delivery of them. Her Quaker garb protected what was after all a Quaker deficiency from criticism, just as it saved her from violence when speaking against oppression in the border slave States, as she sometimes ventured to do; and just as it procured her invitations to speak before religious bodies which would have been scandalized by a similar performance from a woman not a follower of George Fox or Elias Hicks.

It is incredible now to what length religious bigotry went in pursuing James and Lucretia Mott as schismatics. Their journey to England to attend the World's Anti-Slavery Convention in 1840—which was called and largely controlled by Friends—was anticipated by their Orthodox enemies on this side, who denounced them as pseudo Friends, and procured for them all sorts of indignities, with public and private disownment, among their narrow-minded English co-religionaries. Even the painter Haydon, to whom, as a delegate to the Convention, she sat for her portrait, "found her out to have infidel notions, and resolved at once, narrow-minded or not, not to give her the prominent place I first intended," reserving that "for a beautiful believer in the divinity of Christ." Elsewhere Mrs Stanton tells how "on several occasions, when we all met at social gatherings in London, Elizabeth Fry studiously avoided being in the same apartment with Mrs. Mott," and once, when driven to close quarters, prayed at her very pointedly. But there is nothing in Mrs. Hallowell's narrative that surpasses the refusal of a sectarian Quaker physician in Indiana to relieve Mrs. Mott, his own guest, of a severe attack of neuralgia, alleging, "Lucretia, I am so deeply afflicted by thy rebellious spirit that I do not feel that I can prescribe for thee."

Mrs. Mott "got even" with Mrs. Fry at an anti-slavery meeting in London from which, as from the World's Convention, female delegates were excluded, so far as to be what John Woolman would have called "shut up in the ministry," although seats of honor were provided for them on the platform. "Elizabeth Fry," wrote Mrs. Mott in her journal, "afterwards apologized for her conspicuous seat. I told her it was just the seat she ought to occupy in a *Prison* meeting, and there was no objection to it in this one, only as showing the inconsistency of our opponents." We could wish more of such repartees had been remembered, for Mrs. Mott was fairly prolific in them, and her "asides" on public occasions had often all the pungency of wit and the force of argument. They were not always equally happy. Thus, her "*husband* and wife," said in an undertone when Mayor Fox, of Philadelphia, had pronounced a certain couple "man and wife," which induced that worthy magistrate afterward to abandon the traditional formula, was founded upon a superficial knowledge of the history of the obnoxious words. They seemed to her to imply that "the wife was a mere appendage, as she was probably regarded when that formula first came into use"; whereas the conjunction is as innocent of oppression as Mignon's idea of that heavenly mansion where

> "Sie fragen nicht nach Mann und Weib"

was innocent of impurity. But all her life Mrs. Mott was a precisian in language, partly, we may surmise, from having once been a school-teacher, and partly from the hereditary caution of her sect.

The prevailing bent of her mind was theological, as her letters in this volume testify abundantly. She dearly loved to read books, like the life of Blanco White, relating the struggles of creed-bound minds toward the freedom which she enjoyed. She found 'Essays and Reviews' "more interesting than any of your novels," hailed the appearance of Buckle and of Colenso, and eagerly absorbed John Stuart Mill's autobiography, 'Literature and Dogma,' the 'Light of Asia.' There may be thought an excess of letters presenting this dominant phase of Mrs. Mott's intellect, on the part at least of those who can say as she does of Colenso: "The introduction interested us much, but not the examination, having passed through that period years ago." But it should be remembered that letter-writing was not her forte, and that she was never less happy or unrestrained than when writing even to her nearest relatives. Her proper study was mankind seen face to face. For this not only her ministerial and philanthropic journeys, but her boundless hospitality at home, gave her abundant opportunities. The humorous side of these experiences is barely hinted at in this book. On p. 420 we read:

"On Sixth-day last, that windy, cold day, I brought down some of my winter clothes to mend, saying to Maria that it was Heaven to be by ourselves to do as we pleased. We had not been seated long before she said, 'Look, mother, here comes company, with a carpet-bag.' I had only time to escape, with my arms full of quilted petticoat, etc., when ——— and ——— were ushered in. We were in for it till the following Second-day, and it was a very pleasant visit *if we hadn't so much pleasure!*"

Readers of Mrs. Child's Letters will recall Whittier's comical account of his "losing" unwelcome guests on the street. A similar experience (except that Whittier could "never lose a *her*") is related on p. 353:

"Our Yearly Meeting company began to come on Sixth-day: a forlorn Friend from ———, whose mind had been slightly affected. She preaches occasionally. . . . Now she wanted to find ———, who was her 'first-cousin once't removed,' and she would 'like to put up there, but she must have a pilot.' I was going up to ——— ———'s some time that day, so, nothing loth, I made *that* time suit, and taking one of her bandboxes myself, while she carried the other, we trudged forth, she with thick yellow moccasins on and two shawls. We reached Franklin St. after a while, and, dropping her at the door of her friend's house, I turned quickly down the first street."

We pass over much that might be quoted both from and concerning this venerated woman, and

come to the closing scene, when, in her wandering, "she thought she was attending her own funeral, and addressing those present." As the sentences came from her lips they were written down:

"If you resolve to follow the Lamb wherever you may be led, you will find all the ways pleasant and the paths peace."

"I feel no concern for those of my own fold, I believe they are well grounded."

"If an official ministers, let him know his place."

"Now thee lead, Maria, and the rest will follow. First, all of my own fold will go. Now follow as truth may open the way."

"Decorous, orderly, and in simplicity."

These last words were repeated many times, and in passing judgment upon this book as a literary production they occur to us as the most fitting with which to describe it. Mrs. Hallowell's editing is eminently sober, modest, discreet, successful in generalization, happy in descriptions, and full of insight into the mainsprings of her grandparents' characters. In her best vein is the chapter on the life at "Roadside," written, we may be sure, *con amore*, and to the graphic truthfulness of which all can testify who have ever visited that abode of good will to man. Add an irreproachable style, and an index. The result is an important contribution to the history of the Society of Friends, and of the leading reforms of the century, with which the names of James and Lucretia Mott are forever inseparably connected. Those, on the other hand, who, like a certain French school of economists, find in the records of family life the most fruitful suggestions for the amelioration of social evils, will be charmed with this relation of a Quaker household from which affection and reverence were never wanting, and in which public interests and activities were reconciled, in the most exemplary manner, with an exacting standard of domestic obligations.

GRIMM'S ESSAYS.

Fünfzehn Essays. Von Herman Grimm. Berlin. New York: B. Westermann & Co.

THE essay on Emerson, the first of this most interesting series, was written shortly after the death of our great thinker, and its appreciative tone and high estimation of Emerson's writings and influence cannot fail to win the sympathy of American readers. "Emerson desired that to his countrymen should remain the advantage of an unbiassed criticism of the Past, untrammelled by the transfer of European historical burthens." Whether he was inspired by a feeling prevailing around him, or whether his teachings have become the mainspring of American literary culture, is a question Grimm cannot determine. Emerson's essays tend to make man independent in thought and action; they invite him to self-examination, to seek his true vocation in life and to follow it. To the idealist he shows the results of practical labor; to the realist the beauty and usefulness of intellectual culture, and these lessons have borne rich fruit in various soils. Carlyle's admiration of Emerson is well known. Tyndall's words have been quoted frequently: "If any one can be said to have given the impulse to my mind, it is Emerson: whatever I have done, the world owes to him." Among his own people his influence is paramount. Our critic is struck with the clearness and simplicity with which New England professors and students develop their theme, going to the point at once without superfluous allocutions. He also finds much to praise in the function of the daily press in bringing together "those who have something to tell and those who wish to hear what is told." This remark relates to the accounts in the daily papers at the time of the death of Longfellow and Emerson, and the mass of interesting detail they gave concerning both.

Grimm became acquainted in early youth with Emerson's writings, and describes the impression they made on him of deep understanding, of sympathetic contemplation of the world and just appreciation of past and present—an inward power no other shares with him. Nature seemed to have revealed her secrets to him, and there was no question one might not have asked him, feeling sure he must know all things. His thoughts, running in short oracular sentences, were like the verses of some never ending poem, the plan of which he would one day unfold. All this and much more Grimm tells us. In his own words: "As the wind by night, passing through a wood or over a meadow, brings us the breath of trees and grasses and flowers we cannot see, Emerson envelops us with a feeling of things brought very near to us. This feeling of my own I now hear expressed on all sides, as if all had felt thus from the beginning." It is needless to follow our author through the account of Emerson's life, or to comment on the sketch of his works incorporated in this article.

"Fiorenza: Remarks on Certain Poems of Dante and Michael Angelo," goes far to persuade us that Dante and Michael Angelo, in several poems till now supposed to have been written to fair and cruel ladies, addressed the personification of their native city. Some critics have seen Philosophy or some unknown lady in Dante's Canz. ix., beginning—

"Così nel mio parlar voglio esser aspro."

Others, because the beloved is apostrophized as being of stone, have thought of Donna Pietra degli Scrovegni, a Paduan lady, to whom another poem is addressed. There is no doubt that the reproaches so liberally bestowed were merited by the poet's ungrateful Florence. In the case of Michael Angelo, Grimm argues the point step by step so cleverly, bringing in fresh indications in evidence of his theory, that we cannot refuse to be convinced. The German rendering of several of Dante's sonnets and of the above-cited canzone are very well done. They are transcribed by Grimm with great poetic freedom, and therefore do not lose the beauty and freshness generally wanting in translations. This article is full of interesting historical and biographical detail, and deserves to be carefully read and considered.

The essay on Raphael's "School of Athens" in the Vatican follows. It is not light reading, nor have we space to examine our author's exhaustive criticisms of previous writers on the same subject, of which there are not a few. The great point of discussion is whether the central figures of the composition represent Plato and Aristotle, or Plato and Paul the Apostle. Considerable diversity of opinion exists, also, as to the identity of the groups to the right and left of the foreground. No documents of the time bear any record of this painting, or make any mention of its existence. In the succeeding essay, on the early life and works of Raphael, we are reminded how few reliable documents exist concerning his personal life. It is only within the last fifty years that, through the investigations of the priest Pungileoni in the archives of Urbino, we know the real dates of his birth, his father's death, etc. Pungileoni published his account, 'Elogio Storico di Raffaelle Santi d'Urbino,' in 1829, besides another, of Giovanni Santi, his father, some years previous to this. From these it appeared how very inexact Vasari's life is, and how much more like a romance than serious biography. Seven letters written by Raphael's hand remain to us, with 300 paintings, and more than 600 drawings. These alone suffice to reconstruct the history of his work. We cannot, for want of space, dwell at any length on this study. It may interest our readers to learn that the small picture lately purchased for a high price and sent to St. Petersburg, known as the Madonna Staffa, is considered by Grimm to be Raphael's earliest work.

The treatise on the origin of the popular story of Doctor Faustus is one of the most interesting essays of this collection. The material got together for this was originally intended for a book on the subject, but as the author has little hope of finding time for such a work he gives us a résumé of his vast stock of lore. The international popularity of the old book of 'Faustus' he ascribes chiefly to the fact that, although it treated of spiritual, clerical, and supernatural matters, it kept clear of any leaning towards the Protestant or the Catholic faith, so that the clergy of neither religion saw fit to take umbrage at its contents. The Strassburg puppet-show piece from which Goethe got the principal facts of his great creation, is generally traced back to the "Faustus" of Marlowe. The English writer had used a translation of the old book of 'Dr. Faustus' brought to England in the year of its publication, 1587, by strolling actors. The author, or rather compiler, of this book is unknown, but it is not difficult to recognize the original narrative as distinct from the innumerable disconnected adventures tacked on to it from various sources. Dr. Johannes Faust of the story is neither Catholic nor Protestant, nor has he any connection with the Reformation, while his prototype, Dr. George Faustus, is mentioned by Luther and Melanchthon, and was a well-known character in his day. Trithemius, Abbot of Sponheim, considered him a swindler, yet he seems to have been received by Franz von Sickingen and clerical persons of Spires and Erfurt. He was a learned man, proficient in Greek and mathematics, and boasted that he could repeat the whole of Plato and Aristotle from memory. George Faustus also dabbled in the black arts, styling himself "Magister Georgius Sabellicus, Faustus junior, fons necromanticorum, magus secundus, chiromanticus, agromanticus, pyromanticus, in hydra arte secundus." Trithemius first knew him under this title in Gelnhausen in 1506. It must be remembered that all learned men of the day were looked upon as sorcerers, and Trithemius himself had to clear himself of this charge, although he never denied his faith in evil spirits, in prophecy and prophetic dreams; and this faith he held in common with Luther, Melanchthon, and many others.

Trithemius, in his chronicle of Sponheim, tells us also of Dr. Johannes Faustus, who appeared at the court of the French King in 1501, and called himself "philosophus philosophorum," and also "Mercurius," messenger of the gods. He was supposed to be Italian, although Knüttlingen in Wurtemberg is mentioned as his birthplace. Our notice is called to the circumstance, in the old story of 'Faustus,' that the raven who lends a feather from his wing to sign the contract with the Evil One, is also named Mercurius. Düntzer, who has written on this subject, believes that as Georgius Faustus calls himself "Faustus secundus," we must take "Faustus" for a surname. Sabellicus indicates his origin. Goethe accepted this, as he calls him "The necromancer from Norcia the Sabine." "Magus secundus" refers to Simon Magus, known to fame as "Magus primus"; "in arte hydra secundus," to Pythagoras, who, according to St. Augustine, was learned in hydromancy.

The compiler of the old story of 'Faustus' was utterly unable to give any artistic form to the

mass of material he had before him. Marlowe, in his tragedy, was the first to select and give shape to part of this accumulation of episodes. The scene in which Faust, after revelling with the students, conjures up Helena of Troy at their request, who passes across the stage to the sound of soft music, must have been eminently dramatic. Faust after this remains alone with Mephistopheles (whose name derives from μη το φως φιλων, being of the class of spirits *qui lucem oderint*). An old man then appears, who entreats Faustus to give up magic and to appeal to God's mercy. Faustus, moved by his earnest exhortation, promises to repent, upon which the old man disappears and Mephistopheles counteracts his influence, changing to evil Faustus's good resolutions. The effective conclusion is Marlowe's own. We translate Grimm's account of this episode according to the old book:

"It is told how, Faustus bragging of his powers of magic, the students beg to be shown Helena. He promises, on condition that none shall rise from his seat, or speak a word, or seek to touch her. He then leaves the room and reenters followed by Helena, whose charms are described. The students bid fair to break the contract of immobility, under the provocation of her coquetry. Faust leads her away. On his return, the students, being allowed to speak, surround him, begging that he will make her return the next day and that they may bring a painter with them. Then suddenly appears the old man, whose discourse brings Faust to repentance. Then ensues the scorn of Mephistopheles, the renewed sorrow of Faust, and, in conclusion, the resigned expectation of the end. In this scene, so full of meaning, almost every word leads up to a climax needed for dramatic representation. Marlowe here does not come up to his original."

We now come to still another Faustus, mentioned in the letters of Erasmus—Faustus Andreolinus, an Italian studying in Paris through the bounty of some rich patron. This man was deeply inimical to the monks, and no doubt they retaliated by giving him the reputation of having a compact with the Evil One, who is supposed to have carried him away at the last. Dryasdust erudition and sensually realistic elegies are all that remain to us of his writings, but he seems to have been held in esteem and friendship by Erasmus, who kept up a correspondence with him while the latter was in England in 1499. He even invited him to follow him there in a letter which we quote:

"If thou knewest how pleasantly one lived in England thou wouldst fly hither through the air even in spite of thy gout, which thou wouldst elude Dædalus fashion. What shall I begin to describe? The maidens here are charming, beautiful, amiable, pleasing, far better than the Muses with whom thou holdest converse. It is the custom here to greet with a kiss on entering a house, and on taking leave. Whenever one meets an acquaintance, before any other forms, two kisses. The air is full of kissing. If thou hadst once tasted of those soft appetizing wares, thou wouldst not wish to close thy life anywhere but here."

We conclude from this letter and Faustus's own poems that he was known for a man of pleasure. Trithemius is supposed to have told how Faustus exorcised the Virgin Mary, who appeared at his call before the Emperor Maximilian. No doubt this was the foundation for the appearance of Helena. As the student life of Paris is also changed into the Wittenberg University, even Erasmus may have changed into Wagner. Erasmus's letters were generally known at the time of the appearance of the Faustus story, and used for the teaching of Latin, so that no doubt they were familiar to its compiler.

The great question which Grimm seeks to solve is, whether any drama of the kind existed in Germany which the compiler of the Faustus story had before him, or if he himself first intended to dramatize the tale which gradually took the more digressive form of a romance. Notwithstanding the most careful researches, no play on this subject has as yet been found. Grimm, however, still maintains on internal evidence that the old German puppet play of "Faustus," which Goethe used for his 'Faust,' cannot derive either from Marlowe or from the old book of 'Faustus,' but from some earlier work now beyond our reach. Goethe himself made use of all the elements belonging to the different characters bearing the same name used for the old story. To those he added the spiritual development of his day, besides his own experiences of sixty years.

Other essays of varying interest treat of Michel Angelo's Medicean tombs in San Lorenzo, of two engravings of Friedrich Weber after Titian's "Divine Love" and Holbein's portrait of Erasmus, Bettina von Arnim, the brothers Grimm, Rauch's Centenary, Anselm Feuerbach, and two Dürer engravings.

A Confederate Soldier in Egypt. By W. W. Loring, Late Colonel in the U. S. Army, Major-General in the Confederate Service, and Fereek Pasha and General in the Army of the Khedive of Egypt. Illustrated. New York: Dodd, Mead & Co. 1884.

THE title of this book is sufficiently appropriate. We are offered neither a history nor a regular description of the Nile land, nor a narrative of travels therein, but the notes of a soldier (who served under the Khedive Ismail) on the late past and the present of that ever interesting country, with some fugitive glances at its remoter periods and equally fugitive remarks on its future. The book is the production of a man of action and adventure, not of a scholar or diligent inquirer. It embodies very little antiquarian lore, and little research of any kind, but much that is based on personal observation—views shaped by experience and individual predilection and antipathy, and presented with vivacity and terseness. It is light, superficial, and slightly sensational, but apparently the true reflection of a wide-awake man's impressions, sentiments, and prejudices, and eminently readable. It contains pleasant descriptions, some piquant details—part of them of questionable authenticity—and interesting illustrations. As the sole source of information on Egypt under Ismail and his son, Tewfik, it would be exceedingly misleading from its great partiality for the deposed Viceroy, whose bounties the author enjoyed for about ten years, and now more or less consciously repays with ample interest, and from the hostile bias with which all English interference in Egyptian affairs is judged; but as an addition to the growing literature on contemporary Egypt and her almost unspeakable woes, it will be found instructive and enjoyable even by the well read, in spite of its obvious exaggerations and glaring unfairness in advancing political views. A large portion of the volume is devoted to Abyssinia, in one of the unfortunate Egyptian campaigns against which the author had a leading part. The book, for its own success, appears at the right time, for the terrible condition into which England's diplomacy and warlike interventions, and her recent nondescript policy of aimless doing, undoing, and not doing, have plunged Egypt and its dependencies, seems not only to justify the most passionate invectives against "perfidious Albion," but grandly to vindicate Ismail and Arabi, whom our author glorifies.

According to General Loring, not only was Ismail a great benefactor of his country, but "the just and upright motives which prompted him were patent to all intelligent observers." His great aim was the education of the people, the elevation of the fellahin. He instituted schools for the instruction of the masses, and—what no Oriental had ever done—schools for the education of females, but even this he did, not from a desire to shine and appear great before Western Europe, the dispenser of power and wealth, but from the high conviction "that if you educate the women of a country you elevate the men." He never failed to mete out severe punishment for acts of oppression which became known to him. His numberless material improvements—agricultural and industrial works, railroads, telegraphs, canals, harbors, constructions for irrigation—"stand, with many other acts of beneficent policy, as monuments of his goodness and wisdom." He was not only entirely free from bigotry and intolerance, but always evinced "the instincts of a liberal-minded gentleman." And "if there were no other public act to show the bent of his mind, his course in abolishing slavery would be sufficient." (Our ex-Confederate General speaks of slavery, and especially of the slave-traffic, in terms that would satisfy the most zealous disciples of Wilberforce or Garrison.) Ismail aimed at higher things. Never losing sight "of one absorbing thought—the education of the people," he believed that education "would result in the amelioration of their religion"; and, "with Egypt as a nucleus, he knew it was an easy matter" to extend his great reforms, and with them his benign worldly power, "over the entire Arab race." What a pity, then, that unfortunate lavish propensities made this "great reformer and benefactor" a victim of heartless bondholders, for whose sake England discarded all considerations of justice, humanity, and sound policy, broke plighted faith and old treaties, covered Alexandria with ruins, and deluged Egypt with the blood of its sons and defenders. The war was wantonly provoked by the Controllers, under the pretext of protecting Tewfik, the ally of the bondholders, against the mutinous soldiery, but in reality in order to prevent the Notables from interfering, through fair legislation, "with the pay of the 1,325 foreign officers forced upon the country." Arabi Pasha, who owed his influence to his integrity and patriotism, accepted the challenge, but "carried on war as best he could according to the usages of civilized nations, at least as far as can be learned from any evidence that has been published." He did all he could to prevent the massacre of Christians, and was guiltless of the burning of Alexandria.

Military Italy. By Charles Martel. London and New York: Macmillan & Co. 1884.

LIKE every other Continental state, during the last dozen years Italy has entirely remodelled her military system after the German pattern. Universal liability to service, short terms of service, and large reserves—these are the general principles on which modern European armies are all organized. They were adopted by the Italians in 1871, and sufficient time has now elapsed to form a judgment whether these principles have been applied with such adaptation to the national character and local conditions as to produce a really efficient system, or whether the letter of them has been blindly copied without regard to its spirit. Mr. Martel is, we think, the first writer who has treated the subject with any degree of thoroughness. His opinion is, that while "it cannot be pretended that the military system of Italy bears comparison with that of its great model, . . . yet, in spite of a few faults and failings, it must with justice be affirmed that the wise activity displayed in the sphere of military reforms has on the whole resulted in a very real success."

With a population of 29,000,000 people, Italy has annually about 275,000 youths who attain their twentieth year, and become liable to military service for the next nineteen years. Of these about 75,000 are rejected for physical defects, leaving the available number 200,000, of whom about 76,000 are drafted into the active army, and the rest go into the Territorial Militia, where they receive no military training, and are merely liable to call. Those who go into the active army pass three years with the colors, are then placed on furlough for five years, subject to immediate call on mobilization; then they pass four years in the Mobile Militia, which is called out for only a few weeks' drill in each year; after this their military service is practically over, although, for the remaining seven years of the nineteen, their names are carried on the rolls of the Territorial Militia. The whole military force is thus made up of the

Active army	704,207
Mobile Militia	330,767
Territorial Militia	893,998
	1,928,972

But of this vast total, only 216,596 are maintained under arms; so that the permanent force of Italy is much less than that of the other great states—that of Germany, for example, being about 400,000, and of Russia over 600,000. It is probable that Italy could put into the field an army of between 600,000 and 700,000 effectives, leaving the Mobile Militia to guard the fortresses and preserve order at home. The Territorial Militia is little better than a paper force, only a small part of it having had any training whatever, and there being no arms for it. In 1879 there were but 440,000 of the adopted small arm (Vetterli) on hand, and only 220,000 of an inferior converted breech-loader for the militia. The capacity of the four small-arms factories is 60,000 a year, but there are no reserve arms as yet.

The army as organized is deficient in cavalry, the peace effective being only 22,000, against 44,000 in Austria and 60,000 in France. It has another serious defect in the very small number of intrenching tools carried with it, and still another in the lack of proper means for supplying ammunition. Though the soldier carries eighty-eight rounds on his person, yet there is no reserve of ammunition nearer than the division wagon train, which is usually a long way off at the time when ammunition is needed. In both of these particulars—intrenching tools and supply of ammunition—the Italians do not seem to have studied the lessons of the last Turkish war as closely as their military rivals.

In devising their system of recruiting and mobilization, the Italians were obliged by political considerations to make a wide divergence from the German model in one very important particular. As is well known, the German army corps are localized in various districts, and all the men of that corps come from that district, and the men of a single regiment from a certain small portion of the district. When the order is given for mobilization the reserves on furlough have but a short distance to travel in order to join their colors. In Italy it was deemed unwise to form whole regiments or divisions from one locality; it was necessary rather to consolidate the union recently achieved, and for this purpose it was determined to form each company from the natives of different parts of the kingdom. For this purpose five great recruiting zones were marked off, separated from each other by lines running nearly east and west; these zones are as nearly as possible equal in population, and they contribute equally to every company in the army. "The rivalry of races is therefore sufficiently guarded against; the various portions of the contingents, of by no means equal worth as regards soldier service, lose to a great extent their individuality, while unity and cohesion of regiments are finally and satisfactorily assured. The disadvantages of the plan have regard solely to mobilization." It was certainly a bold experiment, perhaps necessary on political grounds, but actual experience can alone tell whether it was wise. To have men travelling in every direction for long distances in order to find their regiments during the hurry of mobilization, would seem to be a plan specially devised to invite confusion and disaster.

We have pointed out some of the defects in the Italian system which show plainly that it is far from being equal to its model. Yet the author is probably correct in saying that "public opinion altogether underestimates the fighting forces of the country," and he cites the recent alliance of Germany, Austria, and Italy to prove the growing power of military Italy, because without military power Italy would never have been invited to join such an alliance. It is doubtless true that Italy is still inferior in strength to Germany, Russia, France, and Austria; moreover, the Italians have no traditions of success, for "since the battle of Legnano, in the twelfth century, their military annals register not one single-handed victory won as a nation." Yet it is probably also true that no nation in Europe is making such rapid advance in military and naval strength as Italy. What success will attend her efforts, can only be determined in dread conflict when it comes. Meantime an opinion as to the probable result can be formed from the excellent and exhaustive discussion of the present condition of affairs which is given in this book.

L'Éloquence de la Chaire et de la Tribune Françaises. Edited by Paul Bouët, B.A. Vol. I. French Sacred Oratory. Oxford: Clarendon Press.

THIS neat little volume contains extracts from the funeral orations and sermons of Bossuet, Bourdaloue, Massillon, Fléchier, and Mascaron—that is, of the five great lights of sacred oratory in the seventeenth century. Since that wonderful age—called, not without reason, *le grand siècle*—when French genius seemed to have reached its acme, science has progressed steadily; the arts have held their own, or, as in the case of music, attained further development; poetry and the literature of fiction have been revolutionized; but sacred oratory has never been equalled. The works of the celebrated divines, from which M. Bouët has so judiciously selected his excerpts, have remained models of eloquence to be imitated by their successors in the Catholic pulpit; nay, more, to be studied and recited on some occasion of moment. "Quand je veux les émouvoir, je leur prêche du Massillon," a good old curé said once, naïvely. For the student who seeks to master the language in all its perfection—and for such this little volume is intended—it possesses another interest: it offers him the best models of French prose that have ever been written. The short biographical notices which precede the extracts, and the valuable notes at the end, add much to the interest of the book. Vol. ii. will contain extracts from the political speeches of the great orators, from Mirabeau to Gambetta.

BOOKS OF THE WEEK.

Axon, W. E. A. Cheshire Gleanings. Manchester, Eng.: Tubbs, Brook & Chrystal.
Brehm's Thierleben. Chromo edition. Parts 121-130. Leipzig. New York: B. Westermann & Co.
Browne, G. H. Notes on Shakspere's Versification. Boston: Ginn, Heath & Co. 30 cents.
Burgess, Prof. J. W. The American University. When Shall it Be? Where Shall it Be? What Shall it Be? Boston: Ginn, Heath & Co. 15 cents.
Busch, M. Our Chancellor: Sketches for a Historical Picture. 2 vols. in one. Charles Scribner's Sons. $2.50.

"Another Disagreeable Novel."

Disagreeable novels sometimes go in processions, and just now the new 'American Novel Series,' lately begun by Henry Holt & Co., seems to have a monopoly of the product. 'Stratford-by-the-Sea' is the fourth in the series. We do not know that it is any worse than 'A Latter-Day Saint,' which was No. 1; and we are quite sure it is not so very bad as 'The Pagans,' which was No. 2. With 'Esther,' the third in the series, we are not able to compare it, as that work of Hebraistic title has not yet come into our hands."—*Literary World.*

"A Novel of genuine Power and Vitality.

It discloses genuine insight into life, real sympathy with living men and women. . . . It is the story of the unfolding of three aspiring lives, breaking away from confining and narrowing circumstances, and reaching at last in two cases the strength, poise, and freedom of thorough intelligence and mastery of power."—Christian Union.

Stratford-by-the-Sea.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued

The Nation.

NEW YORK, THURSDAY, MAY 22, 1884.

The Week.

SENATOR CULLOM'S bill to prohibit speculation by bank officers makes it unlawful for the president, cashier, or teller of a national bank "to deal, trade, or otherwise engage in speculation in stocks, bonds, or other securities, or in grain, provisions, produce, or oil, on margins, on his own individual account, or for his own personal profit, either directly or indirectly, or to have any partnership or other financial interest in the operations of any private banking or brokerage firm or business." Violations of the act are punishable by imprisonment for not less than one and not more than five years, or by a fine of not more than $10,000. An act of this kind, it seems to us, ought by its terms to enforce itself as far as possible. To effect this it would be necessary to make stock operations disqualify a man for a bank presidency. If a bank president could be made to resign the moment it became known that he was speculating in stocks, the stockholders and depositors would be far safer than if they had to await his prosecution by the District Attorney. We appear to be entering on a brand-new period in finance, in which the people on whose integrity the whole fabric of credit rests are to be just those against whose rascality we are most likely to need protection, and in which legislation with regard to banks is to be based on the idea that all positions of trust naturally lead to crime. Under these circumstances it seems to us that there ought to be a summary way of bringing a bank president to book, and making him disclose under oath just what he is actually doing; why he goes "on the Street" so much, and why he does not stay in his bank and attend to its affairs. If he can give no satisfactory explanation nor prove an alibi, let him be disqualified from being a bank president for life.

As a matter of fact, if the stories published with regard to the recent bank mismanagement are correct, the trouble has been mainly fraud and crime, though the fraud and crime have been led up to by stock speculation. In one case the bank president is said to have been in the habit of drawing the amount of his losses in Wall Street at the end of the day from the bank, and having it entered on the books against a fictitious loan to a non-existent person, based on an alleged deposit of imaginary securities, kept in an empty vault of which he carried the key. Such a transaction as this is not countenanced by the law even as it stands now, and renders a man liable to the forfeiture of all his property and to incarceration in the penitentiary besides. Probably with a cumulative sentence such as is now sometimes given, he could be put there for life. Still, we are in favor of having the law complete, and if Senator Cullom will amend his bill so as to enable any depositor or creditor (not the directors only, because they might be in collusion with the criminal) to examine the President before a judge or commissioner as to how he spends his time, and to have the office vacated *ipso facto* if he is found to be continually hanging over a ticker, we shall then be able to give the new system a fair trial.

Mr. Seney's misfortunes as a bank president suggest the question whether it be well, after all, for a man to give away large sums in charity, unless he is going to retire from business. It is undoubtedly a finer thing than leaving them by will, but legacies have the advantage of always coming from a man who has left "the Street" for good, and whom neither stocks nor bonds, puts nor calls, privileges, margins, securities, nor loans can trouble any more. The beneficiaries are thus spared the pain of seeing their benefactor struggling with and often overwhelmed by difficulties from which his donations, if he could get them back again, would save him. We think, therefore, that anybody who really means to make gifts, *inter vivos*, on a great scale, ought to put his affairs in deathbed order, and thus be able to view panics with the serene if not pleasurable indifference of the poet's man who, from the top of a cliff, chuckles over the laboring of ships in a heavy sea.

The return of confidence caused by the reopening of the Metropolitan Bank on Thursday was checked rather rudely in the afternoon by the failure of Fisk & Hatch. They were overthrown in 1873, and, though since then very successful, seem never to have completely regained their old position. They have ever since had things to sell, and, except a brief period in 1879–80, the position of people with things for sale has not been a favorable one. The great fortunes of the last ten years have been mostly made by the bears, and anybody who was made, either by circumstances or temperament, a bull has had a hard time. The reason assigned by the firm for their failure—"the long-continued decline in the market prices of securities, even the very best, accompanied by a general weakening of confidence in financial matters"—has made the fortune of a good many men in Wall Street within the last three years; but they have not been men who had bonds to place, or railroads to construct, or industrial or financial enterprises to push.

The German depositors in the Newark Savings Bank have taken the sensible course of threatening in a general way that unless their accounts are made good, inquiries will be set on foot calculated to lead to a solution of the question whether any one connected with the bank has committed a criminal breach of trust. This course is both prudent and business-like, for it is eminently adapted to induce every one connected with the bank to ask himself the two great questions which few of us, however ready we may be to answer them in another world, like to be asked in this, Am I liable? Am I guilty? Directors of institutions forced to answer both of them in the affirmative, or left in doubt as to what the proper answer is, are usually under a strong inducement to use all their means to save their creditors from loss.

The *Tribune* calls the Rev. James M. Pullman to account, in some remarks, for the most part very just, for having in his sermon last Sunday attributed to General Grant a criminal knowledge of his partner Ward's doings. It further says that he has made himself "amenable to the law." The practice of personal denunciation from the pulpit cannot be too severely condemned, and undoubtedly a libel delivered from the pulpit ought to be punished as sternly as a libel delivered in any other place. But the misfortune of the position into which General Grant allowed himself to get is, that it enables people to libel him with impunity. The law would not presume that he knew how Ward was making the profits which he shared, but it would be very hard to convince a jury that any one who said he knew ought to be punished for it. In cases of this kind, choosing to remain ignorant about something he is profiting by often tells against a man as much as actual and proved knowledge. If the affair will bring home to the minds of those who have filled high places, that they owe it to the people who have honored and trusted them to keep out of dubious company and suspicious situations, it will do great good.

Ferdinand Ward's testimony on Monday must inevitably increase the suspicion that he was not the only person interested in his "contracts" who was aware that the entire business of the firm was a swindle. He says that "of course there never were any profits to divide"; that supplies of money were furnished by Messrs. Fish, Tappan, Warner, and Work; that all these men received their "profits" regularly, and that one of the two books containing the record of contract operations was kept in Mr. Fish's office and the other in his own. A great deal of the firm's "business" was transacted on notes endorsed by Fish, Tappan, Warner, and Work, and while these men seem to have been wise enough to draw out their "profits" as fast as they accrued, other investors, whose opportunities for gaining inside information were not so great, were induced to leave theirs in for fresh investment. These latter persons are likely to be deeply interested in these revelations, and we trust that they will press Messrs. Fish, Tappan, Warner, and Work as closely as possible, in order to gain as much additional information as they possess. Ward is doing his best to shield every one connected with him in his swindling, but he said on Monday that several of his former more or less direct associates were grieved by some things which he had admitted, and he would like opportunity to qualify them. This was promised him, but we trust the aggrieved persons will have a chance given them to take the stand and speak for themselves.

The truth about the real-estate market appears to be that it is in a healthier condition

than it has been for some years, and in an essentially different condition from that in which the panic of 1873 found it. Then the prices of real estate, and especially "lots," were, just like those of railroad stocks, enormously inflated, and the panic led to a violent contraction, followed by a cessation of all schemes of improvement. Several years of depression ensued, and about 1879 or 1880 there began to be a distinct revival, which put rents and prices up, and was followed by a "movement" in lots, and the speculative building operations on which the value of lots depends. The present crisis can only have an indirect effect on this movement, by increasing the timidity of capital. It will be likely to retard all speculative enterprises, and no one who has followed the course of the market for the last ten years can believe that this of itself will do any lasting damage.

The bill lowering the duty on works of art from 30 to 10 per cent. was defeated on Monday. This was due in part to the action of some of the free-traders, who will agree to no special reduction when they cannot have a general one, but mainly to the Western and Southern feeling that pictures are a rich man's luxury, and that it would be dangerous on the eve of a Presidential campaign to lower the duty on them. About the educating influence of works of art, either on artists or the general public, and about the national importance of a knowledge of art, or a love ot art, these men know and care nothing. There is a certain excuse for their prejudice, stupid as it seems, in the fact that picture-buying is in this country, perhaps more than in most others, one of the first signs of a great increase of fortune. The European millionaire runs into land and field-sports as soon as he gets his money. Ours are very apt to buy pictures the first thing, which is a fortunate thing for the country, but it undoubtedly gives color to the suspicion of the agricultural mind that they are imported as furniture.

The Democrats of the House Appropriations Committee have proved unequal to the heroic course of striking civil-service reform dead at a single blow by refusing the appropriation for the Commission. After contemplating the sum of $18,700 asked for by the Commission for many weeks, longing to kill it but not daring to take the responsibility, they agreed on Monday to report it to the House, merely cutting it down to $17,300. As the great cheese-parer of the House, Mr. Holman, was himself a member of the Committee, and consented (with great reluctance) to favor the appropriation, there will probably be no further objection when the bill comes before the House. This will be so craven a submission to the reform clamor of the time that large numbers of the rank and file of the party in the West, notably in Ohio, are likely to have their faith in the perpetuity of Democratic institutions badly shaken.

The amendment to the civil-service law, making its regulations compulsory upon the mayors of all cities in this State having a population of 20,000 or over, has passed both branches of the Legislature, and will undoubtedly receive the Governor's approval. All the attempts which were made to have exemptions incorporated were defeated, and the law now includes within its jurisdiction all branches of the municipal service. This is the most remarkable reform victory of the session, and the one which will have the most enduring and far-reaching influence for good. The municipal service in every large city in the State must henceforth be conducted without regard to political influences. Appointments must be made after open, competitive examinations, and the only test will be the fitness and capacity of the applicant for performing the duties of the position which he seeks. All promotions from lower to higher grades must be made on the basis of merit and competition alone. No person in the service will be under obligation to contribute to any political fund, or to render any political service, and no person can be removed or otherwise prejudiced for refusing to do so. All persons are forbidden to levy political assessments upon employees of a city, or to solicit or receive, either directly or indirectly, from any such employee any assessment, subscription, promise, or pledge for any political purpose whatever; and any person found guilty of violating this provision will be deemed guilty of a misdemeanor, and subject to a fine of not less than $50 and not exceeding $1,000, or to imprisonment for not exceeding six months, or to both fine and imprisonment at the discretion of the Court.

An excellent bill is now before the Governor for his signature, and will doubtless receive it, which makes the sale or circulation in any manner of an obscene "magazine, pamphlet, or newspaper," a misdemeanor. Better still, the second and third sections make guilty of the same offence any one who

"sells, lends, gives away, or shows, or has in his possession with intent to sell or give away, or to show, or advertises, or otherwise offers for loan, gift, sale or distribution to any minor child, any book, pamphlet, magazine, newspaper, or other printed paper, devoted to the publication or principally made up of criminal news, police reports or accounts of criminal deeds; or exhibits upon any street or highway, or in any other place within the view, or which may be within the view, of any minor child, any book, magazine, pamphlet, newspaper, writing paper, picture, drawing, photograph, or other article or articles coming within the descriptions of articles mentioned in the first and second subdivisions of this section, or any of them."

This ought to remove at once from the news-stands and streets generally the *Police Gazette* and a number of other publications of a similar character, if the District Attorney and the police do their duty. They will be expected to do it, and their failure to do so will be easily observable.

Judge Sedgwick has rendered a decision in the Newman church quarrel which gives some advantages to both sides. He makes permanent the injunction granted some weeks ago against the trustees, but with some modifications. The general effect of his decision is to recognize Dr. Newman as the acting but not the permanent pastor of the church, and without any right to take part as an officer at any meeting of the church, or of the deacons, or of the society—that is to say, it puts him in the position of a Methodist minister hired temporarily to do duty in a Congregational pulpit. It ties the trustees up, too, to the management of the property, and forbids their interference with the government of the church, and denies their right to refuse the use of the church building for meetings to the Ranney party, or to decide on the qualification of voters at church meetings. In short, from a spiritual point of view the decision is against the Newmanites; from the financial point of view it is in their favor. Under it Dr. Newman can hold on to the church, but it distinctly intimates that he ought not to do so, not being a Congregational minister. The Newmanites, however, like all Stalwarts, are essentially *de facto* men, and are rather amused by *de jure* views of the situation.

There is something very pathetic as well as tragic about the suicide of Judge Reid, of Mount Sterling, Kentucky, who was assaulted on account of a decision of his court, by a lawyer named Corneilson. The lawyer came to him in his chambers, and beat him brutally; the Judge, who was taken unawares, offering no defence. It appears that the social code in Kentucky requires that when even a judge is assaulted on account of his official acts, he shall not appeal to the law to punish his assailant. If he was unable to defend himself at the time of the assault, he is bound to arm himself, and go in search of his assailant, and murder him as soon as he finds him—exactly as if he were a breech-clouted New Guinea savage. Judge Reid happened at the time of the assault to be a candidate for election to the Court of Appeals. He was also a professing Christian man and an elder in the Presbyterian church. In short, besides being the citizen of a State calling itself civilized, he held official positions and made public professions which imposed on him a peculiarly solemn obligation to abstain from violence. According to the Louisville *Courier-Journal*, however, he found in his canvass that his refusal to commit murder was so injurious to him, and brought on him so many slights and imputations, that the strain became greater than he could bear. His nerves broke down and he committed suicide the other day.

The trouble with Kentucky, as with all barbarous communities, is not simply that the people rate physical courage as the highest of the virtues, but that they suspect everybody of not possessing it who is unwilling to prove it by some deed of violence. In civilized States, however, the virtue exists not only in as high a degree as among savages, if not higher, but its diffusion through the community is taken for granted, and nobody is called on for displays of it for the satisfaction of his neighbors. There is in such States never any lack of brave men for any public service, however dangerous, whether of war or peace. In fact, no community can be great in which physical courage is not a common trait of the men. But no civilized community nowadays would think of asking a judge or man of any

other peaceful calling to prove the possession of it by a murder or other deed of violence, any more than it would think of asking him to prove his powers of memory by retailing indecent stories, or the strength of his brain by a drinking bout. The tenacity with which traditions of savagery hold their own in States like Kentucky, in spite of the church, the press, and the railroads, is a curious subject, which it would take Herbert Spencer to investigate. In the days of Daniel Boone the popular admiration of the manslayer was comprehensible; but the Boone stage has long passed away, and yet men are still expected to prove their fitness for a seat in the highest court of the State by their readiness to engage in murderous affrays.

Bogan Cash, the hopeful son of old "Colonel" Cash, was killed last week in resisting arrest for the murder of the Cheraw City Marshal. He had for a month been hiding in a swamp, and defying the Sheriff. It is fortunate that he did not surrender himself, for he would almost certainly have been acquitted on trial, plain as his guilt was, and doubtless before long would have married and perpetuated the Cash breed, besides killing several other persons. The Cash type would have been extinct before now at the South, as its members generally die early and violent deaths, if they could be killed unmarried. But they are very apt to leave sons behind, who are brought up on traditions of violence, bloodshed, and whiskey, and begin murdering as soon as they reach the age of puberty, if not sooner. The death of a Cash without heirs is, therefore, a great thing for the State. Old Cash is still at large, perhaps one of the best specimens extant of what has been aptly called the "ante-bellum blackguard," and he may do some mischief by way of avenging his son's death; but he cannot last long at best. As we have more than once said already, it is not the existence of such men as Cash in South Carolina which is strange, but the importance attached to them by decent people. Mr. Shannon, a lawyer in good standing at the bar, and a man past middle life, actually felt it necessary to fight a duel with Cash for words spoken in court, simply because the drunken old ruffian went about calling him names.

Mr. Frelinghuysen has sent in a statement to the Senate on the subject of extradition which shows how much a new treaty with England is needed. As the matter now stands, a man in London may commit manslaughter, or counterfeit money, may embezzle, steal, commit perjury, burglary, or rape, kidnap children, or scuttle a ship, or commit all these crimes together, and then run off to New York, and go scot free. An American criminal has just the same harbor of refuge in London. When we reflect that New York is the pleasantest place in the world for an English criminal, on account of some peculiarities in our domestic administration of justice, it is easy to see what an antique and inadequate affair the old Ashburton treaty is, so far as regards extradition.

Rumors of a desire on the part of Spain to sell Cuba to the United States have been renewed; but probably nothing will be done with the property till after the election. The surplus would enable us to purchase the island, though why we should pay any considerable sum for it it is hard to see. Cuba, as an American State, would immensely increase our political difficulties, as it would come in as a free State, and so, like all the States in which there is a large negro population, would have to be conceded to the Democrats. This prevents it from being an attractive purchase to Republicans, and the Democrats have other uses for the surplus. The island is invaluable to Spain, too, as it furnishes one of the regular means of enriching themselves to its officials. What we want of Cuba is an opportunity for unrestricted trade, not the island itself; and a more inconvenient and troublesome addition to the numerous "problems" which our Government presents than the acquisition of the island would make could hardly be conceived.

The majority in the House of Lords, it is now pretty well ascertained, is determined to throw out Mr. Gladstone's County Franchise Bill, and he has said in an interview that, in that event, he will probably dissolve Parliament, and appeal to the country by a general election. He will perhaps be all the readier to adopt this course because of the loss of strength which the Ministry has undoubtedly suffered in Parliament owing to the events in the Sudan. He intimates that he has a complete answer to the attacks made on him on Gordon's account, but it can hardly be made now, while Gordon is still in danger and difficulty, as it will probably consist in the publication of the full official correspondence with him. That this correspondence will show that General Gordon has not been in any way betrayed or badly treated, those who know anything of it are very confident. In the fall it will probably be possible to lay the whole case before the public. Moreover, there is much reason for believing that it is in London and not in the country that the Ministry has become unpopular, and that it will be found, when the test is applied, that little or nothing is known in the provinces of the bitter shame and humiliation over the events in the Sudan which the people report themselves as feeling in the London clubs and at the dinner-tables.

The most remarkable phenomenon in English politics just now is the open separation of Lord Randolph Churchill from the other leaders of his party, as the founder of something which he calls "democratic Toryism." There has been much talk for several weeks past of his differences with Lord Salisbury, and they reached the public eye in a very palpable form recently by the publication of one of his letters to Lord Salisbury. Of his contempt for Sir Stafford Northcote he has long made no secret in the House of Commons. He has not, however, openly separated himself from his party in Parliament on any important question till Tuesday, when he opposed an amendment to the new Franchise Bill moved by a Conservative, Mr. Brodrick, excluding Ireland from the benefits of the extension, and voted with the Government. Lord George Hamilton, who is supposed to be one of the coming Tory leaders, denounced this sort of democratic Toryism, and Sir Stafford Northcote and many others of his party left the House and refrained from voting. That such a thing as a Tory democracy can be started in England or anywhere else, as a political organization, is, of course, absurd. There is nothing that Lord Randolph Churchill can offer the English democracy which they cannot get in a much more agreeable shape from the Liberals. Democratic Toryism means democratic oligarchy, which is a contradiction in terms. There may be imperialism based on democracy, but hardly aristocracy. As a divider and paralyzer of the Tories, however, Lord Randolph Churchill is doing excellent work for Mr. Gladstone in his present troubles.

A little discussion has been going on in England about the "Art of Fiction," apropos of a lecture on the subject by Mr. Walter Besant. He took the ground that fiction is an art, and can only be taught to persons who have the gift for it. He might have added that they will generally learn it for themselves, and if they do not, will rarely, if ever, get themselves taught by anybody else. In France they have literary "ghosts" whose business it is to produce fiction which goes on to the market under some well-known name, and the elder Dumas established a very well-disciplined school of fiction, in which the scholars were taught the art of writing Dumas's novels. We see no reason why the great English novelists should not have done the same thing; but they did not, perhaps because of the extraordinary delusion which seems to pervade the whole literary class in the Anglo-Saxon world, that the possession of literary gifts implies an inspiration which it would be base to employ in a glorious art like fiction, except in original authorship. This accounts for the great overproduction of authors from which the fiction market is now suffering.

Peace has been made between Chili and Bolivia, the terms being the surrender of a good deal of valuable nitrate lands and the Bolivian seacoast. Iglesias has secured a recognition from the United States and Brazil, Germany, and Salvador, and it is expected that other governments will take the same course. There was at first a hitch in the proceedings, arising from the refusal of Iglesias to have anything to do with foreign Ministers, unless they first formally recognized him, and this, it is said, led to the suggestion that Iglesias should first apologize to every foreign nation for this refusal, and that they should then proceed to recognize him—a simple way out of the difficulty. According to a Lima letter, Mr. Phelps, our representative, is charged with attending to Chinese interests in Peru, and seems to be stimulating emigration from China to Peru, no doubt for the purpose of reinforcing the measures passed by Congress to prevent the Mongolian from coming to the United States. The Peruvians and all the rest of the world may as well understand that our Chinese policy is going to be thorough.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 14, to TUESDAY, May 20, 1884, inclusive.]

DOMESTIC.

THE long-continued financial depression, and the more recent failures, resulted on Wednesday in a crisis in this city such as has not been known since the great panic of 1873. As soon as the Stock Exchange was opened the announcement of failures began with that of Nelson Robinson & Co.; then followed in quick succession Goffe & Randall, O. M. Bogart & Co., and J. C. Williams. The Bogart failure was the most important of these, and created a sensation, which was intensified when the announcement was made that the well-known firm of Hatch & Foote had been compelled to close its doors. This was followed by the astounding announcement that the Metropolitan National Bank had suspended. George I. Seney, well known for his gifts to educational and benevolent institutions to the extent of a million and a half, is President of this bank. His two sons and son-in-law are members of the firm of Nelson Robinson & Co. Mr. Seney had advanced them large loans, and was also interested largely in Southern railroad stocks, which have depreciated greatly. It was not only impossible for him any longer to sustain the firm of Nelson Robinson & Co., but to continue the business of his bank. Therefore, it temporarily suspended. The capital stock of the Metropolitan is three million dollars, and at its last report its surplus fund was almost a million and a half. The immediate cause of the suspension was the demand from the Clearing-house for half a million dollars.

Later in the day the failures were announced of Donnell, Lawson & Simpson and Hotchkiss & Burnham, brokers. About 1 o'clock in the afternoon the Atlantic State Bank, of Brooklyn, correspondent of the Metropolitan, closed its doors.

There was a run on the Second National Bank throughout the day, but all calls were immediately met. Early in the day the Bank Examiner testified to its soundness, and this helped to allay the excitement.

Secretary Folger chanced to be in the city, and immediately telegraphed orders to Washington to take up the bonds of the 127th call upon presentation. The bonds are not due until June 20. The Secretary promised that such steps should be taken as would relieve the panicky situation.

The most important action of the day in relieving the situation was a resolution passed unanimously by the Clearing-house in the afternoon, by which the banks in the association united to support each other. The plan was for a committee of the association to receive from banks in the association bills receivable and other securities, to be approved by the Committee, and to issue for them certificates of deposit not in excess of 75 per cent. of the securities deposited, except U. S. bonds; these certificates were to be received and paid in settlement of Clearing-house balances. The result of this action was to keep large blocks of securities from being forced on the market and sacrificed.

Within five minutes after the meeting of the Stock Exchange, on Thursday morning, the failure was announced of A. W. Dimock & Co. Mr. Dimock is the President of the Bankers' and Merchants' Telegraph Company, the stock of which soon fell to 45, a decline of 74 points. No other failures followed, and the announcement was made that the Metropolitan Bank would resume at noon, a special committee of the Clearing-house having recommended that association to advance the amount required to effect the resumption. This report was made after a careful examination of its condition. President Seney resigned, and Henry L. Jacques was elected his successor, which had much to do in restoring confidence. Confidence began to return, and prices of stocks advanced. The news from other cities was encouraging, except that two failures were reported from Boston, and a bank failure from Quincy, Ill. The hopeful feeling was rudely shocked at 2:45 P. M., when it was announced in the Stock Exchange that Fisk & Hatch were forced to suspend. The firm had been the heaviest dealers in Government bonds on the Street. Mr. A. S. Hatch was recently elected President of the Stock Exchange by a unanimous vote. The immediate result was a decline in prices of from 1 to 5 per cent. On the Street it was rumored that the chief cause of the failure was the pressure for money, and the impossibility of realizing upon $4,000,000 worth of Chesapeake and Ohio stock, in which securities the firm was largely interested. They had a great many call loans and call deposits, and the sudden pressure upon them for payment, from all quarters, made it impossible for them to secure enough ready money to continue business.

The failure of Fisk & Hatch dragged down the Newark Savings Institution, and it failed to open its doors on Friday. Five years ago the bank failed and was placed in the hands of the Chancellor. He permitted the old managers to continue business and it seemed to be prosperous again. The President told the Chancellor on Thursday evening that Fisk & Hatch had more than $1,000,000 of the bank's money, but that the Government bonds which should stand for it had been replaced by comparatively valueless securities. The Chancellor immediately ordered the bank closed. It is not believed that the depositors will be paid in full.

On Friday morning the fluctuations of the stock market were alarming, but the only failure announced was that of F. C. Hardy & Sons, whose liabilities are placed at about $300,000, with assets almost equal. By 1 o'clock the market was firm again, and the fear of a panic was dispelled. Confidence seemed to be restored on Saturday, and no new failures were reported.

There was one failure on Monday in this city, that of W. B. Scott & Co. It was caused by the great depreciation in the value of securities. The firm hope to resume in a few days. The market was not strong, but there was no flurry. The suspension of three banks in smaller cities was announced as follows: Planters' and Mechanics', at Petersburg, Va.; City Exchange, at Laporte, Ind.; and Erie County Savings Bank, at Erie, Pa.

Mr. C. C. Baldwin resigned the Presidency of the Louisville and Nashville Railroad on Monday, and Mr. J. S. Rogers was elected to succeed him. The Board of Directors published the following official statement: "Mr. Baldwin reported to the Board that certain funds of the company had been invested in the purchase of stock of the company, which, when sold, produced a loss of $206,000. The Board having declined to recognize the transaction, the amount has been made good by Mr. Baldwin." There are various alarming rumors of a further deficiency of two millions, but they are not credited

On Tuesday the stock market opened weak, and disappointed those who hoped for a steady improvement, by declining throughout the day. No failures were reported.

A resolution to investigate the causes of failure of New York banks was under consideration by the Senate Committee on Finance on Tuesday. By a unanimous vote of the Committee, the Comptroller of the Currency was requested to appear before the Committee on May 27th, prepared to convey to them such facts relating to the subject as he may have gathered. Upon his showing, the Committee will decide whether there is ground to warrant further action at present.

A report of the Senate Committee on Foreign Relations, presented on Wednesday, shows in regard to the prohibition against the importation of salted meats into Germany and France that the discrimination is not a tariff law, but an absolute prohibition of a specific American product as an American product, and the prohibition is declared to be based upon a sanitary regulation, and enforced for sanitary reasons. The same may be said in respect to the discriminations practised in Great Britain against American cattle. If these discriminations are causeless or arise from groundless fears of danger to the public health, the United States has reason for complaint, and, after using every means to remove the prohibition, they may with perfect propriety resort to discrimination. The Committee does not find it necessary to suggest any further legislation than it has already proposed.

The Consular and Diplomatic Appropriation Bill, which came before the House of Representatives on Wednesday, appropriates $978,170 as against $1,296,555 for the current year. On Friday the House passed through the Committee of the Whole the Diplomatic, Army, and District Appropriation Bills, recommending them all for passage substantially as they came from the Appropriations Committee. The Committee resisted every attempt to increase the appropriations for the consular service, and it will remain for the Senate to insist on needed changes.

In the House of Representatives on Monday the bill to reduce the duty on works of art, the product of American and foreign artists, from 30 to 10 per cent. ad valorem, was defeated by a vote of 52 to 179. The House also, by a vote of yeas 127, nays 113 (not two-thirds), defeated a motion to suspend the rules and fix a day for the consideration of the Bankruptcy Law. The opposition came principally from Southern and Western members.

The National Convention of Wool-Growers of the United States on Tuesday adopted an address to those engaged in that industry throughout the country, urging upon them the necessity of united action to secure a restoration of the tariff of 1867 on wool and woollen goods.

Mr. Roosevelt on Thursday sent to the Assembly the report of the Special Committee that has been investigating the Police Department of New York city. They found that a fatal defect in the system is that the Commission is four-headed; that the Police Commissioners connive at the lottery and policy business in this city; that the Excise laws are openly violated, and that hush money is paid for the privilege. They recommend, in conclusion, that all departments be made single-headed, and that appointees of the Mayor go out of office with him.

The State Senate on Wednesday agreed to the conference report on the Civil-Service Bill, and it went to the Governor.

Both houses of the State Legislature passed the Park Commission Bill for this city on Thursday, making the Commission three-headed, each Commissioner to have $5,000 a year, and all to be appointed by the next Mayor. The additional appropriation of $250,000 for the new Capitol was defeated. A conference report allowing this city to subscribe $50,000 for the pedestal of the Bartholdi statue was agreed to. The Senate concurred in the Assembly amendments to the Adirondack Bill providing for a single Commissioner at a salary of $4,000. The bill fails of its object because the Governor had not time to make a nomination for Commissioner and have it confirmed by the Senate. Friday was the last day of the session. In executive session the Senate rejected several important nominations by the Governor on a strict party vote. The Assembly passed a bill forbidding imprisonment for debt for a period exceeding two years. At 12 o'clock both branches were adjourned *sine die* with speeches by their presiding officers.

The National Convention of Anti Monopolists met at Chicago on Wednesday, only 200

delegates being present, and nominated General Butler for the Presidency. Delegates from New York, Maryland, and the District of Columbia protested against the nomination of a candidate before the other conventions, withdrew, and adopted another platform.

The New Jersey Democratic Convention on Wednesday declared for protection to industries and the "old ticket" of Tilden and Hendricks. Delegates-at-large were elected in accord with these sentiments. Virginia Democrats on the same day demanded the immediate repeal of the internal-revenue taxes, and a revenue tariff "adjusted to encourage productive interests at home."

At the Methodist General Conference in Philadelphia on Thursday four bishops were elected, as follows: The Rev. Dr. W. X. Ninde, of the Detroit Conference, President of the Garrett Biblical Institute; the Rev. Dr. J. M. Walden, of the Western Book Concern, Cincinnati; the Rev. Dr. Willard F. Mallalieu, and Dr. C. H. Fowler.

The Presbyterian General Assembly (North) began its annual session at Saratoga on Thursday, with a large attendance of delegates.

Bogan Cash, one of the South Carolina desperadoes, and the murderer of Town Marshal Richards, was shot and killed on Thursday morning near Cheraw, S. C., by a Sheriff's posse, while resisting arrest. He wounded one of the officers.

E. B. Wheeler, of Copiah County, Miss., was acquitted on Wednesday of the murder of Sheriff Matthews. This was one of the Copiah political outrages.

Charles O'Conor was buried on Friday beside his father in the old Cathedral on Mott Street, in this city, after impressive services in the Fifth Avenue Cathedral.

FOREIGN.

The comments of the London press on the debate on the vote of censure were, as a whole, unfavorable to Mr. Gladstone. The *Times* said that the majority in favor of the Government did not represent the predominant and universal conviction of the country. The *Telegraph* said that for the first time Mr. Gladstone's oratory fell dead upon the House and the public. The *Daily News* said that Lord Randolph Churchill assumed more the tone of a leader than Sir Stafford Northcote.

There was an exciting debate on Tuesday in the House of Commons Committee of the Whole, on the Franchise Bill. Lord Randolph Churchill in a speech strongly disagreed with the amendment of Mr. Brodrick, Conservative, to exclude Ireland from the operations of the bill. This announcement was greeted with cheers by the Liberals. Lord Randolph said that although he objected to the bill strongly on account of some of its provisions, he thought the position taken by the Government was statesmanlike. He had no fear of the result of enfranchising the Irish agricultural laborer, and expressed the hope that the Conservatives would not alienate the good opinion of the Irish by supporting Mr. Brodrick's amendment. Lord George Hamilton, Conservative, asked Lord Randolph Churchill what he was really driving at. If, he said, this was a statement of democratic Toryism of the future, then he declined to follow under such leadership. He contended that the bill was introduced to suit the exigencies of the Liberals. Its application to Ireland would result in reopening the floodgates of agitation. Mr. Brodrick's amendment was rejected by a vote of 332 to 137. Lord Randolph Churchill and several other Conservatives and all the Parnellites voted for the Government. Sir Stafford Northcote and many of his followers left before the division. Lord George Hamilton's attack on Lord Randolph Churchill caused considerable excitement, and it is believed that the latter is still at variance with the Conservative leaders.

In the House of Commons on Wednesday the motion for a second reading of the Channel Tunnel Bill was rejected by a vote of 222 to 84.

In the House of Commons on Monday night Mr. Joseph Chamberlain spoke for more than three hours in support of the Merchant Shipping Bill. Its passage is regarded as improbable.

Queen Victoria is negotiating for the purchase of the Villa Nevada, at Cannes, in which Prince Leopold died. Her intention is to convert it into a convent and chapel in memory of the Prince.

The American lacrosse team played their first match in England on Monday at Rock Ferry with the Cheshire team, and defeated them by a score of four goals to one.

Lawrence Barrett will sail from London for America on May 30. His engagement at the Lyceum Theatre has been disappointing, and he feels that he has been slighted by the theatrical profession in London.

A part of General di Cesnola's collection of Cyprian antiquities was sold at auction in London on Monday, and went at very low prices

The British steamship *Illyrian*, from Liverpool for Boston, went ashore on the southern coast of Ireland on Thursday night, and is a complete wreck. All on board were saved.

The British Government has sent orders to Cairo that efforts be made to communicate with General Gordon by other routes than Berber. Secret emissaries will be sent by way of Kassala, also by caravan routes from Dongola and Merawe to Khartum. Refugees from Korosko and Berber, who have arrived at Cairo, report that General Gordon was well, and that the sorties he had made had been successful.

Preparations for the Khartum relief expedition include equipments for 12,000 men, forty steam launches, 400 shallow-draught boats, and several thousand camels. It is doubtful whether the expedition will be ready to start before the end of August.

The Sudan rebellion is rapidly approaching Dongola. Mudir Pasha, who is at Dongola, has been informed that no reinforcements will be sent him, and that if he cannot cope with the enemy he must withdraw.

Osman Digna made a recent attack upon the friendly tribes near Tamanieb, killed twenty-one, took forty women prisoners, and captured many cattle. Of the rebels only five were killed. The tribes attacked can muster 6,000 men, and are determined to revenge the death of their comrades and recover their women.

Two hundred rebels bombarded Suakim on Monday for one hour. Two inhabitants were wounded, and the rebels succeeded in stealing 1,000 sheep. The British troops landed at the town and the rebels were forced to retire. The rebels have captured the Government magazine at Abu-Hamed. They are advancing upon Korosko, and general alarm has been created. El Mahdi's emissaries continue to advance and are welcomed everywhere. Admiral Hewett was at Adowa on April 26. King John of Abyssinia proposes to visit him soon.

Vague rumors are current in French political circles that Prince Bismarck influenced China to conclude a treaty of peace favorable to France, believing that the chances of European disarmament would thereby be increased.

The French Government has decided to introduce a bill in the Chamber of Deputies providing for the taxation of imported cereals and cattle. Prime Minister Ferry announced to the Chamber on Tuesday that the treaty of Tien-Tsin would have to be slightly modified in order to be acceptable to Chinese susceptibilities. Admiral Peyron, Minister of Marine, introduced a bill providing for a credit of 38,500,000 francs on account of the war in Tonquin, and a credit of 5,000,000 francs on account of the Madagascar expedition.

France has agreed not to interfere with the African International Association on the Congo in consideration of the promise of the Association, in case it shall wish to withdraw from its present undertaking, to cede its possessions to France. The London *Times* attacks the Association and its objects as a private speculation. It says: "Free trade may be replaced any moment by a French protective tariff. America has been led into a false position (in acknowledging the Association). The Association has agreed to sell what it does not possess. The bargain is utterly hollow and illusory. The Association's so-called possessions relapse into unappropriated territory. The subject calls for the serious attention of the Foreign Office."

M. Louis Pasteur, the eminent French chemist, announces the discovery of an antidote for hydrophobia, by several inoculations.

The scheme for a canal from the Atlantic Ocean to the Mediterranean Sea, converting the Iberian Peninsula into an island, has been revived. A contract has been signed between the founders of the scheme and the contractors for the Suez Canal for a canal capable of taking the largest vessels through.

The Spanish Cortes was opened on Tuesday. King Alfonso delivered a liberal speech from the throne. That portion of the new commercial convention with America which requires legislative sanction will be promptly laid before the Cortes.

The majority of the Czarevitch was celebrated on Sunday in St. Petersburg by various court and state ceremonies, and a popular fête in the Field of Mars. The streets were thronged by enthusiastic masses. At the palace Prince William of Germany, in the name of his father, the Emperor, conferred upon the Czarevitch the decoration of the Order of the Black Eagle. At the Palace Church the Czarevitch took the oath of allegiance to the Czar and loyalty to the fatherland, and swore to maintain the legal order of succession. Returning to the palace, he took the oath of military allegiance. Salutes were fired, and the city was decorated with flags.

All the employees of the Baku Railway in Russia have been arrested on the charge of being implicated with Nihilists.

A convention of 500 delegates of the National Liberal party was held in Berlin on Sunday. Resolutions were unanimously passed to support unswervingly the Emperor and the Empire, asserting the necessity of the Anti-Socialist Law, and pledging the party to support the Government in social and political reforms, especially in passing the Accidents Insurance Bill during the present session.

Sentence was passed on Monday at Leipsic upon Hentsch and Krazewski, who have been convicted of treason. The former was condemned to nine years' penal servitude, the latter to three years and six months' imprisonment in the fortress.

Emperor William has accepted the resignation of Prince Bismarck from the Presidency of the Prussian Cabinet, and has appointed as his successor Herr von Boetticher, the Prussian Minister of State and Imperial Minister of the Interior.

It is authoritatively announced that the morganatic marriage of the Grand Duke Louis of Hesse-Darmstadt with Mme. Kolamine has been legally dissolved.

Mr. Sam Ward died at Pegli, Italy, on Monday, in his seventy-first year. He was born in this city of a wealthy family, and led a somewhat wandering life. At Washington he made a reputation as lobbyist and good-liver. He was the friend of literary men, statesmen, and artists, and was the author of a volume of poems. Julia Ward Howe is his sister, and F. Marion Crawford, the novelist, his nephew.

A mass meeting was held in Montreal on Monday to protest against the pauper emigrants who are sent there by the London Samaritan Association from the disreputable parts of the metropolis.

PANICS AND PANICS.

If anybody who never witnessed a panic before supposed that what he saw on Wednesday week in Wall Street was a repetition or renewal of the panics of 1857 or 1873, he was greatly mistaken. Those were veritable commercial crises of the first order. The scenes of Wednesday were very exciting and very alarming to the ordinary investor, but they were not in any way indications that we were entering on such a period of disaster as followed the failure of the Ohio Life and Trust Company in 1857, or that of Jay Cooke & Co. in 1873. The history of commercial crises shows that although they vary in many particulars, they are uniformly alike in one most important particular. They always, to all but the very far-sighted or the pessimistic, come like thunderclaps out of a clear sky. The first note of danger is always heard in what seems to be a period of great prosperity, marked by high prices, large profits, great industrial activity, advancing wages, greatly extended credits, eager demand for money, and great mutual confidence. These have been the signs and forerunners of all the great financial convulsions.

It is needless to say that every one of them has been wanting in the crisis we are now witnessing. Low prices, small profits if any, reduced and declining wages, and the narrowest possible amount of credit, have been for some time past the rule all over the country. The fuel of a general and real crisis which was accumulated in the summer of 1881, has been slowly burning out. Perhaps it has not all been consumed yet, but the residuum must be very small. The liquidation, which in a real crisis has to be done in a week, which in 1857 and 1873 was done in a week, has in this instance been distributed over three years. The markets of the country are no longer overstocked. Although the agencies of production may be in excess of the demand for many varieties of goods, the pressure of the supply ceased some time ago to reveal itself in the further decline of prices. The work of readjustment has been going on steadily and safely for nearly three years. While something remains to be done in this regard, it is not of such magnitude or importance as to give ground for uneasiness. Unless the world is entering upon an entirely new stage of experience, in which commercial revulsions come in periods of lethargy, dulness, languor, low prices, and limited credit, we must conclude that last week's panic was a local phenomenon of a temporary character, affecting stock speculators mainly, and having no power to project itself into the currents of general trade.

It is easy to understand how the disasters of the Marine Bank and of Grant & Ward, coming at the end of protracted shrinkage on the Stock Exchange, threw upon certain speculators already weakened a burden more than they could bear. A decline of five or ten points will always hurt a great many people and will generally break somebody. If it happens to bring down a bank president or cashier who has been using funds which he had no right to use, the consequences are far more disastrous and widespread than those of an ordinary failure of equal magnitude, because confidence in banking is thus unsettled. The particular bank affected may remain perfectly sound and solvent despite the misbehavior of its officers; yet the disclosure will produce effects on the imagination of depositors and investors a thousandfold worse than the facts justify. Some people will draw out their money from banks of unquestioned solvency, and others will sell the best securities at panic prices merely because some other person, of whom perhaps they never heard before, has betrayed his trust. Such is the constitution of the human mind, and it is idle to chide it or quarrel with it.

All that can be done is to point out that bank officers are, with rare exceptions, honest and trustworthy; that the banks of New York were never in a stronger position than now, and this by reason of the weeding out of bad customers and bad collaterals, which has been going on so long; that the circumstances of the present trouble are not of a general character, deep-seated in the vital parts of traffic and industry, but confined to the immediate domain of Wall Street and to the speculating part of that, which is really after all only a small part of its general business.

The situation to-day contains abundant evidence of the soundness of this view. The alarm about the banks has been stopped by the action of the Clearing-house, which, following the precedent of 1873, gives to every bank found to bein sound condition the guarantee of all the others against the attacks of panic. Probably few, if any, of the brokers who were brought into trouble by the failure of customers to "respond," or by the refusal of banks to certify checks in advance of deposits, have escaped the general alarm. Those who are safe and sound to-day will doubtless be able now to go on their way, and it will probably be a quieter and more comfortable way than it has been for some weeks past. The worst feature in the crisis has been the appearance of the Secretary of the Treasury on the scene in the character of a special Providence, offering to allay the anxiety by anticipating payment of a large amount of bonds. No Government is fit for functions of this sort, and our Government less than most others. They are never exercised without leaving behind a certain amount of demoralization. The business world ought in times of distress as well as prosperity to be left to live by law, and not by any man's pity or discretion. One thing, however, the Government, through Congress, ought to do, and that is absolutely forbid, under heavy penalties, the borrowing of money from banks by their own officers. The practice leads not only to gross abuse, but, as we see, to great disaster. Everybody's credit who borrows from a bank ought to be judged by eyes less friendly and prejudiced than his own or those of his associates.

THE GRANT & WARD MORAL.

There are probably very few people who will not agree in the main with the remarks made by Mr. Beecher on Friday, on the Grant & Ward failure, in so far as they are a statement of facts. He is reported to have said at his prayer meeting:

"When a man has earned such a reputation as General Grant has for absolute simplicity, absolute truthfulness, straightforwardness and honesty, he is safe. General Grant has made mistakes; he has done things that I wish he had not done — possibly he wished he hadn't done them; but when General Grant and his sons go into a large concern of which they knew nothing, any more than I do, and that concern plays the mischief with him and his boys, the whole nation rises up to say, 'He is not to blame.' If Jim Fisk was here and had gone under, do you suppose there would have been a man in the whole nation but would have said, 'He is a rogue'? But General Grant has earned character and reputation, and the whole nation says, 'He was not to blame; simple, dear old fellow, he knew nothing of the wrong.' [Applause.] And just about this time the national Legislature is honoring itself by restoring him to the rank and pay of a general. It is a noble thing for the country to do. I thank God for it."

There is a very great and widespread sympathy with General Grant. People are prepared to forgive almost everything to a man to whom the country is indebted as much as it is to him, to put the best possible construction on his acts, and to do anything in reason to protect him against the consequences either of his misfortunes or mistakes. Moreover, we believe there is general acquiescence in the opinion that he was deceived as much as anybody by Ward, and believed as implicitly as anybody in Ward's stories of "profits," without knowing where they came from. But, nevertheless, it is going too far to say that "the whole nation rises up and says he is not to blame." We do not believe that the whole nation, or one-quarter of it, does anything of the kind. If this, or anything like it, were the popular judgment, there would soon be an end among us to all sense of business responsibility. What the bulk of the nation says is, that he is to blame, but that his great services, and the fact that he was himself duped, make his error seem slight, and make it easy to pardon and forget it. It will not do to press those who sympathize with him too hard. They ought not to be asked, because they love and admire him and are willing to help him, to suspend the ordinary rules of business morality for his benefit. Some little room must be left, even in dealing with his troubles, for the play of the old-fashioned commercial conscience. No country can afford to raise any individual above the moral law, any more than above the law of the land.

The great defect in General Grant's civil career has been the readiness with which he has allowed his name and friendship and association to cover unworthy persons, and protect them from the consequences of their misdeeds. "Stalwartism" has, in fact, always been simply a combination for the evasion of the law, or the abuse of the public money or patronage, under the cover of his prestige and authority. The facility with which such persons imposed on him, or "poisoned his mind," as it used to be called, was one great cause of the overthrow of the Republican party during his second term, and was the chief and fatal objection to his getting a third term. The Washington scandals of that period are beginning to fade from people's memory, and we have no disposition to recall them; but they were very serious, and they almost all arose out of the facility

with which men with criminal designs "poisoned the mind" of the President against all officers of the Government who suspected them or were likely to bring them to justice. General Grant came out of these things personally unscathed, but it seems to us he must have heard enough about them to know on which side he needed to be on his guard, and what were the defects in his character or mental equipment which grieved or alarmed his friends, and put his good name in peril. The Grant & Ward firm was in all respects an old-fashioned Stalwart enterprise. It was, indeed, as we said the other day, the very "efflorescence of Stalwartism." The machinery was all the same as of yore. A pair of rascals, of whom General Grant evidently knew nothing, and about whom he seems to have taken no pains to inform himself, got hold of him as a figure-head for a concern which was intended evidently from the first to swindle the public, and did swindle it extensively—how extensively will probably never be known, because many of the victims will be ashamed to appear. The operations they were carrying on might, for all he knew, have been those of a bunco shop or a faro bank, and he allowed them to place enormous "profits" to his credit without any inquiry as to their source. As a matter of fact, these profits were described to outsiders as emanating from Government contracts, which they were led to suppose were obtained through his influence. Surely the nation will never rise up and say that there was nothing blameworthy in this ignorance, or indifference, on the part of one who had had such long and varied experience of men and affairs as General Grant. Surely even he owes it to his fellow-citizens, who have loved and honored him so much, to make sure that his name is not used to aid fraudulent attacks on their property, especially when there is any chance of his profiting by the operation himself.

There is more importance in the matter than appears on the surface, because nearly all the trouble in our financial institutions to-day arises out of the failure of persons who allow their names to be used to bring money into concerns, to see that, when in, it is honestly managed. General Grant is meeting with a great deal of sympathy, and there is general acquiescence in the steps taken to relieve him from pecuniary anxiety, but it seems to us that he can hardly be acquitted of *all* responsibility for Ward's operations, without weakening those rules of business morality which are, after all, far more than statutes, the best defence of the community against great and carefully-prepared frauds. Mr. Thomas G. Shearman, the great Brooklyn moralist, who observed at the prayer meeting that General Grant was only a special partner in the Grant & Ward firm, and therefore not to be expected to have an intimate knowledge of its affairs, was in error. He was a general partner, and is liable now for all the debts of the concern.

THE FOLLY OF BOOMS.

THE doubts which many voters must have felt as to the expediency of the business men's meeting on Tuesday night, to push the claims of President Arthur to the Republican nomination, were, we think, fully justified by the letter of Mr. Wayne MacVeagh, which appeared in all the papers of that morning. Mr. MacVeagh, although a member of the famous "class of 1853," seems to have no bowels. His letter is exceedingly acrid in tone, but it is not its acridity which makes it either damaging or severe; it is the facts of Mr. Arthur's political career which it marshals in an orderly, and to the members of his boom most mournful, procession. Now, skilful and prudent boomers would have avoided any demonstration which would have been likely to bring these facts out, or furnish his enemies with an occasion for commenting on them. For it must be borne in mind that Mr. Arthur's sole recommendation for reëlection is that he has given the country during the last three years a very respectable and on the whole efficient administration, which will contrast very favorably with those of his predecessors since the war. On this he must rely for the nomination, and on nothing else can he possibly rely. This fact is constantly before the public eye, and doubtless suggests to great numbers of people, in a quiet way, that four years more of it would not be a bad thing. But it is not a thing which, in Mr. Arthur's case, it will do to advertise. It must be left to tell its own tale and produce its own impression without note or comment. As soon as measures are taken to work it up into a great "claim," people's attention is turned to Mr. Arthur's political antecedents. They begin to ask whether this respectable administration is what it was natural to expect from his political training, and from his political philosophy, or is merely the fruit of a tardy repentance forced by a change in the times on a man bred in, and, through all his best years wedded to, far different methods. The answer to this question must, of course, be very injurious to his boom. One does not need to read Mr. MacVeagh's cruel letter to see this. The reasons why Mr. Arthur ought not to have been nominated for the Vice-Presidency, not to speak of the Presidency, abound in the history of New York politics during the last twelve years. Everybody can recall them. His friends ought not to do anything likely to bring them up.

The truth is, there are very few men who have been active in politics who can bear an early boom. The Blaine men have found this out to their sorrow already, although the *Tribune* piously thinks that Mr. MacVeagh's letter "deserves to be read with extreme sobriety and thoughtfulness by every Republican who thinks of sharing in to-night's performance," as "these are the things we shall have to meet in the campaign." It does not like, however, having the Mulligan letters read with "sobriety and thoughtfulness," although there is no doubt they, too, are among the things we shall have to meet in the campaign if Mr. Blaine is nominated. This is quite natural. Both Mr. Blaine and Mr. Arthur are men whose political antecedents will not bear overhauling, and their friends, respectively, are of course very much disturbed when they see anybody perusing these biographies with a serious air. The way to avoid this was to keep the candidate quiet and in the background till near the meeting of the Convention. Mr. Blaine, for instance, ought to have been confined till now in his study in Maine, working at the "history," and no extracts from it should have appeared in any of the newspapers. It would have been better still if he had gone to Europe, and there hobnobbed with Freeman, and Mommsen, and Treitschke, and other distinguished historians, and then have been suddenly brought into view, just before the meeting of the Convention, when people would have no time to read about him, and when all charges would have the air of suddenly-started campaign stories. His boom, in short, has been ruined by over-zeal.

The same fate seems to have undertaken Mr. Arthur's boom. Johnny O'Brien has been too much in Albany, and, little as he accomplished there, accomplished too much for the President's good. He ought not to have been allowed to defeat the Bureau of Elections Bill. Mike Cregan and Al Daggett, too, have been giving too much tongue; and, in fact, all "the boys" have been too much before the public. The business men ought to have known that New York was the last place in the world to hold a meeting to discuss Mr. Chester A. Arthur. It ought to have been held in Buffalo, or Syracuse, or Utica, if it was to be held at all. Here in the very field of his fame it is the easiest thing in the world to bring to mind that he was the creator of the Republican Machine, which has since 1870 been the curse of the State and nation, and that the Mikes, Jakes, and Barneys are all of his training. He had no warmer or shriller supporter when he was doing this than the New York *Times*, but even the *Times* no longer stands by him. He has to-day no more virulent opponent—a fact which of itself shows how little backing he has in the place of all places where he ought to expect most. We believe he would make a good President if reëlected, but the people are not willing to put any man in that office on a simple promise of good behavior. In the popular imagination, it still stands forth—and may it long stand—as something which ought to be the reward of long identification with things which in some way contribute to the national greatness.

GREAT LAWYERS.

THE Marshall ceremonies, and the deaths of Charles O'Conor and Judah P. Benjamin, have all drawn attention to the present condition of the legal profession and the changes that have come over it in the last generation. These may be summed up roughly as consisting in the change from an appointed to an elective judiciary; the break-down of all restrictions on admission to the bar; the multiplication of judges and lawyers, and the enormous increase in the great body of statutes and decided cases. But what has influenced the development of the law more perhaps than any internal change, has been the growth of corporations and the use of their machinery for private speculation on a gigantic scale, accompanied as it has been by a decline in

the attractions of the law as the direct avenue to a public career. The law in the time of Marshall and Story was a learned profession, and a branch of the public service, and such is still the theory with regard to it, though the practice has drifted at many points into a different channel.

The adoption of a written Constitution in this country, introducing an ultimate appeal to the courts in all important political questions, bid fair to make the American bar even greater than had been that from which it sprang, and in Marshall it gave to the world one of its most famous judges—a judge whose opinions have for a hundred years helped not only to render the Government stable and secure, but to promote directly the general welfare and happiness and security, against the encroachments of wealth and arbitrary power. If it be true, that the danger of democratic government is that it tends to the oppression of the individual and of minorities, and sacrifices to the temporary interests of majorities the eternal interest of right and justice, such judges as Marshall, who never allow themselves to lose sight of the great ends for which law exists, are the most priceless possession a democracy can have. The capacity of the political machinery provided by any Government to attract men of the force and character and independence of Marshall to the bench of its highest court, must be regarded as an important test of its excellence.

That the Federal bench is not as attractive to lawyers of his stamp as it was, and that it is difficult to get lawyers of distinction to take judgeships, or to keep them on the bench, is evidently not due to any change in machinery, for there has been no change in a hundred years. A United States Judge still holds his office for life, and his duties are more important, owing to the great growth of business, than they ever were. It is the surrounding circumstances which have altered. The gains of private practice are so great, and the opportunities afforded by it so numerous, and the emoluments of public employment so small, that the ordinary motives which act upon judges as well as other men drive them out of the public service. We have seen a United States Judge, in our time, promoted from the Federal bench to a law-school professorship, and thence to the service of a railroad corporation, and it is notorious that the judgeship which he abandoned is regarded at Washington as a prize, chiefly because it has furnished a means for two lawyers to get into lucrative private practice. If such has come to be a recognized use for an appointed judicial office, with a life tenure, it is not surprising that in the State courts the figure of the "ex-Judge," promoted to the position of counsel, should be still more common.

If the bench has been subjected to external pecuniary influence to an appreciable degree, the bar, of course, has suffered as much. The career of Mr. Benjamin, however, can hardly be said to be of any value as showing the tendencies of the profession in the United States. His going to England was the accidental result of his connection with the rebellion, and his success there late in life, attributed in the first instance, as it generally was, to the production of an extremely able book on a difficult and important subject, may hint a difference between the condition of the profession in England and the United States; but his distinction was gained as an English, not as an American, lawyer, and was due to causes which would have brought him to eminence in any period or country. Mr. O'Conor, on the contrary, was a product of the American bar, and his life bridges over the interval between the early period, when Webster and Choate were great names, and that of our own times, when it is becoming yearly more difficult to single out men as "leaders" of the bar. He served his apprenticeship while the bench maintained its early vigor, and his most marked peculiarity was his strong sense of professional responsibility—*i.e.*, his professional conscience—which in the case of a lawyer means simply a high sense of duty, not merely, as Lord Brougham persuaded himself, to his client alone, but to the service to which every lawyer pledges himself by a solemn oath at the outset of his career.

There is no reason to doubt that there is just as much ability at the bar now as when O'Conor was a young man, or when Marshall expounded the Constitution. But the condition of the bench makes leadership at the bar in the old sense increasingly difficult. Any one can count up half-a-dozen lawyers of the first rank in New York, who, if they constantly practised before judges of the first rank, would easily settle the question of leadership among themselves by the only possible test. But as a matter of fact they practise before all sorts of judges, from those suspected of corruptibility up to judges whose opinions are quoted with respect all over the world—from judges who have won their places by purchase, fraud, or favor, to judges who have slowly worked their way up to the highest positions exactly as Marshall, Story, and Kent did in their day. In such a condition of the bench it is inevitable that the leadership of the bar should be involved in some confusion and uncertainty. A lawyer may have a great practice and his opinions carry weight in certain courts, owing simply to political influence, which makes judges eager for political favor anxious to please him. The lawyer pitted against him, though professionally his master at every point, may be defeated in spite of his learning and industry and eloquence. In another court a more sinister influence still may keep men who ought to be leaders of the bar fighting for months and years over frivolous points invented with the connivance of a friendly judge to baffle them. The "learning" judge—*i. e.*, the judge who is a well-meaning man, but unqualified at the first for his business, and who has to learn it from the lawyers who practise before him—is a common judicial type in the United States that in O'Conor's younger days was unknown. The struggle for the leadership of the bar before a judge of this sort, who is the pupil of the contestants, often produces curious results. Full of ability as is the American bar to-day, the old professional landmarks are much effaced; and as the great men of the past die off, a new legal order comes more and more into view, and we find it hard, when we compare the theory involved in the traditions of the past with the practice of to-day, to make out what results it will ultimately produce.

CASTS FROM SCULPTURE OF THE MIDDLE AGES AND THE RENAISSANCE.

THE great German museums of plaster casts, partly described in the second paper of this series, are weak in sculpture of other than classical epochs. In Dresden the post-classical department of the cast collection is well composed and well housed, but is wofully small. It has its separate entrance from the courtyard of the Zwinger (the classical department being entered from the street), and is well lighted and arranged. Here one sees some little-known sculptures of real merit: the wonderful statues from the western choir of the Cathedral of Naumburg, the bronze doors of Augsburg, some statues and the tympanum from the great door of Freiberg in Saxony, an important statue from the Cathedral of Madgeburg, a fine early sarcophagus from the little-known museum at Trier; but all this is German. Italian art is scarcely represented, and represented in a fashion far too fragmentary; little scraps being given of compositions which are chiefly important in their *ensemble*. Thus two separate heads are taken from the "Ascension" by Nanni Banco, over one of the north doors of the Florence Cathedral. One can praise unreservedly the selection of the "Jonah" from the Church of Santa Maria del Popolo at Rome, and a statue or two from the Florence Bargello; but, on the whole, Italian mediæval sculpture in its boundless variety and varied merit remains undisplayed in Dresden, and even the immense stores left in Italy by the Renaissance are hardly drawn upon. French mediæval art, one may say, is not represented at Dresden at all, nor English, though that is less surprising, nor Spanish, though that is perhaps less important.

At Berlin, of the dozen halls occupied by the cast collection only one large one is devoted to sculpture of post-classical epochs. Here again one may say that the German is the only mediæval architecture which has contributed its sculpturesque decoration to the museum. The great French schools, early and late, northern and southern, are ignored, nor has the moulder been sent to Verona or Venice, Orvieto or Brescia. Of Renaissance sculpture a more general choice has been made, but it is very uneven, very incomplete—too much of Michael Angelo in comparison with the earlier works, and too little of everything. In fact, these collections of mediæval and Renaissance art give only isolated instances of well-chosen sculptures; for the greater part they are inchoate, and not as yet representative of any school, style, epoch, or people whatever, as if still merely at their feeble beginning. Vienna is not very different in this respect, with its two hundred or so of subjects, though here also one finds things intelligently chosen for their merit and not their celebrity; and Munich has nothing.

There is still the collection at the Trocadéro at Paris, but of this I wish to make a special study, because it was organized expressly to carry out a theory as to the proper form, character, and purpose of museums of art. It would not be fair to Viollet-le-Duc and his coadjutors and successors to study their museum without carefully weighing their published reasons for their action, and comparing these with the result. The whole plan pursued by them is so very novel, and is so important a new departure, that its working out must be considered at length, if at all. The collection includes a splen-

did display of mediæval art of many epochs, not exclusively French, but French in the main, as yet. It represents a very extensive knowledge and a thorough examination of an immense field. The total amount of mediæval sculptures still existing in France is very great, and in general it has been spared by the restorer, even when the building which contains it has been half rebuilt. And this exhibition, which brings together so much of it in Paris, is almost worthy of the occasion and of the place; yet not quite so, for it lacks that which, to be sure, only deep purses could give, but which therefore is the special business of the French Government, with its traditions of free expenditure for artistical purposes—it lacks the completeness of its examples. It is a shame that the statues of Chartres, such as those which decorate the west doorway, and which, in their combination, make up what is perhaps the greatest design in architectural sculpture in Europe—a composition unsurpassed in the way of decorative design, and as unique in character as successful in its realization—should be set up separately, one by one, with breadths of blank gallery-wall between them. The museum contains splendid things, also, which are more or less completely reproduced—the tympanum of Vézelay, archivolts of Rouen, three bays (enough for the purpose) of the stalls of Amiens; it is the more vexatious to have it fail us when completeness is most needed.

But this consideration brings us at once into the very middle of the inquiry which we have really to follow, namely, not what *is*—for that, as we see, is generally rather a warning than an example, so far as non-classical art goes—but what ought to be. This non-classical art, then, especially needs that its examples should be given in their completeness. Neither is it an escape from this necessity to select and reproduce those examples which are complete within a small compass, simple and single pieces of sculpture. The strength of mediæval and of Cinquecento art is not in these. They are immensely interesting, as we all know; but chiefly so as affording further means of studying that art to which we owe the masterpieces of the time. Let us separate the different epochs in our inquiry. It will be admitted readily that the sculpture of a French cathedral porch of the thirteenth century can only be properly studied when all or much of it is taken together. Its religious or traditional meaning naturally can only be got at in this way; but further, its beauty as a work of art can only be enjoyed fully, or in anything like its fulness, when the whole combined work is before the admirer. Charming qualities of expression and of picturesqueness are to be had in the separate statues, reliefs, or groups, but little is there compared with the magnificence of the complete design. And this is because the art is not principally sculpturesque, but almost wholly architectural. It is an art which has developed itself slowly out of simple building, by charging the prominent members of the building more and more richly with decorative carving, until at last it shot up suddenly into the splendors of the pointed style. Its workmen had thought little of pure beauty of form, and had no skill in representing the human body, but they were consummate masters of decoration in all or nearly all its manifestations. The process of development is not at all that of sculpture, becoming more and more powerful and complete, and reaching nearer and nearer to independent value. Later for a moment it was partly so, but only for a moment, and only when the traditions of pointed architecture were lost. The development is not of the art of sculpture, but of the art of the decorative designer, of the architect (as we might say, if the word had not taken a different sense in our time), as of a fiduciary agent charged rather with the expending of large sums of money than with fine designing. From the round-arched opening in the flat wall, with a lintel across beneath the arch, and the semicircular space above carved with a cross, through a hundred steps of slow development, to the three shadowy porches of Reims charged with their ranged saints in order as of battle against the besieging foes of the Church, the growth is that of the doorway. The idea that fills the brain of each designer is primarily that of the door-opening and its proper ornamentation; and it is impossible to urge too strongly the truth that as sculpture grew more scientific and more beautiful in itself, the great art of architecture grew feeble. That very cathedral of Reims is a case in point: there are heads under the great doorway larger than life, and almost Grecian in their beauty; the Chartres artist could never have modelled them, but he would never have hung those wretched curtains under the feet of his rank of saints.

The task of the founder of our cast-museum will be, then, not to fetch a bit from Bruges and a bit from Laon, a statue from Arles and a quatrefoil-relief from Lyons, but to make up his mind which doorway (for instance, and because the doorways are the usual centres of the richest work) he will select, and then to give the whole of it. He must lose so much in losing the heavy wall above, loading the arches, and affording vast spaces of light to contrast the play of shade around his moulded and storied door, that he can afford to lose nothing more.

It will be urged that this is true of classic—even of Greek—art itself. Yes, but it is not *so* true. The Parthenon sculptures lose a great deal in losing their original place, and no doubt they lose a deal in losing color as well, and all the setting which the Greek artist imagined for them; but then, in the first place, the originals, too, have lost all that. They have never had it for us moderns. We cannot give it back to them, nor even imagine it, nor imagine them as they were when in their original setting. And, secondly, as they are, and in our museums, they contain the most perfect sculpturesque art that we know or can conceive of. We have, therefore, some reason for putting casts of the Parthenon frieze at a reasonable height above the floor in a well-lighted hall, and in feeling that that is as well as anybody can do. But with the mediæval sculptures it is not so, and we must set them up in their combination as they are, to the best of our poor ability.

Seriously, what some multi-millionaire ought to do for the study of mediæval art is to build in America a model of Chartres Cathedral. The building could be built for a million of dollars, very likely (I don't pretend to have taken out the quantities), and all the sculpture should be cast in plaster from the original, adjusted in place, stained or colored with careful suggestion of the original, and in some way waterproofed; the moulds being preserved to make easy the replacing of any which might fall. But we do not want any rich man to build a new Parthenon for us (unless by way of an experiment, or as a vehicle for different experiments), for we have no knowledge of how to color it, and, uncolored, it would look but little like what the Athenians raised their eyes to from Pericles's death, perhaps, until Hadrian's, perhaps longer. Who knows what the restorers did in those days with buildings that were a little out of repair, or what house-painter was employed, even under Sulla, to spoil the metopes and the friezes?

This is all matter of course, I take it. Nobody will deny the main assertions made above with regard to mediæval art; but it may not seem equally evident when we come to the developed Renaissance, to the art of the latest years of the fifteenth and of the early sixteenth century. But indeed the difference is only of degree, not of kind. The sculpture of Mino da Fiesole and Luca della Robbia (I take my especial favorites among those earliest men) is more sculpturesque than that of Orcagna; but it is not so very much more, when both are compared with Greek work. Luca, as a man, was capable of anything; with different surroundings he would have known no limits but those of humanity to his achievements as a sculptor. Mino, rather a master of expression than of form, might have carried further than art has yet been able to do the union of expression with sculpturesque qualities as they approach perfection. But both were men of their epoch, and their work is monumental rather than primarily sculpturesque. Their place is in

> "The chapter-room, the cloister-porch,
> The church's apsis, aisle, or nave,"

and not in museums at all. Indeed, the separate statues or other pieces of sculpture not intended as architectural accessories are few in work of this period. A Saint John the Baptist for a holy-water basin, and similar figures of saints for the choir screen, as at San Zenone and San Marco, although still architectural in their employment, are what the age has to offer as independent sculpture—with the one important addition, not to be forgotten, of portrait busts and a very few portrait statues, equestrian and other.

Not only are the mediæval traditions strong and the classic feeling but a feeble and artificial inspiration with the early men, but their comparative weakness as sculptors is evident in their work, when compared with even the great mass of classic sculpture, and never so evident as when a figure or a bas-relief, disengaged from architectural setting, finds itself in a gallery. The Bargello at Florence is the great witness to this fact. To study that collection of sculpture in bronze, terracotta, and marble; to go from time to time to see antiquity at Rome, or even no further than the inferior show of it in the Uffizzi; to keep in view what the same Renaissance men whose work is before you in the Bargello have left in so many churches, is to realize that the Cinquecento, scarcely less than the mediæval epoch which had just closed, and that Italian scarcely less than French art, requires to be considered as primarily architectural. Later, indeed, things change, and much of the sculpture of the great Jacopo Sansovino was conceived independently of all architectural surroundings, even in cases where the statue was designed for its special place, and this although the man was the first architect of his time. This is true of Michael Angelo to about the same extent. Their own evidence, however, would seem to be in favor of our general argument, for each of them was always striving to compass great designs in which sculpture—even their own highly realistic and developed sculpture—would be combined in architectural compositions; so that even Michael Angelo's perhaps most important statues remain for us in what is his most striking decorative design—the new Sacristy of San Lorenzo.

The conclusion is that the future museum of casts must have great spaces and lofty roofs for its non-classical department. It will be worth all it costs, though. The good effect that museums are capable of has only begun to be imagined or conceived. Even so: museums themselves have only begun to be separated from palace splendors, and to be reasoned about, *a priori*, as a separate and superlatively important means of education. R. STURGIS.

Notes.

CASSELL & Co. will publish immediately 'Day-Dawn in Dark Places; or, Wanderings and Work in Bechwanaland, South Africa,' by the Rev. John Mackenzie, Tutor of Moffat Institution, Kuruman, with numerous illustrations; the autobiography of Arminius Vámbéry, also illustrated; and a new 'Illustrated Guide to Paris,' with a map expressly engraved for this edition.

'The Hollanders in Nova Zembla' (1596-97), a poem from the Dutch of Hendrik Tollens, by the Rev. Daniel Van Pelt; and 'The Life and Times of Gustavus Adolphus,' by John L. Stephens, recently United States Minister at Stockholm, are announced as nearly ready by G. P. Putnam's Sons.

D. Appleton & Co. have in press Mr. Guthrie's 'Giant's Robe'; James Sully's 'Outlines of Psychology, with Special Reference to the Theory of Education'; and 'Reforms, their Difficulties and Possibilities,' by the author of 'Conflict in Nature and Life.'

Fords, Howard & Hulbert will publish under copyright in this country Miss Blanche Roosevelt's new novel, 'Stage-Struck; or, She Would be an Opera Singer.'

Henry Holt & Co. have in press Lady Brassey's new book, 'In the Trades, the Tropics, and the Roaring Forties'; and a translation of Dr. Friedrich Kapp's 'Life of John Kalb,' which has long merited this distinction.

Macmillan & Co. have in preparation a complete Library Edition in seven volumes, to be published monthly, of the works of Lord Tennyson. The first volume, containing a steel portrait after a photograph by Rejlander, will be published about June 1. A limited edition will also be printed on the best hand-made paper, and will be sold only in sets.

We have received from the National Christian Association, Chicago, a little pamphlet, 'Sketch of the Life of James G. Birney,' by Gen. William Birney. An insert states, on the authority of the editor of the *Christian Cynosure*, that General Birney is engaged, not, as we had hoped, upon a simple life of his father, but "in writing a history of the growth, aggressions, and fall of the Slave Power in the United States, including notices of the prominent pro-slavery and anti-slavery men who figured before Abolition was accomplished"—in short, covering the ground gone over in Vice-President Wilson's well-known work. The same authority states that General Birney is delayed for want of a "complete collection of books and pamphlets relating to slavery," and is desirous to borrow or to buy. A glance at the 'Sketch' shows that delay is wise, for greater misinformation, misconception, misstatement, omission, or suppression is seldom exhibited in so brief a compass. General Birney's address is Washington, D. C.

We owe an apology to Messrs Funk & Wagnalls for stating that their abstract of Sir Samuel Baker's African books of travel, called 'In the Heart of Africa,' had no map. It is small and inconspicuous, and liable to be overlooked, but it is there.

The remainder edition of the sketches of the secret sessions of the first Senate of the United States, edited from the manuscripts of William Maclay, a Senator from Pennsylvania, by the late George W. Harris, has been purchased by James Anglim & Co., Washington, D. C., and is offered at a reduced price.

Mr. George William Curtis's eulogy on the late Wendell Phillips has been printed in plain pamphlet form by Harper & Bros. Seldom have greater tact and discrimination been shown in a similar task than Mr. Curtis displayed under circumstances of singular delicacy. Only by analyzing the occasion itself, can the merits of this admirable discourse be fully appreciated.

The twenty-third edition of 'Harper's Handbook for Travellers in Europe and the East,' in three stout red morocco volumes, still testifies to the unwearied touring of its editor, Mr. W. P. Fetridge, who spent last year, he tells us, in Belgium, Holland, Germany, Austria, Great Britain, and France. With his customary non-sequitur he immediately adds: "All of these countries have been entirely rewritten"—a censurable use of the perfect definite to indicate an action whose date is wholly indefinite. There is, in fact, no such difference between this year's edition and last year's, or that of the year before, as the statement in question implies. As an editor, Mr. Fetridge maintains an old-time conservatism which is truly refreshing in these days of change.

The generation that lived through the Fugitive Slave Law excitement remembers Mr. Trowbridge's 'Neighbor Jackwood' as a stirring contribution to the special school of fiction at the head of which stood 'Uncle Tom's Cabin.' Then it had a living interest for boys and girls and their parents; now it may excite the reader less, but will interest him still. The new edition just published by Lee & Shepard takes its place among the better class of American historical, and particularly of New England, novels.

'Out-of-Town Places: with Hints for their Improvement,' is Mr. Donald G. Mitchell's choice of a new title for his 'Rural Studies,' in the uniform edition of his works (Charles Scribner's Sons). The change is openly manifested upon the title, and more explicitly in the preface, where "Ik Marvel" hopes that it will attract a class of readers whom he sincerely desires to benefit. A well-known missionary author in the same field, Mr. E. C. Gardner, has lent his aid in the shape of numerous illustrations, both practical and picturesque.

Mr. N. Ponce de Leon's English-Spanish 'Diccionario Tecnológico' makes progress with its sixth part, which breaks off in the midst of the word *fall*. The work is not only of great practical utility for commercial translation, but offers curious comparisons between the two languages in regard to terseness and flexibility. For example, there appears to be no equivalent for the term *fall-board* in Spanish, where we must use a definition three times as long—"puerta engonzada que cierra hacia abajo." So, *drum-head of a traversing platform* is "sillar que se coloca con un perno para el giro del marco de esplanada."

Ten more numbers of the chromo edition of Brehm's 'Thierleben' (B. Westermann & Co.) include the 130th part, and conclude the tenth volume. The colored plates of the crustacea, the coral and the sponge, the nautilus, of many curious and vividly-beautiful sea-forms, will rank with anything that has gone before in this series; and the same may be said of the woodcuts, many of which are striking in a high degree.

Mr. Astor has lately presented to the Astor Library two illustrated manuscripts—one an evangelistary, supposed to have been made for Charles the Bald; the other a missal of the fifteenth century, formerly belonging to St. Stephen's Chapel, London. Also, a perfect manuscript on vellum of Wyklif's New Testament, containing the autograph of Humphrey, Duke of Gloucester. Besides these, the gift embraces two works from the press of Fust & Schöffer, derived from the Sunderland sale, and dated 1459 and 1462 respectively; Coverdale's Bible in black letter, 1535; a Latin Bible, inscribed "Jo Grolierii et amicorum"; and Eliot's Indian Bible, with the English title and dedication.

Pleasant information about Elzevirs is given, with the aid of illustrations, by Mr. A. Lang in the June number of Cassell's *Magazine of Art*. Having occasion to speak of Elzeverian piracy, and to extenuate it on account of its daintiness, Mr. Lang protests that "the Yankee pirate dresses you in rags, prints you murderously, and binds you, if he binds you at all, in some hideous example of New York or Boston 'cloth extra,' all gilt, like archaic gingerbread." Three well-engraved portraits of busts of Molière and of Gluck, and a statue of Voltaire, by Houdon, accompany an article on "Sculpture at the Comédie Française" in the same number.

No. 30 of the Proceedings of the U. S. Naval Institute possesses exceptional value by reason of two papers on important themes. Dr. Emil Bessels reviews the exploration of Smith Sound, and after a crushing exposure of Lieutenant Howgate's ambitious intrigues, which ended in the despatch of the Greely Expedition, considers the chances and the ways and means of delivering the imperilled band. It is made quite apparent that the scheme was suggested to Howgate by Nares's discovery of a seam of tertiary coal in Lady Franklin Bay. The other paper we referred to is one by Lieut. J. B. Murdock, U. S. N., in criticism of the late Mr. Fox's monograph of the landfall of Columbus. Both these articles are accompanied by valuable maps, and Lieutenant Murdock gives a translation of the passages in Columbus's journal that bear upon the question under discussion.

J. W. Bouton sends us the Illustrated Catalogue of the Paris Salon for 1884, valuable, as usual, for its memoranda of the art work of the year, and for the list of contributors. The black-and-white sketches vary greatly in their intrinsic importance as in their thoroughness. Some are noticeably clever translations. The subjects have the customary range—say, from the bottle-fed baby upwards. The *revanche* motives are perhaps fewer than of late years. The portraits that arrest attention are also, in this selection, not numerous.

John Woolman figures in the current instalment of the article, "Friends in Burlington [N. J.]", in the March issue of the *Pennsylvania Magazine of History and Biography*. It appears from the minutes of August 1, 1763, that he, "being returned from his visit to some religiously disposed Indians up Susquehannah, informed the last meeting that he was treated kindly, and had had satisfaction in his visit." The incident is well known to readers of his 'Journal.' Part of a letter of his, censuring the "gay" furniture of a female friend, is also printed, and some characteristic stories related of his cautiousness of speech and disinterested service.

In the report of the Chief of Ordnance for 1883 one finds a number of topics which would be thought extraneous, and which possess a general interest, such as the making of illuminating gas from petroleum, the preparation of vegetable fibres for brush material, the use of special rubber type to supersede stencilling, etc. Here, too, is reprinted Professor A. Geikie's praise of Captain C. E. Dutton's 'Tertiary History of the Grand Cañon District.' Appendix 7 shows the distribution of ordnance and ordnance stores to colleges and universities, while appendix 8 records the following formidable armament as having been bestowed on the Public Printer, viz., 12 Colt's revolvers, 12 revolver holsters, 12 waist belts and plates, 96 revolver ball cartridges.

M. Raoul Frary, who some time ago suddenly achieved fame by his 'Le Péril national,' has again attracted considerable attention by a 'Manuel du Démagogue,' a satirical work on the political life and national foibles of the French. It pretends to be a book of instruction

for the young son of an old friend, whom his father desires to be taught the ways by which popularity and political success and influence can most easily be won. The author, complying with this wish, tells the ambitious youth all he knows of the people, the present sovereign dispenser of public honors and benefices, of politics as a profession and arena, and of the ways of demagogues in general, and especially those of France in the present period. The proneness of the people to be seduced by sonorous professions, false pathos, and hollow declamation, and the vulgar tricks daily used in playing on the Frenchman's vanity, gullibility, instinct of imitation, and love of equality and centralized power, are brought into sharp relief by incisive strokes of satire. The Parisians receive special castigation for their political vices.

We have seldom met with a more amusing lot of blunders in time and type than this announcement contains, from *Das Magazin für die Litteratur* for April 26: "O. W. Holms ist unermüdlich. Das neueste Werk des überaus fleissigen Autors ist: The Pochat the Breakfast Table. Leipzig, Tauchnitz edition."

Dr. Karl Kehrbach, known as editor of the works of Kant, Fichte, and Herbart, has, after many years' preparation, undertaken the editorship of a vast collection of writings on German education, to be known as "Monumenta Germaniæ Pædagogica," and to be complementary to the famous "Monumenta Germaniæ Historica," of which, under the direction of Pertz and his successor Waitz, upward of thirty volumes have appeared. A. Hofmann, of Berlin, is to be the publisher. An idea of the extent of the scheme may be formed from the announcement of contributions already promised. They embrace the school regulations in historical order of Brunswick, Saxon Transylvania, and the Baltic Provinces; the catechetic writings of Agricola; the 'Scholarium Fundamentum' of Remigius of Auxerre; the grammars of Chrysoloras, Gaza, and Lascaris; characteristic school comedies; documents on princely education in the Ernestine branch of the House of Saxony; and writings on geographical instruction in the sixteenth century, on Erasmus, Melanchthon, etc. The list of contributors includes Eckstein, Giesebrecht, Köstlin, Wattenbach, Werner, Zarncke, and many other names of well-known historians and educators.

The fourteen-inch telescope mounted some time since at the Observatory of Nice, France, has lately enabled M. Perrotin, the director of the institution, and Messrs. Thollon & Lockyer to make an observation of Saturn which will have an important bearing on the theory of the constitution of the rings of that planet. On the 16th of March, under most exceptionally favorable atmospheric conditions, the outer ring of Saturn appeared to be composed of three distinct rings, the innermost being the broadest and the outermost the narrowest, the differences of breadth being, however, only slight. At the moments of best vision each of these rings showed striæ which gave the impression that they consisted of numerous divisions. Two days later, when the definition was exceedingly good, Uranus presented a general appearance to some extent similar to that of Mars, dark spots being seen toward the centre of the disk, and at a certain point on its edge a white spot, recalling the Martial poles. Different parts of the disk were also observed to be marked by a difference of tint, bluish-white predominating in one hemisphere.

— The first attempt to collate the various notices of the sea-serpent of Cape Ann since he was first reported in 1639 as coiled up on a rock in that vicinity, is made in the current *Atlantic*, and the comparison develops a force in the evidence that would remove him, if any evidence could, from the realm of the miraculous into that of the scientific. In fact, he has now become a real creature to the eye, for if he has not been photographed exactly he has been sketched from the life by Mr. Arthur Lawrence, and his flat turtle-head looks out from the usually unillustrated pages with a mildness of expression that is suggestive of a zoölogical garden. This drawing was made on the 3d of July, 1875, on the yacht *Princess*, which followed the serpent for two hours off Nahant. He was seen several times during that summer, and again off Gloucester in 1877 by Mr. George Wasson, the painter. The number and character of the witnesses, the pile of sworn affidavits, and the favorable circumstances under which many of the observations were made, are skilfully insisted on by the author, especially in his summary of the evidence for this century. But what convincing power lies in the testimony is due to its peculiar and striking consistency. The creature is described nearly always in the same way—an elongated eel-like body, with protuberances on the back, a dorsal fin, and at least two flippers, a thin neck, white throat, black lizard-like head, black eyes. Its motions of the head and of the body, and its habits, are characterized likewise with little variations; its perfect harmlessness, in particular, is a striking quality in a legendary monster. The author's conclusion is that no doubt of the actual existence of this summer visitor on the North Shore of Massachusetts is tenable; he is neither a delusion nor an imposition. Indeed, he is not a sea-serpent at all, according to this writer, who puts forth his opinion, however, with great caution, and merely ventures the suggestion that he is "a cetacean animal, which, if not an actual zeuglodon, has many affinities with that creature." A zeuglodon bears the same relation to whales that eels do to fishes. The study (considering the transitory nature of much of the material) is thorough, and will interest popular curiosity even if it fails to overcome popular incredulity on this topic.

— The other articles show that hot weather and a Presidential campaign are imminent. In the fiction a Western story, 'Wentworth's Crime,' by Mr. Frank Parks, is noticeable since it puts new territory under tribute, and illustrates the variety of the resources that our own country affords its novelists. In this tale, which is marked by its careful structure and the skill with which nature is truthfully used to tone down the coarseness and elevate the trivialities of a too narrow realism, the interest of the prairie as a romantic motive and the actual life of the dwellers there, in all its crudity, are blended in a way to suggest new possibilities for fiction that takes its local color from beyond the Missouri. The miner and the bandit have had it too much their own way on the border, in books as in fact. It is of more interest now to know how ordinary humanity looks out there in the face of new and picturesque scenes; and a slight sketch, even like this, not only has a refreshing novelty, but is a sign of the future.

—In *Harper's*, also, there are two articles, unfortunately not stories, which enforce on a reflective mind the variety and charm of the picturesque element in our past which has been, comparatively speaking, but slightly utilized in our fiction, and, if Cooper be excepted, may be said to have been disregarded. The first is Colonel Higginson's narrative of the early emigration along the waterways of the Mohawk and the Ohio, with its quick suggestion of color, humor, and adventure; and the second is Mr. Butler's description of the shore of Lake Superior, where, long before the Revolution, the monks had given history a fine beginning, and where after it the first transcontinental explorers, and the trappers and voyageurs, had made a chapter of which our version in imaginative literature is of the slightest. Daniel Boone, as Colonel Higginson says, is a genuine American Robin Hood, and the spirit and gayety of the French adventurers have, as Mr. Butler points out, something of the Norman strain. The solid article of *Harper's*, however, is the long and minute account of the organization and methods of business of the New York Custom-house, which will do much to define to the public the great place that institution has occupied in the field of politics, and which may also impress on the rural mind the far-reaching influence of the tariff by its concrete and luminous exposition of how duties are collected. The statistics, too, exhibit the state of American shipping in a brief, wide, bird's-eye view as it were. Altogether, in addition to the comprehensive information it contains, this paper has a great and timely value as an illustration of the working of our institutions and legislation in many ways. An article on Sheffield is illustrated, chiefly by Joseph Pennell, in a manner decidedly in advance of anything we have seen of this artist's drawings hitherto. These have distinctly a greater completeness as design, and a grasp of general effect which none of his earlier work has had; and the opening one, "A Corner," and "A Bit of Old Sheffield," are excellent in their vein.

—We recently had occasion to call attention to the manufacture of spurious *chefs d'œuvre* of great masters, through which we are threatened with a general inundation of counterfeit canvases. There is another kind of fabrication which is likely to be as dangerous to the finances of inexperienced collectors as the former. This is in the studious fabrication of spurious reputations. The art by which it is done is more subtle and less assailable legally. It is generally, if not always, the operation of European dealers, who, having made contracts with painters not in public grace yet, force them into reputation by persistent puffery, mainly in journals which they control or own, or by raising the prices of their works by an ingenious system of sales at auction in which their prices steadily increase. This is done thus: The dealer, A, having sold a picture by one of his "own artists," X, to a client, B, with the guarantee that if he ever wishes to sell it again, he will get an advance on the price he paid for it, goes to C, who wants to invest safely in pictures, and, assuring him of the security of any investment in the works of X, gets the order to buy something of his. When the picture comes to the hammer again it is sold for an advance on the last price, and if A has found a third customer, D, to order him to buy it for him, which is most likely to be the case, it goes into a new collection under the same conditions. If not, it goes into the stock of A, for sale as the work of a man whose value is rising, as is shown by the previous sales, and, with a modicum of attractiveness, makes a tremendous run in time, the values in many cases rising to three or four times the first price paid within as many years, the dealer getting his commission as a safe broker at every sale, and the last owner before the reaction (which is in a large majority of cases certain to come sooner or later) paying the penalty of the aggregate credulity.

—This is no picture of the imagination, but an actual statement of affairs within the knowledge of any one in the secrets of the English picture trade. Of course, with time, the artists so exalted find their level, and the spurious reputation which has represented so much money value disappears, for it is very rarely the case that the dealers are clear-sighted enough

to select the immortals as their protégés, and we see that neither Turner, whose pictures have been one of the most profitable investments ever made in their kind, or Millet, scarcely less so, acquired the grace of the dealers, and themselves never saw the prices which their works have lately brought. If a dealer in 1840 had been wise enough to foresee the future greatness of Millet and had rescued him from poverty, he would have deserved the fortune he would have acquired. They are always the little men, with superficial qualities, who catch the eye of the dealers (rarely good judges of art), and whose pictures lend themselves most readily to the delusion of people who have money to spend and no art education to direct the spending of it. This leaves the great prizes after all to the genuine connoisseur and amateur—*i. e.*, the man who at once knows and loves art. The painters who have been forced into spurious and temporary greatness by this process of nursing reputations are more numerous than the public would believe or than we should care to say. Celebrity has grown cheap, and is worth as much as cheap things generally are. A man who knows nothing about art is as blind an investor in pictures as a speculator in railway shares who knows nothing of railway statistics, and is as easily taken by the auctioneer's assurance that the celebrated A. B. C. pupil of D. E. F., is one of the greatest painters of the day and a rising luminary, as is the most naïf countryman by the confidence man.

—The Society for Photographing Relics of Old London has just published its tenth year's issue, which, whether designedly or by chance, admirably exemplifies the various lines in which the previous issues have run. For instance, the notable series of inns is continued by two views of "Old Bell," Holborn, which "still retains something of its renown as a coaching inn," and figures in William Black's 'Strange Adventures of a Phaeton.' The view of its narrow yard will compare favorably in picturesqueness with any of its predecessors. Or take old houses of chiefly wooden construction: here is one in Fore Street, of a type very rare, we are told, in London, which probably antedates the Great Fire, and stands on the corner of Milton Street (none other than the literary-historical Grub Street, with an altered name). Here, again, are two wood and stucco fronts with bay-windows, on Fleet Street, likewise surviving witnesses of the conflagration, which stopped, on the north side of Fleet Street, at Fetter Lane; and in one of these, tradition says, the poet Dayton lived. Churches form another division, to which is now added a view of St. Michael's, Paternoster Royal, on the site of a college foundation of Lord Mayor Whittington's: whence the name of College Street for the narrow roadway that furnishes a charming perspective to Wren's design. Finer still is the view (No 88) of the well-proportioned tower of St. Giles, Cripplegate, seen above a row of quaint two-story houses: a singularly well-lighted photograph, with the early dawn creeping down into the silent street. Do we, perhaps, seek architectural details? We have them in several fine doorways—the noblest, that of Innholders' Hall, shown incidentally in the vista of College Street, and again for its own sake on a larger scale; another from the same neighborhood, College Hill, the grandiose carved entrance of some merchant's house; finally, twin doorways of 1703, with bold corbelled overhanging hoods, and with richly carved jambs and lintels. These last are very effective. Architectural, too, is the grand staircase of the house No. 10, Austin Friars, whose existence would not be guessed from the plain exterior presented in No. 91; and yet it recalls, with an interval, staircases in the Charterhouse and in Ashburnham House. A dignified relic of Great Winchester Street in the days (at the beginning of the eighteenth century) when it was full of the homes of merchant princes, is that exhibited in No. 90, with its paved courtyard, its hospitable flight of steps, and the angle which suggests great possibilities of inner arrangement. The ten views thus briefly described bring the total number up to 96, and no other set has been better worth the annual guinea. A sheet of letter-press is now a regular accompaniment of the photographs, which are permanent. We must again commend the series to our architects in particular, who, so far as we have observed, do not seem to be aware of it. The honorary secretary of the Society is Mr. Alfred Marks, 155 Adelaide Road, London, N. W.

—In speaking of Matthew Arnold's 'Isaiah of Jerusalem' (No. 982 of the *Nation*), we gave his view of the style in which translations from the Bible should be made: "The old version is not to be departed from without necessity. . . . Only mistakes, real mistakes, should be corrected, and they should be corrected gently." Rev. T. K. Cheyne, in his introduction to the translation of 'The Book of Psalms,' contributed by him to the "Parchment Library"—a very neat collection, of which the Appletons are the American publishers—dissents from that view, on the ground that the old rendering "does but convey that part of the meaning and the charm which was accessible to the men of the sixteenth century." And though his ambition as a translator, as was Matthew Arnold's as an editor, is to make the Biblical work presented anew to English readers "enjoyable," he evidently cares much less for the charm than for the meaning of the original. The first verse of his translation shows how ready he is to depart from the Authorized Version for the sake of something more conformable to the verbal meaning—though not to the logical sense—of the Hebrew. The old version's "man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners," becomes a "man that has not walked" "nor stood" there, although in the closely following "But in the law of Jehovah is his delight," we see the man in the present. Mr. Cheyne's rendering of verse 3 is superior to the old both in diction and in sense. His godly man "is like a tree planted by watercourses, that brings forth its fruit in due season, and whose leaf withers not," while the old version has this: "He shall be like a tree by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither." In lines like the last all the charm of the Hebrew wording is lost. But so it is also in "God is gone up with a shout" (Ps. xlvii. 5), or in "he giveth his beloved sleep" (cxxvii. 2), which Mr. Cheyne leaves unaltered; in "the bread of painfulness" (*ibid.*), which he substitutes for "the bread of sorrows"; in his "Yea, do thou behold with glad eyes the good fortune . . ." (cxxviii. 5), all of which stands for two short Hebrew words; or in his "the bed of my couch" (cxxxii. 3), which is not even correct as a literal rendering. The Authorized Version has, in the latter instance, simply "my bed," and it also says, with commendable freedom, "Both low and high" (xlix. 2), where Mr. Cheyne uses the loose paraphrase "Both those of low and those of high degree." It would, however, be a much easier task to pick out instances in which Mr. Cheyne's translation has the merit both of greater correctness and pleasanter diction. He here and there follows critically corrected texts, doing so, however, with moderation and discrimination. His introduction is both instructive and attractive.

—It is a trifle difficult for any one who does not know how quickly a new fancy takes root in Paris, and how widely it spreads, to understand the very strong hold on the affections of the Parisians obtained by the fashion of reciting monologues. The monologue is a very Proteus: it may be an ordinary recitation; it may be the telling of a versified anecdote; it may be the acting of a comedietta in one act and with only one part; it may be more than any one of these, or it may be less. In France just now the monologue has driven out the *chansonette*. Things which may be said or sung, and which would formerly have been sung, are now said. To entertain an evening party, resort is had not to the singer, amateur or professional, but to the monologuist, amateur or professional. Not that the singer is banished, but he is cast into the background by the monologuist. At the great receptions of the French capital, M. Faure is not as welcome as either of the Coquelins, to whose talent the surprising vogue of the monologue is in great measure due. The elder has popularized many fine poems by new writers, which, but for him, might have been read by the critics only. His range is as extended as his skill is unequalled. From the tenderest pathos to the most humorous comedy, from the simplest emotion to the most fiery passion, M. Coquelin is master of the monologue in all its forms. M. Coquelin *cadet* is wont to confine himself to one string—the broadly farcical; and one of the best of his efforts, 'L'Obsession,' by M. Charles Cros, is an adaptation of Mark Twain's 'Literary Nightmare,' the "Punch, brothers, punch, punch with care." These brothers are the first to issue a guide for amateur monologuists. 'L'Art de dire le Monologue' (Paris: Ollendorf; New York: F. W. Christern) may be recommended to all who wish to "speak a piece." The discussion of the proper principles of the delivery of verse should be studied by all who are anxious to read aloud or to recite: it reinforces and extends the suggestions of M. Legouvé's admirable little book on the art of reading. The title-page of 'L'Art de dire le Monologue' is adorned with profile portraits of the two authors.

—Everybody who has made the attempt knows the difficulty of acquiring a good knowledge of Russian; those who have persisted in their effort know how exasperatingly hard it is to learn to accent the proper syllables. "In this respect," Mackenzie Wallace justly remarks, "Russian is more puzzling than Greek, for two reasons: firstly, it is not customary to print Russian with accents; and secondly, no one has yet been able to lay down precise rules for the transposition of the accent in the various inflections of the same word." Russians also find it hard to master the difficulties of English accentuation, but then monosyllabic words are ten times as numerous in English as in the Slavic tongues; for in these even what is a monosyllable in the nominative singular, for instance, becomes lengthened in other cases and in the plural, and in Russian there is no general rule to tell which syllable of the lengthened word is to be accented. Thus *voin*, warrior, becomes *voi'na* in the genitive singular, and *voiny'* and *voi'nakh* in plural cases, while other similar nouns will have the accent, for no assignable reason, throughout on the penultimate or the last syllable. For *hand* and *hands* you have *ruka'*, *ru'ku*, *rukye'*, *ru'ki*, *ruka'm*, etc., while *sluga'*, servant, shows only two transposi tions. The difficulty can only be approximately stated, if we say that it is like what a Russian would have to contend with if, in studying English, he had not only to avoid readings like "Histo'ry of the Roman' Empire'," "Waver'ley Novels'," or "Gospel' of St. Matthew'," and to distinguish between *contest'* and *con'test*, *pros-*

pect' and *pros'pect*, and the like, but also to learn arbitrary shiftings of the accent like the following, if such also existed in English: Stud'y, studies', studi'est, studying', re'study, unstudied', stu'dious, studious'ly, student'. Diligent association with Russians, a good teacher, and diligent reading of metrical poetry will, of course, be found to be the means of gradually, though perhaps never completely, overcoming the foreigner's perplexity in the study. But a useful and pleasant additional help is offered by an accented library of Russian standard works, in prose and poetry, started a few years ago in Berlin, under the title 'Collection Manassewitsch' (the name of the editor). In this remarkably neat and clear edition every word of more than one syllable is accented. The collection appears in numbers of thirty-two pages each, of which nearly thirty have appeared, containing masterpieces of Pushkin, Lermontoff, Turgeneff, and Gogol. Works by Koltzoff, Nekrasoff, Tolstoi, and Grigorovitch are to follow.

—The Italian schools and institutions of learning outside of Italy form the subject of an interesting article in the last number of the *Nuova Antologia*. These schools and institutions are scattered over an immense area, embracing many of the European States, the Ottoman Empire, the regions of the extreme Orient, the shore of Roman Africa and both Americas. In Europe the Balkan Peninsula particularly is rich in Italian colonies, whose only tie with the motherland and the mother tongue is the patriotic cultivation of the Italian language. The shores of the Black Sea show numerous settlements of Italians; the Eastern Mediterranean, Syria, Greece, and Egypt, are dotted with towns and villages where Italian is currently spoken as the language of commerce; and a numerous and powerful current of Italian emigration has streamed out through the Pillars of Hercules and impinged upon the coasts of Brazil, Uraguay, Buenos Ayres, and Chili. To bind all this widely separated mass together and unite it firmly to the Kingdom of Italy by at least the sentimental tie of association, the Italian Government is pursuing an enlightened and liberal policy of granting subsidies in money and books to the schools founded by expatriated Italians in these varied regions. In 1880 it expended 109,110 lire in assisting institutions of learning in the east and west. In 1882 the sum was raised to 179,000 lire, which went to aid in the education of 80,000 Italian children living in foreign lands. During the present year it is believed that the sum will reach 300,000 lire, not counting the munificent provision of school-books, maps, school furniture, and pedagogical material contributed by the Government. Not to be forgotten in this record of an interesting attempt to cultivate the *sentimento dell' italianità* abroad are the noble efforts of the numerous missionary sisterhoods, the Franciscan friars, and the other emissaries of a vast ecclesiastico-educational establishment.

—The last number of the *Mittheilungen des deutschen archäologischen Institutes in Athen* for 1883 is one of special interest. The article on the Athena Parthenos of the Ermitage at St. Petersburg is illustrated by full-sized phototypes of two gold medallions, which give us, according to the author of the paper, Gangolf Kieseritzky, not only the most faithful and complete representation of the head of the Parthenos, but also the oldest copies and those not far removed in time from the original. Not less important is the advantage which the material possesses. We see the gold style in which the Parthenos was wrought, whereas the other reproductions translate after a fashion the gold into marble. The variations in detail from the other copies are all of the highest interest, but cannot be presented here. The resemblance of the face to that of the Varvakion statuette is very striking, but the eyes are wider open, and there is more power, more divinity in the St. Petersburg medallions. Kieseritzky complains that the "mildness" of the countenance has been turned into sternness by the photograph, but every one has had a like experience in his own case. It is enough that the goddess is not hopelessly *bourgeoise*, as she seems to be in the front view of the Varvakion statuette, to judge again by the photographs.

—Another article of interest, "Inscriptions of Tralleis" (in English), is the work of a young American scholar, Dr. J. R. S. Sterrett, who is attached to the American School at Athens, and who has done good service from the beginning under the administration of Professor Goodwin, and especially during the much-regretted illness of Professor Packard, the present director. Doctor Sterrett was travelling last summer with Mr. Ramsay, under the auspices of the Asia Minor Exploration Fund, and the two energetic scholars, happening to be in Tralleis, saw and coveted, as other scholars had seen and coveted, "six inscriptions which are built into the wall of the great ruin known now as the Utch Geuz—the Three Eyes or Arches." Frequent attempts had been made to read them with a glass, but the letters were too small and the stones too high. So the Anglo-American duumvirate proceeded to have a ladder constructed, and with "great difficulty and considerable danger" the copying was accomplished. Doctor Sterrett is evidently saddened by the thought that it was impossible to take impressions under the circumstances. The reader will be content with the spirit in which the work was accomplished, and not lament that nothing more was done. These six inscriptions, with fifteen others, are carefully edited, and will add to Doctor Sterrett's reputation as an epigraphist.

SAM HOUSTON.

Life and Select Literary Remains of Sam Houston of Texas. By William Cary Crane, D.D., LL.D. Two vols. in one. Philadelphia: J. B. Lippincott & Co. 1884.

The Rev. Dr. Crane's biography of Sam Houston is a simply-solemn affair, considering the nature of his subject. Its tone might be described as that of a campaign life of a popular missionary, or a voluminous tract dealing with an historical subject, so frequently are the styles of the literary bureau and the homily—both of a rather antiquated date—blended. The number of times in which Houston becomes the "inspired hero" and "governs destiny" in various forms of Providential direction and purpose is beyond count, and the tone of apostrophe and solemn disquisition, particular eulogy and general appeal to the unregenerate, is maintained on every page. It would perhaps be unjust to say that nothing new is contributed to the accessible means of information regarding the life of Sam Houston in this ponderous volume, but it would be hardly too much to say that there was as little as possible. Except in a remarkable chapter concerning his experience of religion and the arguments which convinced him of his worthiness to partake of the communion, and the collection of some of his talks and letters to Indians, which are all that are of any value in his "literary" remains or his state papers (except as materials for history), there is very little that is calculated to give an intelligent idea of the singular character of Houston, although the romance of his career could not be concealed even by a genius for dulness. But the rarity with which any revelation of individuality is allowed to appear is rather exasperating, and the biographer takes pride in suppressing all anecdotes for fear of "wounding personal feelings." He is, indeed, obliged to admit that Houston sometimes "indulged to excess," and that he abandoned civilized life to live with the Indians; but his guarded words hardly suggest Houston's condition as a degraded white man among savages, and there is only a single and almost involuntary glimpse of the theatrical element in his character, when it is admitted that his fits of passion and anger, like those of his great model and exemplar, Andrew Jackson, were sometimes simulated for effect. As a specimen of the carelessness or the confusion of the author, it is sufficient to say that he talks of the Highland or Gaelic ancestry of Houston, when he was of that sturdy Lowland stock, hardened and heated by the colonizing warfare in Ireland, which produced Jackson and so many others of the notable figures in our early history.

Sam Houston was born in March, 1793, of an emigrant Irish family, which had fought at the siege of Derry, and represented on the female side the Scotch houses of Davidson and Dunlop, and had settled in Rockbridge County, Va. His father had been an officer in the war of the Revolution, but the family by position and habit was of the pioneer rather than of the planter class, and a cabin in a clearing was probably the extent of its possessions. On the death of Major Houston, which occurred when Sam was thirteen years of age, the widow gathered up her family and her small belongings, and migrated with a party of neighbors to East Tennessee, on the bank of the Tennessee River, then the boundary of advanced settlement upon the border of the Cherokee country. Mrs. Houston was a woman of uncommon vigor, self-reliance, and natural ability, and from the physique of both parents the son inherited the brawny frame and the almost incredible strength of constitution which sustained him through terrible and wasting wounds, and hardly less trying exposure and excesses. The anecdotes of his youth are probably somewhat apocryphal, but he undoubtedly manifested the zeal and energy of a quick mind, the hasty temper, and the fondness for wild nature and the habits of savage life which always distinguished him. It is said that his imagination was so inflamed with the spirit of Homeric courage and poetry breathing through the conventional restraint of Pope's translation, that he was able to repeat the 'Iliad' by heart; and that he was so indignant because the pioneer teacher could not instruct him in Greek, that he ran away from home and went to live among the Cherokees, whose boys and girls had been his playmates and friends. At any rate, he did run away and join the Indians when a mere youth, and after a brief experience as clerk in a trader's store. The reply which he is said to have made to his brothers, who came in search of him, that he "preferred measuring deer tracks to measuring tape," was entirely characteristic of his grandiloquence and appreciation of theatrical effect, and, if an invention, was not an extravagant one. It is to be said that the Cherokees were by no means the degraded savages that many of the tribes were, and that to live with them and adopt their manners and customs did not signify the degree of degradation that it would for a white man to take up his abode in a Sioux or Ute tepee. They have always been marked as the most civilized and intelligent among the Indian tribes. At this time they lived mainly by agriculture, and had fixed habitations, while they had rapidly assimilated the civilization of their white neighbors, and were beginning to be mingled in blood with the adventurous pioneers who had settled among

them. Nevertheless, in language and habit they were essentially barbaric in their ways, and it is very probable, as is usual in such cases, that Houston was more Indian than the Indians themselves.

He remained among them for three years, perfectly acquiring their language, which is of so rare accomplishment that it is said never to have been done by an adult. When he reappeared in civilization his ambition and his intellectual faculties required food, and he devoted himself with energy and eagerness to self-instruction. He taught a pioneer school while educating himself according to the limited opportunities of the time and place. But the longing for adventure again became too much for him. He enlisted as a private soldier in the regular army, and by natural ability and zeal was promoted through the grades to the rank of ensign. At this time the Creek war, which had been fomented partly by the eloquence of Tecumseh and partly by the aggressions of the whites, broke out. General Jackson commanded the mixed army of regulars, volunteers, and allied Indians, among whom were a body of Houston's old friends, the Cherokees. At the battle of Tohopeka, or Horse Shoe Bend, Houston displayed that desperate gallantry which distinguished him through life, and won him the good will of Jackson, which he always retained. He led repeated charges upon the breastworks, and had already been severely wounded when he headed the final assault upon the last fastness of the desperate warriors, in which he fell with two rifle balls in his shoulder and an arm shattered by his side. When taken out of the mêlée he was given up as hopeless by the rude surgery of the time, and remained without attention through the night. His tenacious vitality sustained life through a journey to Fort William in a litter, and thence in a two months' journey to his mother's home, where he arrived such a skeleton that she declared that she would not have known him except for his eyes. For more than a year his iron constitution struggled with the festering wounds, unskilfully treated, and to the day of his death they were never healed, although they apparently had little effect upon his strength until he reached a late old age. After his recovery he was promoted lieutenant, and received an appointment as sub-agent among the Indians. After brief service he was accused of preventing the smuggling of negroes into the Western States from Florida, then a Spanish province, and indignantly resigned. It is interesting at this point to note that the reverend author leaves us somewhat in doubt whether he means to deny the truth of the charge, or to commend Houston for being guilty of the offence of defending the negro against what was probably a sort of land piracy. But although Houston was naturally a pro-slavery man, he was no abettor of slave-catchers, and his warm sympathies would naturally have been enlisted against the cruelties of kidnapping and smuggling.

On quitting the army service, Houston betook himself to the study of the law, the natural resource of the ambitious young man of his time. He was embarrassed with various difficulties of poverty and lack of education, but the requirements of the Southwestern bar in the way of study of authorities were not onerous, and in a very short time he was licensed to practise, and set up an office in Lebanon, Tenn. The records of his triumphs at the bar have not been recorded, although his biographer would give the impression that they were considerable. They were doubtless such as could be won at the local courts and from country juries by an advocate with a ready speech and a knowledge of human nature such as Houston possessed. He soon blossomed into a politician, was elected a major-general of the Tennessee militia, and a member of Congress in 1823, when thirty years of age. An amusing chapter is devoted to his Congressional career, almost wholly with reference to the legislative events of the time, in which, so far as appears, he took no sort of part, and certainly not a more conspicuous or influential one than that of a silent member from a rural district. He was a zealous supporter of Jackson in peace, as he had been in war; but, although less eccentric and of a higher class of mind and self-education than his colleague, David Crockett, he was doubtless only the backwoods politician among the leading statesmen of the time. In 1827 he was elected Governor of Tennessee, and two years later occurred that remarkable episode in his career which at first threatened to degrade and ruin him forever, but was finally the cause of his greatest achievements. He had been married about three months to an "amiable and accomplished" young lady, and there had been no appearance of any unhappiness. Suddenly they separated, Mrs. Houston going home to her parents. All sorts of rumors were rife as to the cause, but the secret was never divulged by either. Perhaps the most credible rumor has finally settled on the explanation that, in a moment of pique or despair, Mrs. Houston confessed that her heart belonged to another and that she had never loved her husband. No allegation was ever made of misconduct on either side, and Houston's habits at the time were not irregular beyond those of his class. Houston was of an impulsive and passionate nature—what is called in Southern parlance "high-strung"—and such a confession would have been very likely to upset him. At any rate, he announced his intention of resigning his office as Governor of Tennessee, and carried it out in a manly and dignified letter. He made no reply to the remonstrances or the accusations, and prepared to retreat to the wilderness among his old friends, the Cherokees, a portion of whom had settled in the Indian Territory in advance of the compulsory removal of the tribe. Here, on the banks of the Bayou Illinois, flowing into the Arkansas, lived his adopted father, the old chief John Jolly, or Oo-loo-tee-kah. To his cabin Houston made his way after the long and tedious journey with a flat-boat of Indian supplies, and received, according to tradition, a friendly and pathetic welcome. The Indian nature could sympathize with his sorrows, and the hospitality of fosterage was open to him.

Houston's second residence among the Indians marked his lowest decadence. Whatever sympathy he may have had by nature with wild life, and however grateful may have been the solitude of the forest and prairie to his wounded spirit, it was not possible that he should forget the position he had held, or drown the higher instincts of civilization in the rude life of the savage. He sank very low in habits of self-indulgence, took up with an Indian wife, and was hardly above the level of the "squaw-men" who have infested the Indian camps in a voluntary degradation greater than that of their hosts. This would not be quite true in every sense, for Houston had weight in the councils of the tribe, and was regarded more as one of themselves than an alien guest. At one time he accompanied a delegation of the tribe to Washington, and discredited himself by appearing in the blanket and buckskins of his associates. His mission was to protest against the robberies committed upon the tribes by the agents, and a savage attack was made upon his character and integrity by the friends of the Indian Ring. This he resented by committing a violent assault upon Mr. Stanberry, of Ohio, within the Capitol grounds, knocking him down with a hickory cane. For this he was reprimanded in a complimentary manner by the Speaker, and fined $500 by the courts, which was remitted by the President, the affair being championed by the Jackson party, then paramount. The charges against Houston's integrity were thoroughly disproved before a committee, of which Mr. Stanberry was chairman, and there never was any reasonable allegation throughout his career that he was not the honest, zealous, and intelligent friend of the Indians, whom he knew so well, and whose character he thoroughly appreciated. On his return to the Territory he continued his course of self-abasement, keeping a little trading store across the river from Fort Gibson, and spending a great deal of his time drunk about the cantonment. All this is passed over almost silently by Mr. Crane.

After three years of Indian life, the news began to stir the Western frontier of the rising of Texas, which had been colonized to a slight extent by Austin's party, under the authority of the Mexican Government, and was attracting the eyes of adventurous Americans and the distrust and apprehension of the Mexican authorities claiming sovereignty over it. Houston's better instincts and ambitions were aroused, and in 1832 he bade farewell to his Indian wife, who refused to accompany him, and started for the seat of the new empire. He found there the hardy adventurers and reckless spirits of the border, of every kind, animated with an eager greed and a native hatred of the Mexicans. At his advent among them he still wore the dress of the savage, but his reputation, his natural tact, strong magnetism, and undoubted ability for the conduct of affairs and the management of men, made him the leader; and, although he had keen and bitter rivalry, he maintained his position. With all his impulsive recklessness, his fondness for theatrical sensation, which never deserted him, and various other weaknesses, which were apparent enough, he had the gift of saving common-sense and shrewdness, and the genius for the practical achievement of great things. He inspired the motley band with confidence in him, and, while greatly daring, was not wantonly reckless, like the defenders of the Alamo and others, who were ready to fight at a hundred-fold odds. With such a leader, there was no question of the result of a contest between as fine a body of partisan soldiers, in indomitable courage and individual skill in the use of arms, as the world has ever known, and the ill-trained, inefficient, and effete Mexican troops, however extraordinary the nominal disparity in numbers. Thus it was that the battle of San Jacinto was won in one desperate fight of ten minutes by seven hundred and fifty over twelve hundred, and the question of the independence of Texas settled without another effort. Houston managed well in getting his troops into position, and the fight was won by the ready rifles against the clumsy *escopetas*, and the stout hearts against the timid ones.

Houston naturally became the first President of the Republic of Texas, and exhibited a practical skill in civil administration in marked contrast to his successors, to whom he gave way through the constitutional limit of office. He was largely instrumental in bringing about the inevitable annexation, and became a Senator of the United States. In this office he spent several years as a sort of picturesque and eccentric figure, having some queer ideas of statesmanship, but not without a shrewd sense of his availability as a popular and "hurrah" candidate for the Presidency, as, indeed, he narrowly escaped being. His notions of devotion to the Union became old-fashioned in comparison with those of the fire-eaters, and it is fair to presume

that he had no natural liking for the institution of slavery. He was superseded as Senator and then deposed as Governor for his opposition to secession, and died in a tranquil retirement, somewhat enfeebled in mind as in body. After his marriage in Texas he reformed his habits in a great measure, experienced religion after the orthodox fashion, and forgave his enemies so far as not to threaten to knock them down.

His character was a singular one, but perhaps less so than his career. He was a sort of lesser Andrew Jackson, with the latter's traits of affectation and instinct of adventure exaggerated, and less inveterate and vindictive—in fact, a lesser man in every way. But he had a genius for affairs in his way, and was sound at heart, kindly, grateful, and affectionate, with a manly spirit, which gave way for a time to degradation but not to meanness. He saved Texas at a crisis in its fate. It may be hoped that some capable hand will one day depict his life in clear and enduring colors.

Das Schatzhaus des Königs. Ein Roman aus dem alten Ægypten. Von Wilhelm Walloth. Leipzig: W. Friedrich.

A COLLECTION of detached stories not unfrequently produces upon the mind the rather unfortunate impression that any one of them is more and better than all taken together as a whole. Not so with Mr. Craddock's. True, he needed to tell but one story to prove his power as a simple narrator, who can catch a single incident, sketch in strong lines the few characters involved, and throw it all in high relief against a broad background with a power of conception and of execution almost simultaneous. But the eight stories now grouped together under the title of 'In the Tennessee Mountains' present in their total effect something much more than mere short stories. We have not only one mountain valley, but a whole country of hills—not a man and a woman here and there, but the people of a whole district—not merely a day of winter or of summer, but all the year—not lives, but life. Mr. Craddock is a master in the art of description. It is very easy for a man with a facile pen to forget that description, even of character, is not the main purpose of a story or a novel. The realist school is always in danger of piling up a mass of details, brilliant and telling, it is true, but of no use for the expression of sentiment or the development of passion.

William Black's work supplies good illustrations of widely different uses of description. That charming chronicle, 'The Adventures of a Phaeton,' is avowedly, in the main, description—as painters say, "a landscape with figures." The story is so slight as never to draw the reader's attention from the scenery, which is given with the accuracy of an eye-witness. The sunsets must have been recorded on the spot. Fancy would never have made them each so unlike the other. 'White Wings' is an attempt at a plot of an ordinary kind, with a great deal of yachting thrown in to fill up. Yet, after a few pages, we are conscious that there is no variety of scene, and that the paragraphs are mainly filled with catalogues of names, euphonious but strange and unsuggestive. Story and description fail together. The people in the story are no nearer to the scenery than the reader himself. It is all outside admiration. At the other extreme, in 'A Princess of Thule' the landscape is absolutely essential. Who could understand the King of Borva and his fair daughter who did not know intimately the surroundings of their lives? Who can imagine Sheilah without the background of boundless sea and sky? All the studied detail in 'White Wings' was futile, but here some flash of genius revealed to the author the spirit of things, and one precious hour was granted him to embody it.

A like felicity has fallen to Mr. Craddock. His vivid pictures of the roughness and loneliness of a wild country are not painted for their own sake, but because if we know them our hearts will be stirred by the sorrow and the joy of the life that is spent there. It is a hard life: the men are uncouth and stern, at the best; at the worst, wicked as only borderers can be. The women are gaunt and melancholy: "holding out wasted hands to the years as they pass; holding them out always, and always empty." But side by side with them is that strange miracle of young girlhood. We find it again and again as we find the wild rose lending tender beauty to the grim story. It may be rather the result of the grouping of the stories than of any plan of the writer, but he has enforced anew that saying of George Eliot's: "In these delicate vessels is borne onward through the ages the treasure of human affections." The reader cannot forget them, for they remain in his thought as a saving grace to those lawless communities. It is hardly needful to add that the style is admirable, with marked characteristics of its own which extend beyond the mere expression, and produce at times an effect of rhythm, not of words, but of thought—if such a thing is possible. "The 'harnt' that walked Chillowhee," has all the power of a pathetic refrain in music.

In 'Trafalgar' we have an old man's recollections of the high hope and the terrible defeat of that day. As a lad of fifteen he went as servant to his master, a Spanish gentleman, who, after years of chagrin over the defeat at Cape Saint Vincent, offered himself as a volunteer in the fleet. It is hardly a novel, but those who are fond of sea stories will find it worth while. The little Gabriel had an inclusive eye, and missed nothing, from the colossal mass of the *Santissima Trinidad*, on which he served, to the row of soldiers on deck "tying their pigtails, poor men! I saw them standing in a line, one behind another, each one at work on the pigtail of the man in front of him; by which ingenious device the operation was got through with in a short space of time." Even the proverbial school boy will think the fighting as old-fashioned as the hair-dressing, but it cannot come amiss to know how those who never heard of "Victory or Westminster Abbey" tell the familiar story. The single page that records with generous regret the death of Nelson, closes with the sentence, "The reader will forgive me this digression."

'Stratford-by-the-Sea' has nothing in plot or execution to commend it. The man who marries the country girl and afterward falls in love with a brilliant woman, appears once in so often in the third-rate novel in various guises. This particular hero is a little more stupid than usual, and a convenient railroad disposes of him when he is too much, or rather too many, for the author. It does not make the story less hackneyed that there is a lover ready for the country maiden. He is borrowed from Mrs. Whitney, and very badly used in the borrowing. The brilliant actress consoles herself with her destiny as "the vessel of the gods," and forms "a stock company that shall present nothing but standard tragedy and comedy." Were not the book so weak the fantastic notions of marriage and divorce might do harm. As it is, they are a pitiful witness to the confusion of right and wrong of which a well-meaning person may be guilty.

The author of 'Bethesda' has hit upon the same situation attempted in 'The Pagans.' In both books the hero is sent back to an early love by the heroine, whose self-sacrifice is as resolute as her professed ideals are lofty. The early love in the latter book was simply impossible, and all the ability of her rival goes for nothing. In 'Bethesda,' René d'Isten's wife is a commonplace woman of a poor kind, and may be true enough, but the lady who is supposed to save him and herself is queerly worked up from many novels (Mr. Crawford's notably), with an ignorance of life so profound as to be ludicrous. At twenty she had "found the hollowness of her childish faith . . . and taken refuge in æsthetic religion." She is of the grand pattern, with a vocation. As the American girl in Europe, "she sends a weekly letter to one of our best papers." When the lover hears this, there "comes a peculiar luminous appearance in his eyes. 'It is so unexpected——'" On that line the story goes on. She is to return home, and he is to supply her with materials to work over, so that the letters may still continue. They seek "a uniting of minds whose only aim is literary development." Bethesda knows of the wife at the outset, from her aunt, who is her sole guardian; but the wisdom and self-reliance of twenty never fail through three hundred pages of alternate flatness and spasmodic passion. The perils that are escaped only a tyro would dare to suggest, and the conquest at last, to any one who can struggle so far, must seem like the end of a sham fight. Some flattering comparisons have been made with Mr. James's work, but you might as well compare the performance of the last devotee to Kensington crewels with a piece of Gobelin tapestry.

It is a refreshment of soul to turn to anything so bright and sweet as 'Not Like Other Girls.' It is not the less pleasant for the suggestion of the spirited 'Doigts de Fée,' though there is as little resemblance as between the brilliancy of a Paris boulevard and the charm of an English village. The story ranks with the best of its kind; and the kind is a very good one, that leaves would-be philosophy and pretentious theories quite out of sight, and gives us the home-life of gentle, high-hearted maidens. A daughter's devotion, and the old-fashioned fidelity of lover to lady, still offer worthy opportunities to the novel writer. There is something curious in the difference in a story of this calibre (to adapt

a word, for neither rank nor class would express our meaning), by an English hand and an American one. The latter is more ambitious, puts more ideas into it, intends to mean more; but the former rounds out and finishes by adding a host of details that make the picture more interesting as well as more beautiful. Some people may say the difference is in the life itself, but it is not yet proved that it is not for want of some special faculty, call it perhaps literary patience, that will gather a full store, and then spare no pains to use it all to the utmost advantage.

The nervous should be warned off from 'Archibald Malmaison,' except where the plain prose of modern houses precludes the chance of secret chambers and the like. Mr. Hawthorne is at much pains to proclaim the story literally true, point by point; strong as the telling may be, it is so bluntly, boldly worked out as to be only horrible. Charm or fascination there cannot be in watching, in the broadest daylight, the deeds of a man who spends the alternate seven years of his life in a state but one degree better than idiocy.

"She mixed those babies up, and not a creature knew it," is the key to 'Mr. Nobody.' But she mixed them up under such dismal and disagreeable circumstances that the author's taste is condemned past dispute. Those who seek in a novel what we believe to be its primary *raison d'être*, entertainment, will hardly go beyond the first pages. Nor is it desirable that they should, since there is only dreary elaboration of nothing as well as nobody, and an extra stint of moral padding, both social and political.

A decent edition of the preposterous farrago, 'A Wife Hard Won,' suggests that we have still among us a few of those whose shining characteristic Rochefoucauld defined as the tribute vice pays to virtue. It is a choice specimen of that richly imaginative fiction from which in the sensational weekly all self-respecting persons turn away their eyes.

Mr. King offers 'Kitty's Conquest' to the public with the remark that it was written several years before his successful military novel, 'The Colonel's Daughter.' This at once attracts attention to the resemblance between the stories and to the perhaps natural inferiority of the earlier composition. Spurs jingle and the bugle-call rings true throughout, but the characters are drawn with comical sentimentality. In the handling of women the author's sensibility is worthy of Maria Roche. To "Noodledom," protesting solemnly that the practice of virtues is woman's proper and only duty, Sydney Smith said, "No man and no woman can fill up twenty-four hours with acts of virtue. We know women are to be compassionate, but they cannot be compassionate from eight in the morning till twelve at night. What are they to do in the intervals?" They are to pout, says Mr. King, to toss their golden curls, in a word, to coquet, thereby inspiring permanent rapture in the masculine breast. So he pleasantly settles the dreadful question, for the pretty women at least, and provides, too, a pleasant hour for good-tempered idlers who are never critical.

An old friend appears in the first pages of 'The Man She Cared for.' He is that imprudent English gentleman who has "one wife at Natchez over the hill, and another one here in Pike." Fame may be confidently predicted for that novelist who shall give us, as an eccentric character-study, the English gentleman successfully resisting the allurements of bigamy. The story chiefly concerns Sam and Agnes Challis, children of the indiscreet Mr. Dangerfield. Mr. Robinson tells of their trials and victories with the ease of a born *raconteur* and the skill of a practised writer. He tacitly admits the insignificance of the question why a woman cares for a man by not showing why Agnes Challis should care for Hamilton Redclove. But when a woman begins to be uncommon, she may not stop short of preferring insolence to deference in a lover. Redclove's rival, Overdown, the gunsmith, is a much finer sort of a man; still, the reasons why Miss Challis could not love him are obvious. Those who think him defrauded should reflect on the recent influx of grace which prompts aristocrats to give to a demogogical workman in white duck trousers the freedom of their hearth and dining-table.

The history of Mr. William Amelia and his paper, *The Way of the World*, may be taken as a satire on the society journal and the methods of its editor. The man and vocation fit each other, and worldly prosperity ensues. Mr. Amelia is diligently and delightfully snubbed, but that is small comfort, since inability to recognize a snub is part of his fortunate nature. The characterization is a clever and amusing piece of work—so clever and amusing that it almost excuses the author for whipping up choice items from the daily papers before the ink dries, and presenting them to us as fiction. At the same time it shows him scourging with the left hand what he imitates with the right. He holds Mr. Amelia up for detestation as an unscrupulous gossip, knowing that the spice in the dish is, for a great many readers, the inferential identification of Mr. Amelia with very interesting current gossip. The journalist's career is but slenderly interwoven with the commonplace plot. A peer so pitiable as the Earl of Windgall is enough to prompt the House of Lords to abolish itself in order to escape such an associate. A daughter so beautiful and dutiful as Lady Ella Santerre is removed beyond the sympathy of imperfect mortals, and the reader is as much oppressed by the abject humility of Bolsover Kimberly as that poor little man is oppressed by his millions and the letter "H."

A daughter's sacrifice for a bankrupt father is a prominent feature in 'The Entailed Hat.' If in so disorderly a composition there can be any central situation, it is the marriage of Vesta Custis and Meshach Milburn. This is an aggravated case of filial devotion, and, without disparaging domestic affection, we must protest against the generally-accepted beauty of the illustration chosen. The woman who gives her body in payment of her father's debts ought to be repulsive to the world in proportion as the act is repugnant to herself. Novelists, in such crises, often manage a dexterous slip betwixt the cup and the tearful but firm maiden's lip. The owner of the entailed hat is, however, an inexorable suitor, to whom love means acquisition, not denial. He coolly disregards Vesta's hint that he might express his adoration by letting both her father and herself go free. "I do not think," he says argumentatively, "you personally know of such a case, though you may have read it in a novel or a tract. . . . Where did you ever hear, Miss Vesta, of a famished lover surrendering every endowment that might win the peerless one, to be himself returned to his sorrow, tortured still by love, and by his neighbors ridiculed?" The remark is a fair specimen not only of Meshach's sensible ideas, but also of his style, which has something of the air and no little of the absurdity of a schoolboy's translation of heroic verse. If on the spur of the moment he tried to match his phrases against Vesta's, she very easily distanced him, for almost in reply she exclaims:

"Where will be my share of love in this world, married so? To love is to a woman the Globe itself, her youth the mere atmosphere thereof, her widowhood the perfume of that extinguished star."

This picturesqueness of language is not confined to the conversation, for the narrative is a revelation in the way of epithet and comparison. As far, however, as the story concerns Meshach and Vesta, it is harmless, and the unconscious drollery in the pair relieves it from dulness. But the twenty chapters dealing with Patty Cannon and her kidnapping gang are neither harmless nor droll. It is somewhat the fashion to excuse grossness in literature, on the plea that repulsion from evil propels toward good, and to discover a potent moral tonic in nastiness. It is also the fashion to lay upon the American novelist the awful responsibility of perpetuating every phase of by-gone national life. Among the horrors here accumulated, we have carefully sought for some latent moral force or some valuable historical fact; we have found none. Murder and debauchery have no national significance, and their fashion changes little with the times. The details of blackguardism, whether among princes or kidnappers on the border of a slave State, have no place in a literature with any pretensions to decency. It would be impossible in limited space to point out all the offensiveness of these chapters, but toward the last the climax of wanton bestiality is reached. It is stated in the introduction that the author's reflection on his knowing no locality well, inspired study of which this romance is the result. A little deeper reflection might have led him to a happier choice.

The tragic drama 'How Much I Loved Thee' comes to us several centuries before its time. When the language has been so long dead that Shakspere and the Sweet Singer of Michigan shall be equally valued and valuable, then only can justice be done to this episode of the American civil war. At present there is something in blank verse as it rolls from the lips of United States citizens and army officers that rouses a spirit of levity, not to say flippancy. There is no reason why a modern policeman should not break up a crowd with—

"Come, sir, you trifle—you must go with us";

nor why a young lieutenant should not remonstrate with a Washington citizen thus:

"What villain lie is that! How dare you, sir,
Level your piece upon a Union soldier?"

but we are pretty sure that they don't, and we are so hampered by the real that we cannot take the ideal seriously. But when time shall have obliterated nice distinctions of idea, of language, and of metre, then Eudora's madness will not seem a travesty of Ophelia's; then Ricardo will be as good a villain as Iago; then Anderton's soliloquies over his dead love will not parody Othello's; then "vile bounty-jumping beast" will have all the effect of vile "besonian," and start as many squabbles among the commentators.

The latest novel of M. Octave Feuillet is like the earlier, being strained, sentimental, and sickly. There are two friends, one in the army and one in the navy. The latter marries a beautiful woman, resigns, volunteers again when the war with Prussia breaks out, is wounded, and dies in his friend's arms, after making the latter promise to tell his widow that she must not remarry, and that if she does her husband will rise from his grave to curse her. Obviously, the friend falls in love with this victim of posthumous jealousy, and she with him. They are married, and on his wedding-night the bridegroom commits suicide. This is a painful and unwholesome story, inherently vulgar in its conception, in spite of the grace and decency of the literary style in which it is told. We maintain our frequently-expressed belief that M. Feuillet is a far more dangerous writer than M. Zola. M. Feuillet is insidious, M. Zola is outspoken. M. Zola must shock, and M. Feuillet is sure to

corrupt. It is perhaps characteristic that the second part of M. Feuillet's volume should contain a very lively little dramatic sketch, which might also be called "La Veuve," and which closely recalls an earlier comedy of M. Feuillet's, "L'Urne." It is an amusing little trifle, showing how a traveller, returning after a long absence, finds that the lady whom he had loved, and whom he had left married to a friend, is now a widow; and he assumes a due air of grief and condolence, only to discover that the husband died eighteen months before and has already been sufficiently mourned. So he marries the widow. Whether he, too, commits suicide on his wedding night, is not revealed to us.

Every period of Egyptian history has yielded fruitful subjects for the novelist -that of the old, the middle, and the new empire; that of the Ptolemies, Alexander's successors; that of the Romans, and of the Christian and Islamitic period. Wilhelm Walloth, in his 'Royal Treasure-Fort,' and G. Ebers, in his 'Uarda,' have selected the earlier centuries of the new empire for their narratives. In this empire are comprehended the reigns of all the Ramesids, the monarchs best known to us historically through the numerous inscriptions and manuscripts left to us from their times. A court-life episode from the reign of the powerful Rameses II., the Sesostris of the Greeks, forms the subject of Walloth's interesting tale. The antagonism of the Egyptians to the Hebrews, who then inhabited a northern province of the country and were held in abject dependence by the Egyptian Government, is the cause of all the tragic incidents and terrible scenes described. A young Jewess named Rebecca learns from her dying father the secret of the hidden entrance to the King's treasure-house at Memphis, and, having penetrated into it at night with her brother, robs it of many jewels and other precious articles, and afterward, by a curious coincidence, while following the profession of a dancer, is brought to Thebes, the capital, and becomes the favorite of the King. She meets there Menes, a young man whom she had known at home, occupying the position of a State Minister. He is engaged to a Jewish girl, but his mother compelled him to leave her in Memphis. Rebecca is ordered by a number of conspirators to poison the King, but betrays the plot to him. She suffers death at their hands, and Menes is on the point of losing his life while combating them. Meanwhile, his betrothed arrives at Thebes; the robbery at the treasure house is discovered, and a parchment found in possession of the robbers proves that Menes's intended is the natural daughter of King Seti I. The wedding takes place with the "royal blood" in preference to the real daughter of Rameses II., who is desperately in love with Menes; and, save a few invidious persons, everybody is happy. The story is exceedingly dramatic, even at the beginning, where the erection of the King's statue on the top of a pyramid, with fatal consequences to the laborers, is graphically described. The principal characters, too, are well marked. But there is too much improbability in the plot.

THE ORIGIN OF THE AMERICAN INDIANS.

De l'Origine des Indiens du Nouveau-Monde et de leur Civilisation. Par P. Dabry Thiersant, Consul-Général de la République Française au Centre-Amérique. Paris: Leroux. 1883. 8vo, pp. 358.

WHETHER the American Indians, such as the early explorers found them, were "native and to the manner born," or whether they derived their origin and their civilization—one or both—from the Old World, are questions about which opinions may well differ. Indeed, so many and varied are the theories that have been held upon these points that the bare enumeration of them, without any attempt at weighing their respective merits, would require more space than we can well afford. Hence we are compelled to limit ourselves to the statement that, for reasons which seem to be good and sufficient, the tendency to-day is to the belief that the Indians, so far from being autochthonous, are descended from Asiatic progenitors, and that they brought with them from their homes in the Old World the seeds of that civilization which, in material development at least, found its highest expression in Mexico, Central America, and Peru. But while conceding this much, we do not by any means wish to be understood as admitting that the question is finally settled; neither do we intend to assert anything as to the people or peoples from whom they are descended, or from whom they received their civilization, nor as to the route or routes by which they travelled in the course of what must have been a long, slow, and toilsome progress. So far as we know anything about these matters, the Indians may have been indigenous; or, assuming their foreign origin, they may have come over at one immigration, or, springing from different stocks or races, they may have started from different centres, travelled by different routes, and arrived at different times and at different places on the same or opposite sides of the continent. All that we can assert with any degree of certainty is, that the discovery, in California, of stone implements in the same stratum with the remains of extinct animals, and the fact that our Indians were ignorant of the use of iron, indicate most unmistakably that this immigration must have taken place at a period so remote that it can only be measured by geological epochs and phases of civilization. Beyond this all is conjecture, and if the drift of opinion at present is toward the Asiatic theory, it is not because it has been proved, but because, with the present configuration of the earth, an immigration from that direction (or perhaps it might be more correct to say a series of them) would meet with fewer obstacles than if starting from any other quarter; and because, also, in no other way can we account for certain peculiar features in the civilization, as developed here, with as little violence to accepted facts. Mindful of these limitations, and estimating at their full value the data which, though few, are all that we have to guide us in the investigation, we are now ready to take up this account of the origin of the Indians and of their civilization with some prospect of finding our way through the maze of fact, fiction, and fallacy in which our author is hopelessly lost.

Beginning with the question of their origin, he tells us (pp. 27, 49, and 348) that the New World was peopled, at a time that cannot be easily fixed, by colonies of the Mongol race, which came either by way of Behring Straits or the Aleutian Islands. That this colonization did not take place earlier was owing to the fact that the frozen regions of the northern part of America offered but few attractions to the people of Asia; and this same fact will, it is thought, also explain why it was that, in the seventh century of our era, America was inhabited by only a few tribes of savages who dressed in skins, subsisted by hunting and fishing, and dwelt in caves and grottoes instead of houses. About this time a band of Aryo-Turanians, whose country—Kharism or Chorasmia (Carizme?)—was situated just east of the Caspian Sea, being driven from their homes by the followers of Mahomet, took up their line of march, and, after a stay more or less prolonged in China, "probably" came to Japan (pp. 28 and 36), where they embarked in seven junks, and, guided by fishermen from the island of Yezo, they set sail and landed on the coast of Alaska. For the first forty or fifty years after their arrival they remained concentrated in the section of country now known as Arizona and New Mexico, and are said to have devoted themselves to "teaching the still savage tribes of North America how to clothe themselves, to cook food, to build houses, to make arms and implements, to raise temples, to offer sacrifices, to speak their language, and to make use of written characters." At the end of this time, or about A. D. 670 or 700, only forty or fifty years after they had been driven from their home on the shores of the Caspian Sea, and in spite of the most unfavorable conditions, we are asked to believe that, from a mere band of refugees brought over in seven junks, they had now become so numerous as to necessitate their division into tribes, and a migration to other less populous and more fertile regions, or, as our author poetically expresses it: "The hive became too full, and swarms escaping gradually spread, as the Aryans did in Europe and Asia, over the whole of the New World, where they can be traced, historically and by the ruins of monuments which they have left behind them, all the way from the Rio Gila to the land of Fire."

We believe this to be a fair statement of our author's theory, and he supports it by a reference to the traditions of the Toltecs, who seem to have formed a part of one of the earliest of these civilization-bearing "swarms" that left the parent hive. Without stopping, now, to inquire into the historical value of these myths, it is sufficient to say that, according to the account as given by Ixlilxochitl, these Toltecs came originally from a place called Huehue Tlapallan, or, as it is translated, "Old Red Land," and, after wandering around for a hundred years or more, they established themselves in Anahuac, the Valley of Mexico, some time during the seventh century. This is also the date fixed by our author, and as it is one of the few facts connected with early Mexican history about which there is anything like unanimity of opinion, it may be accepted. But while we may therefore feel reasonably sure as to the time of this migration, we cannot, unfortunately, be so certain as to the situation of this Huehue Tlapallan, the country from which they said they had migrated. According to most of the early Spanish writers, it was situated to the north, probably in the region now covered by New Mexico and Arizona. Some modern investigators, among them Squier and Hubert H. Bancroft, formidable by reason of their attainments rather than their numbers, incline to the opinion that it is to be found in the south, perhaps in Guatemala or Yucatan; while our author identifies it with Chorasmia or Carizme, which, as we have seen, was, A. D. 650, situated just east of the Caspian Sea. He bases this conclusion upon the fact that in the year 1222, or 600 years after these so-called Aryo-Turanians were driven from their homes, Genghis Khan, according to a Chinese history, having made himself master of Bokhara and Samarcand, destroyed the kingdom of the "Hue hue," and obliged their King to take refuge on an island in that sea, where he died. This Hue hue, if we may judge from the context, was situated to the east of the Caspian, and must therefore, according to our author, have been the same as Chorasmia, though separated from it by an interval of 600 years. It was also identical with the Huehue Tlapallan of the Toltecs, for the reason that in the Khanate of Khiva, as Chorasmia is now called, the soil is composed of a reddish clay, and produces melons of enormous

size and in great quantities; and as these same things are asserted of Huehue Tlapallan, it follows that the two countries must have been identical.

Bearing upon this point, and, from our author's point of view, strongly confirmatory of it, is the argument which he draws from the account given in the 'Popol vuh' of the origin of the Quiché Indians of Chiapas. In fact, the two arguments run parallel, or, rather, they are so mixed up that it is impossible thoroughly to understand one, especially in its philological aspect, without a reference to the other, and we therefore summarize it as briefly as possible: The Quichés, if we may accept the 'Popol vuh' as history, came from a country called Tulan zuiva, or "Seven Caves," which is said to be the same as Tulan *chiwim* or *chiwan*, though *chiwin=chivim* belongs to the Votan myth of the Maya Indians, and means "serpent." This Tulan or Tollan, we are told, is the same as the Turan of the Zendavesta—a country of darkness situated in the north—and must therefore have been the same as Chorasmia, the "Hue hue" of the Chinese historian, which, as we have seen, is represented to-day by the Khanate of Khiva. Now, Khiva is but another name for chiwim, and if to this latter we add Tulan, we have once more Tulan chiwim or Tulan zuiva, which is the Quiché name for the Toltec Huehue Tlapallan.

This is substantially all that there is in the historical argument, and to those who will take the trouble to measure our author's statements by the confession of ignorance with which we set out, it is needless to say that we do not regard his conclusion as entitled to any weight. Even if it be admitted that the traditions of the Toltecs, Quichés, Mayas, and other civilized tribes of Mexico and Central America as to an emigration from some centre, the name of which is variously given, refer to the same event; and that, hence, Huehue Tlapallan and Tulan Zuiva are but different names for the same place, there is nothing in the evidence presented, considered either historically or linguistically, to connect the former with the "Hue hue" of the Chinese historian, or the latter with the Turan of Zoroaster.

But it is unnecessary to pursue this branch of the subject further, neither will it avail us to follow our author into the comparison which he institutes between the religion, laws, arts, manners, and customs of the different peoples of the New and of the Old World for the purpose of showing their identity, and hence of proving not the Carizmian, but the "Asiatic" origin of the civilization of our American Indians. Unquestionably this portion of the work displays considerable research, and any one sufficiently familiar with the facts and the authorities to be able to separate the wheat from the chaff, may read it with profit; but the question is not as to the derivation of this civilization from any or all of the peoples of Asia, but whether it was brought over in the seventh century by a band of Carizmian shepherds who were driven from their homes by the Mahometan invasion. This is our author's own proposition, and, as he must abide by it, it follows that so much of his argument as relates to any other people is irrelevant and falls to the ground, unless it can be shown that they were in about the same stage of development as these refugees from the shores of the Caspian Sea. In other words, he must, according to his own showing, prove that there existed in the seventh century, upon the steppes of Tartary and among a tribe of shepherds, a civilization which equalled in every respect the best that had yet been developed upon the banks of the Ganges, the Euphrates, and the Nile. This he has not done; nor can he do it without indulging in as wild a flight of fancy as that which characterizes the assertion (pp. 39 and 45) "that proofs are being daily discovered which tend to show that the Iroquois, Algonquins, Shoshonees, Natchez, and other 'savage' tribes of North America had the same religion, the same manners and customs, and spoke the same language, as the Mexicans, the Central Americans, and the Peruvians."

So far as our author's argument is concerned this is, of course, a sufficient answer, though it does not go to the root of the matter. To do this we must go further, for, admitting that the American Indians derived their civilization from Asia, we hold with Tylor and other anthropologists that it is necessary to put the date of this event at a period long anterior to the seventh century, for the reason that, "when supposing a civilization to have been transmitted from one people to another, we must measure it by its lowest point, as the strength of a chain is measured by its weakest link." Applying this principle, it will be found that the people from whom the American Indians received their civilization were ignorant of the use of metals and of the domestication of animals, and, consequently, must have been living at that indefinite period in the remote past, and in that stage of progress, which, for the want of a better name, we are accustomed to call the age of stone.

In a concluding chapter our author tells us that the civilization of most of the American tribes, at the time of the conquest, was but a faint reflection of what it had been; and he ascribes this degeneration to "the want of a religion of peace elevating the heart with hope instead of depressing it with fear, to the absence of a liberal government, and of equal institutions founded in justice." Aside from the fact that the statement as to the extinction of this civilization is not admitted, it may be said that even if it were true the reasons given for it are not sufficient. We hasten to add that it is perhaps lucky for us that it is so, as there is not a government, a religion, or a set of institutions now on the face of the earth which could, if tried by this test, justify its existence at any and all times during the past 400 years.

Essays and Leaves from a Note-Book. By George Eliot. Harper & Brothers. 1884.

THE seven essays reprinted in this volume were selected by George Eliot from among her fugitive pieces, and, it is said, were carefully revised by her for publication after her death. If they are the best of her writings in the reviews, the world need not regret their fewness; for, as essays, they are by no means level with her reputation. They are not the work of a critic, but of a partisan; their aim is not disinterested, but to serve a cause in which the moral nature of the writer was strongly aroused; they do not belong so much to literature as to polemics. Yet the seriousness of George Eliot, her grave enthusiasm, expressing itself not in idealizing or eulogizing or any heightening of the reality, but rather in thrusts of irony, or sketches of grim truthfulness, or appeals laboriously practical, saves them from the fate of being merely literary curiosities. They have still the worth of their moral and the interest of the information hived in them; they show the old comprehensive, discriminating, rigid power of mind, and in a striking way the scientific basis, and firm, reflective trend of her convictions before she turned from critical and abstract thought to build the fictions that are truer than systems; but, for all that, they belong to the works that perish and ought to perish.

George Eliot's nature, her training, and her aims, did not particularly qualify her to be the judge of either Young or Heine: the consequence is that Young, under her treatment, becomes as gloomy an object of reprobation to us as the most hardened sinner could have been to his own blandly contemplative eyes; and Heine even, whose intelligence creates a sort of sympathy with his critic, loses half his merriment and all the conceited light-heartedness of it, as if he had put his cap and bells in his pocket to make a more decent appearance. Young was very likely a hypocrite morally, and a hyperbolical star-gazer poetically; but the energy of George Eliot's criticism spends itself not on the man or his poetry so much as on the profit-and-loss nature of his religion, which allowed his self-complacency to flourish under the notion that he held preferred stock. This was the vile thing, she thought, behind the man and his poetry, and so she thrust at the system through them. Such criticism has only the slightest value in art, however useful in other respects. The essay on Dr. Cumming is a simple denunciation of preaching that she did not like—rightly enough, because it was foolish, ignorant, and full of misrepresentation; but his words and himself are gone now, and it is a pity that this dust, too, did not settle with the rest that his little eddy of popularity raised. The four papers which conclude the collection are of a less pugnacious kind, being a notice of Lecky's 'Rationalism,' in which she thought he did not assign sufficient relative influence to science in moral changes, an account of Riehl's studies of German sociology, a description of a visit to Weimar, and an address to the workingmen of England when the extension of the suffrage was carried in 1868. The last few pages are taken up with some indifferent notes from a commonplace-book, such as were stitched together in 'Theophrastus Such.' The whole volume is on a lower plane of literary art and mental power than either her novels or her poems; it must, of course, be now added to her complete works, whence after a while time will winnow it.

Annals of Sandy Spring; or, Twenty Years' History of a Rural Community in Maryland. Baltimore: Cushings & Bailey.

"SANDY SPRING NEIGHBORHOOD" is in Montgomery County, Maryland. It is a Quaker community in the main, and, as such, enjoyed the blessing of free labor in a slave State before the civil war. In its homely thrift there is a suggestion of the Quaker Community at Kennett, Chester County, Pa., but the resemblance does not extend to all particulars. Unless the writer of these pages has, through fear of giving offence, been over-cautious, there has been at Sandy Spring no such aggregation of men and women remarkable for their intellectual and moral force and independence as at Kennett. Of course the local situation was a serious obstacle to any such part as the Quakers of Kennett played in the times preceding the rebellion. The main impression that we get of Sandy Spring from Mr. Farquhar's book is that of admirable decency and thrift, combined with intellectual feebleness and general pettiness; but this impression may be owing to the character of the annalist rather than to that of the community.

There is, it seems, at Sandy Spring a Lyceum Society, at whose annual meeting Mr. Farquhar has each year, for twenty years, read a brief history of the neighborhood for the year preceding. He is disposed to magnify his calling, and, as he approaches the conclusion of the twenty annual records that make up this little book, he quotes with sympathetic admiration that beautiful passage from Gibbon's autobiog-

raphy in which the historian describes his final deliverance, after twenty years' devotion to the 'Decline and Fall.' If General Butler could attribute Tennyson's "Brook" to Longfellow, it is not strange, perhaps, that Mr. Farquhar attributes

> "It is not growing like a tree
> In bulk doth make man better be," etc.,

to George Herbert instead of to Ben Jonson, and the admirable saying of Sir G. Cornewall Lewis, "Life would be so pleasant were it not for its pleasures," to "some Frenchman." There is much poverty of incident and interest throughout the book, which closes with a hope that when the comet of October, 1883, appears again, it may behold not only a brighter, better world than ours, but also a narrow-gauge railroad connecting Sandy Spring with the great outside world. This railroad is the most engrossing topic in the book. Each chapter in turn leads up to an account of the deaths, births, and marriages of the ended year. The writer's bathos reaches its lowest deep in these passages. On page 82 he records a "marriage gale"—"the actual solemnization of three weddings very near together. . . . Thanksgiving day of 1870, how inexpressibly bright and sweet and balmy! And yet there was another side to the picture; for the influence of these exciting events served to lessen the interest felt in opening the lecture course of the Lyceum." On page 237 we are told how Doctor Magruder dropped insensible at a social meeting, "and by the coming of dawn next morning his bright, bold spirit had left its splendid earthly tenement a mass of lifeless clay. *A void was left there, never since filled.*" The italics are our own.

Kreolische Studien, IV. and V. Von Dr. Hugo Schuchardt. Vienna. 1883.

Among the islands and archipelagos of the South Sea, the missionaries and colonists of to-day were long antedated by the whalers, the trepang-fishers, and the sandalwood-seekers. These, singularly enough, were chiefly of English and North American origin, traders sailing among the islands and trafficking with the natives, between whom and the trading people some method of communication had to be devised so that the productions or possessions of each could be speedily and advantageously exchanged. Hence a rude lingo sprang into existence, originated primarily by the whaling men, and called distinctively the "whalers' jargon," because they first of all touched on these remote and varied coasts and felt the need of communicating with the aborigines. Added to the English ground-stock of this jargon there came, in process of time, an accretion of words picked up by these "beach-combers" from every possible source, so that in one of them English, Portuguese, Hawaiian, and Chinese elements jostle amiably together without producing (as one would suppose) an unintelligible result. Many of the singular expressions prevalent in these seas, indeed, have been introduced from season to season by American whalers who, in the pursuit of their business, are obliged to take on board a number of the aborigines from many different places to assist them in their whale catching. The activity of the trepang-catchers and the sandalwood-hunters was naturally more limited, but to counterbalance this they came into more enduring relations with the South Sea populations, and had better opportunities of refining and elaborating their jargon. Large numbers of these Oceanians, voluntarily or involuntarily, serve as laborers on the ships, and though the English which they learn from the sailors and fugitives is not of the purest, it is sufficiently clear and impressive to hang in the recollection of the laborers and perpetuate itself from year to year, until, being greatly helped by the intrusion of a deeper and purer European culture, by instruction in unspoiled English, and by greater intelligence and appreciation of the Oceanian dialects on the part of Europeans themselves, it bids fair to evolve itself out of its cocoon stage and spread in a purified form all over the islands of the South Sea.

New Caledonia (albeit a French colony) and the New Hebrides are becoming particularly important factors in the diffusion of the New Pidgin English in the southern latitudes. Many of the New Hebrideans, indeed, after the term of their service on the plantations has expired, remain in New Caledonia as workmen and servants; and here especially an astonishing lingo has excreted itself, made up of English, Chinese, Portuguese, and New Caledonian words. We have the peculiarly interesting fact, furthermore, that the French are known all over these remote regions as the *wee-wee* men (*oui-oui*) and the English as the *yes* men, quite in the fashion after which Italian in the Middle Ages was called the *lingua di sì* and the French dialects the *langues d'oïl et d'oc*. So, by a grotesque twist not entirely devoid of humor, the Methodist denomination, which ingeniously combines missionary work with (presumably) profitable trade in coco oil, is called in Melanesian *lotu wai-wai* (the coco-oil denomination).

The English of New Caledonia goes by the curious name of *Beche-le-mar*, or Sea-Slug-Catcher English. The trepang or sea-slug (*holothuria edulis*) is the special delicacy of the Chinese, and is called in Portuguese *bicho de mar*, French *bêche de mer*, English *beech de mer*, further corrupted into *beche le mar*. An extensive trade is plied for the gratification of the Chinese in this sea animal, the chief agents in which are English and American sailors. Hence the wonderful growth of numerous mediary jargons in Queensland, the Fiji Islands, and throughout Oceania, the results of which are indicated and explained by Dr. Schuchardt in one of his very interesting studies ('Ueber das Melano-Englische'). Here are a few specimens of it:

"What for you put diss belong-a master in fyer? him cost plenty money!" "Missis, man belong bullamacow him stop." (Mistress, the bull-and-the-cow butcher is come). "What for lamp you make him dead (put out)?" "This fellow hat belong you?" "What man you give him stick?" "Me like him grog," etc.

Dr. Schuchardt's second pamphlet, on the Spanish-Tagil Creole of the Philippine Islands, is scarcely less interesting to an intelligent inquirer. The Spanish language has run a far less brilliant career in the Malayan Archipelago than in Central and South America and the West Indies. Of the population really subject to the Spanish Crown in the Philippines only about one-fortieth speaks Spanish. Even in the provinces of Manila and Cavité, where the Spanish language is at its strongest, only a seventh or eighth part of the people speak the language of the conquerors, and this after an occupation of three centuries. This is partly attributable to the overwhelming numbers of the aboriginal population as compared with the small garrisons of Spanish Americans, Mexicans (before the emancipation), and *mestizos*, who held the islands for the crown, and partly to the disinclination of the colonial clergy to instruct the Malays in Spanish, paralleled by the course of the Jesuits in Paraguay. Now, however, a better state of things, modelled after the more enlightened course of the Dutch in Java, has begun to prevail in the Philippines. In the capital the prevalence of Spanish and the growing interest in its acquisition have started into existence some very interesting linguistic phenomena. A "scullion Spanish," or *Español de cocina*, recalling to mind the lingo of the Greek cooks of antiquity, is in full efflorescence, springing from the lips of the colored population and gradually making its way up into the higher circles, much to the grief and mortification of lovers of the so-called *Castellano*. For the seeker after truth or insight into the genesis of speech this patois has a high interest, being not so much a finished patois, like the Portuguese of Macao or Malacca, as a growing and expanding dialect full of instructive gradations, replete with reminiscences of Castilian grammar, and yet richly garnished with native Malayan words; a fluent jargon current among a numerous Indian population, and showing at their most transparent stage many of the important evolutionary processes of Creole idiom.

Dr. Schuchardt is to be congratulated on his important contributions to the study of mixed dialects, and on the intelligent manner in which he has gathered and arranged his material, principally acquired by an extensive and laborious correspondence with cultivated men in the remotest corners of the globe.

Leisure Hours in Russia. By Wickham Hoffman, late Secretary United States Legation, St. Petersburg; Minister Resident in Denmark; author of 'Camp, Court, and Siege.' London. 1883.

This is a very unpretentious little book, embracing sketches and translations, of which the following are the most extensive: "St. Petersburg," "Russian Superstitions," "Nadeschda," "Finland," and the "Kalevala." Some of the pieces originally appeared in a Philadelphia monthly, which is all we are told in a prefatory way. The prose sketches contain unadorned descriptions and characterizations, little of which will be new to the more diligent class of readers, excepting the pages treating of Finland, a country seldom visited and described by travellers from England or the United States, though, for a Russian province, abounding in highly characteristic features. The little our author has to tell about this almost hyperborean land of fens, lakes, and fiords, and its two million non-Slavic, partly non-Aryan, and with few exceptions Protestant inhabitants, is enough to show the fallacy which he aims at destroying. The popular opinion of the Finns—a term here used of the Finlanders proper—entertained by nine-tenths of the people of the United States is, he says, that "they are pretty much like the Lapps: that is to say, that they live in huts, dress in skins, and live principally upon reindeer milk and black bread." He is, in fact, very fond of Finland, and especially of its capital, Helsingfors, "a picturesque and charming little town of about 35,000 inhabitants," with a university, various learned societies, and upward of twenty newspapers and periodicals, chiefly in Swedish and Finnish. He believes "it is difficult to find a more highly civilized, cultivated, and agreeable society than exists at Helsingfors." And it is mostly Finnish things that attracted his attention during the leisure hours in the Russian capital of which the fruits are here presented; for only the first thirty pages of the book are descriptive of things properly Russian, while all the rest is devoted to the Finnish Grand Duchy—to translations from Runeberg, a Finlander whose contributions to Swedish literature rank among the most esteemed productions in that language, and to an abstract of the great popular epic in the ancient Finnish vernacular, the 'Kalevala.'

Runeberg's romantic tale in verse, 'Nadeschda'—Mr. Hoffman in this and other Russian names improperly follows the spelling of the

Swedish original—is rendered entire. It is attractive in its simplicity, and in some of its parts touching, though the idyllic scenes are placed in the rude wilds of Muscovy, and Catharine II. plays the part of a benign *deus ex machina*. The translation, however, is far from being satisfactory. The versification is very loose, and there is a great deal of unnecessary or bad inversion, as in the following:

> "A rose plucking then Nadeschdina
> Wandered on in beauty and gladness."
>
> "Then from the flow'ry bank of the brook,
> Took she a path that led to the hall."
>
> "And replied then the maiden,
> 'On the ocean a sailor
> My young prince is now like to.'"

The following lines are, probably, the worst of all:

> "'In what occupation, what place residing,
> Told me you have not, and I have not asked you.'"

The translations from the 'Kalevala' are, on the whole, incomparably better, and the abridgments into which the unrhymed verses are woven also show an advance in style on the preceding prose pages. The translator evidently studied with good results the diction of Longfellow's "Hiawatha," knowing that its verses were modelled on those of the 'Kalevala.' Not a few of the verses are, both in sentiment and wording, as pleasing as this address to a departing bride by her mother:

> "'Why abandon thus your mother? . . .
> Here you had no thought of trouble,
> Here no care your heart to burden.
> Cares were left to pines of forest,
> Troubles to the posts and fences,
> Bitter griefs to trees of marshes,
> Sad complaints to lonely birches.
> Like the leaf you floated onward,
> Like the butterfly in summer—
> Grew a bay, a beauteous berry,
> In the meadow of your mother.'"

Frederick the Great. By Col. C. B. Brackenbury, R. A. [The New Plutarch.] G. P. Putnam's Sons. 1884.

FOR the majority of readers who do not care to make a study of Frederick the Great, but who wish to have an intelligent knowledge of the principal events in his career, and a fair appreciation of his character and abilities as a whole, Colonel Brackenbury's life will be found all that could be desired. It is written in a very interesting style, and shows good judgment in the selection of materials, and a clear conception of the relation of Frederick to general history. Military events are described especially well, but unfortunately there are no maps or plans—a defect which is almost fatal to the value of the book as a military history. Col. Brackenbury's estimate of his hero from the point of view of public morality may probably be taken as on the whole that of history. It needs no elaborate arguments to show that Frederick had little regard for right and wrong; or, on the other hand, that he was no worse than his rivals, only a great deal abler and shrewder. Of the two especially vulnerable points in his career, no attempt is made to justify the partition of Poland, which we could wish, indeed, had been condemned a little more heartily. For the seizure of Silesia strong grounds of justification are given—strong enough, at any rate, to be valid against the predecessors of Maria Theresa. That virtuous Queen was made to suffer for the crimes of her fathers. There is at the beginning of the book a compendious (rather too brief) account of the early growth of the Margraviate of Brandenburg, and of the Hohenzollern family. Here it is incorrect to say (p. 4) that Albert the Bear was made *Kurfürst*, or Elector of the Empire. The Electoral College was not organized until a hundred years after his time. What is true, is that he, the most notable German Prince of his time, obtained for his house the hereditary dignity of Archchamberlain of the Empire; and that, the electoral office coming to be attached to the great household offices, the Margrave of Brandenburg received this power as an outcome of the other.

Woodcraft. By "Nessmuk." *Forest and Stream* Publishing Co.

THIS book contains a series of useful instructions for those who go to the woods in search of health or amusement, and is, on the whole, a valuable companion and assistant to such as have not large stores of personal experience to draw from. It is systematically arranged and plainly written, with a number of explanatory illustrations. "Nessmuk" believes in "travelling light"—for fishing excursions recommending on p. 16 what most people consider, and justly, a nuisance, "a general fishing-rod," not good for bait fishing and almost worthless for fly fishing, while on p. 22 he instances the superfluousness of washing material in the woods by stating that "last summer I carried a cake of soap and towel in my knapsack through the North woods for a seven weeks' tour, and never used either a single time. When I had established a good glaze on the skin (with tar and oil) it was too valuable to be sacrificed for any weak whim connected with soap and water." Probably the portrait of "Nessmuk" which forms the frontispiece was taken just before the seven weeks were up. The description of the headlight, used almost entirely for shooting deer out of season, might have been omitted; but on the whole the book is sound and practical, and well worth the reading.

BOOKS OF THE WEEK.

An Hour with Miss Streator. Boston: D. Lothrop & Co.
Barnes, Dame Juliana. An Older Form of the Treatyse of Fysshynge wyth an Angle. London: W. Satchell & Co.

THE CENTURY CO.,
33 East 17th St., New York.

THE DATAVYA BHARAT KARYAlaya has ready for distribution among American scholars the following books, at the prices named, which include postage:
Mahábhárata in Sanskrit.....36 shillings
Rámáyana in Sanskrit.....24 shillings
English translation of Mahábhárata.....£2½ or £6½
N. B.—£2½ is payable by persons of slender means, who cannot afford to pay £6½.
Address PROTAP CHUNDER ROY,
367 Upper Chitpore Road, Calcutta, India.

FOR SALE.—Two "Capi-de-Monti" Cups and Saucers, very old and rare. Particulars can be had by addressing "W. C. H.," care of *Nation*.

NOW READY:

Professor Conant.

A POWERFUL NOVEL OF ENGLISH AND AMERICAN SOCIAL AND POLITICAL LIFE.

By Hon. L. S. HUNTINGTON.

1 Vol., cloth, $1.25.

Professor Conant, at first an "Oxford professor" and afterward a member of Parliament, visits this country, and American hearts and homes are open to receive him. The book abounds in English, American, and colonial social pictures.

R. WORTHINGTON,
770 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 29, 1884.

The Week.

THE affairs of Grant & Ward still maintain their primacy among financial misdemeanors, by reason both of the magnitude of the liabilities and the queer things which are all the time cropping out. Mr. Davies, the receiver, has commenced a suit against W. S. Warner to recover large sums of money obtained by the latter from the firm of Grant & Ward without consideration. The complaint avers that the firm was insolvent at least a year before it failed, and that Warner had reasonable cause to believe that the money drawn out by Ward and handed to him (Warner) was unlawfully withdrawn, and that the transfers of property made by Ward to Warner about the time of the failure were fictitious and should be set aside. All this is highly probable; but Mr. Ferdinand Ward's brother, William S. Ward, of Colorado, a man of good repute, makes some statements to the newspaper reporters implying that there was other crookedness besides W. S. Warner's. According to William S. Ward, it was not Warner alone who wrung this large amount of property out of Ferdinand Ward, but "Work and Warner." These two were present at the midnight interview when the deeds were executed. These two were "getting credits for profits purely fictitious"—profits of ten, and even twenty, per cent. per month, which they must have known were fictitious. The queerest thing in the whole jumble is the fact that the receiver, Davies, is Work's law partner. It will become necessary, therefore, if Mr. William Ward's statements are correct, for Mr. Davies, as receiver, to sue his own partner. Such a suit would probably determine a point which stands much in need of elucidation, viz., whether Work or Warner was the master spirit in the enterprise of plucking Ward while Ward was plucking the public. But, perhaps, a more enterprising plaintiff in such a suit could be found than the receiver. Mr. William Ward says in conclusion: "I do not propose to stand by without objection and see the debtors of this firm claiming to be its creditors," a sentiment which the real creditors of Grant & Ward will heartily endorse.

Dr. Newman on Sunday, commenting on the panic—which naturally supplies much material for pulpit exhortation—said that "religion does not interfere with business life, nor business life with religion," and wished to know "why the idea of hostility between the two was so prevalent." We do not think it is prevalent—not nearly so prevalent, in fact, as it ought to be. The great trouble of the day is, that religion does not interfere enough with business life. In Stalwart circles in particular the separation of religion and business has long been painfully evident. It is too much the custom for business men to leave their religion up town during business hours. It is told of one of our prominent financiers that, being reproached with some sharp practice in Wall Street, as unbecoming in so prominent a professor of religion as he was, he said, "Up town I endeavor to do my duty to God, the Church, and my family, but down town I have to take care of myself." It would not be a bad thing, in fact, if the financial "shrinkage" in some way affected the churches as well as the financiers and if some of the cutting down which goes on in private houses as a consequence of these crises, operated on the gorgeous buildings, and the expensive lots, and the high-priced music and pews, with which so much of the war of religion against dishonesty is carried on in this city. This would bring home to the worshippers the danger of going too fast probably much more effectively than most of the sermons.

Russell Sage has apparently settled with the holders of all his "privileges" who care for a settlement at present prices, and is now enjoying a brief period for reflection and refreshment. His experience during the past few days is probably unique. It is doubtful whether any other member of the human family has passed through anything like it. It must have been a sort of foreshadowing of the punishment which awaits wicked brokers in the nether world, to have stocks in which he had made heavy losses "put to him," hour after hour and day after day, in infernal iteration, by an apparently endless file of mocking or infuriate creditors. An eternity of this, or something like this, must surely be the fate which awaits, after death, dealers in "puts" who "lay down on their privileges." Sage on one day undoubtedly came near incurring the dreadful penalty. If he did not actually "lay down" on Tuesday week, he lolled and lounged in a very suspicious and alarming manner. It will be interesting to see whether his taste for "puts" will survive this ordeal, which so much resembles the plan of curing inebriates by giving them a little whiskey in everything they eat. Will not the very sight of a boy bringing a "put" hereafter cause faintness and nausea?

The failure of the Bankruptcy Bill is a great misfortune, coming as it does at a time when a general insolvency law is most needed. A bankruptcy act will have to be passed sooner or later, and probably would have been passed now but for the deep distrust of Wall Street and Wall Street "methods" which the recent troubles have inspired in some of the patriots who carry on the work of legislation. A bankrupt act is evidently supposed by these statesmen to be simply a device by which debtors get rid of their obligations, and it must be admitted that there is some warrant for suspecting the motives of a good many of the "business men" who are strongly in favor of one. But we have yet, sooner or later, to make our choice between such a bankrupt system as every other civilized country has, and the State insolvent system. There is certainly just as much chance for fraud under the latter as the former; and any one who has watched the proceedings in the recent assignment cases must regret that there should not be a uniform instead of a local system of investigating all bankruptcies.

Signs of disintegration among the Blaine forces multiply daily, and the managers of the boom are making heroic efforts to stop it. From nearly all the States in which large numbers of delegates have been claimed for Blaine, definite and apparently trustworthy information comes that he has nothing like the strength claimed, and that he is likely to have less when the Convention meets than he has now. The main cause of the falling away in his support is the belief which has spread through all the States that he could not carry New York if he were nominated. In order to counteract the bad effect of this belief, the Blaine organs are now arguing that New York is after all only a secondary consideration; that the first thing to be considered is the carrying of Maine in September and Ohio in October, and that the candidate who can carry those States will have no trouble in New York. This apparently makes slight impression upon anybody, and even Murat Halstead, who was a pretty good Blaine man for a time while the boom was big with promise, is admitting more or less frankly that there is no hope for Blaine. He has just returned to Cincinnati from a visit to this city and Washington, where he had all possible advantages for inspecting the boom, and gives it as the result of his observation that there "is a growing chance for John Sherman." The "close calculators," he says, "have fixed it up that Arthur and Blaine will prove too strong for each other." He says also that Blaine has a "sincere feeling that the office is not worth the struggle."

There can be no doubt that the Blaine men have greatly exaggerated their strength in the Northwestern delegations. They "claimed" 23 delegates from Indiana, 25 from Michigan, 10 from Nebraska, 10 from Kansas, 28 from Ohio, 12 from Wisconsin, and 26 from Iowa. Recent advices from those States cut the figures down to 10 from Indiana, 3 from Nebraska, 6 from Kansas, 12 from Ohio, and leave Michigan and Wisconsin altogether doubtful, while it is quite certain that Mr. Blaine will not receive the whole Iowa vote, although he may get the majority of it. The total vote claimed for Blaine, including the erroneous estimates of the Western States, was 378. Three hundred is probably a liberal estimate of his strength after making allowance for his alleged Southern recruits. We are convinced that he will not get 32 votes from New York, or 16 from New Jersey, or 8 from Rhode Island, or 2 from Massachusetts—these being a part of the 378 which his organs have counted for him. The bragging tone which they indulged two weeks ago has moderated of late in a very noticeable way.

A week or two ago the British Minister was interviewed in Mr. Blaine's behalf, and testified, it was reported, that the election of Mr.

Blaine would be a mighty disagreeable thing for his government and its diplomatic representatives abroad, as he would make it hot for them about canals, foreign trade, and divers other matters. All this time, however, there has been no news as to the effect on the English people of "the history." In fact, the silence of Europe about the history has been rather puzzling. Not one historian of the Old World has opened his mouth about it, or given any sign that he even knew of its existence. The talk about it has been, indeed, confined to American members of the Blaine boom. This can, of course, be easily accounted for by ascribing it to jealousy. The European historians naturally fear the effect of Mr. Blaine's book on their own sales. It is not likely, in fact, that there will be much demand for Freeman's 'History of the Norman Conquest,' or for Mommsen's 'History of Rome,' when 2,000,000 copies of a really live work like 'Twenty Years in Congress' are in the market and selling like hot cakes. The London *Times* has now had the manliness to disregard insular prejudices, and publish a "first-class notice" of the American history, which will be very useful during the coming week in showing that the British dread of Mr. Blaine as a statesman is not unmingled with admiration for him as a writer. They will, in short, read him, not with moistened eyes, but shaking knees.

The movements of Secretary Chandler are watched with great interest as the time for the National Convention to meet draws near. He seems to have dropped for the time his official capacity as a member of the Cabinet, and to be operating in his old and very familiar capacity as "Bill." It is announced that by a singular coincidence he and a large number of Southern delegates will meet in Chicago early this week, and the possibilities of this accidental conference are a subject of great anxiety to both the Blaine and the Arthur managers. The former are fully aware of Bill's persuasive powers in meetings of this kind, for they had the advantage of his coöperation in former years. The latter are also aware of them, but are disturbed by rumors that Bill has never quite recovered from his Blaine infatuation, and is likely to use some of his power secretly for Blaine now. Indeed, there is a lively discussion in progress as to which side Bill is really on, and there are shrewd observers who say that he may turn out to be a Blaine man when the critical moment arrives. All speculation of this sort, while it must necessarily be disagreeable to Chandler as Secretary of the Navy, must at the same time be most flattering to him in his more congenial character as Bill. It shows that the labors of his life are fully appreciated by the public, and that, whatever else may be said of him, nobody will ever accuse him of wilfully putting himself on the side of the losing man.

The "old ticket" movement among the conservative and revenue-reform Democrats is, of course, a cover for the boom of the real candidate of the old-ticket men, whoever he may turn out to be, and is also a defensive measure against the machinations of the protectionists, the Butler Democrats, and other wicked persons who will probably show their hands early in the game. The actual nomination of Tilden cannot be seriously thought of, because he not only is himself a "tattooed" statesman, but is in such a physical condition that exposure of him to campaign charges would probably finish him. There are the cipher despatches and the income-tax suit, all of which would have to be gone into once more; and to political charges what the lawyers call *res judicata* cannot be pleaded. But the use of the old ticket as a cover is a very astute political device, and no one in this State would be very much surprised if, when it was removed, it should disclose the well-known and respected features of the present Governor of New York. The old ticket might do a far worse and more foolish thing than nominate Mr. Cleveland.

The action of the Democratic majority in Congress on Thursday, in voting to admit a contestant to a seat to which on the previous day they had voted that he had no right, was a very scandalous performance. There is no evidence that English, who is the son of the last Democratic candidate for Vice-President, was elected to the seat, and the only reason for putting him into it which appears to have been given was that his father had set his heart upon having him get it. The father was so conspicuous in lobbying for his son on Thursday that several members protested against his efforts as constituting a breach of an ex-member's privileges to the floor. Mr. Cox, however, came to his rescue with the remarkable explanation that the rule defining such privileges had been drawn by him, and that its object was to bar out ex-members who came to lobby for railway interests, but not to limit in any way the natural eagerness of a fond father who was on the floor to help forward his son's cause. There were some vague charges made that members had been bribed to change their views in the case, and suspicion hovered for several hours over "Calamity" Weller, who had voted at the outset against English, but who was suddenly called away before the final ballot was taken. These are generally believed to be unfounded, however, and the most common view of the matter is that the Democratic members voted to give English the seat out of sheer inability to avoid a blunder.

According to a Chicago despatch, the Convention next week is to be marked by a total absence of "headquarters." This is as nearly incredible as any political story can be, for in the case of a candidate who has accumulated any considerable amount of strength in advance, and who has a large number of delegates in his favor, a headquarters—in other words, a large suite of rooms in a hotel where meetings can be held, and plots hatched for capturing delegates, transferring strength, and getting early and reliable information as to the "break"—have hitherto been considered an absolute necessity in a contest of this sort. One great function of a headquarters is that it furnishes a rallying point to which the supporters of a candidate can retire in the intervals of the fight, count noses, talk matters over, form estimates of what the next vote will show, receive visits from other delegations, prepare to transfer strength, etc., etc. A headquarters is generally believed to be worth a good many votes to any candidate, and as this is true of all the candidates, it would be difficult for one of them to abandon the custom unless all the rest did so too. Blaine and Logan giving up their headquarters without Arthur doing the same would be like Gladstone and Ferry disarming England and France without Bismarck doing as much in Germany.

That the story should be circulated and find believers, seems to imply very strongly what we have all along contended with regard to some of the great men before the Convention, that their booms are singularly factitious, and that the promoters of them know this to be the case. There has been very little real "pledging" in advance this year, and three-quarters of the Convention will go to Chicago without being openly bound to any one, and with a certain unwillingness to brand themselves in advance with the badge of a particular candidate, and with a burning desire to find out simply who is the man who is going to be able to get the most votes. Out of these circumstances, the story (which we find in an Arthur paper) must have originated. The delegates are supposed to feel that they are in a better position to find out where they are, and what the "lay of the land" is, by simply appearing as delegates from Pennsylvania or New York, as the case may be, rather than as Arthur, Blaine, or Logan delegates. If there is any candidate before the Convention who only counts on a majority of the votes as the result of quiet intrigue and bargains and deals, and is, therefore, anxious to prevent too much publicity in advance, it might be a good plan for him to get headquarters abolished, at any rate until after the second or third ballot, when, the work of "subsoiling" the doubtful delegations having been done, he might suddenly develop a sort of a temporary headquarters in the Field, and come in with the Gallery at his back and the dark horses nowhere. It would be all of a piece with other things that such candidates have done before now. For ourselves, we insist that the good old American custom of headquarters ought to be kept up, and we rely upon the thoughtful recluse of Washington, who must desire to preserve all the best traditions of the Government, and the grim warrior of Illinois, to whom the very name of headquarters must be as a bugle-call, to see to it that the proposed innovation is not attempted.

The Senate Post-office Committee, in their report on postal telegraphy, say that in their belief the lines of the Western Union Telegraph Company could be duplicated at the present time for the sum of $24,500,000, including the cost of instruments and batteries. They go on to say that "the swollen capitalization of the Western Union has created at one and the same time a cover and an inducement and in some senses a necessity for excessive charges for telegrams. So long as and so far as the public have been made to believe that the nominal capital was a real one, it has tended to

cause an acquiescence in excessive charges, while the exposure of the actual nature of the nominal capital does not diminish the pressure of the motives which impel the managers of the company to keep up charges which are essential to the maintenance of the present dividends upon the immense mass of its watered stock." This is undoubtedly true, but it is true also that the "water" is going out of Western Union at a rapid rate, without any squeezing on the part of Congress. The stock of the company sold above par after the consolidation with the American Union. During the past week it was quoted at 53. At this rate the whole property, including the valuable real estate which it owns, was worth $42,400,000, or only $17,900,000 more than the Committee estimate to be the probable cost of duplicating the poles, wires, and instruments. The truth is that the monopoly character of the Western Union Company has ceased to exist, and, whether Congress establishes a Postal Telegraph or not, the public will soon get their telegraphing done at what the service is fairly worth. The "water" in Western Union may serve to point a moral or adorn a tale, but it will do no further harm to any except those who have invested their money in the water.

A bill has been reported by the Judiciary Committee of the Senate to authorize the Secretary of the Treasury to pay off and redeem the first mortgages on the Union and Central Pacific Railways and their subsidized branches, in the event of such default as would bring the property to foreclosure under the first mortgage. The object of this is to protect the Government's second mortgage and accrued interest on the same property. The opposition to the bill, based upon the notion that it is opposed to the Government's proper duties and functions to own and operate railways, comes too late. That would have been a valid argument in 1862, when the subsidy was granted, and again in 1864, when the Government's mortgage was postponed and made subject to another mortgage of equal amount. The question is no longer one of mixing up the Government's interests with private interests, but of saving money already spent—saving it in the only way still open. Upon this there can hardly be two honest opinions. There is no reason yet to suppose that default will be made on any of the first mortgages, but it is altogether prudent to clothe the Executive with power to meet such a contingency.

Ex-Senator Kellogg, of Louisiana, is in search of a "vindication," and is much grieved because Congress, of which he is now a member, declines to give it to him. The grounds of the refusal are, that when Mr. Kellogg had an opportunity to prove his innocence in court he allowed the statute of limitations to be pleaded as an excuse for discontinuing the trial; that the charges against him relate to acts committed before his election to Congress, and are therefore outside its cognizance. Mr. Kellogg made a long speech insisting upon an investigation, saying that his character had been injured by testimony made before the Springer Investigating Committee; that he was a victim of the malice of wicked men; that he could prove his innocence; and that, if he had violated any laws, he could show that other Congressmen had done the same thing and had not been punished. The sincerity of his desire for investigation was painfully impeached by a statement from one of his Democratic colleagues from Louisiana, to the effect that he had been trying for weeks to induce Kellogg to demand an inquiry, and had only succeeded in persuading him to make the demand on Friday by threatening to do it himself in case he refused longer. The lack of a "vindication" to a sensitive man like Kellogg is of course hard to bear, but he ought to console himself with the reflection that his reputation cannot be injured by anything which Congress may say or decline to say about it.

The whiskey dealers, having failed in getting aid from Congress in carrying their large stocks, have formed a pool, railroad fashion, to keep prices up; but now the pool is suffering from the old trouble—the secret "cutting of rates" by selfish and perfidious men. There are sad accounts from Chicago and Cincinnati of the treachery of some of the members in selling below the pool price of $1 11 a gallon. The chances are said to be now that the pool will go to pieces this summer if the consumption does not increase.

A worse way to get out of financial difficulties than that which appears to have been adopted by the Reading Railroad can hardly be imagined. They are going to issue scrip to pay wages, while their credit is seriously impaired, and although the employees do not at all like the plan. Mr. Gowen declares that there will be no trouble, because the scrip will be taken up by some capitalist who will pay par for it. If this is so, why talk about issuing scrip to pay wages at all? On the other hand, if it is not so, what is the use of pretending that it is so? The employees of the road know perfectly well, or ought to know, that a receiver could be ordered to pay such current obligations in cash; and the talk about scrip wages can only tend to make creditors think about a receivership.

A curious case has arisen in France connected with the collapse of the Union Générale. Vicomte de la Panouse was "squeezed" in the crash, could not meet his contracts, and got one Bacot, a broker, to pay his differences for him to the amount of 600,000 francs, giving him twelve bills of 50,000 francs each. La Panouse afterwards repudiated these as a gambling transaction, and his view was sustained by the courts. Bacot, however, kept the bills, and this so irritated Panouse that he brought an action to compel their return to him as necessary to "protect" himself against them, and actually recovered judgment. This may be good law in France, but would seem to be covered in this country by the rule that in disputes wholly outside the law the possessor of the property has the better right. Why a court of justice should bother itself with the "protection" of a gambler who repudiates his debts of honor, it is hard to see.

The demand for higher duties on grain and other agricultural products in France calls forth some solemn words of warning from M. Leroy-Beaulieu. He says that while part of the agricultural depression is due to a succession of bad harvests and the phylloxera, by far the greater part of it is due to things which no increase of duties will cure, such as heavy taxation, the drafting off of agricultural labor to unprofitable public works, and the turning of the heads of the younger generation of the farming population by over-education in the public schools. He ridicules the idea that any government will dare to raise duties to the point which, in the absence of other remedies, would protect the French farmer from foreign competition. Grain producers are suffering from the supplies of new countries and the low rates of freight both by sea and land, and the beet-sugar men from the superiority of the German beet-root in saccharine properties.

Late public utterances of General Gurko, the Governor of the Kingdom of Poland, or, as the Russians prefer to call it, the Vistula Country, show that, in the midst of all its troubles and anxieties, the Russian Government not only steadily adheres to its old schemes of denationalizing its Polish territories, but is now bent on precipitating the process. The recent restoration of friendly relations with the Berlin Government offers a favorable opportunity, and there is an obvious inclination to punish the Poles for their late endeavor to foment discord and sow suspicions tween the two Governments. Gurko's occasional brief addresses to leading members of the Polish clergy or nobility are very severe in tone, and the comments of his official organ, the *Warsaw Journal*, exasperating. A provocation which is novel even in Warsaw, is the partial surrender of the principal theatre of that metropolis to a company of Russian players, in order to accelerate the course of Russianization, of which the exclusive use of the Russian language in schools and public offices has hitherto been the main instrument. All this, as the result obviously shows, is much more galling than effective. The patriotic resistance of the Poles is unremittent, and is both encouraged and strengthened by the opposite course of events in neighboring Galicia, or Austrian Poland, where the demands of the Polish nationality are more and more yielded to by the organs of the Imperial Government, in almost pure indifference to the antagonistic claims of the Ruthene population. These opposite currents of official influence in two adjoining parts of ancient Poland, under the clear direction of Governments formerly equally detested by their Polish subjects and now united in apparent friendship, are an interesting phenomenon in the history of our times. In the third division of Poland, the Prussian, the attitude of the Government toward the Poles is unfriendly, often rudely so, but mainly on account of their political alliance with the Ultramontanes. But here, too, the Polish nationality is not losing ground, as Bismarck himself, some time ago, frankly admitted.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 21, to TUESDAY, May 27, 1884, inclusive.]

DOMESTIC.

WALL STREET on Wednesday was feverish and excited, prices being rapidly forced down. At 10:40 o'clock the suspension of J. L. Brownell & Co. was announced. It is believed that their liabilities are not more than $150,000.

The Penn Bank, of Pittsburgh, one of the largest in that city, suspended on Wednesday after a run of five days, during which more than a half a million dollars of deposits were withdrawn. The bank is believed to be perfectly solvent and resumed payment on Friday, but on Monday again closed its doors, alleging, as the cause, that President Riddle had been taken suddenly and seriously ill.

Ferdinand Ward, of the firm of Grant & Ward, was arrested late on Wednesday afternoon on an order issued on the application of Mr. John R. Dos Passos, counsel for County Chamberlain J. Nelson Tappan, in a suit to recover $320,000, alleged to have been obtained by Mr. Ward on false pretences. The amount of bail fixed by the Court was $300,000. Mr. Ward passed the night at a hotel in the custody of a deputy sheriff, and has since been in Ludlow Street Jail.

The course of the market on Thursday was steadily downward.

On Friday it became known that Charles A. Hinckley, paying teller of the West Side Bank, Eighth Avenue and Thirty-fourth Street, in this city, had disappeared on May 15, and about $95,000 of the bank's funds were found to be missing. It is supposed that they were lost in speculations at the Produce Exchange. The Directors issued a statement on Friday evening that their capital stock was intact, and that they had a surplus of about $100,000 to the bank's credit. During Saturday there was a run on the bank, and about 1 o'clock it closed its doors, owing to the refusal of the American Exchange Bank to make further "clearings" for it.

Business was dull on Saturday at the Stock Exchange, and about noon there was a slight rally in prices.

James D. Fish, President of the Marine National Bank, was arrested on Sunday evening in his rooms. The warrant was issued by United States Commissioner Shields on an affidavit sworn to by Bank Examiner Scriba. It charges Mr. Fish with "unlawfully misapplying certain sums of money, to the amount of $1,400,000 of the moneys and funds of the Marine National Banking Association, to his own use, benefit, and advantage, with intent to injure and defraud such association." Mr. Fish made a remarkable statement to a reporter, alleging that he had an autograph letter from General Grant, asserting that all the Government contracts of the Grant & Ward firm were genuine, and that the alleged profits were all right. Mr. Fish furnished bail on Monday for $30,000. Warrants are also out for the arrest of John C. Eno, late President of the Second National Bank, but he has eluded the officers.

General Grant's counsel have furnished letters for publication, in view of the serious statement made by James D. Fish. One of the letters from General Grant to Mr. Fish is an acknowledgment of his status as a general partner in the firm. The other is a brief letter which was written by Ward, copied by an employee of the firm, and handed to General Grant for his signature. He did not scrutinize it, but signed it on the assurance that it was only an ordinary letter in the course of business. It is addressed to Mr. Fish, and reads: "In relation to the matter of discount kindly made by you for account of Grant & Ward, I would say that I think the investments are safe, and I am willing that Mr. Ward should derive what profit he can for the firm that the use of my name and influence may bring." This letter Mr. Fish's friends claim was in reply to one from Mr. Fish, in which he mentioned that he had endorsed and discounted notes for Grant & Ward to the amount of $200,000, and added: "These notes, as I understand it, are given for no other purpose than to raise money for the payment of grain, etc., purchased to fill the Government contracts." General Grant's friends, on the other hand, assert that he believed that the letter was wholly disconnected from the preceding correspondence. A friend of Mr. Fish's said that the latter made no charge of wilful deception against General Grant, but simply defended himself from the charge of being a conspirator with Ward, by whom he had been deceived and ruined. General Grant had also been deceived by the same person.

The Secretary of the Treasury issued on Thursday the 128th call for the redemption of bonds. It is for ten million 3 per cents, and matures June 30th.

The House of Representatives on Wednesday, by a vote of 121 to 117, adopted the minority report in the Peelle-English contested election case, which gives the seat to Peelle (Rep.). The House then adjourned while a motion to reconsider was pending. On Thursday morning the motion to reconsider was carried by 133 to 130. The Republicans endeavored to recommit the case to the Elections Committee, but were defeated by ten votes. Mr. Horr (Rep., Mich.) stated that W. A. English, father of the contestant, had grossly violated the rules of the House in actively working in his son's interest, and ought to be excluded from the floor. This caused great excitement, and Mr. Randall defended the elder English. At length a resolution to give young Mr. English Mr. Peelle's seat in the House prevailed by a vote of 130 to 127, twenty-nine Democrats voting in the negative. A resolution was adopted appointing a committee to inquire into the alleged lobbying.

Ex-Senator Kellogg asked the House of Representatives on Friday to investigate his alleged connection with the Star-route service. The resolution was referred.

The House Committee on Civil-Service Reform on Thursday unanimously directed a favorable report on the bill introduced by Mr. Long, of Massachusetts, to repeal the Tenure of Office Acts. To this is attached an amendment repealing the sections of the Revised Statutes which fix the term of office of certain officers at four years.

The Senate Judiciary Committee on Monday reported the following amendment to the Constitution of the United States: "Article II. The executive power shall be vested in a President of the United States of America. The President and Vice President hereafter elected shall hold their offices for the term of six years, but the President shall not be re-eligible, nor shall the Vice-President be eligible to the office of President if he shall have exercised the same in the case of vacancy therein."

J. W. Elder, one of ex-Speaker Keifer's witnesses in the Keifer Boynton matter, has presented the ex-Speaker with a bill for $350 (less $70 received) for "services in looking up witnesses," and has written him a letter demanding payment.

The New Hampshire Democratic State Convention on Wednesday adopted a platform demanding a reduction of the war tariff, and insisting that there shall be no cessation of efforts until the revenue system is re-established on a just and honest basis, and calling for a thorough reform in tariff, financial, and administrative affairs. No instructions were given to the delegates elected, but the unanimous sentiment of the Convention was for the "old ticket."

On Thursday the Nebraska Democratic Convention elected Tilden delegates-at-large, and advocated a revision of the tariff which "shall limit it to the production of the necessary revenues of the Government, economically administered."

On Wednesday afternoon the New York Democratic State Committee met at Albany and called the State Convention to meet at Saratoga on June 18. The members expressed strong Tilden sentiments.

General B. F. Butler has accepted the nomination of the Anti-Monopoly party for President.

President William Endicott, jr., of the Oregon and Transcontinental Company, has resigned on account of ill health, and Elijah Smith has been chosen as his successor.

There have been great rains in Texas, extending from the Red River to the Gulf, more than 500 miles north and south, and from the Louisiana and Arkansas line westward 250 miles. The damage to the crops and railroads is estimated at five million dollars. Hundreds of miles of track were submerged.

A colossal bronze statue of Martin Luther was unveiled in Washington on Wednesday. There were addresses by the Rev. Dr. J. G. Morris, of Baltimore, and Senator Conger, of Michigan.

The shore end of the Bennett-Mackey cable was laid at Rockport, Mass., on Thursday, amid the great enthusiasm of the collected people.

There was a collision near Rochester on the New York Central about midnight on Thursday, between the St. Louis express and a freight train on the Auburn branch, which crosses the main track at Brighton. Seven sleeping cars were thrown from the track, and twenty persons more or less seriously injured, among the latter being the Japanese Prince Imperial and his suite.

The Council of the Nebraska Diocese of the Protestant Episcopal Church has elected the Rev. Dr. Worthington, of Detroit, Bishop of Nebraska, in place of the late Bishop Clarkson.

Thomas P. Grinnell, a millionaire of this city, shot and killed himself on Friday, about midnight, in his bed-room. His friends believe that it was accidental.

Ex-Judge Welcome R. Beebe was killed by the cars on Thursday at Evona Station, near Plainfield, N. J., while waiting for a train to New York. He was seventy five years of age and had practised before the United States Courts for fifty years. He was considered among the very best admiralty lawyers at the bar.

FOREIGN.

An important naval expedition will start from Cairo immediately for Assuan in three Egyptian Government Nile steamers. Lieut.-General Sir John Adye will command the expedition which is now preparing to go to Khartum. The route to be taken will depend on the success of Admiral Hewett's mission to Abyssinia. General Lord Wolseley will command an expedition in the early autumn which will land at Suakim and march to Berber. Private contractors or the War Office will begin in June to construct a military railway across the desert, which is considered quite indispensable. It is reported that England has proposed to the Porte to despatch troops to the Sudan to coöperate with Lord Wolseley's column.

A slightly different rumor on Saturday was that England had suggested to the Porte to send 12,000 troops to land at Suakim, march to Khartum, attack El Mahdi and re-establish order in the Sudan, and then withdraw with the English garrison, leaving a Pashalik of the Nile dependencies subject to the Sultan's sovereignty. This has not been confirmed.

Lord Dufferin has stipulated that if Turkish troops are despatched to Suakim, English officers must command them, England to pay all expenses and to have sole control during the period of the withdrawal of the Turks from

the Sudan. The Sultan declines this proposition, and has also refused to send 10,000 troops to coöperate with the English in the Sudan. It was reported from Cairo on Sunday that the rebels had captured Dabbeh. Bodies of Arabs of the desert are on their way to attack Assiut and Assuan.

It is believed to be settled that the Egyptian Conference will meet on June 23. According to the *Pall Mall Gazette*, France asked that England should first consent to place Egypt under international control. Earl Granville, Foreign Secretary of State, objected to this so long as the British military occupation of Egypt should continue. At that, France asked that the duration of the English occupation should be limited, and renewed its demand for an immediate international control. Earl Granville, in answer to this, named five years as a minimum for English occupation, and insisted on a postponement of the proposed international control until after the English had withdrawn from the country. But France steadfastly adhered to its previous demand, until at last Earl Granville offered to consent to the principle of multiple control, provided it should be disguised. France accepted this, caring little for the shadow, but anxious for the substance. France then desired to limit English occupation to three years, and it is asserted that England consented, and also agreed to an international board with supreme authority over Egyptian finances. Italy supported France in her demands.

In the House of Commons on Tuesday Mr. Gladstone said that no agreement would be concluded with France without reference to other Powers. He again declared that the Egyptian Conference would be limited to a discussion of the financial situation. Earl Granville, in the House of Lords, said the Government had no intention of employing Turkish troops in connection with a British army for the reconquest of the Sudan.

It was reported on Saturday that the negotiations between Admiral Hewett and King John of Abyssinia had failed, El Mahdi having promised the King a large coast district, including Massowah and several harbors, upon condition that he would remain neutral.

It was asserted in Cairo, on Thursday, that the Governor of Dongola, whose loyalty had been questioned, had sent a despatch to General Gordon in which he said he despaired of relief being sent him, and had determined to become an ally of the Mussulmans' cause. The report was not believed. El Mahdi is at El Rabat, and he has ordered his followers to bring General Gordon to El Obeid alive. It is believed that he desires to ask a heavy ransom.

In the House of Commons on Friday, Mr. Gladstone stated that no definite news had been received concerning affairs at Berber and Dongola, but the reports were reassuring.

On Friday the British Government decided to reinforce the Governor of Dongola to the extent of 1,000 rifles, his loyalty having been established.

The Governor of Dongola telegraphed on Tuesday that he had visited the disturbed districts and had persuaded the people to remain quiet. The tribes have consented to pay their taxes. The Governor engaged to pacify the entire Sudan if several thousand troops were sent him. He has retaken Dabbeh.

Reports have reached Korosko that Berber has not surrendered, but hostilities have been suspended, as the Governor of Berber agrees to surrender the town when Khartum surrenders. El Mahdi is prevented from leaving Kordofan, owing to the hostility of several tribes.

Sir Henry Gordon, in an interview on Monday, said the latest news received from General Gordon was to the effect that he had no fear as to his personal safety. He could leave Khartum by a safe route any day, but would not until a better government in the Eastern Sudan had been established and the safety of the inhabitants from the rebels assured. General Gordon considered that a large British expedition was needless. He only wanted a few hundred English troops to coöperate with the gunboats after the rising of the Nile to clear the country of rebels from Berber to Khartum.

Nubar Pasha, the Egyptian Prime Minister, insists that no Europeans shall be employed by the Ministry of the Interior. Mr. Clifford Lloyd's nominees will be dismissed. That gentleman has permanently retired from Egypt. The resignation of Abd el Kader Pasha, Minister of War, is considered imminent.

In the House of Commons, on Wednesday, the bill amending the Irish Laborers' Act of 1883 was rejected by a vote of 138 to 75. Mr. Parnell said the Government must not find fault if it should meet with a little retaliation. "Does the Government," he asked, "mean to wait until the laborers burn the houses over the heads of dissenting landlords? The laborers have been patient; but it is intolerable that they should continue to live upon mud floors until a commission has investigated their grievances."

Colonel Stanley's amendment to postpone further consideration of the Franchise Bill in the House of Commons until after a redistribution bill should have been passed, was rejected on Friday by a vote of 276 to 182.

The Committee of the House of Lords to which the Manchester Ship Canal Bill was referred, resolved on Friday to pass the bill, provided that the stock issue of £5,000,000 should be subscribed before the work was begun. Three hours after this announcement was made the necessary stock issue was subscribed.

Two Frenchmen from Calais were arrested on Monday morning at Charing Cross Railway Station. Their luggage contained a quantity of explosives, together with what were supposed to be infernal machines. They declared that they intended to use the explosives for blasting purposes. One was released on nominal bail and the other was discharged.

The festival in celebration of the five-hundredth anniversary of the death of John Wycliffe, the English reformer and translator of the Bible, was begun on Wednesday, May 21, at St. Andrew's Church, Blackfriars, London. This church is on the site of the monastery where the Pope's bull against Wycliffe was read. There was a choral service by various religious societies, a sermon by the Bishop of Liverpool, and a conference at the Mansion House, at which the Lord Mayor presided. A number of eminent gentlemen spoke. The celebration was concluded in the evening with a great meeting in Exeter Hall. The Earl of Shaftesbury made an address.

The Duke of Marlborough has made an offer to the director of the British National Gallery of eleven of the best pictures in the collection at Blenheim Palace for £367,500. The Duke has applied to the Court of Chancery for permission to sell his pictures, and the offer is made subject to his gaining that. The Treasury has declined to recommend the purchase.

The steamship *Oregon*, of the Guion Line, which recently made the fastest transatlantic trip on record, has been purchased by the Cunard Company.

The American Lacrosse Team defeated the Lancashires at Manchester, England, on Wednesday, by a score of 4 goals to 0. On Saturday they defeated the North of England Club, by 5 goals to 0.

A bill will be introduced in the German Bundesrath increasing the taxes on Bourse and other financial operations. It imposes a percentage of duty amounting to two-tenths per 1,000 on all money bargains. The German Liberal papers violently attack the bill. They say it is calculated to interfere with speculation and injure the investment market. The feeling in commercial circles is one of indignation.

The Paris *Voltaire* published a letter on Monday, from Brussels, which said that Belgium and Holland had agreed to exclude the German Princes from succession to the Dutch throne. The report was denied in Brussels.

Prime Minister Ferry introduced on Saturday in the French Chamber of Deputies a bill for the revision of the Constitution. It proposes that the office of Senator shall not be life-long, but that the term shall be for nine years. The bill is not retrospective. The number of Senators and delegates with whom the election of ordinary Senators rests is to be increased in proportion to the number of the Municipal Councillors. The financial powers of the Senate are to be modified, and prayers at the opening of the Legislature are to be abolished. Clause 8 of the law of February 25, 1875, is to be revised so as to provide that in no case shall a revision touch the stability of the Republic.

The new Customs Bill which the French Government will introduce in the Chamber of Deputies leaves the tax on wheat the same as at present, in order to facilitate an increase of the public supply in case the national production shall be deficient. The duty on all other cereals is increased to 3 francs 75 centimes per hundred kilogrammes.

The Bonapartist papers in Paris attach considerable importance to Prince Victor's decision to leave the house of his father, Prince Jerome (Plon Plon) and reside in his own private apartments. This action is deemed a definite rupture between them. Prince Victor denies that he has quarrelled with his father.

The Paris *République* repeats a story that Mr. Morton, the American Minister, lately received the Comte de Paris with royal honors, and invited many prominent enemies of the Republic to meet him. It is, nowever, explained that the Comte de Paris was present at Mr. Morton's ball as an ex-officer of the American army, having served on Gen. McClellan's staff in the civil war.

Tamatave advices of May 9 state that General Miot has notified the foreign consuls that a blockade will soon be declared along the entire coast of Madagascar. The Hovas are still in force near the French lines. The French refuse further negotiations, insisting upon their protectorate already demanded. The French Government has decided to send a Resident to Madagascar.

Sarah Bernhardt appeared in Paris for the first time as *Lady Macbeth* on Wednesday night. She acted with great power, it is said, in the sleep-walking scene, and the whole performance was a success. The French version of the play is severely criticised.

Mlle. Colombier, the French actress, has been sentenced to three months' imprisonment and to pay a fine of $200 for her book about Sarah Bernhardt, entitled 'Sarah Barnum.'

In the Italian Senate on Thursday Signor Mancini, Minister of Foreign Affairs, said that the law passed affecting the Propaganda must be fulfilled. He hoped soon to introduce a bill definitely regulating church property, in which it would be possible to introduce a stipulation favorable to the Propaganda.

The floods in the southeastern provinces about Murcia and Alicante, Spain, are becoming alarming. Whole towns have been cut off, and the crops over a large extent of country have been completely destroyed. Many families have been rendered homeless.

The Servian Skupshtina was opened on Thursday with a speech from the throne by King Milan. He announced that bills would be introduced looking to the freedom of the press and the right of public meeting.

Sir Richard Cartwright, the Finance Minister in the late Mackenzie Government, and a prominent leader in the present Opposition, delivered a political address in Toronto on Wednesday, in the course of which he advocated the advisability of Canadian independence, a sentiment which the audience cheered.

AFFAIRS IN WALL STREET.

When the Wall Street panic broke out, we remarked that the conditions of trade and industry throughout the country were not those which commonly precede and usher in a commercial crisis, and that the signs pointed merely to a local trouble, which would not reach far beyond the circles of stock speculation. The course of events has confirmed this view of the situation. The explosion in Wall Street has had no answering echo anywhere. It has fallen upon general business with no more rebound than a blow upon a mass of putty. General business had already gone through its crisis. The slow shrinkage of three years had left little or nothing for a bank panic to work upon. The bank panic was for this reason short-lived. Banks are merely agencies for conducting and expediting general business. There can be no protracted or considerable panic among them which is not fed by troubles outside of themselves. Stock dealings cut only a small figure in their affairs, and defalcations are few and inconsequential when we look at the whole mass of the capital and "turn-over" of the banks. The dangerous side of stock failures and defalcations is their tendency to start a run on the banks by frightened depositors.

Possibly such a run was averted by the action taken by the Clearing-house in issuing "loan certificates" to settle balances between the banks. This device was first introduced in the panic of 1873, when the conditions of general trade were in the highest degree favorable to a commercial crisis—when every species of inflation had reached the bursting point. As the loan certificates were effectual at that time, so far at least as to keep the banks open and business moving, it was certain that they would be effectual at this time. It is plain that they will not be required much longer, and it is doubtful whether they are really needed now. At all events they are not increasing but diminishing in amount. Banks in the interior which habitually keep balances in New York have, to a large extent, drawn them out, in anticipation, perhaps, of a run on themselves, but as they have no real use at this season of the year for their surplus, they will shortly send the money back. The local run, if there was one to be apprehended, has ceased to menace the city banks, while in the country at large there has been no disturbance whatever outside of the narrow limits of speculation in stocks and oil.

The trouble, such as it is, is confined to the Stock Exchange, and here it seems to have gone further than the facts really warrant. Probably we have not seen the end yet. Probably some classes of securities are destined to go lower, but the pressure exerted upon the whole list by the sympathy of the good with the bad must be nearly exhausted. It was seen six months ago that the coal companies must yield sooner or later to the lessened demand for iron. They were held up by main strength, while the railroad companies, which relied upon general traffic, were tumbling right and left under the effect of low rates and excessive competition. It is only within a short time that the coal stocks began to give way. They may give way still more, and they may carry other things down to a lower deep by breeding further distrust among investors, but it is time to call a halt in the mad sacrifice of property which has been going on so long. The insensate character of the panic is illustrated by the fact that railroads which show an increase of earnings—a steady increase betokening a real turn of the tide—have suffered heavily in the stock market from day to day with scarcely an intermission. The *Financial Chronicle* cites St. Paul, Northwestern, Omaha, Northern Pacific, St. Louis and San Francisco, and several minor roads as glaring instances of declining values in the face of increasing receipts. Obviously somebody must reap a harvest from the groundless fears of those who are throwing good things overboard, merely because they see others throwing bad or doubtful things overboard. The want of discrimination among investors is as wonderful in seasons of depression as in times of prosperity, and is as marked among large capitalists and old stagers as among greenhorns and patrons of the bucket-shops. There is no aristocracy in a panic.

The disposition to throw overboard good stocks as well as bad has been intensified by the multiplication of parallel and competing lines of railway, whose effect in many instances, and whose tendency always, is to impair the value of old dividend-paying lines and to ruin the promoters of the new lines as well. The country is too full of instances in point to call for specification, but the latest and one of the most glaring may be found in the rivalry of the Union Pacific and the Denver and Rio Grande. No cure for this form of mutual destruction has yet been devised. No one will affirm that it is a good thing for the country that its railways should cease to bring a return to those who have honestly invested their money in them. Even the most confirmed Granger will acknowledge that this is an undesirable state of things. Yet the capitalist classes have brought it about. They are primarily responsible for the depreciation of good securities now going on as well as for the massacre of poor ones. The holders of St. Paul and Northwestern & Illinois Central, when they see Union Pacific fall thirty points in three weeks in consequence of paralleling, infer that their own roads may be paralleled in like manner, and they hasten to get rid of their shares while they may. Of course there is a great lack of discrimination and ignorance of geography in such a rush. But there are some cool heads left, and it will probably be seen in the course of the next thirty days that they have been picking up gold pieces which others have been recklessly throwing away.

GRANT, WARD, AND FISH.

Late on Monday General Grant's counsel reached the inevitable conclusion that they would give to the press the correspondence between him and James D. Fish, touching the business of the firm of Grant & Ward, of which Fish furnished some account in an interview with the reporter of the *Tribune* on Saturday. The letters appeared in the morning papers of Tuesday. To understand them it is necessary to remember that the assumption that the firm of Grant & Ward had large and highly profitable Government contracts, was for nearly two years the basis of their swindling operations; that it was from this source that their dupes supposed they were deriving their enormous gains; that when the exposure came, it was alleged on behalf of General Grant and his sons that they knew nothing of these Government contracts—that Ward managed the business, and this business they supposed to be a legitimate one of stock and money brokerage. When the inquiry began to be made who were Ward's real confederates, if he had any, public opinion fastened on Fish, the then President of the Marine Bank, he being a large endorser of the paper of the firm and a participator in the alleged profits.

Fish, being arrested, and threatened with criminal proceedings, is now standing at bay, and is defending himself, as it is his natural right to do, with every weapon within his reach. He says that he did not enter the firm of Grant & Ward and begin to share in its risks without proper inquiry; that when he found himself an endorser of the notes of the firm to the extent of $200,000, he wrote a letter to General Grant, in which he called attention to this fact, saying that the amount of his liability was "not trifling for him," and adding:

"It is necessary that the credit of G. & W should deservedly stand very high.

"These notes, as I understand it, are given for no other purpose than to raise money for the payment of grain, etc., purchased to fill the Government contracts. Under the circumstances, my dear General, you will see that it is of most vital importance to me particularly that the credit of the firm shall always be untarnished and unimpaired. I will be happy to meet you at almost any time you may name to talk these matters over."

This letter was dated July 5, 1882. It will be observed that it called General Grant's attention explicitly to the existence of the Government contracts, as being, in Fish's opinion, the basis of the firm's operations and the source of their credit. General Grant answered, the following day:

"New York City, July 6, 1882.

"My Dear Mr. Fish: On my arrival in the city this A. M., I find your letter of yesterday with a letter from Thomas L. James, President of the Lincoln National Bank, and copy of your reply to the latter. Your understanding in regard to our liabilities in the firm of Grant & Ward is the same as mine. If you desire it I am entirely willing that the advertisement of the firm shall be so changed as to express this. Not having been in the city for more than a week, I have a large accumulated mail to look over, and some business appointments to meet, so that I may not be able to get down to see you to-day. But if I can I will go before 3 o'clock.

"Very truly yours, U. S. Grant."

This, it will be seen, contains no denial of the assumption about the contracts, nor any expression of surprise on hearing of it. On the same day a formal letter was sent to Fish from the office of the firm, which must be regarded as the real answer to Fish's inquiries about the contracts, and was signed by General Grant:

"NEW YORK, July 6, 1882.

"MY DEAR MR. FISH: In relation to the matter of discount kindly made by you for account of Grant & Ward, I would say that I think the investments are safe, and I am willing that Mr. Ward should derive what profit he can for the firm that the use of my name and influence may bring. Yours very truly, U. S. GRANT."

It is due to Fish to say, that he certainly was justified in regarding this communication as an affirmation by General Grant that the contracts existed, and that Fish was warranted in relying on them as security for his notes, and also as an intimation that the contracts were procured, and likely to be sustained, through General Grant's "influence." Of course this ought not to have satisfied a man of Fish's age and experience. He ought not to have been willing to share in the profits of contracts such as he supposed these to be, without more inquiry. But we are not seeking to make Fish out an honest man. We are simply showing that he was not as dishonest as he has been supposed to be. He confesses himself a party to an operation which he must have known was in some manner, or at some stage, tainted with fraud. The president of a New York bank can hardly be such a simpleton as to suppose that honest contracts for hay and oats with the United States Government yield 10 or 20 per cent. a month profits. But he has apparently vindicated himself against the charge of joining Ward in concocting a story about contracts which had absolutely no foundation, for the purpose of defrauding investors.

It is, of course, easy to believe, from what the world already knows of the ease with which General Grant is imposed on by persons who have once acquired his confidence, that he was deceived by Ward about the amount of his profits from Government contracts or any other source; but that he should have been deceived by him to the extent of supposing the firm to be maintained in great prosperity by Government contracts which had absolutely no existence except in Ward's imagination, is something which the public will hear with painful surprise. It will, too, try even General Grant's warmest friends greatly to learn that he was willing to participate, or assist others in participating, in contracts with the Government of which he was once the honored head, from which it was possible for the contractor to make 120 or 240 per cent. per annum, in such articles as hay and oats. It would seem as if it was his duty, on hearing of such profits, to warn the departments at Washington that they were in some manner being defrauded or overreached.

HASTY NAVAL LEGISLATION.

IT would be interesting to know how many members of Congress understood the real effect of the bill abolishing the grade of junior ensign in the navy which passed the House of Representatives without opposition last Saturday. Nothing could be simpler on the face than the provisions of the bill as explained by the Naval Committee. Those graduates of the Naval Academy who were assigned to the line, had to accept a salary of $1,000 for several years, while their associates, inferior in academic standing, who were made assistant engineers, commanded a salary of $1,700. Thus the singular anomaly was presented of the lower graduates getting the higher pay. Not a single member present had the readiness to inquire whether there was any obstacle to the best graduate getting the $1,700-appointment. No one, even of the Naval Committee, seemed to know that if the best graduate got the place of lower pay and rank, it was either through his own choice or by the arbitrary act of his superiors. We shall try to explain the anomaly.

The engineers have heretofore been the picked technical corps of the navy proper. On them has devolved the important duty of planning and designing the engines of all our ships of war. This duty demands a higher grade of natural ability, scientific knowledge, technical skill, and close study than any other which the navy requires. Recognizing the necessity of securing the best talent for the performance of this duty, and the imperfections of candidates for the service who had not been specially trained, the Navy Department established, a few years ago, a special class of cadet engineers at the Naval Academy. The examinations for admission to this class were far higher in grade than for the regular cadets, so that none but picked men from our schools were able to pass it. Thus the corps of assistant engineers was being recruited with a class of men who, in native talent and intellectual training, were far above the requirements of their grades. In a few years the new blood would have reached the upper grades, and the chief engineers would have been better qualified for the important duties required of them than ever before.

Such was the prospective state of things when the separate corps of cadet engineers was abolished by the Naval Bill a couple of years ago. Of course the effect was to abolish at a stroke the whole system of special and superior training for the corps; the entrance examination was the same for all, and this meant that the higher standard was abolished, and not that the lower one was raised. That such a causeless cessation of a system of superior training should have been allowed to pass unchallenged, is not creditable to any of the parties concerned. That no effort to stop it should have been made by the men of high rank among the engineers, is particularly suggestive of shortsightedness. The system cost nothing, and the only possible objection to it was that there was no need of such training for men performing the duties of engineers. There we reach the kernel of the whole matter. It has long been maintained by men of high rank in the line of the navy that there was no real need of a scientifically educated corps of naval engineers. All that was wanted was a body of skilled mechanics, who could manage and run the engine and repair it when necessary. There is no "high science" needed in this duty—only mechanical training and such precepts as can be condensed in an engineer's pocket-book. In a word, it was desired that the officer who commanded the ship should know better how to design her engines than the man whose duty it was to run the engine. As a further step in the same direction, it was proposed to abolish the Bureau of Steam-Engineering in the Navy Department, and consolidate its duties with those of the Bureau of Construction. This would do away with the last vestige of a necessity for a highly trained corps of engineers, by leaving that corps nothing to do but run and repair engines designed by their superiors.

But there was still a serious obstacle to the completion of the plan. The law was silent as to the choice of service on the part of the graduates of highest rank. The assignment was to be made by the Secretary of the Navy upon the recommendation of the Academic Board. The old salaries, graded upon the idea that the engineers were the picked graduates, remained unchanged. To retain the old state of things it was only necessary that the Academic Board should assign the best graduates to the engineers, and thus secure them the highest pay. But this would have kept up the intellectual superiority of the engineers, and indeed have made it, from the point of view of the line officers, still more threatening, since the new engineers would have been men of at least equal political influence with their fellows of the line. The best men must be retained in the line, and this could not be done except by giving them the places of lowest pay. The new law, it must be said, does not remove the difficulty, it only slightly eases the conscience of those members of the Academic Board who vote to assign their first man to the line and not to a technical corps. At the same time the bottom would have dropped out of the bill if they had been willing to assign him to the engineers, since he would then have received $1,700 salary.

In discussing this subject we do not enter into the question whether the duties of engineers should or should not be reduced in importance in the way which the bill is designed to facilitate. If, however, the naval cadets who hereafter replenish the Corps of Engineers are those who know the least about the principles of steam engineering, there can be but one result. That corps will be unfitted to design engines, and the continued existence of a Bureau of Steam-Engineering will be an anomaly. But, if this is to be the case, there will be no reason for continuing the present rank of the corps. Indeed, it is difficult to see why a young man should be sent to the Naval Academy at all to become a skilled mechanic. A good apprenticeship in a machine-shop will give him all the training he will require.

Our conviction that Congress little understood the effect of the bill is strengthened by the very next act of the House, which had the effect to increase the very disparity the first bill was designed to lessen. It was an eminently just and proper measure if the engineers are to retain their superior position, since it provided a small increase of pay after ten years' service as passed assistant engineers. It appears that although the engineer gets the highest pay at first, promotion is so slow that after he has been twenty or thirty years in the service he finds himself with less pay than his brethren of equal rank in the line. But, if his position is to be that of perpetual inferiority, this inferior pay will be a natural result.

MONARCHY IN FINANCE.

THE monarchical tendency in all the financial institutions of the day—that is, the tendency to one-man government—which has recently been exciting so much attention, and to which so many of our financial collapses are attributed, is not confined to this country. Some people here ascribe it to the effect produced in the financial mind by the spectacle of the disorders and corruption produced in politics by the government of the multitude. But this theory would hardly hold water, even if it were true that the financial mind in America really distrusted popular institutions. We believe there is in all business enterprises a natural tendency to put the power in the hands of one man; or, to state the matter a little differently, that enterprises initiated and managed by one man are apt to be more successful than others, owing to the very constitution of the human mind. Consequently, monarchical finance gets the advantage of the principle of natural selection, or the survival of the fittest. What our finance is suffering from now is what so many political communities have suffered from—the abuse of its own principle of government. We have not learned to put the proper limitations and checks, in the management of financial institutions, on the One Man, and consequently we find that every few years he loses his head and gets us all into immense trouble.

The last number of the *Journal des Économistes*, discussing the condition and characteristics of the financial world in France, says, apropos of this:

"What first of all strikes any one who studies our financial world is the small number of men in whose hands all the financial power of our time really lies. One might expect that owing to the constant growth of the principle of association, individuality would be lost in the crowd; that the talents and merits of each one would be confounded with the activity of the whole; that, in short, individual, personal force, if it did not lose its value, would lose its importance, and count for less and less in the success and development of enterprises. But this expectation has been completely falsified by the facts. The more grouping and association there are, the more efforts and resources tend to unity, and the more personal weight is appreciated, estimated in large figures, and encouraged by confidence and often by infatuation. Never as much as in our own day has the maxim been true—'that the thing is worth what the man is worth.' . . . One is greatly astonished, in studying the financial world, to see by how few persons the serious business of the country is done, and how rare real financial capacity is; for were it as common and as easy to acquire as some people think, it would be difficult to explain the scarcity of solid, experienced, sagacious, and sure financiers. So that we find that for great and extended operations there is an extremely limited and choice *personnel*. On the contrary, for moderate and small business there is a numerous and superabundant *personnel*."

The French have a special and characteristic name for this small group of great moneyed men who, in every country, do in the last resort the work of financial management. They call them "the High Bank," or "the High Finance," and hold them, or have held them hitherto, in considerable awe. The smash-up of the Union Générale, however, and some other things of a similar character, have done a good deal of late to diminish this feeling, and to bring the great men of the financial world down to the humble level on which they live and work among us, who, after permitting them unbounded power and license, such as no one man is fit to use in any undertaking, kick and cuff them unmercifully, and denounce them from the pulpit, when they break down under the weight of mistakes from which a little wholesome supervision and counsel would have saved them.

The "Haute-Banque," however, is hardly ever likely to fall into as much discredit in France as here, owing to the extraordinary pains the French have taken to fortify their Stock Exchange against all financial crises and mutations. The constitution of the Bourse is such that failures among brokers, which form such an exciting and disastrous feature in Wall Street panics, are almost impossible. There are only sixty members in the Board. For admission the candidate must not only be able to stand a most searching investigation as to character and capacity, but must put up $50,000 as security for his good behavior, besides paying $500 for the expenses of his reception. He has also to pay from $320,000 to $340,000 for his seat, and to put $24,000 into the treasury of the Exchange. Then he needs about $80,000 as working capital, and the mere legal costs of the transfer of a seat amount to about $12,000. So that, all told, every seat at the Board represents about $500,000, or the whole sixty about $30,000,000. When the great crash of 1882 occurred, caused by the breakdown of the Union Générale, the credit of the Board was very seriously shaken. Many of the members were, owing to the default of their clients, in great difficulties, but none were allowed to fail, or be "sold out under the rule," or go through any of the humiliations which our newspapers describe the day after a crash here. The Board borrowed in its corporate capacity $16,000,000 on bonds of $100,000 each, and enabled every member to meet his engagements pending his recovery. Moreover, it obtained the loan without difficulty. The High Bank stepped forward and, through a syndicate headed by the Rothschilds, lent half the amount, and the Bank of Paris and that of Holland lent the other half. The loan was repaid within a year. It is not surprising that High Finance should continue highly respectable when buttressed up in this way.

EGOTISM IN LITERATURE.

M. GUILLEMOT, a French critic, has been discussing in a magazine article the "I" in contemporary literature, and denouncing the growing tendency of authors, and dramatists, and artists to thrust themselves and their private life upon the public. Unless it is checked, he declares that it must inevitably lower the standard of all modern literary productions. It is natural enough that an author, an artist, or a poet should desire to have a great name; but that is an altogether different thing from craving to be talked about and marvelled at. Formerly the poet sang his song, the author told his tale, and the artist completed his work without ever a thought of putting himself to the front. Whether he was married or single, whether tall or short, fair or dark, sanguine or bilious—what had this to do with his work? No one knew, and no one cared to know. They remembered Confucius's words, "Do not talk of yourself either well or evil; because in the former case no one would believe you, and in the latter everybody would." Within the last two centuries all this has changed. At present all houses are built of glass, the inhabitants themselves being the architects, throwing open to the gaze of the public even the most sacredly private portions of the edifice.

That there is a great deal of truth in this will be disputed by no one. It is when M. Guillemot produces his explanation that we are shocked and pained. He traces the origin of the malady to ourselves—to the United States. Fortunately for France, he says, these evils do not originate within her borders, but come like tempests across the Atlantic, from "that powerful nation which in turn astonishes the world by its grandeur and its folly, its refined civilization and red-Indian barbarities, its love for liberty and its contempt for inferior races; from the United States, which let a Lincoln die and a Barnum live." The audacious, resolute Americans exercise the same influence on the French which every firm spirit does on the weak and undecided: "We are as wax in their hands." It was in America that interviews and lectures originated, the Yankees having always had a great desire to approach the persons of great men. That, however, is due to a defect of vision, which incapacitates the American from seeing the difference between a justly celebrated poet and a two-headed calf. It is by no means the deep interest in the works of a great man which excites this curiosity among the people; in the same degree as art declines, the personality of the artist increases in interest. American journalism and reporting strengthen this tendency to pry into the private life of public characters, and France has eagerly taken up the evil habit.

It is the fashion just now for thoughtful Europeans who take up the evil tendencies of the time to attribute them *en masse* to the influence of the United States. It is a very convenient and simple method of moralizing, and it curiously reverses a fashion in vogue in the last generation on this side of the water. Then all the evils found in Europe were attributed by us to the lack of something which was to be found in abundance in America, and if the world was to be saved at all it was by the influence of the United States. Now it makes little difference what the evil is—according to all sound European thinkers, the Yankees are at the bottom of it. The frivolity of women, the rascality of men, sensationalism in the pulpit, trichinæ in pork—everything that is unpleasant, or disagreeable, or discreditable, is attributed to our unfortunate country, our institutions, or our "tendencies;" and the best of the joke is that the American snob, who basks in the favor of the Europeans who despise him, echoes most loudly the complaints made by moralists of the school of M. Guillemot.

M. Guillemot, however, carries the new

system too far. We may be conceited, and growing more so—though we think, as a matter of fact, the level of highest conceit was reached in this country some fifty years ago, and that this might be demonstrated to any one's satisfaction by a comparison of the tone of the press of the country then and now. But even if we are growing worse and worse in this respect, it is vastly more probable that we caught the disease from France than that the French were infected by us. Impersonal literature has no existence in France, and personal literature there goes much beyond anything we dream of here. From the time of Balzac to that of Zola, French literature and journalism have been the scene of an orgie of egotism, which now makes it impossible for the simplest criticism or narrative to be produced without the constant intrusion of the "I" between the reader and the subject, in a way which to most Englishmen and Americans is excessively funny. That egotism is making rapid progress in the modern world is a fact the explanation of which must be looked for not in any one country or place, but in the conditions of modern life and in modern institutions. In literature we seem to be suffering just now from the fact that a great literary period is coming to an end, and that the traditions of literature and the literary function are great, while the performances of the present literary generation do not quite match its expectations. It feels uneasy at its shortcomings when it thinks of the mighty shades of the past, and endeavors to make up for its lack of fame by a diligent cultivation of personal notoriety. The work goes merrily on throughout the broad expanse of the modern world, and we protest against any attempt on the part of the lively Gaul or any other enterprising European moralist to unload the burden upon us.

THE ANTI-PIANO MOVEMENT.

The details of the anti-piano movement in Berlin will be awaited with interest on this side of the Atlantic. From the despatch published on Sunday it looks as if the popular feeling against the instrument was not too violent to allow the Germans to consider remedial measures with the cool calmness which the crisis demands. Piano-playing in Berlin has, it is said, reached a point at which the public health and the price of real estate are seriously affected. It is therefore proposed that the Government shall restrict playing and practising within certain hours of the day, *i. e.*, between eleven o'clock in the morning and noon, and between eight and eleven in the evening. In this country, where the piano is an almost universal instrument, and where the capacity to own or rent one is the great mark of division between the wage-earning and the property-owning classes, and where it is the popular substitute for every other instrument, the damage to health and real estate must be even greater than in Germany, where the quieter violin is more cultivated, and where there is a smaller population interested in pianos. In New York life the piano plays an especially important part, owing to the great number of flats, in which the piano of each family is practically a curse or a blessing to the floor above or the floor below—a fact admirably brought out in the popular song, "The Family Overhead."

Some of our contemporaries treat the piano revolt with levity, and indulge themselves in humor at the expense of what they call the "phlegmatic" Germans. But this is an erroneous view of the subject, for Germans are by no means phlegmatic about music, and their rage against the piano is no blind rage. The piano is the instrument of a democratic age, because it is an instrument which within certain limits any one can learn to play. It is an instrument which seems to bring music within the reach of everybody provided, as the dry-goods people say, with a "full line" of fingers and thumbs and eyes. The beauty of the piano, as distinguished from the violin, is that every note and half note is identified to the eye and touch by its connection with a particular piece of ivory; and in "practising" the apprentice does not have to strike the true note by ear, which is regarded by the musical aristocrats as the true musical organ, but simply by pressing down the appropriate key with her finger. As long as she is willing to labor—and the dullest piano-players are notoriously the most industrious—she can certainly in the end master her instrument, and play just as many and difficult pieces as Paganini ever could on the violin. It is this fact which has given the piano its triumph in the modern world, and accounts to musical people for the extraordinary number of people who play it extremely well and yet so very disagreeably. They maintain that it might just as well be played by machinery, or that a mechanical instrument, like a musical box, would be as good for ordinary family use.

If this is true, it is easy to see why the piano is so well adapted for a really unmusical race like ours, a race of which Mr. Lowell had the audacity to say the other day that it was not, and would never be, artistic. We have produced some of the greatest piano manufacturers in the world, and the American home into which the daughters do not force a Grand, a Baby Grand, or at least an Upright, is a rarity—one of those houses in which we miss something feminine and familiar, a home in which we involuntarily suspect that the husband is a cold, unmagnetic man, who rules his household with a rod of iron.

The great difficulty in the way of any anti-piano movement in England or this country has always been that the people who were hostile to the instrument were suspected of being mere men, with no ear for music. *Punch* used to contain many a broad hint directed against the piano and "scales," but the friends of the instrument never heeded this much, because they felt above it. They looked down with amusement or pity upon those who remonstrated against practising, feeling toward them much as we do toward the expressions of dissent which come from dogs and other quadrupeds exposed to a piano.

But the attack on the piano in Germany, accompanied as it is by a threat of a resort to the police, and, no doubt, in the end, to Bismarck, is a much more serious matter, because those who make it are presumably musical people. Their movement is directed against the unreasonable use of the instrument; but any restriction in hours will greatly reduce the number of players, because all practising is done in the morning, and one morning hour only is to be allowed; it is only those naturally gifted with a musical taste who could acquire any real proficiency in it by means of giving an hour a day to practising. This would rule out the great host of players who rely for success solely on indefatigable industry. It is by having the whole morning to themselves, when the men are away at business, and when no one but the neighbors can be annoyed, that the women of the type we mean reach that proficiency celebrated in the well-known story of Dr. Johnson, who, hearing that a piece performed in his presence was "very difficult," politely replied, "Would to God, madam, it were impossible."

That the "violin men," as we should say, are probably behind the attack on the piano does not rob the movement of its interest, but rather increases it. Musical people in Germany have for a long time insisted that the violin was the true instrument for educational purposes, and it is by no means uncommon for girls in England who, twenty-five years ago, would have been taught the piano, to learn the violin instead. Probably to a person afflicted with an "ear" a girl playing badly and industriously on the violin is even worse than a girl playing badly and industriously on a piano. But then the violin baffles the unmusical girl in the end, because there are no ivory keys which she can make sure of and rely on hitting with accuracy every time. Therefore she soon wearies of the violin, and leaves it for those with ears. The worst that can be said of the anti-piano movement is that it is undemocratic. The piano is the only good instrument which is really compatible with equal rights in music. But then we get more undemocratic, socially, every year, and it is doubtful whether there can be any permanent democracy in art. But the Germans have one great resource from which we are cut off: they can rely on the police to enforce the ordinance.

THE BRITISH MINISTRY AT HOME AND ABROAD.

London, May 12.

There is probably no country in the world whose politics are so complicated as those of Britain, none in which the conduct of affairs and the authority of that Governing Committee of Parliament which we call the Cabinet, is affected by so many crossing and intermingling currents. Our foreign and colonial relations ramify all over the world, our domestic issues of policy are numerous and intricate; and each set of questions and issues tells upon the other and upon Government in unexpected ways. While Lord Beaconsfield ruled, he was in the habit of appealing for support to the country, on the ground of the spirit and energy with which he had conducted our foreign policy and sustained our imperial position, although he had confessedly done little or nothing in the way of progressive domestic legislation. The result showed that he had overestimated the success

of his foreign policy: but till 1880 it was generally believed to have constituted a strong claim on the confidence of the nation. At present the position is exactly reversed. Mr. Gladstone's Government has been unusually successful in its domestic policy. There have been no scandals, no grounds for serious complaint, in the conduct of English and Scottish administration, in the exercise of patronage, in the character of the measures which have been submitted to Parliament. Defects in Parliamentary procedure have prevented many useful measures from passing; but the great majority of the nation approves the proposals of the Government, and trusts their honesty and capacity in all such matters. Even in Ireland, the standing and insoluble problem of British politics, a wonderful diminution of crime has taken place under Lord Spencer's administration; the Land Act of 1881 has greatly improved the condition of the peasantry; the troubles which still confront us are rather political than agrarian or social, and in so far less formidable. The Franchise Bill, which is now being debated in Committee of the House of Commons, has rallied the Liberal party to the Government in a remarkable way, and seems likely to pass the Commons by so large a majority that even the House of Lords will hesitate to reject it. Mr. Gladstone has seldom appeared to more advantage than in his advocacy of this bill, while the vacillation and weakness of the Opposition leaders has been displayed in the fact that they have never ventured to say what they are known to feel about it, and that they have left the only really weighty criticism to come from an independent Liberal, Mr. Goschen.

This is the bright side of the picture. But the deficiencies of the Government in their conduct of the Egyptian problem seem to many of their supporters as conspicuous as their successes at home. It is hard to say exactly what view an impartial observer would take, because the exaggerated language of the Opposition provokes sympathy from those who would otherwise be disposed to blame the Government, and disturbs the balance of their judgment. But the case, as presented by men who wish to hold that balance fairly, might be put by them as follows: The policy of the Ministry in Egypt since the day when they sent the fleet to Alexandria, now just two years ago, has been a hand-to-mouth policy. They seem to have never looked more than a month ahead, and to have taken each successive step only because it naturally followed from the last preceding step, not because it could be justified in view of the consequences it might ultimately entail. It has therefore, such men go on to say, been marked by infirmity of purpose: not that they have vacillated, but that they have always done the least possible, appearing to follow and be swept along by events, not to control them. They have allowed evils to outrun their remedies, and have seen more than one difficulty grow serious which might have been diminished or avoided, had it been foreseen and provided against a little sooner. They have clung, no doubt, to their principles, the chief of which was to avoid annexation or any increase of British responsibilities; but this very adherence to principle has blinded them to facts, and made them unwilling to admit what the rest of the world recognized. It has been plain enough for a good while that our troops cannot leave Egypt at any assignable time, because the country would then at once relapse into anarchy, or perhaps be occupied by France. Yet they have continued to talk of a speedy evacuation, and have thereby prevented the settling down of society in the Nile Valley, and lost the benefit even of the reforms they have initiated. They allowed the Khedive's Ministry to attempt to reconquer the Sudan when his resources were obviously inadequate. When Hicks had been defeated and killed, they took no step to rescue the garrisons or secure the southern frontiers of Egypt till seven weeks had elapsed, during which the position had grown far more perplexing. Then, in the middle of January, when they despatched General Gordon to Khartum, it was not so much with any definite view as to what he was to do, as in the vague hope that he would somehow succeed in pacifying the revolted tribes, and by the magic of his personal influence restore tranquillity and secure the retreat of the garrisons. Things having turned out worse than he expected, they had no second string to their bow, no course to pursue which could either help him or the garrisons; and, though they admit their responsibility for his personal safety, they are helpless to aid or to rescue him. Doubtless the task is difficult, for the climate prevents European troops, perhaps even Indian troops, from crossing during summer and early autumn the terrible deserts that separate Khartum from Assuan and from the Red Sea coast. But these were difficulties which might have been foreseen. If they were not mere waiters on fortune, they ought either not to have sent Gordon, or to have arranged some means of rescuing him, or to have let both him and the world know at the outset that he was taking his life in his hand and could not expect any support from home. As it is, we are in the painful position of seeing a gallant man in danger, which he has incurred on behalf of his country and humanity; of being unable to succor him, and of seeing the danger of a Mohammedan attack upon Egypt itself increase every day. If a forward policy was too perilous, and would have drawn us into new entanglements, a policy of prompt evacuation might surely have succeeded if adopted in time, and it would have saved the needless and dishonorable victories on the Red Sea coast.

There is no denying that sentiments of this kind are widely held, and have seriously affected the reputation of the Government. Some think that their mistakes are mainly due to Lord Granville, who has always been considered rather adroit than strong or profound in his conduct of foreign policy. Others blame Mr. Gladstone himself, alleging that he has disliked the whole Egyptian business so heartily from beginning to end as to have tried to lull himself into a false security, and ignored facts which it was disagreeable to admit. The London press has, as usual, been foremost in denouncing the apathy or timidity of the Government. Even some organs usually strenuous in their Liberalism, such as the *Pall Mall Gazette*, have in this instance turned against them, while there has been no advocacy of any weight or value offered in their behalf except by newspapers in other parts of the country, which are of course not read in London. True it is that the country and the mass of the people are far less sensitive than London or the upper classes on questions of foreign policy, and that the damage which all this hostile criticism has inflicted is therefore less perceived by the bulk of its supporters than by members of Parliament and other professed politicians. The country Liberals want the Franchise Bill passed, and would put up with a great deal for the sake of that. They do not quite understand why we have gone to Egypt; they wish we were well quit of it. They respect the Government for its consistency in trying to be quit of it. They have an unshaken admiration for and faith in Mr. Gladstone. It may be, they admit, that he is less brilliant in foreign than in domestic policy, but then foreign policy has so much less to do with the welfare of the people. They are therefore, on the whole, faithful; and the suspicion that the declamations against the cowardice or hesitation of the Government, with which the London press rings, may be partly due to the selfish promptings of the holders of Egyptian bonds, who would like to see the value of their property enhanced by the proclamation of a British protectorate, makes them less than ever disposed to swell the cry against the Ministry.

This loyalty of the Liberal party in the country is the dominating fact in the present situation. Emboldened by the chorus of complaint and indignation which one hears in every London drawing-room or club, the Tory leaders have again arraigned the Government by a formal vote of censure. It might be carried, or almost carried, were the Ministerial majority to follow their own sentiments, because London opinion tells heavily on them. But even those who are most swayed by it fear to offend their constituents, who would call them sharply to account for a vote which endangered Mr. Gladstone and the Franchise Bill. It is therefore expected that the Ministry will have an easy, if not large, majority in the division to be taken to-morrow, though much will of course depend on that unascertained and unascertainable factor, the votes of the Irish Parnellite members. The speech in which Mr. Gladstone replied to the charges levelled against them was somewhat disappointing to his followers, the rather as the case which the despatches in the Blue Books disclose is decidedly less unfavorable than the London papers have made the London public believe. He had the air of being fatigued and disheartened—disheartened not at the attack upon the Ministry, for conflict stimulates him; but at the sad complication of difficulties which our position in Egypt involves, and which will remain to perplex other Ministries when he has retired. It is a curious piece of the irony of fate that he, whose main object has been to keep England out of fresh responsibilities, should have been dragged, always resisting, deeper and deeper into this Serbonian bog. Y.

THE HUNDRED DAYS.

PARIS, May 8, 1884.

THERE is not in modern history a more dramatic episode than the "Hundred Days," the return of Napoleon from Elba, and the short struggle which ended at Waterloo. I have spoken in these columns of the first volume of the memoirs of Baron de Vitrolles. The second volume, which has just appeared, is even more interesting than the first, and it is chiefly devoted to the period of the first year of the Restoration of the Bourbons, and to this period of the "Hundred Days." The Restoration had been a national necessity, but Talleyrand, Fouché, and their friends had succeeded in making it appear as the work of the French Senate. The first cabinet of the Restoration was presided over by the Comte d'Artois; Talleyrand, Dalberg, Jaucourt, the Abbé de Montesquiou were the nominees of the Senate; Marshals Moncey and Oudinot and General Dessoles had been called in in order to conciliate the army and the National Guard. Vitrolles had a place in it as secretary. The Comte d'Artois acted in everything upon the formula—"There is nothing changed in France; there is only one Frenchman more." This historical saying, by the by, was never pronounced by him; Beugnot tells us in his amusing memoirs that he made it himself, thinking it necessary for the occasion, and sent it to the official papers. Beugnot had much *esprit*. One day he came to visit Vitrolles; they had to make up together a list of persons who were to be sent with a special mission into all the provinces.

"Give me," said he, "your honest men, and I will give you my rogues; so we will do a good business."

Louis XVIII. was in England when the allied sovereigns entered Paris; he remained there till an armistice was concluded between them and the new government. He left Hartwell on the 20th of April, 1814. In London he was received with much enthusiasm; he gave the order of the Holy Spirit to the Prince Regent, who gave him the Garter. The King crossed the Channel in the *Royal Sovereign*, the finest ship in the navy, escorted by eight men of war. The reception in France was equally enthusiastic; the King stopped at Compiègne and had a conference with his brother, the Comte d'Artois; he received Pozzo di Borgo, who was deputed to him by the Emperor Alexander; the Emperor of Austria and the King of Prussia came to him in person. Everybody was anxious to see how Talleyrand would be received. "People expected to find him supple, adroit, flattering, and caressing; he adopted a different part. He arrived cold, serious, making advances to nobody, like a man who has nothing to be pardoned, and who has need of no suffrage. He tried to make his *bel esprit* in unison with that of the King, and showed himself at ease on all the questions of the day." The King was infirm, and walked with difficulty; but he had a very noble face and countenance. He had a good voice, and his intellect was of a high order. Vitrolles was presented to the King, who assured him that the dangers which he had incurred and the services which he had rendered would not be forgotten. He wrote a *Déclaration* at Saint-Ouen which preceded him to the capital, and he made his *entrée* on the 12th of April, in an open coach, with the Prince de Condé and the Duc de Bourbon before him, the Comte d'Artois and the Duc de Berry riding beside the carriage. The cortège went first to Notre Dame, and then to the Tuileries. Vitrolles gives the impression made on him at the first meeting of the Cabinet over which the King presided himself. After having done justice to the King, he adds:

"It seemed to me that all the sentiments which the King had expressed were noble, but that his ideas had not risen above a certain level. I had seen in his impatience for the formation of a guard one of the weak points of the emigration—the conviction that the reduction of a few hundred of horse of the King's household had been one of the principal causes of the Revolution. In vain had I waited for an exposition of his policy, of the principles which he had adopted for the reëstablishment of his authority, of the plans which he had traced for himself for the development of the public prosperity. Instead of all this, when I summed up his discourse for myself, I found only narrow thoughts, dictated by prejudice."

The chief preoccupation of the new King was, it is true, the formation of a military household. Six companies of guards were formed, and given to the Duc d'Havré-et-de-Croy, the Duc de Grammont, the Prince de Poix, the Duc de Luxembourg, Marshal Berthier, Prince of Wagram, and Marshal Marmont, Duke of Ragusa; these two last nominations were a concession to the army of Bonaparte. The King had, besides, two companies of chevau-légers and of gendarmes, two companies of mousquetaires, and a company of grenadiers on horseback. To all this cavalry it was decided to add a body of 4,000 infantry, under the name of Royal Guard, and a body of artillery. These projects, while they gave satisfaction to the émigrés, offended the old army, wounded its legitimate pride, and were not without influence on Napoleon's resolves. Louis XVIII. treated the sovereigns who had prepared his Restoration with an easy pride and dignity; he made great efforts to put a stop to the exactions of their armies. In all matters of administration the King took no initiative; he seemed disposed to assume the part of a constitutional King. Many told him to keep the bed of Bonaparte, and to place himself in it. Such was not his disposition; he was too idle to be despotic, too indifferent to see to details. In England he had become familiar with parliamentary government, and Beugnot could say of him, "Let us thank Providence for having made us a King composed of the finest flower of constitutionalism." The Comte d'Artois, who afterward became Charles X., once said to Vitrolles, who was speaking against constitutionalism and the modern ideas of monarchy: "If you could pound us all, Princes of the House of Bourbon, in a mortar, you could not make out of us an absolute King." The King did not attach much importance to formulas, and the "Charte" was called "Charte Constitutionnelle."

On the 5th of March, 1815, M. de Vitrolles was in his cabinet at the Tuileries, when the Director of Telegraphs asked to speak to him immediately, and thereupon handed him a despatch. Vitrolles, feeling instinctively that it contained bad news, brought it to the King.

"The gout was at that moment in his hands. He tore the seal with difficulty, and, seizing as well as he could the despatch in its envelope, told me to draw the envelope from it. I turned slowly and threw the envelope in the chimney-place which was behind me; then, standing before the table facing the King, I waited while he read the two or three lines of the despatch. He kept his eyes fixed on the paper longer than was necessary to read them; then threw it on the table: 'You don't know what it is?' said he. 'No, Sire, I am ignorant of it.' 'It is,' said he in a voice without the slightest alteration—'it is Bonaparte, who has disembarked on the coast of Provence.'"

The despatch had been sent from Marseilles by Marshal Massena; at that time the telegraph did not extend further from Paris than to Lyons. "'Take this,' said the King, with the same calm, 'to the Minister of War. He will see what there is to be done.'" Vitrolles found Marshal Soult, on his way to the Tuileries, on the Pont Royal, and told him the great news. Soult showed some incredulity, and went at once to the King. It was decided that the Duc d'Angoulême should take command of the troops in the South, in Languedoc. The Duc de Berry was to assemble the forces which were in Alsace and in Lorraine; the brother of the King, Monsieur, was to march directly against Bonaparte, with Macdonald under his orders. Vitrolles remained in Paris. On his way, Bonaparte passed by the château of Vitrolles, near Sisteron. "Is this," he asked, "the castle of the famous Baron de Vitrolles?" The defection of Labédoyère opened to Bonaparte the gates of Grenoble; the soldiers joined the Emperor wherever he went. Monsieur, who was at Lyons, was obliged to return to Paris with the Duc d'Orléans. Marshal Macdonald, and the Governor, M. de Damas, who remained the last, were obliged to run away at full gallop, so as not to be made prisoners. Marshal Soult, who was suspected of treason, resigned his functions of Minister of War. Vitrolles made plans of resistance, and proposed to the King to make a stand in the west of France, at Orléans, at Tours, at Angers—if necessary, at La Rochelle—to make of half of France a new Vendée.

In the midst of the drama the King preserved his perfect calmness. Here is a curious proof of it. A speech was prepared, which the King was to pronounce before the Chambers. "We were all standing round the table of the King. At the moment we heard it read I was struck with this locution: 'The man who comes among us to fire the horrors of civil war, brings also with him the curse of foreign war.' 'I do not believe,' said I to Blacas, who was by me, 'that the horrors of war can burn.' 'What are you saying?' said the King. Blacas repeated my observation. 'He is quite right,' said the King, and he wrote 'the torches of civil war.'" He was a great purist, and the grammarian was not lost in the King.

The next day General Maison, who offered his services against Bonaparte, asked to see M. de Blacas, with General Dessoles. They spoke of the situation, said that Bonaparte would never forgive them, that they would probably be forced to go into exile; they threw themselves on the goodness of the King. M. de Blacas answered in the best terms, and said that the King would certainly appreciate their services and their devotion, but kept in the domain of generalities. "General Maison spoke then with the cynicism which lay at the bottom of his character. 'You see,' said he to General Dessoles, 'that he makes believe not to understand us. We must speak clearly. You must,' said he to M. de Blacas, 'either not count on our services or else give us each two hundred thousand francs.'" M. de Blacas took the advice of the King, and the money was sent.

Louis XVIII., through the agency of some bankers, sent about fourteen millions of francs to England. This sum was procured from the resources of the civil list, and it helped the King to maintain his numerous followers at Ghent during the Hundred Days. The King, before his departure, gave to Vitrolles a letter for his niece, and asked him to take it to Bordeaux. "You will tell my niece to stay at Bordeaux as long as she can, and when she is no longer able, to do as I do." "The speech," says Vitrolles, "was not more heroic. Taking in my hand the King's letter, I told him that I regretted much not to have foreseen this order of his Majesty; that I would have come to an understanding with the Ministers and taken their instructions; that they would have enlightened me to the best of their ability, and that I regretted much to go away without any directions. 'Mitte sapientem et nihil dicas,' said the King. I answered this compliment with a profound reverence." The King and Monsieur gone, Vitrolles left Paris by way of Rambouillet and Chartres. He found the Duchesse d'Angoulême at Bordeaux, and gave her the letter of the King.

The last part of this second volume contains an account of the vain attempts made in the south of France against Bonaparte and in favor of the Bourbons. The great answer to all the prayers of Vitrolles, to all his entreaties, was the word, "We will have no civil war." The Generals, one by one, took sides with the Emperor against the King. The regiments felt no loyalty for Princes of whom they were almost ignorant. Every proclamation of Bonaparte stirred the patriotism and the pride of the soldiers. His success, uncertain at first, had become definitive. Madame, learning that the King had left Lille, and afterward Belgium, had embarked in the *Gironde;* the Empire was proclaimed at Bordeaux. Vitrolles was arrested by order of General Laborde, and sent to prison. He heard the soldiers who were on guard say to each other, "When shall we shoot him?" He was not shot, however. After ten days' confinement, he was sent, under escort, to an unknown destination. The escort stopped at Montauban, at Limoges, at Orléans; he learned at last that he was going to the prison of Vincennes. He remembered the Duc d'Enghien, and prepared himself for an immediate death, without trial, or after a mock trial.

Correspondence.

A YOUNG VOTER'S DOUBTS.

TO THE EDITOR OF THE NATION:

SIR: A college friend (who has just passed his professional examinations and is about to enter active and independent life) and I have been talking about our duties as young voters, and those of all young men who are to cast a ballot this year for the first time at a Presidential election. Believing that there are hundreds of young men of about our age who would read, perhaps with some benefit, a report of our conversation, I will attempt to reproduce it in effect, hoping that although it may not express their ideas, yet it may suggest something further in their own line of thought.

We thought that it is a natural and praiseworthy desire for a young man of our age to choose carefully a party, and then work with all the seriousness of honest citizenship to help accomplish the aims of the chosen party. But on analyzing the two parties we could not see that either party, as a *party*, was working for any of the important questions which advanced scholars and papers are advocating. Had we been voters twenty years ago, when the Republican party was doing a great work, there would be some excuse for our saying, as many older voters do, "I believe that the Republican party has done so much good that it ought not now to be abandoned." Or, could we read of its great achievements without being mindful of its present stupidly dogmatic views on the question of tariff, its insane notions of special industries, and its peculiar susceptibility to all influences which come bearing riches via the lobby, then we might accept it as an honest leader. Could we, on the other hand, believe that a large majority of the Democratic party is in earnest about revenue reform, and will spare no means to make itself an honest exponent of that cause, without remembering that its seriousness in regard to civil-service reform is much like that of the trick mule, and that its notions of silver are unscientific and delusive, then we might with some hesitancy say, "We believe that you have *almost* an honest purpose, and we will lend our weak but earnest efforts to your side."

So, then, we conclude that the serious and disinterested young voter of to-day cannot afford to work within the ranks of either party. The languor which always follows a great struggle has not yet left the Republican party, the blood-poisoning which the Democracy has experienced on various occasions has not yet been entirely cured, and the screaming babe of which Butler is the fond nurse is not yet old enough to make any articulate sounds. Our final resolve, then, is, to *enlist* with no party, to freely express our ideas, denounce narrow partisan spirit, and give our efforts and our sympathies to every movement, in whatever party, that will tend to raise our political system to such a level that demagogues shall no longer be the most powerful, special interests the most important, and careful political education and stern morality an object of popular jesting.

Very respectfully,

A POLITICAL STUDENT.

NEW YORK, May 24, 1884.

Notes.

THE first volume of an American edition of Dr. Alfred Edersheim's 'Life and Times of the Messiah,' will be issued by A. D. F. Randolph & Co., early next month; the second and last volume, in July.

'The Travelling Law School and Famous Trials' is announced by D. Lothrop & Co., Boston.

Mr. Francis S. Drake has nearly ready for the press a small quarto entitled 'Tea Leaves,' largely made up from documents, biographical notes, etc. (now for the first time printed), relating to the "Tea Party" which met in Boston on the 14th of December, 1773. Mr. Drake has found out the names of as many as 100 persons who were engaged in the destruction of the tea, and will have something interesting to tell about each and all. Portraits of Warren and Revere, and views of the wharf, vessels,, etc., serve to illustrate the "scene of action."

'Henry Irving, in England and America,' 1838-1884, has been issued by T. Fisher Unwin, London. From the same source we have received the catalogue of the summer exhibition of the Royal Society in water colors, of which the memorandum sketches possess considerable intrinsic interest.

Dr. J. G. DeHoop Scheffer, of Amsterdam, author of the well-known 'History of the Reformation in the Netherlands,' has translated into Dutch and published in the *Doopsgezinde* [Mennonite] *Bijdragen* for 1884 the address delivered by Mr. Samuel W. Pennypacker, of Philadelphia, at the recent German Bicentennial in that city.

Mr. John Edmands, librarian of the Mercantile Library, Philadelphia, has reprinted from the *Bulletin* his 'Reading Notes on Wycliffe,' which have a timely importance: and has also distributed for corrections and additions proofs of a bibliography of the "Dies Iræ," regard being paid only to works in English.

We have received the first part of vol. i. of Records of the Society of Naturalists of the Eastern United States, an organization formed in April, 1883, and having for its object the discussion of methods of investigation and instruction, laboratory technique and museum administration, and other kindred topics. Professional naturalists, teachers, and physicians are alone admitted to membership. The New England and Middle States and the District of Columbia are the allotted territory for the Society's reunions.

No. 18 of the *Journal of Social Science* (G. P. Putnam's Sons) contains the transactions of the American Social Science Association at Saratoga last year. The papers printed have the usual variety of subjects, but none is striking by its novelty, unless we name Mr. M. F. Tyler's "Legal History of the Telephone."

Professor James K. Hosmer, who is engaged upon a new life of Samuel Adams, sketches his hero in the fourth number of the Second Series of the Johns Hopkins University Studies—"Samuel Adams, the Man of the Town Meeting." It will be found eminently readable, and to have had the benefit of the new life of Governor Hutchinson.

The corporation of Harvard University have just announced that a gift received from the estate of the late Henry T. Morgan, of this city, is to be used for the establishment of four new fellowships for the encouragement of advanced liberal studies. The "Morgan fellowships" are to be assigned to applicants undertaking to carry on at the University special work of the kinds for which the degrees of Doctor of Philosophy and Doctor of Science are now given, but it is not required that an applicant should become a candidate for any degree, nor that he should hold any academic degree as a qualification. As in the case of the Kirkland fellowship established by Mr. Bancroft, it is requisite that the applicant should prove that he has the education and the special capacity necessary for success in the work undertaken; but this proof may be presented in any form which the particular case admits, and for this purpose diplomas, certificates from instructors or from experts, and written or experimental work already performed, will all serve equally well. The holders of these fellowships will work under the supervision of the committees having charge of the several departments of advanced study, and will be required to forego all other occupation, except such university work as may be approved by the Academic Council. The income of the fellowships will be $500 each, and the term of appointment one year, the incumbent being eligible for a second appointment.

We have received from Mr. Arthur Gilman, Secretary of the Society for the Collegiate Instruction of Women, at Harvard College, the programme for the sixth year's courses of study, (1884-5). Mr. Gilman's address is 5 Waterhouse Street, Cambridge, Mass.

Prof. C. K. Adams, Dean of the School of Political Science in the University of Michigan, sends us the Annual Announcement describing the plan, courses, and requirements for admission to this seminary, which is one of the most promising of the latest forms of our higher education.

The Ohio State Forestry Association at Cincinnati has issued a pamphlet on 'Trees and Tree Planting,' which, though somewhat loosely edited, will do far more good than its occasional exaggerations both of facts and of sentimentality will do harm. It is intended to promote everywhere the observance of "Arbor Day," or a general tree-planting, by school-children and the citizens at large. In Cincinnati, a pin-oak, planted in memory of a cemetery superintendent, "was appropriately draped in mourning and labelled"; and at the feet of trees set up in an "Authors' Grove" were sunk "small granite tablets, about eight inches square, bearing the name of the author honored and the date of the ceremony." Many authorities are cited as to the value of preserving forests; practical directions for planting and transplanting are given; and appropriate extracts in prose and poetry are offered for use at the annual festival. We understand that copies of this pamphlet will be forwarded gratuitously on receipt of postage.

A pamphlet address by Mr. Alexander Hogg, Superintendent of Schools at Fort Worth, Texas, on "The Railroad as an Element in Education," is devoted mainly to the advantage of making all the railroad routes of the State converge upon Galveston, and of building a great breakwater in that harbor. We have remarked the following curious testimony: "A prominent minister of one of our leading denominations told me he had ridden free, in one year, 24,640 miles upon the various roads of Texas—over 5,000 miles being upon the lines of a single company. Hundreds of other ministers can testify to this same liberality of these same corporations toward the spread of the Gospel. The Texas roads keep a temperance lecturer continually travelling over the State, free as to transportation, to wage a ceaseless war against intemperance. One of our greatest General Managers says: 'At all times put me down, first, in favor of public free schools; second, and under all circumstances, against whiskey.'"

The *Revue Indépendante*, begun this month in Paris, is recommendable by its handy form, but its print is poor, and its contents far from extraordinary. The editorial article on Materialism allies the *Revue* with the modern doctrine of evolution; M. Adrien Renacle treats, as a disciple, of the Wagnerian movement in France, in the first number not getting beyond the historical stage; and J. K. Huysmans attacks the system of the Ecole des Beaux-Arts, by which the sons of peasants and of workingmen are expected to be turned out painters with ideas, seeing in it the cause of the increasing mediocrity of the Salon. Edmond de Goncourt con-

tributes a trifle, and is in turn made the subject of eulogy by an admirer.

We should doubt if *La Nuova Scienza*, a quarterly metaphysical review just started by Professor Enrico Caporali, at Todi, Umbria (New York: F. W. Christern), would have many attractions for American readers. The three leading articles of the first number are entitled: "Italian Thought of To-day," "The Pytnagorean Formula of Cosmic Evolution," and "The Anti-Clerical Italian Evolution."

M. Gaston Paris has pointed out, in a paper read before the French Academy of Inscriptions and Belles-Lettres, a source from which, by a little ingenuity, considerable knowledge of the manners and customs of the Middle Ages might be derived. Ovid's 'Art of Love' was translated half-a-dozen times, beginning with Chrestien de Troyes, whose version, to be sure, is lost; but the others remain, and whenever there are allusions to the usages of ancient Rome which their readers would not understand, as of course there often are, the translators substitute equivalents borrowed from the practices of their own time; so that the changes are doubly interesting, as showing what was not, as well as what was, the life of the Middle Ages. It would require some care to work this mine, but it would be a very interesting labor for a scholar endowed with leisure.

Architects will find their account in 'L'Architecture Normande aux XIe et XIIe Siècles en Normandie et en Angleterre,' text and plates, now in course of publication by the Librairie Centrale d'Architecture, 15 Rue Bonaparte, Paris (New York: F. W. Christern). The editor is M. V. Ruprich-Robert. Certain classes of the designs copied will be given on a uniform scale. There will be about 176 plates, engraved, colored, and photographic.

From the *Revue Critique* we learn that the last volume (2d series, vol. viii., pp. 128 129) of the *Recueil des travaux de la Société d'Agriculture, Sciences et Arts d'Agen* contains a notice and a letter by Mommsen upon the famous inscription of Hasparren (Basses-Pyrénées). This inscription, which has lately been the subject of an article by M. Desjardins in the *Revue Archéologique*, October, 1883, and of which a good facsimile is given in the *Bulletin du Comité des Travaux Historiques*, 1883, p. 163, is dedicated to one called Verus, who "*Pro novem optinvit popvlis se ivngere Gallos.*" The date of the inscription Mommsen fixes as of, or subsequent to, the time of Diocletian, and the subject in his opinion is the provisional reunion of Novempopulana and the diocese of the Gauls. It is worthy of remark that Mommsen has lately turned his attention, in a great degree, to the study of the antiquities of Gaul. The results of his researches have been given from time to time in the French reviews. The *Bulletin Épigraphique de la Gaule*, 1883, p. 133, has a note by him on a Paris inscription, the *Revue Épigraphique du Midi de la France*, 1883, p. 379, a comment upon the pretended inscription of Ahenobarbus, and in the *Bulletin Trimestriel des Antiquités Africaines*, October, 1883, he writes upon the inscription of an ADVocatus XL GALLIARVm.

— The annual educational discussion of the commencement season is begun in the *Century* for June, by the publication of President Eliot's address at Johns Hopkins University last February. This paper is to be looked on as an authoritative statement of the aims of the practical reformers, which it defines and supports with a condensed but far-reaching argument. Succinctly the proposition laid down is, that the degree of Bachelor of Arts shall mean a certain amount of knowledge irrespective of its kind, and secondly, that on this understanding English, French, German, political economy, history, and natural science shall be regarded as equal in weight or rank to Greek, Latin, and mathematics. The argument starts from the utilitarian principle that the best is a fluctuating quantity, and, after showing that this is historically true of education, asserts that the present strong effort for reform is of the same character as that which more than three centuries ago substituted classicism for scholasticism, *i. e.*, it is an attempt to adapt methods which grew out of old learning to the interest of an age of new knowledge. This is a much more skilful and powerful attack than Mr. Adams's guerrilla raid last year; in fact, it is a move in the game, and denotes a change in the disposition of the forces. It is not likely that a leader in the movement would take up so positive and decided a position unless he were sure that it would be held The time is ripe for results. Mr. Edward Eggleston's paper on the "Commerce of the Colonies," though summary and statistical, gives a very vivid picture of the trading activity of all the colonies, their pursuits, ways and means of transit and exchange, and their state of mind with regard to smuggling and piracy. Its illustrations, from contemporary sources, are very curious and valuable.

—The *Century* has for a frontispiece an engraving from a drawing by Kenyon Cox from St. Gaudens's statue of Randall, founder of the "Sailors' Snug Harbor." The drawing is an admirable reproduction of the statue, and it is cut in the best possible style. There is an interest *sui generis* in the statue, arising from the fact that it is entirely the creation of Mr. St. Gaudens's imagination, no likeness of Randall being in existence. The illustrations of "A French-American Seaport" are in the best manner of the *Century* work. Mr. Julian Hawthorne's article on "American Wild Animals in Art," having reference to Mr. Kemys and his sculptures of the wild animals of America, has too much the air of a "boom" for Mr. Kemys, and from this the editor of the *Century* very wisely dissents. It is one thing to write on art eloquently and in the abstract, and quite another to pronounce concrete judgments, especially on new forms of art. Art is not picked up on our Western frontier, however well the knowledge of nature may be; and the more accurate representation of nature does not imply, or necessarily go accompanied by, art. Between the art of Kemys and that of Barye, to which it is preferred, there is the gap which lies between nature and art. Kenyon Cox, on the whole, carries off the honors of this number of the *Century*, not only with his Randall, but with the fool's May-day poem and illustration—both excellent, and in the best sense original.

— In *Lippincott's*, also, the educational question is taken up in an article on the endowment of academies, which is declared to be desirable on many old grounds. It is a pity that the comparison, by statistics, of the academies and the high schools was not made more fully and closely. President Eliot has confessed, long ago, that in his view endowed academies should supersede high schools in the preparation of students for college; and, certainly, education could thereby be more easily controlled by the university, on which such feeders would be practically dependent as the public schools can never be. Just here is the essential point which differentiates education East and West. Where the university is a State school it can dominate the school system, and it is in the exercise of this power, which is markedly increasing, that the competitive strength of the Western State colleges will lie. In the East the lack of a direct tie with the common-school system is gradually leading to the conviction that endowed academies must be multiplied, and that, perhaps as an indirect consequence, the higher education, afforded at public expense, will be abridged. There are certainly two sides to a question out of which two systems seem to be growing at the same time. Of the other articles in this number, Mr. Kirk's reminiscences of the great actors of Shakspere who are dead, adds a valuable chapter to the conflicting annals of the stage.

—The fifth annual report of the Archæological Institute of America gives an account of the conclusion of the work at Assos. It is unfortunate for the more practical results in museum-material that our diplomatic representative at Constantinople had not been gifted with a little more backbone, which would have enabled him to insist on the firman rights of the Institute. The scrupulous good faith of our American Society is not appreciated or understood by the Turkish officials, by whom the love of justice is taken as nothing but a sense of weakness. The partition of the objects found having been made by the recognized Turkish authority, no nonsense on the part of the Porte or its officials should have been submitted to, and the characteristic conduct of the authorities which the report mildly refers to thus, "The architectural fragments which had been granted to the explorers by Baltazzi Bey were ultimately withheld by higher officials," should have been met by our Minister as it would have been by the Minister of any other Power, even Greece, and, if not corrected, the flag of the Legation should have been struck at once. The Porte chooses occasions like this to show its contempt for the civilized Powers, and no good diplomat submits to the insolence of the Pashas. Our legation has not, during the present occupancy, succeeded in obtaining redress for a single outrage or for a single violation of the firmans. It is pleasanter for the Minister to protest amiably, and not disturb his cordial receptions by the Sultan. He nurses his "influence" at the Sublime Porte lest he should blunt it by efficient use. The Institute might profitably try its hand at Italian work, where liberal measures and friendly coöperation would meet it. Fortunately the archæology of our own continent is untrammelled by stupid and malevolent officials, and we have always a field to work in. Bandelier's researches (which are here mapped and described in two very interesting letters) are worth all they cost, and are every year more valuable. The third annual report of the American School of Classical Studies at Athens is joined to the foregoing report.

—The sixteenth and seventeenth reports of the Trustees of the Peabody Museum of American Archæology and Ethnology at Cambridge, Mass., come bound together in a thick brochure, of which they form, however, but a relatively small part. What may be called the permanent value of the volume consists in papers by Professor Putnam's assistants, Mr. Lucien Carr and Miss C. A. Studley, and by Miss Alice C. Fletcher, the last-named contributing several important minute descriptions of various Indian festivals and ceremonies like that of the White Buffalo, the Elk, the Four Winds, the Shadow Lodge, etc., etc. Mr. Carr, with a light hand, but with a fulness of knowledge and citation that has a very satisfying finality about it, describes the female domination in the Indian tribes east of the Mississippi. The ideal overworked and abused squaw disappears under this treatment, and the woman stands clearly forth as the base and crown of aboriginal society. The picture will be a surprise to most readers. Professor Putnam tells of the continued exploration of Western mounds, in Tennessee and Ohio,

with very significant results, among which must be counted the numerous traces of wooden structures destroyed by fire. The Museum has acquired some of the prehistoric human footprints (in what is now solid rock), found last December on the shore of Lake Managua in Nicaragua. Miss Studley furnishes some exhaustive notes on human remains obtained from caves in Coahuila, Mexico. A well-known dental surgeon of Buffalo, who has examined the Museum's large collection of aboriginal American crania, is quoted as having found in them every species of dental disorder, except syphilitic, which now afflicts us. The mound-builders of Tennessee had better teeth than the Peruvians whose mummies are found at Ancon, and vegetarians will not be pleased to have this attributed to their larger diet of animal food. Reference is made to the discovery of a prehistoric quartz tool-shop in the gravel forming the modified glacial drift on the banks of the Mississippi at Little Falls, Minn., by Miss Franc E. Babbitt, and we will mention here that the beginning of this explorer's report will be found in the June number of the *American Naturalist*. It is a significant circumstance that the three ladies we have mentioned should figure so largely in a scientific pursuit of this character.

—The English Dialect Society have just added a volume to each of their series, namely, of original and of reprinted glossaries. Sir William H. Cope, who edits the 'Glossary of Hampshire Words and Phrases' (Trübner & Co.) explains the peculiarity of this dialect, such as transpositions of consonants (*e. g.*, *aks* for *ask*, *waps* for *wasp*, and the like), the invariable use of *his* or *hisen* for *its* among the elder people, and a preference for the masculine gender. "There is a saying that 'everything in Hampshire is called *he*, except a Tom-cat.' This is not strictly true. The cat, indeed, whatever its sex, is always *she;* but so is generally a wagon, and any sort of carriage, and invariably a saw." An American will be struck in this glossary with *allow*, in the sense of 'think, suppose, consider' (as, of distance, "I allow it to be so far"); *bang*, 'to puzzle' (as, "That *bangs* me"); *cusnation*='tarnation'; *hash*='harsh.' Quaint locutions are, *adapted*, 'versed in, experienced' (as, "A man adapted to pigs"); shirt-*craw*=the bosom of a shirt. "To *haunt* pigs or cattle in the New Forest is to accustom them to repair to a certain spot, by throwing down beans or fodder there when they are first turned out." "'*Up-along* volk' are the people of Surrey and Sussex, in opposition to the '*down-along* volk' of Dorsetshire and Somersets." An opprobrious association of locality is seen in *Isle-of-Wight parson*, meaning the 'cormorant,' and *Isle-of-Wight rock*, 'a particular kind of skim-milk cheese, extremely hard, only to be masticated by the firmest teeth, and digested by the strongest stomachs.' Finally, in Hants, *break* is used for *tear*, and vice versa, as "I have *a-torn* my best decanter," and "I have *a broke* my fine cambrick apron."

—A stouter brochure is 'English Dialect Words of the Eighteenth Century,' derived from Nathaniel Bailey's 'Universal Etymological Dictionary,' and edited by Mr. W. E. A. Axon, who gives in his introduction a more particular account of this worthy lexicographer than can be found elsewhere in print. Besides adding something to the scanty details of his life, by the discovery that he was a Seventh-Day Baptist worshipping at the Mill Yard Church in Whitechapel, Mr. Axon makes up a tolerably complete bibliography of the Dictionary, on which Johnson based his, and of his other numerous works. The thirteenth English edition of the Dictionary appeared in Glasgow in 1802; an eleventh German in Leipsic in 1810. Bailey's Hebrew scholarship, it seems, was slightly superficial. A Rabbinical quotation, introduced by him to illustrate the duty of Christians to forego retaliation, turns out to mean: "If one says to thee that thy ears are those of an ass, do not care for it; if two [say so] prepare for thyself a bridle." Most interesting, perhaps, is the showing, after Mr. Skeat, of Chatterton's use of Bailey to get up "the antique and sham-antique dialect of the Rowley Poems." The glossary here taken from the same source is very curious, embracing many proverbs and local customs. "As wise as a Man of Gotham: This Proverb passes for the Periphrasis of a Fool, as an hundred Fopperies are feigned and father'd on the Townfolk of *Gotham*, a Village in Nottinghamshire." *Kid* is defined as "formerly one trapanned by Kidnappers; now one who is bound Apprentice here, in order to be transported to the English Plantations in America." Remembering Mr. Darwin's residence in Kent, it is amusing to read, apropos of *Kentish long Tails*, that "the Kentish Men are said to have had Tails for some Generations; by way of Punishment, as some say, for the Kentish Pagans abusing Austin the Monk and his Associates. . . . Others again say it was for cutting off the Tail of Saint Thomas of Canterbury's Horse." So grows apace the material for "the future Dialect Dictionary," the necessary complement of the literary dictionary now in course of publication by the English Philological Society.

— 'The Dictionary of National Biography,' which Messrs. Smith, Elder & Co. have undertaken to publish, under the editorship of Mr. Leslie Stephen, will take rank with Dr. Murray's dictionary as one of the literary monuments of this century. It is being compiled with extraordinary thoroughness, all known sources having been ransacked for names of Englishmen in any way distinguished above their fellows, and lists of names having been published from time to time in the *Athenæum* with a request for additions or suggestions. An idea of this thoroughness may be gained from the fact that from Bonomi, Joseph, to Bythner, Victorinus (the end of B), there are over 1,300 names, A and B together furnishing 4,000. Probably at least four out of every five of these will be new to most readers. The size of the work will be octavo, and the number of volumes to which it will extend may be roughly inferred from the statement that the first volume, which will probably be issued in the autumn, will contain only a part of A. The name of the subject of each article will be given in two types, with dates of birth and death, and descriptive title, thus—

"**ACKERMAN**, JOHN YONGE (1806–73), numismatist and antiquary."

The initials of the writer will be given at the foot, and each volume will contain a list of the contributors whose initials appear in it. In every case references will be given as fully as possible to original authorities, and to previous biographies of any importance, and at the end of each article general authorities will be cited and bibliographical notices given. It is already evident that a feature of the new dictionary will be the large number of errors of earlier biographers which will be corrected in it. Mr. Stephen has enlisted the services of antiquaries in all parts of the country, and of officials in the various departments of the British Museum and the Record Office, and there will be few well-known English men of letters whose names will not be found in some of the lists of contributors. In many cases classes of biographies have been assigned to writers who are specially qualified to deal with the subjects of them: for instance, the chief Anglo-Indians will be treated by Sir Alexander Arbuthnot, K. C. S. I., the naval celebrities by Prof. J. K. Laughton, of the Royal Naval College, Greenwich, and many of the artists by Mr. Cosmo Monkhouse. Among the articles of special interest our readers will be pleased to hear of the following: Prince Albert and W. E. Aytoun, by Sir Theodore Martin; Dr. Arnold, of Rugby, by Mr. Theodore Walrond, C. B.; Akenside, Samuel Butler, and Mrs. Aphra Behn, by Mr. E. W. Gosse; Major André and Benedict Arnold, by Mr. Richard Garnett; Anstey and the Bewicks, by Mr. Austin Dobson; Burns, by Prof. John Nichol, of Glasgow; Walter Bagehot, by Mr. R. H. Hutton; Bacon's political career, by Mr. S. R. Gardiner, and his literary and philosophical career, by Professor Fowler, of Oxford; Anne Boleyn, by Mr. James Gairdner; Queen Anne, by Prof. A. W. Ward; Richard Bentley, by Professor Jebb. Mr. Stephen himself will write a large number of articles, among which will be Addison, Dr. Arbuthnot, Bishop Berkeley, Bishop Butler, the Brontës, and—one which will be of special interest in view of recent discussions—Byron. With regard to the length of the more important biographies it may be stated that Mr. Stephen's article on Addison covers eight pages of two columns each. The dictionary is intended to include all dead English, Irish, Scotch, Welsh, and colonial persons of any importance; several early American settlers will be found in it, but no one who was born on American soil. We have not yet heard of any plan by which American biographies are to be included, either in a supplementary work or by supplements to each volume, but it is much to be hoped that some arrangement of the kind will be made. The work will be one of the greatest value and importance—indeed, it may be considered in many respects the final undertaking of the kind. It seems, therefore, specially desirable and fitting that it should reach the highest standard of completeness by becoming the repository of the personal records of the whole English-speaking people.

— The new Museum of Classical and Genera Archæology at Cambridge, which was formally opened early in the present month, marks the beginning of a new epoch in the study of classical archæology in England, and has a special interest for us from the fact that the teaching of an American scholar has been the basis upon which the undertaking has rested in a great measure, and to which its promoters look for the results which shall justify their efforts. The originator of the scheme was Professor Sidney Colvin, while he occupied the position of Director of the Fitzwilliam Museum, with which the new institution is connected, and it is to him that the credit is due of having overcome the difficulties which beset the beginning of any new departure in such a conservative place as an English university, and of having developed it step by step to its successful completion. But as much, also, is due to the success with which Dr. Charles Waldstein, the present Director of the Fitzwilliam Museum, has taught classical archæology at Cambridge for the last four years, and thus gained for Cambridge the credit of being the only place in England where that study was pursued in the same scientific manner as in Germany. And Mr. C. T. Newton, in his eloquent speech at the inaugural ceremony, doubtless expressed the general feeling when he alluded to Doctor Waldstein's latest discovery (of which there is an account in the *Century* for May) as one of the grounds of confidence for the future of the study in its new home. The Museum, which stands at the back of Little St. Mary's Church, is classic in style, and was designed by Mr. Basil Champneys. It consists of a long central hall, with a smaller hall on each

side, a library, lecture-theatre, curator's room, and a series of rooms devoted to the collections of general and local antiquities—as, from the South Sea Islands and Central America, with fine remains of British and Roman pottery from Cambridgeshire — under the curatorship of Baron von Hügel. The casts are placed upon neutral-tinted pedestals, which run upon wheels to enable them to be drawn to the platform of the theatre as required for the illustration of the lectures, and the walls are tinted with dark buff and pale terracotta. The effect of the whole building is thus extremely pleasing. The collection, however, is disposed with the chief object of affording instruction by its scientific arrangement, and so well is this done that it is sufficient for a visitor to walk carefully through the rooms for him to obtain an intelligent notion of the sequence and characteristics of the periods of Greek plastic art. At the inaugural ceremony Mr. Lowell was the principal guest, and spoke in his best manner, provoking much amusement by his allusion to himself in his scarlet doctor's gown as a "flaming herald," bearing a message of filial respect and sympathy from the new Cambridge to the old. Mr. E. B. Tylor also made a hit by his humorous threat that if anthropology were not duly recognized by the teachers of art and classical archæology, the anthropologists would write a book on their subject and assign art to a sub-section of a chapter near the end. Lord Houghton, Sir Frederick Leighton, the President of the Royal Academy, Professor E. A. Freeman, and Professor Jebb also spoke, and a letter of congratulation was read from Professor Adolf Michaelis, of Strassburg.

EVOLUTION OF MIND IN ANIMALS.

Mental Evolution in Animals. By George John Romanes, M.A., LL.D., F.R.S. With a Posthumous Essay on Instinct by Charles Darwin. D. Appleton & Co. 1884. Pp. 411.

It appears to be the inevitable fate of modern physiologists and zoölogists to develop into temporary or permanent psychologists. Wundt, Helmholtz, Fechner, Lotze, Haeckel, Stricker are prominent instances in Germany, Huxley and Lewes in England. Dr. Romanes, too, is rapidly moving away from comparative neurology to the more abstruse questions of human psychology. When he undertook, a few years ago, to write a work for the International Scientific Series on animal intelligence, he intended to devote one part of his book to statements of facts, another to their explanation with reference to the theory of descent. But, as in the case of most authors, the material grew so rapidly under his hands that the second part had to be expanded into the special volume which now lies before us. This, again, was to include a consideration of mental evolution in man as well as in animals: but, for the same reason, the human division has been reserved for a third volume; and as man is a comprehensive subject, there is no knowing where this process will stop. Perhaps, like the German metaphysicians, Dr. Romanes will ultimately evolve a twelve-volume philosophic system of his own—which may the gods avert! We do not want any more "systems" at present, but monographs on special elementary subjects; and it is to be feared that Dr. Romanes is entering a field where he can do less useful work than he has done heretofore. Already he finds himself hampered by the uncertainty which enshrouds a multitude of elementary facts; and until these are determined, it will be advisable to defer a discussion of first principles.

There is evidence in the present volume that the author has not prepared himself so carefully for the elucidation of higher psychologic problems as for the classification and explanation of those primary mental phenomena which are usually met with in the animal world. Dr. Romanes is thoroughly familiar with the theories of Herbert Spencer, Bain, Lewes, the recent works of Sully, Grant Allen, Preyer, Haeckel, and others; but he does not go back of the Mills, while the works of the great Continental philosophers—Descartes, Leibnitz, Spinoza, Kant, Schopenhauer—appear not to exist for him. It is true, these thinkers knew little or nothing of evolution; but there is a vast amount of subtle and genuinely scientific analysis in their works, to ignore which is to commit as great an error as was the contempt in which many of the old metaphysicians held zoölogical and physiological facts. In the chapter on Pleasures and Pains, for instance, it strikes one as very odd that Mr. Grant Allen and Spencer alone are considered, the former of whom, in the author's opinion, "has given in brief compass the best analysis of the philosophy of pleasure and pain that has hitherto appeared." We had supposed that Spinoza deserved this distinction in the eyes of those who are able to translate his antiquated phrases into terms of scientific psychology; and such appears to be the opinion of two of the greatest modern physiologists, Johannes Müller and Professor Huxley. Edward Hartmann, also, has written a chapter on pleasure and pain—the unconscious in feeling—which is quite as suggestive as anything in Grant Allen's 'Physiological Æsthetics.' And this brings us to a second and much more serious objection. Hartmann has earned an honorable place in the history of philosophy by the prominence he has given to the unconscious element in psychic activity, as first clearly pointed out by Kant *en passant*. Through the writings of Carpenter and Maudsley, this matter has also been brought home to English readers. It is most extraordinary, therefore, that Dr. Romanes should entirely ignore this (next to evolution), the most important principle introduced in modern psychology. Throughout the present work the word "mind" is used as synonymous with *conscious* mental action—as, for instance, in the following passage (p. 160): "Reflex action . . . is non-mental neuromuscular adaptation to appropriate stimuli; but instinctive action is this and something more: there is in it the element of mind. No doubt it is often difficult, or even impossible, to decide whether or not a given action implies the presence of the mind-element, *i. e.*, conscious as distinguished from unconscious adaptation," etc. If Dr. Romanes will consult the works of the writers just referred to, he will see how very small a portion of mental action is conscious—Dr. Maudsley, we believe, somewhere compares the conscious element to a small flame breaking through a mound of invisibly-burning charcoal—and to exclude all this unconscious element as non-mental is an error of definition which is sure to create all sorts of mischief, and does so in various parts of the book before us. "Mind" has been used and should be used as a generic term, including unconscious as well as conscious activity in the three customary divisions of mind—intellect, feeling, and will.

Dr. Romanes devotes the greater part of his space to the first of these divisions, including instinct, which might be called petrified or stereotyped intellect. The feelings are only considered in a short chapter on Pleasures and Pains, and in six pages devoted to the emotions, which we should have liked to see expanded into sixty, for no one would appear to be better qualified than Dr. Romanes to discuss such questions as the expression of emotions, so interestingly and yet somewhat inadequately treated by Darwin.

In regard to the third division, the will, Dr. Romanes involves himself in a peculiar difficulty. In the very first chapter he fixes upon choice as the objective criterion of mind—the first conclusive evidence of its existence. But on the last page (352) of this part of the book he classes the lower stages of volition with the very highest and latest developments of psychic powers in animals, and therefore reserves the consideration of them for his next volume. Now choice is commonly regarded as an activity of will. John Locke, *e. g.*, says that "the will signifies nothing but a power or ability to *prefer* or *choose*." This ability is found as low down as the microscopic Protista, among which, says Professor Haeckel, "there are some that love light and some that prefer darkness to light. Many also . . . select their food with great care." The classification of the lower stages of volition with the latest and highest intellectual powers is inconsistent with these facts and with the selection of choice as the criterion of mind. In the second volume of his principal work (pp. 224-276) Schopenhauer has a chapter on the "Primat des Willens im Selbstbewusstsein," which, he maintains with pardonable conceit, contains more suggestions for a science of the mind than is contained in many systematic treatises on psychology. In this essay he insists that whereas the intellect has countless degrees of perfection, the will is never imperfect, but is "complete and entire even in the smallest insect." To our thinking there is no such thing as a will at all, as a separate division or activity of mind, and the term should be discarded as useless and misleading, like the numerous metaphysical subtleties and quiddities of mediæval treatises. Will is simply the consciousness of a motor innervation, the passage of feeling into action, guided by motives which, as Schopenhauer says, are intellectual; and one of the best evidences for our view is that Dr. Romanes in his two volumes has hardly made any reference to the will, and apparently seems puzzled what to do with it.

Having thus disposed of a few obvious criticisms, it is with all the more pleasure that we recognize the admirable qualities of the book as a whole. It is full of interesting illustrations of the various phases of mind, and contains not a few original suggestions of great ingenuity. Such, in the chapter on Pleasures and Pains, is that in regard to the origin of consciousness, which we do not remember having ever seen made so clearly and definitely: "The *raison d'être* of Consciousness may have been that of supplying the condition to the feeling of Pleasure and Pain. Be this as it may, however, it seems certain, as a matter of observable fact, that the association of Pleasure and Pain with organic states and processes which are respectively beneficial and deleterious to the organism, is the most important function of Consciousness in the scheme of Evolution." Under the head of Perception, the results are given of the latest German experimental researches in regard to the time required by acts of perception in the case of different senses and different individuals. To these our author adds an account of his own experiments in regard to the power of rapid reading (silent and tested by writing a synopsis). He found that "in a given time one individual may be able to read four times as much as another"; and he was struck with the fact that "ladies nearly always carry off the palm." Lest, however, improper use should be made of this discovery by the advocates of women's rights, we may add that "there is no relationship between rapidity of perception, as thus tested, and intellectual activity, as tested by the general results of intellectual work; for I have tried the experiment with several highly-

distinguished men of science and literature, most of whom I found to be slow readers."

Dr. Romanes has, with great ingenuity, prepared a table showing at a glance the scale in animal life at which he has been able to discover the first evidences of the different intellectual and emotional activities. This table is of course only tentative, and the author himself points out the various objections to it. But it is convenient for general orientation, and for the benefit of those who may observe these phenomena at a lower scale than here indicated, and thus be induced to record their observations. Under the head of Products of Intellectual Development, the following order of evolution is given: protoplasmic movements; non-nervous adjustments; partly-nervous and nervous adjustments; pleasures and pains; memory; primary instincts; association by contiguity; recognition of offspring and secondary instincts (insects and spiders); association by similarity; reason (higher crustacea); recognition of persons; communication of ideas; recognition of pictures, understanding of words, and dreaming (birds); understanding of mechanisms, use of tools, indefinite morality. The Products of Emotional Development are thus arranged: surprise, fear; sexual emotion without sexual selection; parental affection, social feelings, sexual selection, pugnacity, industry, curiosity; jealousy, anger, play; affection; sympathy; emulation, pride, resentment, æsthetic love of ornament, terror; grief, hate, cruelty, benevolence; revenge, rage; shame, remorse, deceitfulness, ludicrous. The principal objection to such a definite arrangement is, of course, that these psychic activities do not arise full blown, but gradually, and have various stages of development. One of the best features of Dr. Romanes's treatise is the manner in which he takes care to indicate these steps, and draws useful lessons from them, as in the chapters on Reason and Imagination, the latter of which is the most interesting of all, and should be read even by those who have not time to read the entire work. It gives evidence of the existence in dogs and other animals of dreams, delusions, home-sickness, and a sense of the mysterious, akin to fetishism, which induced Dr. Romanes's dog to conceal himself in terror at the sight of a dry bone which suddenly became alive, apparently, through the agency of a thread, one end of which was in his master's hand; while on another occasion this feeling manifested itself at the mysterious disappearance of soap-bubbles, which exploded on being touched by the dog. Since the appearance of 'Mental Evolution in Animals,' Sir John Lubbock has made a very valuable addition to canine psychology by showing that a dog can be taught to read—to distinguish "Bones" from "Out," etc., and to bring a board bearing these words according as he feels hungry or wants to go out—the possible assistance of smell being carefully eliminated. In regard to the dog's sense of smell, we may add here, Dr. Romanes makes an error on p. 93. Speaking of the astonishing perfection of this sense in dogs, he gives his opinion that it is not merely our own sense of smell greatly magnified, because, "if this were the case, it seems incredible that highly-bred sporting dogs, which have the finest noses, should be those which take the keenest pleasure in rolling in filth, which, literally, stinks in our nostrils to the degree of being physically painful." He forgets the difference between physical and æsthetic refinement. Savages love noises and glaring colors which we abhor, yet physically their eyes and ears are better than ours. The Esquimaux's fondness for antiquated eggs is also well known; and, after all, the difference between the dogs mentioned, the Esquimaux, and the German professor eating his Limburger cheese, is not so very great.

Mr. Darwin's posthumous essay on instinct (30 pages), which is appended to the volume, is, on the whole, of more historic than scientific interest, although, like everything written by the great naturalist, it is crammed with interesting facts and suggestions. Part of it is antiquated, and some of it is incorporated in the 'Origin of Species.' Dr. Romanes not only had the privilege of using this essay, but all the MS. notes left by Darwin on psychologic subjects, which are incorporated in the text in their proper places. His own discussion of instinct takes up no less than 259 pages, and may without hesitation be pronounced the most satisfactory and complete treatise on the subject in existence in any language. Lewes's theory, that instincts are due to lapsed intelligence; Spencer's view, that they grow out of reflex actions; and the views of Darwin, are passed in review, and what is good in each is appropriated. Both Lewes and Spencer practically ignore natural selection as an agency, although in a letter published in the *Athenæum* of April 5, 1884, Mr. Spencer states, with reference to his 'Principles of Psychology,' that

"had that work been written after the publication of Mr. Darwin's 'Origin of Species,' instead of four years previously, I should probably have recognized the natural selection of favorable variations as one factor. . . . I still hold that inheritance of functionally-produced modifications is the chief factor throughout the *higher* stages of organic evolution, bodily as well as mental (see 'Principles of Biology,' § 166), while I recognize the truth that throughout the lower stages survival of the fittest is the chief factor, and in the lowest the almost exclusive factor."

According to Dr. Romanes, instincts are due either to habits, originally intelligent, becoming by repetition automatic, or to natural selection, or else to both of these principles in coöperation. Darwin recognized both these principles. In the 'Origin of Species' (1859) he says:

"If we suppose any *habitual* action to become *inherited*—and it can be shown that this does sometimes happen—then the resemblance between what originally was a habit and an instinct becomes so close as not to be distinguished. . . . But it would be a serious error to suppose that *the greater number* of instincts have been acquired by habit in one generation, and then transmitted by inheritance to succeeding generations."

The accent, of course, rests on the words here italicised, as pointed out by Dr. Romanes. Nevertheless, a Mr. Butler, author of 'Life and Habit,' is held up by the *Athenæum* as the author of the hereditary theory of instinct because he claims to have first made use of the term "inherited memory" in this connection. But even the phrase "inherited memory" is not original with this amateur, for Darwin, in a private letter to Dr. Romanes (p. 301), employs the term "instinctive," *i. e.*, memory transmitted from one generation to another; moreover, in the passage just quoted, he spoke in 1859 of an "habitual action . . . become inherited"; Canon Kingsley, in 1867, used the phrase "inherited memory," in *Frazer's Magazine* (not *Nature*, as erroneously stated on p. 296); and, finally, as far back as 1837, Andrew Knight used the phrase "hereditary fear" with reference to the habits of the woodcock.

The Woman Question in Europe. A Series of Original Essays, Edited by Theodore Stanton, M.A. With an Introduction by Frances Power Cobbe. G. P. Putnam's Sons. 1884. Pp. xii.–478.

Mr. Stanton has produced a volume of interest, which by its arrangement alone will draw attention with emphasis to the fact that the "woman movement" is a live one in the countries mentioned, and that it is rapidly advancing all along the line in most of them. The plan of allotting the treatment of each country to a special writer—usually one who has been not only an observer but also an active sharer in the work—is felicitous in many respects. It gives an encyclopædic character to the whole, and, by the cumulative nature of the testimony it presents, impresses the reader with a sense that the forward movement is receiving almost universal support, not only from progressive women everywhere, but likewise from enlightened men.

The plan has its disadvantages, however, and they are not difficult to discover. The responsibility of each writer for the completeness of the entire work is but slight, and each one, having but a small field to cultivate, feels somewhat free to indulge in irrelevant discussions, and sometimes in remarks that are rather sentimental than solid. The editor himself has not entirely avoided this snare, and wastes precious space, in the interesting biographical sketches which introduce the chapters upon the various countries, now upon an explanation of the orthography of an author's name, and again on the fact that a writer is usually credited with one Christian name instead of two.

The countries are treated in the following order: England, Germany, Holland, Austria, Norway, Sweden, Denmark, France, Italy, Spain, Portugal, Belgium, Switzerland, Russia, Poland, Bohemia, Turkey, Bulgaria, and Greece. England has naturally the fullest treatment, and France comes next, in each of these cases several writers contributing information about the different branches of the subject. Thus, Mrs. Fawcett tells the story of the woman's suffrage movement in England; Mrs. Grey treats the educational movement; Mrs. Hoggan, medical education; Miss Boucherett, the industrial movement; and Mrs. Barnett, the progress of women in the line of practical philanthropy. In the chapter on France, Mr. Stanton has woven together contributions by Léon Giraud, on woman's legal status; by Mme. Émilie de Morsier, on the moral condition of Frenchwomen; by Mlle. Deraismes, on their religious character; by Mme. Bogelot, on their philanthropy; by Mme. Henry Gréville, on their place in literature; by Mme. Berteaux, on their work in the fine arts; by M. Foucart, on their industries; by M. Godin, on their part in socialistic movements; and brief papers by other writers on correlated topics.

It would seem that a book constructed in this coöperative fashion could not fail to present all the facts that the investigator would naturally wish to find, and yet we confess to a disappointment that the opportunity has not been more satisfactorily used. The book is undoubtedly well adapted to arouse an interest in its theme, but it lacks the definiteness and exactness which the student requires. The chapter on Switzerland furnishes an example. One would expect in it an account of exactly what opportunities for the higher education are offered at the University of Zurich, and yet, though the institution is mentioned a number of times (but not once in the index), there is no hint given which would serve the turn of a woman who might wish to go there to study. The essay on the educational movement in England also illustrates this point. It fails to give facts that were not already easily accessible, and it does not enable a woman who desires to enter one of the colleges at Oxford or Cambridge, to learn those details which she ought to know before taking a voyage over seas to add to her educational equipment. The article states that the movement has reached a point of "culminating success," but neglects to tell the uninformed reader just what constitutes that success. Quot

ing Lady Stanley of Alderly, the writer describes the relation of Girton College to Cambridge University, showing it to be that which the Harvard "Annex," so called, bears to Harvard College, and adds in a note that "this ceased to be true in February, 1881, as we shall see further on." Lady Stanley's words are worth quoting. She says:

"The University did not recognize, nor has yet recognized in any official sense, the existence of the women's college, but the help and favor of the individual members has never failed. The teaching has been Cambridge teaching; and Girton students have been yearly examined from the same papers and under the same conditions as the undergraduates, both for the previous examination and for examinations for degrees, with or without honors."

This could not have been more precisely stated if it had been written about the "Annex." We turn to page 56 ("further on"), and find that the "culminating success," mentioned on page 31, consists in allowing the Girton students to enter the examinations formally to which they had previously been admitted *sub rosa*. They do not even yet receive degrees, though the fact is not stated, but only (as we learn from other sources) "degree certificates," as they are euphemistically entitled, corresponding to those given graduates of the Harvard "Annex." We do not know how to explain the omission of any reference to the opportunities for the higher education of women at the Owens College of Victoria University, at Manchester.

The editor is inclined to generalize somewhat freely, as when he states in his preface that France has solved theoretically "the woman question, as she has *all the other* great problems of the nineteenth century"; and we are naturally surprised to learn, on page 266, that she has failed to solve one, at least, of the most important of all the questions that are connected with the well-being of woman. We suppose that it was a slip of the pen that made Miss Isala van Diest intimate, on page 371, that education might destroy a woman's energy; and we call the editor's attention to the somewhat unimportant fact that the Christian name of Dr. Sulsowa is differently spelled by Miss Hoggan, on page 69, and by the Russian contributor, who ought to be right, on pages 390 and 419. Regarding the oft-asserted "inferiority" of woman, there are two quotations worth repeating. On page 328, Mme. Doria d'Istria remarks: "Before pronouncing woman an inferior species, a simple transition between 'man and nature,' as Michelet has said, it would perhaps be better to wait and see if intellectual culture may not have on her the same effect as on the men of the 'good old time.'" On page 422 Montesquieu is quoted to this effect: "The powers [of the sexes] would be equal if their education were too. Test them [women] in the talents which have not been enfeebled by the way in which they have been educated, and we will then see if we are so strong."

It is to be regretted that a book so good as this should not have been made better. If the editor had arranged his facts in another form, he might have made a volume of smaller size, and it would have been of much greater practical use to the cause that he and his many able coadjutors have at heart. The present index, so called, is entirely unworthy of the book, being worse than valueless. An analytical index ought to be provided.

Oriental Experience. By Sir Richard Temple, Bart., late Governor of Bombay, Lieutenant-Governor of Bengal, and Finance Minister of India. London: John Murray.

THE reports which Sir Richard Temple must have written upon Indian subjects of every conceivable sort during his official career would, if bound together, equal in bulk and magnitude the largest of our encyclopædias. To write a book, and a good book, about India, would, one might think, come as easy to such a man as marriage to a Kulin Brahmin—who can, if he pleases, marry a new wife every day in the week. 'Oriental Experience,' however, furnishes yet another illustration of that principle of perversity which is embodied in the nature of things, and which so incessantly gives the lie to our most legitimate anticipations. It is a book of extraordinary feebleness. Take, for example, Sir Richard Temple's method of replying to those who are bold enough to question "the soundness of Indian finance":

"You hear of deficits, annual deficits, year after year. But these are technical, nominal deficits, and are hardly deficits at all in the proper sense of the word. These merely arise because the sums spent by the Government upon the improvement of the country, upon canals and railways, are included in the ordinary finances. But in no other country in the world are such charges included in the ordinary finances; on the contrary, they are excluded; and that being so, there is in India no deficit whatever; on the contrary, there is an exact equilibrium established between income and expenditure. Upon the finances of the last twelve years there has been actually a slight surplus; and thus it goes on, a little deficit one year, with a little surplus another; and, when you come to draw out the threads of a series of years, there comes out a slight surplus."

Now, no one, so far as we know, who questions "the soundness of Indian finance," bases his conclusion upon so superficial a fact as the proportion of annual surpluses to annual deficits. They question "the soundness of Indian finance" because they doubt the permanent productiveness of the two main sources from which the Indian Government derives its revenues. They say that while the expenses of the administration are perpetually on the increase, the means of meeting that increased expenditure depend upon the enhanced productiveness of the soil and the continuance of the opium traffic with China. As regards the soil of India it is a fact about which there is no dispute among those best competent to judge, that all the best soil has been brought under cultivation, and although, in order to pay the state-demand, inferior soil is being broken up by the plough, this extension of cultivation is seriously encroaching upon the land hitherto set apart for the pasturage of the farm cattle. Again, as regards the better soil, its productiveness, so far from increasing, is steadily diminishing. Sir Richard Temple has himself testified to this fact. In his evidence before the Indian Famine Commission, he said:

"I believe that in many parts of India a gradual exhaustion of the soil is going on. . . . The yield of the crops is popularly supposed by the natives of the country in many parts of India to be gradually decreasing. Be that as it may, I am certain of two facts—first, that the soil in India does not produce nearly so much as the soil in Europe; and secondly, that virgin soil, broken for the first time, in all parts of India, yields very much more than it ever yields afterward. The difference on these two cardinal points I attribute to the exhaustion of the soil."

But if there be this steady deterioration in the fertility of the best land in India, it is obvious that the assessment on the land cannot be kept up at its present high level. In the Madras Presidency, not only has the assessment been stationary for many years past, but it has been saved from serious diminution only by the desperate expedient of assessing grazing lands which have hitherto been held rent-free by the villagers—in other words, by an enhanced tax to be obtained from an impoverished soil.

The other cause which threatens the stability of Indian finance is even more alarming, because likely to be more prompt and immediate in its operation. The Indian Government has always lived beyond its natural income, because it obtained a sum of eight millions annually from the Chinese in exchange for its opium. The solvency—one may almost say, the very existence—of the British empire in India depends upon the permanent continuance of this source of revenue. The Chinese Government has more than once attempted to emancipate itself—by force, as it were—from its bondage to the Indian opium monopoly; but two opium wars have convinced it that its strength is not sufficient to obtain deliverance in this way. It has, therefore, adopted the slower but safer method of growing its own opium. For a time, of course, this new method had no effect upon the market for India-grown opium. It needed that the generation of opium-eaters should pass away who had been educated upon India-grown opium. This has now been accomplished; the Chinese opium-consumers of the present day have taken to smoking and eating the home-grown drug in such increasingly large quantities, that already the Indian Government has been compelled to make a heavy reduction in the duty levied upon Malwa opium, and the revenue derivable from this source has already fallen away to the amount of more than a million sterling. Had war broken out between China and France, and had the French Republic blockaded the Treaty Ports, the traffic would have been entirely interrupted; and so strong is the feeling in England against this particular source of revenue that, once interrupted, it would be extremely difficult for any Government to reëstablish it. Under any circumstances, however, as the taste in China spreads for the home-grown drug, the more costly article provided from India must be displaced from the market. It is only a question of a few years more or less, and if Sir Richard Temple wishes to establish "the soundness of Indian finance," he will have to show what resources there are in the country to compensate for a failing land tax and a precarious and diminishing opium revenue. We know of none.

This passage on Indian finance is a favorable specimen of the contents of 'Oriental Experience.' The essays are, in the main, remarkable for observations which remind one of a certain patter-song that the elder Matthews was wont to sing at his entertainments. Each line contained a statement of fact, quite indisputable, but hardly worthy of being insisted upon with emphasis: for example—"Ham sandwiches are not made of tin." Sir Richard Temple may be said to revel in observations of a similar striking and original character. The essay on "Pan-Islamism" is a real treasure-house of them. This purports to be a kind of bird's-eye view of the present state of the Mohammedan world, and the following are a few specimens culled from its pages: "The Mohammedans," Sir Richard informs us, "have certainly got a general policy, which is this—to resist the further encroachments of the Christian states." Then he adds: "We must acknowledge that this is reasonable in theory." It would be interesting to know at what period of their history the Mohammedan Powers did not have this "general policy," and when it would be "reasonable in theory" for them to dispense with it. Of the Indian Mohammedans, we are told that they "will probably be found to entertain a profound veneration and a keen sympathy for the Sultan of Turkey." "They do not," adds Sir Richard, as though logically the one were the sequence of the other, "care equally for the Afghans." Concerning the Shah of Persia, we are told that he "must be rolling his anxious eyes first in this direction, and then in that." He has been brought to this distressing condition by the "stagnation" of Persia; for, as Sir Richard

Temple sententiously observes, "in a progressive age like this, nothing is more dangerous, nationally, than stagnation." Of Mohammedans generally we learn, a little further on, "that they will evince gratitude, if we succeed in giving them much to be grateful for." The Indian Mohammedans are possessed of this singular but obstinate perversity, that, "though willing to learn English, they insist on learning those languages also in which the history of their faith and nationality is written." "This," Sir Richard is good enough to add, "should be humored as much as possible." Then, a little further on: "It is also essential to render them all the loyal citizens of a world-wide empire, and the useful members of a vast society. We must do all this courageously, without fear of the consequences hereafter."

The foregoing may be taken as illustrating the ripe political wisdom with which this volume abounds. It also contains some curious conclusions of a speculative character, as in his Presidential address to a Social Science Congress. Herein Sir Richard supposes that the British colonies are exclusively dependent upon the population of the United Kingdom for all "light and leading"; and as the populations of the former are nine times as numerous as that of the latter, he deduces the astonishing conclusion that "each one at home who succeeds in improving, or neglects to improve, himself, will influence, for progress or for stagnation, nine other persons, his fellow-subjects abroad." Could there be more delightful reading than this for people of a cynical frame of mind who love to remark with how little wisdom the world is governed?

Beethoven's Nine Symphonies. Analytical Essays by Sir George Grove, D.C.L. Boston: Geo. H. Ellis. 1884. Pp. 229.

Sir George Grove, whose Schubert researches and editorship of the 'Dictionary of Music and Musicians' have combined, with various other labors, to give him a place among the foremost writers on music, appears to be endowed with a modesty as excessive as it is rare. In 1854 he became secretary to the Crystal Palace at Sydenham, and introduced, among other things, a series of daily concerts under the direction of Mr. Manns. Schumann and Schubert were added to the ordinary English repertory, notwithstanding the opposition of the conservative critics to the former. To assist the audiences in appreciating the various standard works, Mr. Grove wrote a series of analytic programmes, including Beethoven's nine symphonies. Mr. Georg Henschel has had the good thought to issue these as a volume, and in this form every concert-goer should add them to his library. In a preface Dr. Grove says that he is not a musician, and in many senses cannot even claim to be an amateur; and that these sketches "are written by an ignoramus for those of his own stamp." Whatever truth there may be in this declaration, it does not by any means show itself in the quality of his information, but only in the desire to make his remarks clearer than a professional musician would sometimes think it necessary to make them. In these essays the reader will find full accounts of the dates at and circumstances under which the symphonies were composed, together with analyses of the structure, including illustrations, in musical type, of the leading themes. The critical remarks of Berlioz, Wagner, Schumann, and others are occasionally quoted, but not so often as their excellence must have tempted the author to do. For perusal at home Berlioz's analyses of the nine symphonies can never be superseded; but for use in the concert hall Dr. Grove's work presents certain advantages in the greater amount of historic information and musical quotations.

In introducing this collection to the book-buying public, Mr. Henschel takes occasion to make some remarks on the subject of tempo and metronome marks, apropos of the fact that eight days before his death Beethoven sent the marks for the various movements of his Ninth Symphony to the Philharmonic Society of London. Mr. Henschel has been so frequently criticised for his tempo in conducting orchestral works, that he was probably eager for this opportunity to explain his views. His opinion is, that "the interpretation of a musical work can as little be measured by the degrees of a metronome as can the delivery by a reader or an actor of a poem, a monologue in rhythmical verse"; and he refers to the facts that Bach rarely denoted even the *character* of a movement, allowing his themes to speak for themselves; that Wagner found his best guide in regard to the tempo of Beethoven's symphonies in the *singing* of Schroeder-Devrient; and that Brahms wrote to Henschel in reference to his "Requiem": "I am of the opinion that metronome marks go for nothing. As far as I know, all composers have as yet retracted their metronome marks in later years. Those figures which can be found before some of my compositions, good friends have talked them into me; for I myself have never believed that my blood and a mechanical instrument go very well together." For musical pupils who are not highly gifted, a metronome has its value; but those to whom music is an instinct do not need one. They will never commit a serious error in tempo, although in accordance with their varying moods they will play the same passage somewhat slower or quicker. This is true of creative as well as of merely executive artists, and it shows how much dogmatic presumption there is in the assertions so often made that a certain piece was taken too fast or too slow at a concert.

Roadside Songs of Tuscany, translated and illustrated by Francesca Alexander, and edited by John Ruskin, LL.D. Part I.—The Story of Lucia. John Wiley & Sons.

Accustomed as the world of art is to Professor Ruskin's eccentric judgments, there was not a little surprise in store for students of art in reading the laudations of the drawings of Miss Alexander in his Oxford lectures. The antipathy of years to American art, on account of its newness and want of the ripe estimation of the higher artistic qualities, seems to have melted before a work which is probably more peculiarly American in its character than anything else he ever saw; for while it is entirely indifferent to everything like grace of composition, or composition properly so called in any form, and shows not the slightest trace of any influence of old art or even of modern art such as Ruskin has found worthy of commendation, it has the peculiarly American virtue of mechanical and manual exactitude in great perfection. The figure-drawings of Miss Alexander are simple portraiture, of an artlessness, in every sense of the word, carried to its extreme. Her flower drawing, where nothing but the most literal portraiture is wanted, is quite unsurpassable in line work, for all she does is done with the pen. That her flowers should excite Ruskin's admiration does not in the least surprise us, not only on account of their exquisite fidelity and refinement of execution, which is like the most careful etching, but because they are work in the vein which Ruskin himself has tried with less success; but that he should consider her St. Christopher as the most noble rendering of the legend as he expresses himself in his lecture on Miss Alexander's work, is simply confusion to any one who credited him with perception of the higher artistic qualities. As we have never done so, however, his acceptance of the naïve and absolute *pose plastique* of Miss Alexander's figure-drawing as genuine art, only makes clearer what we have always believed, that Ruskin's opinions in art are a mixture of an acquired and traditional respect for the work of certain great painters like Tintoretto (who never painted detail with any zest, and the admiration of whom is, like Ruskin's religious ideas, so grounded in his nature by his early education as to be ineradicable), and a genuine and intense appreciation of purely superficial qualities of execution, chiefly of extreme minuteness and gem-like brilliancy of color. He showed himself capable of appreciating Meissonier, and used to keep a magnifying glass hung by the picture of that artist which he owned, to show with what exquisite minuteness the bridle of the horse was painted; but he has never found a word to say for Millet or for Rousseau, the greatest artists of France in our day, and in the veins which Ruskin particularly affects.

As for the literary interest which Ruskin has found in Miss Alexander's records of the poetry and life around her, there can be no surprise; for in these days of folk-literature the charm of such fidelity as hers requires no commentator, and can have no better or more sympathetic admirer than Professor Ruskin, whose love of what is pure and true in life and thought is as strong and genuine as his admiration of art is complexed and perplexed. Miss Alexander's books (she made another, previous to her acquaintance with Professor Ruskin, which now belongs to Mr. Quincy Shaw) are works of a kind which, from their fidelity to the inspirations and character of the peasant life in which she has found the inspiration of her own, merit perpetuity.

To those who read the book for the literary interest, the reprint of Messrs. Wiley is of course as good as the original edition; but for the appreciation of Miss Alexander's art it is absolutely useless, and worse: for the reproductions of the photographs of the original edition give no conception of those qualities of the drawings which are admirable, while betraying the faults of composition, *pose plastique*, etc., without any redemption. They constitute the worst form of photographic caricature. Professor Ruskin's antipathy to American methods will probably be greatly intensified by this reprint.

Bound Together: A Sheaf of Papers. By the author of 'Wet Days at Edgewood,' 'Reveries of a Bachelor,' etc. Charles Scribner's Sons. 1884.

Mr. Mitchell could not have chosen a more appropriate title, for his collection of papers has no more unity than is given by juxtaposition between two covers. Some of them are speeches delivered many years ago at the second centenary of Norwich (Conn.), or at the twenty-fifth anniversary of the Alpha Delta Phi, or at the celebration of the hundredth birthday of Irving, of whom he gives a few reminiscences that lend a touch of life-like humor even to the elegant memory of that august figure; but most of the papers, and all that have the original charm of the writer, are on country subjects—old school days, farm life, gardening, winter furnishings, Fourth-of-July festivities, and the like. But the sentiment that first won Mr. Mitchell his audience—the quiet suggestion, the vague half-regret, half-hope, the cheerful out-door loneliness of a younger heart—forms a much slighter element in his work than was once his choice. Now

he does not fail to tell us what season is best to transplant the evergreens, which strawberry or radish to choose, and how to mix the salad dressing for our White Coss lettuce; but he has plainly given up inquiring what song the Siren sang. The solid comforts of a pleasant home, however, are something more substantial than the reveries of a bachelor, and perhaps the literary result, if less ethereal, is more to the purpose. It is certain, at any rate, that the present volume appeals to a different class of readers from the old ones, unless, indeed, they have grown old with the author. Here and there is a bit of sentimental trifling, a beautiful outdoor scene of quiet English-looking upland or downs; but the book seems meant for those who, with an eye cast back on the past and observant of local anniversaries, are mainly employed in taking care of "their grounds." At long intervals, to be sure, there is a bit of literary criticism, but it is sometimes puzzling: such is the eulogy of Bryant as the one "who wrote of Ulysses as Homer might have written, if he had lived at Roslin and edited the *Post*." To the author's old friends the volume will be a pleasant renewal of acquaintance; it will hardly make new ones for him.

Preparatory Latin Course in English. [The After-School Series.] By William Cleaver Wilkinson. Phillips & Hunt. 8vo, pp. 331.

THE "Preparatory Latin Course in English" is a companion to the "Preparatory Greek Course" of the same editor, which we noticed a few months ago. It has the same general character, and the same excellences in execution, while it shows a readier and more experienced hand, and appears free from some defects which we noted in the earlier work. In one respect, however, the present volume falls below the standard of its predecessor. The two courses differ markedly from one another in that the Greek course is essentially literary, the Latin course historical. Xenophon—if he was a soldier and an historian—and still more Homer, interest us chiefly as writers; Cæsar and Cicero interest us chiefly as statesmen. Xenophon's 'Anabasis,' as Mr. Wilkinson points out, was a mere incident in Greek history, and hardly that in the history of the world. But the conquest of Gaul, the conspiracy of Catiline, and the later careers of Cicero and Cæsar, are events of the first importance in universal history. Now, it is no disparagement to Mr. Wilkinson to say that his aspect is rather that of the student of literature than of the historian; and that, while the literary parts of this work, as well as of the other, are excellent, the historical treatment is quite inadequate. It is not that we differ materially from him in his views. We, too, think that Trollope's 'Cicero' presents a truer aspect than Froude's 'Cæsar'; and we cannot share Mommsen's unqualified worship of success. It is rather the incompleteness of the picture presented, both of the political world in which these two great men lived, and of the work which they did in it. It is well enough to point to the crime in Cæsar's career; but, after all, what we need still more is a just appreciation of his creative statesmanship, of the Constitution of Rome as he found it, and of the political ideas which he bequeathed to his adopted son.

In his selections from Virgil, Mr. Wilkinson was fortunate in having a wide range of excellent translations to choose from; and he appears to regret, when citing Mr. Choate's fine version on page 224, that he had not more of the same quality. Bohn's translations are certainly very insipid by its side; for which reason we wonder that he followed Bohn in his selections from Sallust when he had at hand so fine and idiomatic a rendering as that of Pollard.

BOOKS OF THE WEEK.

Fine Arts.

EXHIBITION OF THE SOCIETY OF AMERICAN ARTISTS.

IT is difficult to conceive, from anything we can see in the present exhibition of the Society of American Artists, why they should have seceded from the Academy or organized a separate exhibition, if it be not that that dignified institution would certainly have rejected a great proportion of the eccentricities which we find in the places of honor in the present exhibition. Certainly no such balderdash as Mr. Chase's "Young Orphan" would have been hung even in the corridor, and the appellation given it by a morning paper, "a symphony in brick red painted on oil-cloth," only gives the best side of it. It is a pointless, indolent muddle of color, without an element of genuinely artistic feeling in it, in which respect most of the painter's other contributions resemble it more or less. The cod-fish in No. 26, "still life," is his high-water mark and worth all the rest put together, but even that is far from the best-known still life.

The several hundred pictures rejected in favor of these eighty-eight admitted might, if they were conscious, thank heaven that they did not get in; for certainly of all the exhibitions of shallow affectation, empty ostentation, and wasted ability we have ever seen, this seventh annual exhibition of the Society of American Artists is the crown of folly. What is good in it should in charity come first—it will not take long to deal with it. Mr. Alexander's portrait, No. 3, is an altogether admirable work, superb in color, subtle and masterly in character and expression, and without an affectation of any kind—as noble a piece of portraiture as the year has brought forth. It would be difficult in common-sense terms to praise it too much. Mr. Porter's "Portrait of a Lady," No. 65, is not quite so successful as a whole as the portrait in the Academy exhibition. The shadows are somewhat hot; but it is dignified, full of character, a grave and sober work, and one wonders what it has to do in such company as it finds itself in here, while Mr. Lafarge's two little water colors may well wonder for themselves why they should have got lost in this waste of oils and canvas. Mr. Millet's contribution is not up to his Academy mark, though, as always, earnest and classic in feeling as well as form. Mr. Baker's landscape, No. 8, is in every respect up to his prize picture at the Academy, which it much resembles—honest, vigorous, and uncompromising, if not intense study from nature. "A Favorite Model," No. 11, by Mr. Bell, is just what it pretends to be, a naïve study of a model and good work without ostentation. Kenyon Cox's "A Rose," No. 32, is, we believe, a mistake in its way of looking at art; but that is a matter of opinion, and Mr. Cox's may be better than ours. His "Rose" is ugly; her anatomy, if true, impresses the ordinary eye as not so, and the right hip, both in outline and modelling, puzzles the eye of a student, though we will not say that an anatomist might not reconcile it with the skeleton. It is painful as subject, which no work of art ought to be, but it is painted with genuine power and very great refinement of modelling. There is no shirking study in it, and the color, though to our taste not agreeable, is subtle and in harmony with itself. The key once admitted, it is in keeping throughout. The little picture by Mr. Low, "Narcissa," No. 57, is by far the best that we have ever seen of his, and is painted with simplicity and good taste and in a good method. Charles Warren Eaton has an unassuming "still life," No. 41, which, in its way, is by far the best in the gallery. Mr. Lippincott's little portrait, No. 55, is in a happy vein both of color and execution, painted with entire frankness and a facility which does not in the least tend to flippancy. Mr. Volk's "Accused of Witchcraft" is, if anything, slightly theatrical, but not offensively so, and it is really dramatic, which theatrical work very rarely is. A little more earnestness in the carrying out of the idea, and a little less glibness in the painting of the

accessories would have strengthened the picture, which is, with all its qualities, the one subject picture of the exhibition. Mr. Maynard has a small and unobtrusive picture, "The Bride," No. 58, which is charming in color and composition, and, moreover, has the delightful qualities of modesty and refinement, and might easily be passed over.

Mr. Alden Weir contributes two studies of flowers, more than usually elaborate, but in his peculiar subtle and artistic vein of still life, as refined in color and treatment as the scent of the originals of his roses. The best realistic flower study, in a very different vein from Mr. Weir's, however, is the work of women—Miss Clara Stillman ("Laurel," No. 73) and Ellen Stone ("Chrysanthemums," No. 75). The former is painted in a firm and precise manner, but without being in the least over-labored, and the latter with a bold and solid execution well adapted to the class of subject. Mr. Dow also contributes two studies of roses, which are distinctly excellent painting without being at all *hors ligne*, Nos. 38 and 39. A "Sketch," a child and dog, by Eleanor E. Greatorex, No. 47, deserves all the commendation it is likely to get, and its excellences are those which will strike the general public as well as the severer critic. The drawing is spirited, color solid and veracious, with an execution free and simple—an *ensemble* which makes it one of the most satisfactory pictures in the exhibition.

If Mr. Frank Fowler's "At the Piano," No. 44, were one-fourth its size, it would gain four-fold, for a subject of this kind will not bear extension to life-size or anywhere near it without loss of interest. There are certain subjects to which the life-size is indispensable for the full effect of their dignity, but nothing is more unfortunate in a subject of this intimate, familiar character than to be spread over a canvas which requires a gallery to see it in. The ambition to do big things is not a motive for a serious artist, and such Mr. Fowler is; and it is quite impossible, unless we have Rubens or Velasquez to work for us, to get the same completeness of treatment on the large as we get on the small scale. What then can be said for Mr. Donoho's "Mauvaise Herbe," No. 37, which has the most trivial of all subjects —a mere medley of foreground weeds, with a poor and poorly drawn peasant girl wading through them, or, strictly speaking, posing in them, as rigid and rooted as if she were growing out of the soil! It is difficult to conceive that in the hundreds of rejected pictures there were not many better worth seeing than this huge canvas, over which is spread in tenuous dilution so frivolous a theme. As landscape or figure it is equally unimportant, and as treatment not at all above commonplace; but perhaps in the "Society of American Artists" it is accounted a merit to be huge even in failure. Certainly Mr. Chase takes the lead in this competition, his "Portrait of Miss Dora Wheeler" being the most extraordinary vagary in life-size in the collection—crude as color, flimsy as execution, with an intolerable pretence of masterliness which can express itself with nothing smaller than a palette-knife, and which probably required a trowel and shovel in its background and simpler accessories. It is a picture which baffles rational criticism, because it defies all the decorum of serious art—it is the insanity of *chic*, sacrificing the real excellence of execution to the shallowest pedantry of the palette. "The Garden of the Orphanage, Haarlem," No. 25, is only better as it is less harsh and garish in its color. Crude and discordant enough it is, and the near foreground is painted with a liberty, both with art and nature, which is inexplicable in a man who has seen good art. It is not cleverness—it is weakness gone daft, which has poured its mediocrity over these four huge canvases. What bad things the Committee must have rejected! J. Carroll Beckwith, again, has a huge canvas with two little children astray on it—a landscape background raw and unaerial, without any clue in its composition or unity in its impression—if it was intended to be impressionist. The head of the larger child is not without merit in its drawing and a certain intensity of expression, but is painted in a light which contradicts the other child's head, and even its own hands and legs.

Mr. Thayer's "Portrait of Two Ladies," No. 76, has power enough in it to make its frivolous execution and flimsy method inexcusable. The portraits are fairly good, though far from the refinement of type of the originals. The color of the heads is solid, the values, as between the black of the draperies and the flesh, are very true, and the pose of the nearer lady's hands is easy and natural; but where is the arm of the intruding hand of the further lady? and what is gained by the flimsiness of the painting of the hand itself? Mr. Thayer evidently can paint well, but this affectation of the *petit maître* to whom painting is only legerdemain, and better the more flimsy the trick is, to whom the most important thing is to show how little he cares for the sound methods and sincere study which were not beneath Raphael or Titian, is no indication of genius, as so many of our young painters seem to think, but of their own frivolity and insufficiency for the work they have undertaken.

A piece of genuine power and admirably facile painting is a slight sketch by Mr. Turner, No. 82, "An Autumn Day," very suggestive in execution, and perhaps a little studiously insufficient, but excellent in color and in effect. It is well worth comparing with the work of Mr. Chase to show the difference between affectation of slightness and genuinely suggestive execution. Walter Palmer has a landscape, No. 63, which, with too much of the vice of affectedly nonchalant execution which seems to be *en règle* in the Society, has a very remarkable sense of color; and if he would but throw off this fad and acquire a sincere and straightforward method of painting, he would do valuable work. Mr. Brush's "Picture Writer" deserves the commendation due to sincere and manly work, which, if it has not the attraction of poetical associations, has those of honest realization of a subject which has interested the painter, and strikes one with the air of verity due to good realism, in which the painter has put his heart. We are disposed, however, to question the anatomy of the writer's right shoulder. These are not the Indians of romance, but such as the painter saw and studied, and the picture belongs to a class of work of which we have too little and ought to encourage much more, holding solid ground on the historical side of art.

Of Mr. Blakelock's landscapes, which ought not to be passed without notice, it is not easy to decide what to say. That he has great poetical feeling and a strong sense of the unity of landscape subject-matter, is as clear as that he has allowed certain theories of execution to interfere with freedom and the variety of treatment which the varying material of nature demands. The manner of Mr. Blakelock is not new, and the theory of the stained-glass method of using color has had many (and worse) adherents before him, but it has never succeeded in gaining as much as it has lost. Applied to a head, as Page used it, it is at its best; but Titian, who mastered it most completely, never allowed his hands to be tied to that method alone; and Turner's use of it, if sometimes excessive and morbid, shows it at its best in landscape. Mr. Blakelock, and still more Mr. Ryder, push it to an extravagance and to his own weakness.

Bolton Jones sends a landscape, No. 51, of a simpler and more manly style of execution than his contribution to the Academy, and, on the whole, vigorous and luminous work, but the light green in the middle distance, and more or less throughout, is too intense. The high green lights in landscape always tend more to gray, and only in the middle tints is the intense green of spring so visible. Of the remaining pictures we may have missed two or three worth study. The impression of the exhibition as a whole is painful, and not encouraging to return for further study.

The Nation.

NEW YORK, THURSDAY, JUNE 5, 1884.

The Week.

THE nomination of Powell Clayton at Chicago for the temporary Chairmanship of the Convention, by a combination of the Blaine and Logan men in the National Committee, is something for which the friends of good government cannot but be sincerely grateful to "the Blaine crowd." Clayton is a disreputable Arkansas carpet-bagger, who was the "pal" of Dorsey in all the operations which disgraced the politics of that State in the evil days between 1865 and 1873. A worse type of the corrupt political adventurer is probably not to be found in the United States. He cannot have been selected for the temporary Chairmanship for any other reason than the belief that he could be relied on for any ruling however shameless or unscrupulous. In selecting him, therefore, the friends of Blaine make one more display of their disregard of the moral sense of the Republican party, and of their readiness to resort to any means whatever in order to secure a nomination for their champion. In fact, we could not have desired a better illustration of the truth of what we have been saying in these columns, during the past three months, as to the nature of what may be called the Blaine influence in politics. It is thoroughly corrupt and corrupting, has been so from the beginning, and must remain so to the end. This open display of it in the very first stage of the proceedings at Chicago is, however, likely to be extremely useful. We believe it will put the friends of other candidates more than ever on their guard. It will satisfy them that no compromise of which Blaine is to be the outcome is open to anybody who cares for the continued existence of the Republican party. It will, moreover, prepare the voters, in this State at least, in case the Blaine tactics should be successful at Chicago, for the imperative and solemn duty of once more punishing successful knavery at whatever cost, by an overwhelming defeat at the polls. Those who buried Folger under the great majority of 1882, on account of the trickery and fraud of his managers at Saratoga, will, we are sure, do as much and more for any Presidential candidate who comes into this State next fall as the product of unscrupulous dexterity.

If any other proof of the indifference of the Blaine managers to public opinion were needed, it would be found in the fact that the leader of his boom in Chicago, and the probable inventor of the Clayton device, is a Star-route contractor. In fact, it is not too much to say that all the really corrup element in the Republican party is now ranged under the Blaine standard, and is looking eagerly for his nomination. We do not mean to say that it is only this class which desires it, but it is undoubtedly this class which desires it most and is working hardest for it. President Arthur has on his side some of the most prominent enemies of all reform, but it is safe to say that Blaine has all or nearly all those who, besides disliking reform, expect to make money in any way which comes to hand—out of the Treasury if possible, but if not possible, by some evasion or perversion of the law. Blaine's selection for the mission to Peru, during his short term of office in the State Department, of a man who had been convicted while in high command in the army of bribery, forgery, and false dating of letters for purposes of fraud, is a fair specimen of what we might expect were he armed with the Presidential powers. If he did this in the green tree, what would he not do in the dry?

One of the most amusing, but most characteristic, attempts to put a good face on the Clayton nomination was made by Mr. Carr, of Illinois, who warned the Convention "not to put down a man who carried an empty sleeve," Clayton being a one-armed man. The truth is, however, that Clayton shot his own arm off while out hunting, during the very thick of his Arkansas thievery, and the time he was in the hands of the surgeon was probably the only tolerably innocent period of his political career.

One of the humors of the situation at Chicago is to be found in the appearance on the scene of a delegation of three from Typographical Union No. 6, armed with a large number of copies of the *Boycotter*, a weekly journal of this city devoted mainly to the task of persuading people not to read or advertise in the New York *Tribune*, and to hate and despise Mr. Whitelaw Reid, the editor. The work does not seem to have been very successful; so now, as a last resource, the Union is making an appeal to the National Convention to "disown Reid," and not to "admire" him, or "heap honors on him." Should the Convention turn a deaf ear to this appeal, 10,000 votes are to be thrown against the Republican candidate in this State next fall, particularly if he should be Reid's candidate. Some of the members of the Convention are said to consider the affair really critical, but they see no way out of it. Reid refuses to compromise, or go to Europe, or stop the publication of his paper. The end, it is said, is not yet.

The Knights of Labor have held a meeting in Chicago to urge the claims of labor on the attention of the Convention. They are apparently not content with the usual platform declarations about labor, or with the usual promise of a tariff which is to satisfy both labor and capital. They want the Convention to go into particulars and declare for an eight-hour law, a law incorporating trades-unions, a law forbidding the employment of minors under fourteen, a law giving the mechanic or laborer a first lien on the product of his labor, a law forbidding the importation of foreign labor under contract, an employer's liability law, and a law establishing a national bureau of statistics, for all of which there is, of course, much to be said. But what they seek more than all else is the repudiation by the Convention of "the New York *Tribune* and Whitelaw Reid." They demand that the Convention shall in some manner stigmatize the said Reid, and threaten it, if it fails, with the votes of a million of workingmen "throughout the length and breadth of the land." In fact, the Reid problem seems uppermost in the minds of the Knights. At present it looks insoluble. Reid is not a member of the Convention, and refuses to leave Chicago until it suits his convenience, and it would take at least an act of the State Legislature, which is not in session, to get him out of the city. Moreover, the act would probably be unconstitutional, and he would defy it with a habeas corpus. Altogether, he seems likely to cloud the future of labor for some little time yet.

The National Republican Convention of 1880 met at Chicago on Wednesday, June 2. On that day Mr. Hoar was elected temporary Chairman, committees were appointed, and credentials were received. On Thursday the permanent organization was completed, and the chair affirmed the right of delegates to vote contrary to the unit rule. On Friday the contested seats occupied the attention of the Convention. On Saturday General Garfield reported the rules, the platform was adopted, and in the evening the candidates for the nomination for President were presented. On Monday 28 ballots were taken without a choice, and on Tuesday General Garfield was nominated on the eighth ballot of that day, or the thirty-sixth ballot of the Convention. On the first ballot Grant received 304, and Blaine 284 votes, with 93 for Sherman, 31 for Washburne, 34 for Edmunds, and 10 for Windom. Grant gained one on the second ballot, one more on the eighth, and two more on the ninth. On the tenth he fell back to 305, on the twelfth to 304, went up to 305 on the thirteenth and to 309 on the fifteenth, returned to 306 on the sixteenth, and varied only one or two votes until the last five ballots, which stood 308, 309, 312, 313, and 306. Blaine started with 284 votes on the first ballot, fell off to 280 on the sixth, recovered to 285 on the thirteenth, fell off to 279, 276, 276, and 275 on the nineteenth to twentieth ballots inclusive, went up to 281 on the twenty-fifth, and on the last five ballots had 270, 276, 275, 57, and 42. Garfield received one vote on the second ballot and did not get more than two until the thirty-fourth. Then he got 17, which grew to 250 on the thirty-fifth ballot, and he was nominated on the thirty-sixth by a vote of 399.

As a devout Presbyterian, Mr. Blaine must have been deeply pained when he saw by the morning newspapers what a tremendous day's work his friends did for him in Chicago on Sunday. They not only created an uproar which drowned everything else in the city, but, in their official accounts of the day's proceedings, they scoffed openly at the Edmunds men for keeping their headquarters closed out of respect to New England Sunday traditions. In the almost innumerable authorita-

tive announcements which have been made during the past few months concerning Mr. Blaine's religious opinions, he has always been pictured as a devout Presbyterian, who passed all the Sundays of his youth in giving instruction in a Sunday-school. This exemplary conduct has been held up as a "bait" for the Presbyterian vote and the Quaker vote in Pennsylvania, and to this constituency as well as to Mr. Blaine himself the news of last Sunday's work will come as a painful shock.

One of Butler's friends explains his plan of Presidential campaign, and the scheme is Butlerish enough to be genuine. He says Butler wants the Anti-Monopoly and the Greenback nominations simply to give him strength as a candidate before the National Democratic Convention; that he will go into the Convention with a large following who will cling to him as long as there is any hope; when his own nomination is seen to be impossible he will use his forces to name the candidate, and thus establish a basis for a claim; that he will then publish a card withdrawing as the candidate of the Anti-Monopoly and Greenback parties, advising them to vote for the Democratic candidates, and will have himself nominated again as the Democratic candidate for Governor of Massachusetts, in case Blaine or some other weak man is nominated at Chicago this week.

The "Irish vote" appears to be the subject of more or less speculation at Chicago. Many of the prophets assign it to Mr. Blaine, because his mother was a Catholic, because if he were President he would make things lively for England, and because as an ardent protectionist he is opposed to the admission of British goods to the American markets. The President of the Irish National League when questioned on the subject, however, declined to say more than that "Phil" Sheridan would be a good man to catch the Irish vote. President Arthur, on the other hand, is held by many to be more likely to get it than Blaine, being of Irish descent, while Blaine's descent is Scotch, and being a secret sympathizer with the Irish cause, which Blaine is said not to be. The Arthur men, however, probably do not place too much reliance on this last item, for there is hardly any cause with which Mr. Blaine does not sympathize secretly. He is one of the most successful sympathizers on the continent.

Defaulters and thieving bank officers in all parts of the country are, with much unanimity and heartiness, cursing Grant & Ward for failing and precipitating a panic before they had time to gather in their margins and make good their deficits. But it may be doubted whether the officers of the Penn Bank of Pittsburgh could have saved themselves even in the calmest financial weather. The affairs of this institution are most gloomy, but not peculiar. One report says that the liabilities reach $2,500,000, and that there is not sufficient money left to pay the fees of the receiver. It is even hinted that criminal proceedings may be instituted by parties who deposited a few dollars in the bank last Friday, the presumption being that the officers knew at that time that the bank must fail. It looks as though this theory might be sustained before a jury, and, while the trial is going on, evidence may be obtained to warrant some sort of prosecution for the balance of the $2,500,000. Meanwhile it is encouraging to note that "the directors have decided to make a thorough investigation," and that they have put the cashier under police surveillance. More unhappy than the Penn Bank officials is Mr. Bruon, the absconding President of the Hot Springs (Ark.) Bank, who has been arrested at St. Louis in company with a woman not his wife, and whose feelings were outraged by the spectacle of her arrest and imprisonment.

Looking at these numerous betrayals of trust, we are apt to conclude that we have fallen upon exceptionally evil times, and that the world is going to the bad altogether. The truth is that a panic merely uncovers whatever rascality is going on by forcing an immediate settlement of accounts. It proves nothing to the disadvantage of one year or period of time as compared with another. The panics of the past have been equally prolific of suddenly discovered but old-standing frauds. Moreover, in times like these, we are apt to lose sight of the countless array of the honest and faithful who hold our money and property secure at all times, and whose fidelity to their trusts keeps business going and holds society together. Of the hundred or more banks in New York, only four have been victimized by breach of trust, and only one has been actually ruined. Yet every one of the hundred has been exposed to the danger of being disembowelled every day of the year, and many hundreds more of fiduciary institutions and corporations have been all the time at the mercy of somebody. If we strike a balance between the good and the bad, we shall find that the preponderance of the former is so vast and overwhelming, that the latter becomes perfectly insignificant by comparison.

The story told by the Civil-Service Reform Association of Brooklyn about Secretary Chandler's recent doings at the Navy-yard, shows how wise it was for the President not to let him go out to "take the command of his forces" at Chicago. The story is, substantially, that last autumn a veteran of the war who had been put in the place of the chief clerk of the Equipment Department, suspended for irregularities, was ousted to make way for one Biggs, a nominee of "Al" Daggett and "Mike" Dady, the two well-known local politicians; that an efficient messenger was removed without cause to make way for the brother of the President's messenger in Washington; that Mike Dady asked Commander Watson for two places, and was informed that one of them was filled and the other was superfluous; that Mike thereupon remarked that the Secretary said "they might as well have both places," and the places were soon after filled by appointment from Washington; that Commander Watson was relieved from the charge of the Equipment Department, and the Commandant was directed to conduct it without assistance; that when the Commandant declared that this was impossible, he was informed that he might employ any naval officer except Commander Watson; and that more recently extensive dismissals of civil employees were made to make room for appointments from various wards of the city in which Al and Mike had to "fix" the primaries for the Utica and Chicago Conventions. The light which these things throw on the sincerity of Mr. Arthur's pretensions as a civil-service reformer is very painful. That he should venture at such a crisis in his political fortunes to give Chandler full swing is certainly extraordinary, though it is not so audacious as his allowing him to go to Chicago to represent him would have been.

A correspondent of the *Commercial Bulletin* has taken pains to collate the new Pension Bills now pending in Congress, which have been reported or considered favorably by the committees of the House and Senate, and which will probably pass unless stopped by the indignant protest of the taxpayers. The ingenuity of claim agents, so far from being exhausted by the Arrears Bill of the Hayes Administration, was only stimulated by that vast largess. It appears that bills have already been favorably reported which will take $150,000,000 out of the treasury in addition to the regular pension appropriation, including arrears already allowed by law. One of these bills proposes to allow arrears for all persons whose names have been put on the pension rolls by special act—that is, those who could not obtain pensions under the laws and regulations of general application, but who had "influence" at Washington. Another "revives and indefinitely extends the notorious Arrears of Pension Act of January 29, 1879. The latter Act applied only to claims filed on or before June 30, 1880. The pending bill proposes to remove this limitation, and to extend the benefits of the Act to all claims filed since June 30, 1880, and to all claims which may hereafter be presented and allowed." It is estimated that this bill, if passed, will add fifty per cent. to the Arrears Bill, and call for $60,000,000. The most reckless measure of all, and the most dangerous, because it marks a clear departure from all the principles governing pension legislation, is a bill which provides pensions for all soldiers who were confined in Confederate prisons during the war, whether disabled in any manner or not—so that in any future war it would only be necessary to be taken prisoner in order to secure a pension—and also grants pensions to all soldiers who are now in any way disabled or incapacitated for earning a livelihood, whether the disability resulted from military service or not. From this the transition will be easy to pensioning the Home Guards and all those who at some time thought of entering the service, and who were exposed to the danger of being drafted.

The Grand Army of the Republic has been very busy for months past sending petitions to Congress in support of pension, bounty, and back-pay legislation. We have already provided pensions and back pay for everybody who was hurt in any way while in the army. There remain now only two things to do.

One is to pension everybody who ever served in the army, and who has grown older and less active since he left it; the other is to pension everybody who would have liked to serve in the army, but was prevented by physical disability, or the pressure of private business, or who sent a substitute who was killed or has since died. After the public has been familiarized for a while with all this, doubtless a proposal to pension every American citizen, not a criminal, will be received with a certain amount of favor. Much of the existing prejudice against pensioning is due to the fact that in monarchical countries they were in times past bestowed on the privileged few. It would rapidly die out if the pensioning system were, so to speak, democratized, and every citizen got his pension as of right on attaining his twenty-first birthday. Moreover, this is really the only satisfactory way of disposing of the surplus. Every other suggestion would, if adopted, leave somebody out in the cold. This one would give a certain amount of happiness to the humblest individual.

Mr. John C. Eno was brought before the Canadian authorities at Quebec on Monday, and released on account of the insufficiency of the warrant for his arrest. It charged him (under an English statute) with the crime of having stolen money in his possession, but failed, probably from oversight, to add the gist of the offence—that he knew it to be stolen. On his release he was rearrested on a new and correctly drawn warrant. There is some reason to doubt whether Eno has committed any such offence as that charged in the warrant. He has never been charged here with actually stealing money, or with having stolen money put in his hands. On the other hand the code of this State makes a criminal breach of trust such as he is said to have committed "larceny" (Sec. 528), and if he committed larceny in the State of New York, and is found in Canada with the proceeds of his crime in his possession, and the Canadians will punish him for it, it will be a fortunate thing for every bank and trust institution in the United States. The sympathy said to be felt for him in Canada is founded, apparently, on a belief that he is to be kidnapped under pretence of extradition. Nothing could be more unwise than any attempt of the sort; but if he can be punished, notwithstanding the defects in the treaty, by the Canadian courts under Canadian laws, so much the better.

The first day's examination of James D. Fish makes it impossible to look upon him as being in any way an innocent victim of Ward's duplicity. The admissions which he made about his business methods, his profits from the firm of Grant & Ward, and his discounts of his own notes, were sufficient to condemn a man who was under much less suspicion than Mr. Fish has been from the moment of the Marine Bank's failure. He, like all the other men who were receiving their enormous profits from Ward's contracts, never took the trouble to inquire into the real nature of those contracts—what they were for, or how they were obtained, or how they were executed. If a contract was for ten thousand bushels of corn, Mr. Fish did not even take the trouble of comparing the price alleged to be paid and the profit claimed with the actual price of corn on the Produce Exchange. He took his share of the profits, amounting to $407,973 within about four years, on an original investment of $100,000, and asked no impertinent questions except those which he put into his private letter to General Grant.

We presume most newspaper readers will find some difficulty in discovering what was the occurrence at Mr. L. P. Morton's ball in Paris, over which the Paris press and London *Truth* have been making such a fuss. What happened was, apparently, that the Comte de Paris was present, and Mr. Morton asked his permission to introduce a lady to him, instead of asking the lady's permission to introduce him to her, which is what ordinary usage would have required. Somebody seems to have construed this as an offer to the Count, on Mr. Morton's part, of royal honors, and somebody else magnified it into an acknowledgment of the Orleanist monarchy by the American Republic. The Orleans family are watched so closely now in Paris that any little incident that will help, however remotely, to show that their presence is dangerous to the Republic, is eagerly welcomed by a portion of the press.

The proposal of Sir William Harcourt that a large sum of money should be placed at the disposal of the English police, to be used in rewarding informers against the dynamiters, may be a wise one, but its publication can hardly be called judicious. We had always supposed that the British Government had at its disposal plenty of secret-service money, which it could use without announcing the fact in the newspapers. One probable result of the news that there is money to be made by informing, will be that dynamite will be put in all sorts of places by the informers themselves, in order that the police may find it, for it would appear that dynamite may be put almost anywhere without detection. O'Donovan Rossa naturally claims the credit of the latest explosions, and no wonder, seeing how much money they bring him in. If he could get himself denounced more by the English press, or a demand made on the American Government for legislation against him, he would do better still.

In so far as the dynamite policy is intended to affect Irish affairs, there can be little doubt that one of its main objects is to frustrate the attempt at pacification and conciliation which the Gladstone Ministry is making, by disgusting the British public with it. If dynamiters can get the English press to treat them as the representatives of the Irish people, and the explosions as a distinct national refusal to be satisfied with the land laws, they will have carried their first point. There have been signs in one or two of the London papers that they were making some progress in this direction, but nothing serious after all. The majority have been calm and rational. But as a revelation of the extent to which life and property are at the mercy of miscreants, in spite of the utmost police vigilance, the explosions are profoundly alarming, and the alarm is spreading through every civilized country.

Mr. Broadhurst, the working-class member of the House of Commons, has obtained a heavy majority for a bill introduced by him, making another attempt to permit marriage with a deceased wife's sister. The working-class opinion in favor of the change is, in fact, stronger than that of any other class, as it suffers more from the existing law. The inability of poor men to marry their sisters-in-law often produces immense inconvenience and damage to the children. The Bishop of Lincoln, apropos of this, is amusing the scoffers by his explanation of the meaning of the late prolonged series of bad harvests in England. He says they are intended by Providence, among other things, to warn the public to make no change in the marriage law.

The signs that the excitement about Gordon and the Sudan is largely confined to London society, continue to multiply in England. Mr. W. E. Forster, who made a long and elaborate attack on his old colleagues, in the vote-of-censure debate, and even indulged in some personalities toward Mr. Gladstone, has been hauled over the coals for it in very strong language by the Liberal Four Hundred of Bradford, or, in other words, the managing caucus of his constituency. He defended himself on the ground that he only did it once, and that anyhow he must follow the guidance of his conscience. But then his enemies doubt whether conscience has so much to do with it as personal pique.

The London *Truth* has, apropos of the *Pall Mall Gazette*, an amusing illustration of the way the London journals arrive at the conclusion that "the country" is on their side on questions like these. The *Pall Mall* became furiously Jingo in 1879–80. Its editor left it to establish the *St. James's Gazette*. Then it became Liberal under Mr. John Morley, then he left it, and it remained Liberal for a while under his successor, but there has been another change, and it is now Jingo again. Every one of these editors was sure he had the country behind him about foreign politics. The boroughs, however, and the working-class voters especially, are evidently disposed to look on the agitation about the Sudan as simply a Tory device for distracting attention from the County Franchise Bill and other domestic questions. The Sudan and Gordon are in fact just now "the bloody shirt" of British politics.

Baron Tennyson and Mr. Matthew Arnold have joined the movement for international authors' copyright, and the American Authors' League will, no doubt, welcome their offer of alliance. The battle, however, will have to be fought out on American ground, and must be lost or won at Washington. English authors' motives are always suspected by a large number of Congressmen, who, on hearing that Tennyson and Arnold are in favor of protecting authors' rights, will only be hugely delighted, and point to the fact as additional evidence of the corrupt designs of all English advocates of copyright.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 28, to TUESDAY, June 3, 1884, inclusive.]

DOMESTIC.

THE National Republican Convention at Chicago has been the engrossing political topic of the week. The delegates did not arrive in large numbers until Friday and Saturday. Political headquarters for the leading Presidential candidates were then in full operation. The most noise and boasting was made by the Blaine men, a strong delegation having arrived from the Pacific coast with banners, brass bands, and anti-Chinese arguments. The Blaine men were still more elated by rumored splits on Saturday in the Southern delegations which had presumably been solid for Arthur. The National Republican Committee voted on Saturday evening, 31 to 10, in favor of seating the Mahone delegates from Virginia. This vote was subject to the future action of the Convention. The Indiana delegation voted on Sunday 18 for Gresham and 14 for Harrison, and then resolved unanimously to cast the vote of the State for Gresham. This was a serious back-set to the Blaine men, who counted on a number of votes from that State. The Blaine men, however, claimed the following on Monday as probable figures on the first ballot: Blaine 330, Arthur 290. Their serenity was not increased by a meeting of the Edmunds men on Monday, at which about ninety delegates were present. The meeting was attended by all the Vermont, nearly all the Massachusetts delegates, and part of those from New Jersey and New York, including Andrew D. White, Theodore Roosevelt, John I. Gilbert, and George William Curtis, and portions of the Rhode Island, Wisconsin, Minnesota, and Michigan delegations. They believed that their numbers would insure them the balance of power in the Convention.

The Republican National Committee voted on Monday afternoon to present Powell Clayton's name for temporary Chairman of the Convention. The ballot stood 27 for Clayton, 13 for Hoar, 2 for Grow, and 2 for Horr. Clayton is an Arkansas carpet-bagger of unsavory reputation, who led his delegation from Arthur to Blaine. The offer of the Chairmanship was supposed to be his reward. George William Curtis was elected Chairman of the New York delegation on Monday.

Clayton's nomination excited great indignation among the Independents and many of the Arthur men. Early on Tuesday morning a scheme was crystallized for running ex-Congressman Lynch, colored, of Mississippi, as an opposition candidate.

At a meeting of the Indiana delegation on Tuesday morning, twenty-nine voted to present Harrison as a candidate, and it was understood that twenty-five of them will surely vote for him. This action created intense excitement, and promised to upset calculations of the Blaine men.

At noon on Tuesday the great hall of the Chicago exhibition, seating more than 8,000, was filled with a vast audience waiting for the opening exercises of the eighth Republican National Convention. The 820 delegates were seated immediately behind the press, who occupied seats next the platform. The rest of the building was given over to spectators. At 12:24 the Chairman of the National Committee announced that the hour having arrived for the meeting of the eighth Republican National Convention, it would be opened with prayer by the Rev. Frank Bristol, of Chicago. Prayer was then offered. When the Chairman announced Powell Clayton for temporary Chairman, Mr. Lodge, of Massachusetts, put in nomination John R. Lynch, of Mississippi, and thereupon a debate sprang up which lasted over an hour, when the previous question was demanded and the Convention proceeded to vote. The roll was called and each delegate responded to his name. It took about two hours to get through the vote. It was very close, and intense excitement prevailed. Lynch was elected by a majority of 42, the vote being Lynch 427, Clayton 385. The nomination was made unanimous.

The election of Lynch revealed the fact that the Arthur, Edmunds, and Sherman forces outnumbered the Blaine, Logan, and part of Hawley's Connecticut vote by 42, and that of the majority party Arthur controlled less than 300 votes. The leaders in the movement which resulted in Lynch's election were Theodore Roosevelt and Henry Cabot Lodge, representatives of the Independent Young Republicans and of the Edmunds men. On Tuesday evening the indications were that a combination would probably be effected by that wing of the Convention which nominated Lynch on some new candidate. There was a quiet movement for Robert T. Lincoln, supported by good men, and another quiet movement for General Sherman. It is expected that the Committee on Contested Seats will report on Wednesday, a permanent organization be effected, and the presentation of candidates be made. It is not probable that a ballot will be taken on that day.

A committee of one hundred prominent men of this city, appointed under a resolution passed at the Cooper Institute meeting, held on May 20, left on Thursday evening for Chicago, where they will advocate the renomination of President Arthur.

The National Greenback Convention at Indianapolis on Thursday nominated General Butler for President and Gen. A. M. West, of Mississippi, for Vice-President.

The Senate on Thursday disagreed with the House joint resolution appropriating $100,000 for the relief of the sufferers by the overflow of the Mississippi, and adopted a resolution appropriating the unexpended balance of the Ohio flood appropriation, about $40,000.

In the House of Representatives on Monday, Mr. Hiscock moved to suspend the rules and pass the bill repealing taxes on tobacco and fruit brandy, and allowing the use of alcohol free of tax in the arts and manufactures. The Democrats staved off a vote by adjourning the House. Mr. Hiscock will have the floor when this matter comes up again on the first Monday in July, and the Democrats will have to dodge again or vote on the bill.

The Legislative Appropriation Bill came before the House of Representatives on Wednesday. The amount appropriated is $20,736,876, being an increase of $88,190 over the appropriation for the current year, and $938,626 less than the estimates. A motion to strike out the appropriation for the Civil-Service Commission was defeated. A motion to increase the appropriation for the travelling expenses of the Commission from $3,000 to $5,000 was lost.

A Sub-Committee of the House Committee on Agriculture on Wednesday reported to the full committee a bill to establish agricultural experiment stations in connection with the various State Agricultural Colleges. The bill provides that it shall be the duty of those in charge of the experiment stations to conduct original researches or verify experiments on the physiology of plants and animals, and such other researches or experiments bearing directly on the agricultural industry of the United States as may be deemed advisable, having due regard to the varying conditions and needs of the respective States.

The Memorial Day services in this city and Brooklyn on Friday were more than usually successful. The chief feature in both cities was a fine military parade. The procession in this city was reviewed by President Arthur and General Hancock; in Brooklyn by Generals Grant and Sheridan. The day was observed with the usual ceremonies throughout the North.

It was discovered on Thursday that J. O. P. Burnside, Superintendent of the Post-office Building in Washington and Disbursing Clerk, was short in his accounts to the amount of $45,000. The Postmaster-General immediately removed him from office, and he was arrested. It has been asserted that Burnside was a frequent investor in the oil syndicates conducted by the broker Levis, who recently absconded, and that he lost heavily in such ventures. The amount of his bond is $90,000.

J. Nelson Tappan, Chamberlain of the city of New York, on May 22 resigned his office on account of ill-health, to take effect on the appointment of a successor. Mayor Edson on Thursday appointed Henry B. Laidlaw to that position. The Grand Jury recommended the removal of Mr. Tappan on account of the financial entanglements in which he has been recently involved. The resignation was not made public until the day of the Grand Jury presentment.

John C. Eno, the late President of the Second National Bank in this city, was arrested on board a steamer at Quebec on Friday evening, when about to sail for Liverpool. A Pinkerton detective effected the arrest. It is believed that he cannot be extradited, as he is charged with embezzlement, which is not covered by the treaty with Canada.

The affairs of the Penn Bank of Pittsburgh, Pa., are in a very involved condition. It is now thought that the depositors will not recover more than five per cent. The liabilities are believed to reach $2,000,000.

D. W. Middleton & Co., bankers of Washington, made an assignment on Saturday. About $500,000 are involved in the failure.

Three receivers were appointed on Monday in Philadelphia, for the Philadelphia and Reading Railroad, and Coal and Iron Companies.

J. Edward Simmons was elected President of the Stock Exchange of this city on Monday, to succeed A. S. Hatch, resigned.

The decrease of the public debt of the United States during the month of May was $4,763,241 20.

The upper floor of a warehouse in Baltimore filled with cotton collapsed on Friday, burying a number of men. Six of them were killed.

A severe frost on Wednesday, Thursday, and Friday nights damaged the crops in various parts of the country. The losses were especially severe throughout New England.

Charles O'Conor's will bequeaths to the New York Law Institute all the bound volumes in his library marked "My Opinions," and all those marked "My Own Cases," $20,000 in money, and two silver testimonials. There are no other public bequests.

The Rt. Rev. Benjamin Bosworth Smith, D.D., LL.D., Bishop of Kentucky, the senior and presiding Bishop of the Protestant Episcopal Church in the United States, died on Saturday at his home in this city. He was born in Bristol, R. I., on the 13th of June, 1794, and was graduated from Brown University in 1816. His consecration as Bishop took place in this city, at St. Paul's Chapel, on October 31, 1832.

Samuel M. Shoemaker, ex-Vice-President of the Adams Express Company, one of the pioneers of the express business in this country, and a prominent citizen of Baltimore, died on Saturday.

Gen. Mansfield Lovell, who for a time commanded the Department of the Gulf in the Confederate army, died in this city on Sunday at the age of 62.

Brevet Major-General Henry W. Benham, formerly of the Corps of Engineers, United States army, died in this city on Sunday.

General O. E. Babcock and Levi H. Luckey, with a gentleman from Washington

named Sutter, were drowned on Tuesday off the Florida coast while trying to cross Mosquito Inlet bar in a small boat during a high wind. Both Babcock and Luckey were at one time President Grant's private secretaries, the latter being the former's assistant. General Babcock has been for some time light-house inspector of the fifth district. He was a distinguished officer during the war in the engineer corps, and rose from Second Lieutenant to Brevet Brigadier-General in four years. He was closely associated with General Grant after the war. In 1875 the Grand Jury at St. Louis indicted General Babcock for complicity with the Missouri whiskey ring. He was tried in February, 1876, and was acquitted.

FOREIGN.

The dynamiters were again at work on Friday in London. At 9:20 o'clock in the evening an explosion took place in the basement of the Junior Carlton Club-house, in Pall Mall, by which that part of the building was shattered and four female servants seriously injured. The dynamite was carried down the iron steps leading to the kitchen and cellars. It was placed in the cellar under the pathway, with a lighted fuse attached. The explosion was most destructive on the west side of St. James's Square. The windows in the Duke of Cleveland's house and in the War Office in Pall Mall were shattered. A few seconds later another explosion occurred near by, in front of the Army and Navy Club-house. The lights throughout that building were extinguished and the windows were blown in. The residence of Sir Watkin Wynn, M. P., was seriously damaged by it. At St. James's Theatre, a hundred yards distant, the explosions sounded like two claps of thunder. The audience was seized with alarm, which came near resulting in a panic. They were reassured by shouts bidding every one to sit still, as no harm had been done. Two persons tried to arrest a man who was hurrying along Pall Mall away from the scene of the explosion in St. James's Square. But four men suddenly emerged from a dark corner and released the man, whereupon the whole party hastened away.

An explosion of dynamite occurred outside of the detective office in Scotland Yard fifteen minutes after the two above mentioned. The corner of the building, which was composed of thick brick-work, was blown off to a height of thirty feet. A brougham standing opposite the point of the explosion was wrecked and the coachman injured. A policeman was blown across the yard and was injured. Another explosion in Scotland Yard was averted by the failure of the fuse to burn. Thirteen persons in all were injured by the three explosions, five of them seriously.

At 10:30 o'clock sixteen packets of dynamite, with fuses attached, were found under the Nelson monument in Trafalgar Square. They had failed to explode owing to a defective fuse. Had the attempt been successful the loss of property and life would have been very great.

More dynamite packages were found in Scotland Yard on Saturday. It is of the American make known as Atlas powder.

The Paris *République Française* published an article on Monday severely condemning the United States for allowing dynamiters to complete organizations and plan outrages in America. Henri Rochefort, in his Radical paper, *L'Intransigeant*, offered encouragement to the dynamiters. He called the explosions of Friday night the explosion of 600 years of suffering and misery. James Stephens, the ex-Fenian head-centre, now in Paris, regards the explosions as a dastardly outrage. He says no true friend of Ireland had any part in bringing them about.

The Paris *Matin* has published a letter signed by a group of Irishmen who reside in that city, justifying the London outrages. They say they have no other means to combat England. They insist that Ireland is fighting for independence, and they solicit the sympathy of the French people.

Irish Nationalist meetings were held on Sunday at Mulligan and Newry. The latter meeting had been prohibited, but Messrs Biggar and O'Brien addressed the people as they were leaving the church, advising them to come to terms with the landlords in order to secure their farms.

Mr. Trevelyan has introduced a bill in the House of Commons to enable tenants in Ireland to acquire their holdings from the landlords, assisted by state loans at 3¼ per cent. Mr. Parnell is satisfied with the measure, and it will receive the support of the Irish party.

The Governor of Dongola telegraphed on Monday to Cairo that the rebels to the northward of Berber have completely submitted to his authority. The prospects of Kassala are much brighter. The rebels continue their night attacks upon Suakim, but the Egyptian troops are behaving well, and the rebel attacks on Sunday and Monday were repulsed.

Advices from Kassala, dated April 12, report that town to be completely isolated. The 3,000 Egyptian troops of the garrison had no difficulty in keeping the Hakendos away from the city, as they are great cowards. Ammunition was still plentiful, but the food-supply was rapidly running out.

News has reached Cairo that a new black false prophet has appeared before Darfur and defeated El Mahdi's troops. The new Mahdi says that El Mahdi was one of his former dervishes. He claims the power of becoming invisible at will. A story is told by the natives that El Mahdi sent soldiers to capture the new prophet; but when the soldiers had surrounded the divan in which he was sitting he suddenly vanished in the air.

The Catholic Bishop of the Sudan arrived at Cairo on Wednesday from the south. He reported that seven Italian priests and four Sisters of Mercy had been massacred at El Obeid, and that three priests were exposed naked to the sun for four days and died.

It was reported on Sunday that Berber had fallen into the hands of the rebels. This was denied on Monday, and it was asserted that the siege had been raised, and that General Gordon was successfully holding his own at Khartum.

Germany's colonial policy has formed the subject of frequent letters which the Crown Prince Frederick William has been addressing to Prince Bismarck of late. Apropos of this Emperor William has said: "The last great work of my reign is to establish Germany's social policy. Her colonial policy will be the duty and the glory of my son."

Prince Bismarck opposes the pardoning of Krazewski, who was recently convicted at Leipsic of treason, on the ground that when the Polish parties desired to show their sympathies with Germany Krazewski acted as a spy in favor of France. He was playing the double game of a Polish patriot and a Russo-French emissary.

The Berlin papers contain bitter attacks upon England apropos of the action of the Earl of Derby and Earl Granville in ignoring German rights in the Angra Pequeña country, Africa.

It is again affirmed that Prince Jerome and Prince Victor have quarrelled, the father having desired the son to take a tour and abandon politics. *Figaro* asserts that the ex-Empress Eugénie has given Prince Victor a liberal income, and has declared that she will leave him the greater part of her fortune, thus acknowledging him as successor to the Prince Imperial.

It is officially announced in Paris that M. Patenôtre, the French Ambassador to China, who is now on a special mission at Hué, has telegraphed that the Emperor of Anam has expressed his acceptance of the principle of the proposed treaty with France.

M. Henri Rochefort, the revolutionist and editor of the Paris *Intransigeant*, is making violent editorial attacks on General Grant, charging him with hostility to France during and since the Franco-Prussian war. He also charges that Minister Washburne was the active agent of Bismarck during the siege of Paris, and twice a week sent advices to Emperor William of the condition of affairs in the besieged city.

Comte d'Haussonville, a French statesman and writer, is dead at the age of seventy-five. In early life he was a diplomat, but was driven from public life by the Revolution of 1848. He devoted himself thenceforth to historical and political literature, and published a 'History of the Foreign Policy of the French Government, 1830 to 1848,' in two volumes, in 1850; a 'History of the Annexation of Lorraine to France,' in four volumes, in 1854-9; 'The Roman Church and the First Empire,' in four volumes, in 1868-70. He was elected to the French Academy in 1869, and was made a life Senator in 1878.

It is asserted that the Czar, Czarina, and Czarevitch will soon make a journey into the interior of Russia.

Placards were posted on Wednesday throughout the province of Moscow, warning the Czar that in order to escape his father's fate he should grant a constitutional amnesty to political offenders.

The damage caused by the floods in South-eastern Spain is very great. Four hundred and nine dwellings have been destroyed and 514 injured in the province of Murcia alone.

South African advices state that the Boers have crowned Cetewayo's son Dinizulu King of Zululand. The chiefs Oham and Usibepu have paid him homage.

The Vienna correspondent of the Paris *Gaulois* asserts that there are symptoms of a break-up of the triple alliance, that the courts of Berlin and Vienna are not so friendly, and that there are indications of a secret understanding between Russia and Germany, which may possibly be strengthened by a marriage between the Czarevitch and the Princess Sophia Dorothea, granddaughter of the Emperor William.

News has been received that a violent shock of earthquake occurred May 19 on the island of Kishm, near the mouth of the Persian Gulf. Twelve villages were destroyed, 200 persons killed, and many others injured.

The Newfoundland sealing brig *Confederate*, of Harbor Grace, with a crew of seventy-nine men, was caught in the ice in Notre Dame Bay on April 28, and thrown completely on the floe. On May 20 five of the crew volunteered to travel to the land, distant nearly twenty miles, and report the situation. At imminent peril to their lives and in an exhausted condition they reached Twillingate, boarded the steamer *Hercules*, and arrived at St. Johns on Friday evening. They reported that all provisions except bread were exhausted when they left, and there was no fuel. The ice floe is drifting out to sea and the remainder of the crew, seventy-four men, are in danger of starvation. A powerful steamer was immediately sent to the rescue.

The English Derby on Wednesday resulted in a dead heat between Major F. E. Brace's St. Gatien and Sir John Willoughby's Harvester; time 2 minutes 46 1-5 seconds. The race was not run off, but the stakes were divided.

Lawrence Barrett gave his farewell performance in London on Friday night, in "Yorick's Love." He made a speech returning thanks for kindnesses received in London.

Sir Henry Bartle Edward Frere, Bart., died in London on Thursday. He was sixty-nine years of age, and for many years has been prominent in English political and colonial affairs.

THE PRESS AND THE NOMINATIONS.

THE New York *Times* has given notice, in answer to the inquiry of a correspondent whether it intends to support the nominee of the Chicago Republican Convention, that it will support him "if he is a man worthy to be President of the United States"; but that "if he shall be a man who personally or politically, in office or out, represents principles or practices which it abhors," it "will watch with great interest the efforts of those responsible for such a nomination to elect their candidate, but can give them no help." We believe that this is the only sound position at any time for a newspaper which professes to be independent, and that it is a position which now more than at any time since the war it behooves independent newspapers to take. Nothing does more to diminish the influence of the press and to enable even knaves to despise its criticisms, than the too common editorial practice of agreeing beforehand, in return for circulation, to eat every dish, however nauseous or injurious, a political convention may prepare. It is of course open to any man to decide for himself that he will, on grounds of public safety or expediency, vote for a candidate who does not come up to his standard either of integrity or capacity, provided he does it in silence, or, if he defends it, defends it on the true ground. A public journal, however, can discharge no duty in silence. Its function is to talk about what men are thinking most about, and above all to furnish its readers with reasons for doing this or leaving that undone. When a nomination is made, it has either to commend or condemn it, and its first duty to its readers is to make its commendation or condemnation sincere and truthful. This it cannot do if it be under any sort of obligation to applaud the action of a party convention under all circumstances. This it must do if its applause is in the long run to be worth much. A journal which is known to be ready to eat its own words, to make black appear white and white black, to recommend in the strongest terms for the highest office this year a man whom it last year described as unfit even for the lowest, cannot render a party much service except as a spreader of news. Its opinions can hardly have any great influence on the fortunes of a canvass. Readers who seek from a newspaper any assistance in forming a judgment on public affairs are generally among the first to be disgusted by undisguised unscrupulousness, tergiversation, or venality.

These considerations are more than ordinarily important just now. In one way or another the graver issues which divided the American people almost from the foundation of the Government have been disposed of. The party organizations remain, but they are separated far more by temperament and traditions than by ideas or aspirations. Almost in spite of itself, almost for want of any more exciting work, the party in power has begun to turn its attention to the improvement of the administrative machinery, to the infusion, in short, of more honesty and capacity and efficiency into the management of public business. This change gives to the character of our public men, of those who are to give the public service its tone and impulse by standing at its head, and seeing that the laws are faithfully executed, an importance it has hardly ever had before.

The next President will represent more distinctly than any President who has gone before him the idea that public servants must be competent, honest, and faithful business men, and must stand for the national morality in its highest aspects. The heart of the people is set, as it probably never was before, on having in the White House a simple, sober-minded, clean-handed man, who is above reproach both in his public and private life, who has no antecedents which need disguise or oblivion, and who is not likely to involve the Government in scandals and adventures, or build up his own fortunes on public shame or disaster. We believe the Convention will nominate such a man, but we all know that as conventions are now made up, it may not. The nominating machinery has become so elaborate; the Convention itself has become so large, so cumbrous, so excitable, so exposed to great gusts of passion and panic, that there is a chance—it may be only a chance in a thousand—that it may give us a candidate whom it will be impossible for a great many journals to support without dishonesty and degradation, and impossible for tens of thousands of voters to vote for without sacrificing to party the very things which parties are intended to save. For that chance, however remote, it behooves all honest journalists to be prepared. The *Nation* certainly is prepared for it.

QUESTIONS IN THE ENO CASE.

IT seems very doubtful whether it will be possible to hold Eno under the extradition treaty with England. The only plausible ground for an extradition demand thus far mentioned in connection with the case is that he may be surrendered on a charge of "forgery in the third degree." Under the statutes of New York any falsification of accounts by an officer of a corporation, or by any person, with intent to defraud or to conceal any larceny or misappropriation, is forgery in the third degree, punishable by imprisonment for not more than five years (Penal Code, Secs. 515, 525). The treaty with England makes forgery an extraditable offence, and it is now said to be the intention of Eno's captors to test the question whether its provisions cover forgery in the third degree. The difficulty in the case is that a similar point with regard to the crime of burglary seems to have been raised and decided adversely to the claim of extradition in the Lagrave case. Lagrave was extradited from France on a charge of burglary in the third degree, the treaty only providing for extradition in the ordinary case of common-law burglary—*i. e.*, breaking and entering a dwelling-house by night, with felonious intent. When Lagrave was once here, an attempt was made by his creditors to hold him on civil process. He was accordingly arrested, and obliged to give bail. The Court of Appeals decided that this was proper, on grounds which have furnished lawyers ever since with much food for argument, but not because they thought the original arrest lawful under the treaty. Chief Judge Church declared that an indictment for burglary in the third degree was not within the treaty (Adriance v. Lagrave, 59 N. Y., 110). This is because the names of the crimes in extradition treaties mean things, and neither of the contracting parties can, without the consent of the other, by merely local legislation, change the nature and character of the things which are the subjects of the stipulation.

The peculiarity of the law in this State has been, however, that some of the judges have undertaken to lay it down that the prisoner himself cannot raise the question whether he is being tried for a crime different from that for which he was extradited, and not in the treaty. Thus in the Lagrave case Judge Church said that the question was one of good faith between the two governments, and not one for the prisoner to raise on his own behalf. In Caldwell's case (8 Blatchf., 131) Caldwell was extradited from Canada on a charge of forgery, and indicted, tried, and punished for bribing an officer of the United States, which was not an extraditable offence. He raised the question of the jurisdiction of the Court to try him, and Judge Benedict took the same view of the law as that laid down in the Lagrave case, that the prisoner could not take advantage of the defect. The same view of the subject was taken by the same judge again in U. S. v. Lawrence, 13 Blatchf., 295. Other courts, *e. g.*, the Kentucky Court of Appeals, Com. v. Hawes, and Judge Hoffman of the United States District Court in California, and we believe one other Federal judge, have taken the ground that the prisoner must be held under the treaty or not at all, and that if any attempt is made to proceed against him for an offence outside the treaty, he can obtain his release.

It will be seen from this that if Eno were actually in New York, it would probably require a good deal of protracted litigation to determine whether the judges here would adhere to the old and (as we believe) the erroneous view laid down in the Lagrave, the Caldwell, and the Lawrence cases, or abandon it in favor of the later view that the jurisdiction of the courts over an extradited prisoner depends wholly upon the treaty.

But Eno is in Canada, and there the English view of the subject presumably prevails. The English Government has steadily maintained for many years that the New York view of the subject, which was taken up and advocated by Mr. Fish in the Winslow correspondence, was wholly wrong, and they would, therefore, like nothing better than an opportunity to refuse the surrender of a notorious criminal like Eno. They have prepared themselves for such a case by the passage of an act, which we believe is in force in Canada, providing that a fugitive criminal shall not be surrendered to a foreign state unless provision is made "by the law of that state, or by arrangement," that he shall not, "until he has been restored or had an opportunity of returning to her Majesty's dominions, be detained or tried in that foreign state for any offence committed prior to his surrender, other than the extradition crime," etc. (Act of 1870, Sec. 3).

It looks therefore as if Eno would escape, and as if the Queen would have the benefit of his presence in her dominions for the remainder of his valuable life. His crimes are just those which are most dangerous to the prosperity of modern commercial communities, and he is just the kind of criminal that the whole Anglo-Saxon race has the least interest in having at large. The case will evidently further demonstrate the immense importance of an enlargement of the list of crimes covered by the Ashburton treaty, so that there may be hereafter as little room as possible for either diplomacy or litigation in such cases.

SAVING THE PENN BANK.

THE story of President Riddle, of the Penn Bank, published on Tuesday, is perhaps the most remarkable of all the various financial statements put forth since the recent tumble in stocks. As in the case of so many other presidents, his own intentions were the very best, and he proved his sincerity by staking his whole fortune on the success or failure of the bank. To quote his own language, "I was wedded to it always. To me my own pleasure was a second thought to its prosperity. I kept all my money there. I bought its stock whenever I could spare the money. I kept everything I had there and even gave up my health to its service." Yet with all this devotion he has not a cent left, the bank is fairly gutted; and the air is thick with charges and counter charges of fraud. What was the trouble? Just what it is in every other case, "collaterals."

The Penn Bank, according to the ex-President, was based on oil. It had a good business and carried a large amount of oil paper or certificates. Sometimes these were up and sometimes they were down. In 1882 oil was high, the bank was safe, and Mr. Riddle, who appears to have been cashier at the time, told the assistant cashier to see that all the oil accounts were "made up," but this apparently was not done. Returning to the bank after a holiday, the President of the bank resigned, and Mr. Riddle was urged to take the place as "one of ease." With foolish good-nature he took it, and found it not a place of ease, but a place of very onerous responsibility, especially as he discovered that his directions as to the oil accounts had not been carried out, and that the loans were $100,000 or $200,000 more than the collateral, oil having meantime gone down, as oil will do.

Now we come to the great crisis in the bank's history. What was the President to do? He might have called in the loans, and insisted that the directors should make good whatever losses had occurred. But he had a much deeper plan than this. The trouble was with the collaterals; and the trouble with them was the price of oil. The way out of the scrape was plain. It was to bull oil, so that the price should rise sufficiently to make the collaterals good for the losses. He told the directors that he did not see what was to be done unless he could "by personal exertions get a lot of people to buy oil enough to put the price up." He accordingly went to work with a will, with the usual result.

"Many of the individuals who had received information to buy at low rates sold at high rates and took money to the credit of their own accounts. At the time this oil was bought it was currently circulated at the Exchange that this was only a little pool to make up some bad accounts at the Penn Bank, and this was the case. It was work enough to have attempted to do such an act and try to make this money for these accounts, and particularly so when the price had reached the limit of our intention. That I might keep faith with others I insisted upon all whom I had to do with not selling; but many of the individuals did sell in spite of their promises not to do so."

This is, we believe, what happens in almost all bull pools got up to sustain a falling market, and reveals the weakness of Mr. Riddle's plan for saving the bank. When the end came the bank suspended, tried to resume, failed a second time, and is now in a state of chaos; the President, the Cashier, and the oil broker who helped them to save the bank, are all under arrest.

The curious part of Mr. Riddle's story is that it is published for the purpose of exculpating him, and the public are expected to sympathize with him because he has lost his money in trying to save the bank. "If," he says, "the loss of all the money I had, the labor of a life, the loss of a health never robust at the best, is proof of wrong-doing on my part, then am I guilty of wrong-doing." No one would undertake to prove a bank-president guilty of wrong-doing on the strength of such facts as these. The view of such transactions taken by those who think they are very wicked and dangerous is, we believe, this: In the first place, Mr. Riddle's money being all in the bank, his most obvious motive was not his alleged desire to save the bank, but his determination to save himself. To save himself he engaged in transactions which every bank officer knows to be wrong. Failing in his scheme, he makes up a long story in which he figures as benefactor and intending saviour of the bank. It is not by bulling oil or stock that the business of banking is carried on, and it is out of the question to conceive of any bank in which an honest president would resort to such a device out of a mere desire to bring the bank out all right. Consequently, to the cynical or worldly-minded (and most depositors are in this frame of mind just now) what Mr. Riddle calls the attempt to save the bank, looks like the act of a gambler masquerading as a banker, and his "statement" the production of a hypocrite.

AFFAIRS IN RUSSIA.

A YEAR has elapsed since Alexander III. was solemnly crowned as Emperor of all the Russias in Moscow. In a certain sense this year has been the most successful of the three which he has spent on the throne. In the deadly duel between autocracy and the Nihilists, autocracy has decidedly had the upper hand. Its foes have succeeded in striking only one heavy blow during the year, slaying the chief of the gendarmerie, Lieutenant-Colonel Sudeikin, and baffling all attempts to seize the assassins. A Siberian Governor also fell a victim of their vengeance. But their repeated threats directed against the Czar himself and the leading members of his Cabinet, though proclaimed with awful earnestness in the official organ of Nihilism, have proved *brutum fulmen*, while the Government has been again and again filling its horrible prisons with real or presumed conspirators, and emptying them only to send the inmates to Siberia. The number of the deported is immense, and new monster trials are announced. Nihilist conspirators are everywhere—in the schools, in the army, in the navy, in the surroundings of the court; but the secret police, treason in their own ranks, and the numberless accidents which generally foil plotting combinations, have been too strong for them. With all their fanaticism and martyrlike determination, and with all the skill acquired in a decade of secret warfare, they have of late been even more impotent than the Irish avengers in their blind and coarser fury. Whether the serious accident which befell the Czar while returning from a hunt about the beginning of this year, was owing to an attempt on his life or not, has not become definitely known, but he has shown considerable freedom in his movements between Gatchina and St. Petersburg, during a visit to Copenhagen, at the celebration of the Crown Prince's coming of age (at sixteen), and on other occasions. Domestic animosities and suspicions have been smoothed away, and even Grand Duke Constantine Constantinovitch, a corrupt father's more corrupt son, has been restored to grace.

In its doings abroad the Czar's Government has, on the whole, been decidedly successful during the year. It is only in the Balkan Peninsula that its diplomacy, there mismanaged by over-zealous and indiscreet tools like the envoy Yonin and Generals Soboleff and Kaulbars, has suffered a reverse. M. Giers, the Russian Minister of Foreign Affairs, took the defeat with tolerably good grace, and by so doing considerably blunted its effect. In the heart of the Continent the same statesman succeeded in ending the painful situation into which the indiscretions of Skobeleff and other Panslavists had forced Russia, while Prince Bismarck was strengthening and vastly extending his "peace coalition." Russia herself, though the coalition was mainly formed against her ambitious designs and pro-Gallic proclivities, may now be said to have been admitted to it, and it thus really means peace, durable peace, perhaps—in spite of the unnaturalness of a combination which unites in one fold two Powers as antagonistic and as dangerous to each other as are the Empire of the Czar and Austria-Hungary. All danger of a speedy collision being over in Europe, and England finding herself inextricably entangled in the Nile countries, Russian diplomacy availed itself of the favor of the moment to make another rapid advance in Central Asia. The seizure of Merv, a prey long coveted and long jealously watched by the British, was executed with a precision and a firmness of grasp of which St. Petersburg and Tashkend may be proud. There was more in it than revenge for Beaconsfield's Cyprus *coup*. After Merv, Herat is the expectation of the Moscow chauvinists, and the dread of the Anglo-Indian Russophobists. Sarakhs, which lies between, is considered to be already virtually in Russian possession. A brilliantly achieved new loan offers means for fresh enterprises.

More closely regarded, however, the affairs

of Russia, at the beginning of the fourth year of Alexander III.'s reign, are far from wearing a bright aspect. The warfare against the Nihilists has not been brought to a close, either by their submission or by crushing defeats; it is still to be continued with the old fury and with uncertain success. The spirit of disaffection may have lost something of its wild intensity, but it is apparently spreading. And to prevent its spread the Government, besides using merciless repression, has done absolutely nothing. Not a single important measure of reform has been enacted, not a single step in the direction of freedom taken. Every liberal utterance—whether the voice of a provincial assembly (*zemstvo*) or of leading public men, like that of the late Mayor of Moscow, has been violently or contemptuously silenced. The schools, purged and circumscribed, continue to be hotbeds of hostility to the reigning system, students and teachers being equally infected. Fifteen million Christian dissenters are still looking in vain for the removal of their grievous disabilities. The Jews continue to be oppressed by the Government and hunted by mobs. Moslem agitation is rife in the Caucasus. Poland is subjected to new rigors of denationalization. And, what is worse than all, fresh evidences of unbridled corruption or flagrant faithlessness in every sphere of the public service are daily coming to light. "All the employees of the Baku Railway have been arrested on the charge of collusion with Nihilists" is the latest piece of news.

GERMAN COMMERCIAL AND COLONIAL SCHEMES.

BERLIN, May 18.

THE telegraph will have informed you that to-day week the bill for the prolongation of the exceptional law against the Social Democrats was passed by a majority of thirty-two, viz.: 189 yeas to 157 nays. Since the Conservatives and National Liberals were unanimous in their policy of favoring the measure, and since those members of the Centre who belong to the landed aristocracy had joined them, the question was only how large the majority would be. This was increased by some twenty-five Liberals, who apprehended that with such a war cry as that raised by Bismarck the dissolution of the Reichstag would lead to a heavy loss of seats on their side, that higher interests were at stake than a mere party triumph, and that the right course in this instance was to defeat Bismarck with his own weapons. For this reason the Mayor of our city, Mr. von Forckenbeck, a truly Liberal deputy, voted with the majority, and about seventy followed his example.

It is true, Bismarck has attained his end in his warfare against the Reichstag so far as he has succeeded in demoralizing it and in lowering it in the eyes of the people, but his victory is of no practical consequence. Things will go on as they did before: the Social Democrats will be patronized and called out when an attack on the "bourgeois" and the government of the large cities is planned; they will, however, be kept back and suppressed when the existence of the so-called conservative classes is threatened. The old Emperor can no longer be frightened by the insinuation that his life is endangered by the attempts of Social Democrats, backed by the German Liberal party.

I have never seen a more reckless demagogue than the Chancellor. He plays with the fire which must some day consume his own house, and for temporary results sacrifices all other considerations. If the whole socialistic movement had been left to itself it would never have assumed such large proportions, and the ordinary course of justice, if properly administered, would have sufficed to suppress any act of violence or rude passion. But now these men have, so to say, been artificially raised into importance, and trained to imagine that the welfare and prosperity of the country depend on their conduct. They consequently act as if they had to manage our public affairs. Can it be otherwise when Bismarck, in defending his home policy, solemnly declares that every German citizen has an inalienable natural right to employment (*Recht auf Arbeit—droit du travail*)? Can there be a greater satire on the conservative principle which forms the existing basis of society than the proclamation of a so-called revolutionary principle, which must uproot the groundwork of the whole social fabric, and lead to utter ruin? And our squires and squireens, our landed and financial aristocracy, who more than once have been threatened that the next revolution would not stop before their castles and palaces, heartily applaud their master's socialistic utopias as if they would be expressly benefited by them. It was the same right of employment, as you will remember, which in April, 1793, was first proclaimed by Robespierre, then adopted by Babœuf and his followers, to reappear again in Paris in 1848, when the Provisional Republican Government, at the impetuous demands of the workingmen, was compelled to carry it into execution. It is notorious with how little success the so-called *Ateliers nationaux* tried to realize the idea: how hundreds of thousands of workmen were suddenly thrown out of employment when the French Republic became tired of them—that is, as soon as the unproductiveness of these ateliers became manifest; and how, finally, the insurrection of June, 1848, gave the finishing stroke to that measure. Bismarck in his speech, of course, did not mention the origin of his new creed, but referred to the Prussian civil law (*Landrecht*) which, as he interprets it, binds the Government to provide for the subsistence of every man who cannot find work, or is too weak to perform it. The legal article in question, however, only means to institute poor-houses, and to give board and shelter to paupers.

The Chancellor argued that a German general law, frankly acknowledging the right of each citizen to employment, would take the wind out of the sails of the Liberals and Social Democrats, whose objects and alleged pernicious influence he treats as quite identical. The latter, he explained, would be paralyzed in their most powerful attacks on the Government; and the former, by the decrease of sheriffs' levies and executions, would lose a standing weapon of agitation. Bismarck, therefore, wound up his remarks with an appeal to the country not to elect any more Liberals, against whom he felt bound to fight to the last gasp, as their mere existence was irreconcilable with monarchical institutions. On the whole, his speech is worth reading. It abounds in sharp and unjust criticisms, historical comparisons, and views, in demagogical inuendoes, wilful and unintentional distortions of truth, bitter sarcasms and badly-concealed anger against his opponents. The only thing which is new in it is the fact, hitherto unknown, that immediately after the assassination of Czar Alexander of Russia, Emperor William wrote an autograph letter to his Chancellor for the purpose of concerting international measures against murderous attempts with dynamite, blasting powder, and other like processes. The plan was frustrated by England, which positively refused to join in it only a few days before the Phœnix Park assassinations took place in Dublin.

The Reichstag has adjourned for an indefinite period, as all its work was disposed of that could be. Several bills are, however, still pending in special committees, and probably will not be reported before the middle of June. Whether they will be passed during the present session, in accordance with the Chancellor's wishes, is very doubtful. In my opinion, no result will be reached, at least in the case of those which are characterized as the most important, viz.: the bill against shareholders and corporations, and that in relation to accident-insurance companies. Meanwhile, some new bills have been prepared which look to the support of our shipping and manufacturing interests. First, a new colonial bank is proposed, with a capital of some fifty millions of marks (about twelve millions of dollars), for the purpose not only of assisting our exporters by advances on their shipments, but also of making Berlin a financial world's centre, which can be drawn on in marks and compete with English pounds. As far as I am able to judge, such measures are not determined by German statutes, but obey the law of trade, and depend on a great many circumstances over which we have no control. Merchants of middling ability know that much better than I do, and can appreciate that London cannot so easily be superseded in its monopoly. The second measure is the creation of two new German steamship lines, with a yearly subsidy of about a million of dollars for a period of fifteen years. One of these lines is to ply between Germany and eastern Asia, and the other between Germany and Australia. Hitherto our shipping merchants and companies—to their honor be it said—have kept free from state support and refused all offers made to them. This time, however, the largest, best-managed, and best-conducted German steamship company—the North-German Lloyd—wants to have a hand in the pie. It could not resist the temptation of being supported by the Government, and of asking a consideration of two to four millions a year.

According to the plan submitted to the Bundesrath, which, as Bismarck's obedient tool, unanimously passed it without loss of time, the imperial Postmaster-General is to institute and control the proposed enterprise. Mr. Stephan is an excellent officer, and will do what he can to make it pay; but Bavaria and Würtemberg, having reserved to themselves all postal rights, and consequently not contributing a cent toward defraying the common German Post-office expenses, will be free of any contribution, and gain post-office accommodations without footing the bill. In this way majorities are manufactured! Our communications with eastern Asia and Australia have until now been quite sufficient. The Hamburg lines of steamers are perfectly competent to do all the freight business. Our trade with these countries is still small. In order to freight their steamers fully in going out, they have to call at London, Antwerp, and Lisbon, and must often wait nearly a week before obtaining a full load. By competition with the Government they will lose heavily, if they are not driven out of the market. The postal service has thus far been attended to by English and French steamers via Suez, and they have never been complained of. It would, therefore, be a lavish expenditure of money if we should pay four millions a year in order to have a probably quicker and independent mail line for a few dozen German firms in the East. The game is not worth the candle. I apprehend, nevertheless, that the bill will obtain a majority. There is at present a vague and obscure notion

in the German mind that we must have colonies, and keep the emigrated Germans in constant contact with the mother country. So-called colonization societies are springing up like mushrooms; some 20,000 unsophisticated Germans pay three or even six marks a year to have a colony of their own, and so turn the tide of emigration away from the United States. The most ludicrous schemes are floated, that will not bear the least scrutiny. The enthusiasm among the smaller manufacturers for the new colonial bank is quite wild. They manifestly imagine that if it be established they will obtain money more easily and cheaply.

Let me, in conclusion, report a very gratifying fact. Dr. Robert Koch, the celebrated physician, has safely returned from his trip to Egypt and India, where he discovered and examined the bacilli which transport the virus of the cholera. It was a scientific conquest, undertaken with great danger and hardship to himself, but beneficent to humanity at large. Koch was of course wined and dined by his colleagues and friends; but the Government, too, was not behind in acknowledging his great merits. Apart from the crosses with which he was decorated, as if he had distinguished himself in battle before the enemy, the Government asked for Koch the more substantial reward of 100,000 marks, and for his followers of 35,000 in all. The Reichstag of course passed the bill unanimously, in the shortest possible time, and without debate. † † †

Correspondence.

THE ELECTION OF ENGLISH.

To the Editor of The Nation:

Sir: In your issue of the 29th inst. you say:

"The action of the Democratic majority in Congress on Thursday, in voting to admit a contestant to a seat to which on the previous day they had voted that he had no right, was a very scandalous performance."

These remarks have reference to the English *vs.* Peelle contested election case, and clearly imply that the *same* Democrats who voted against English one day voted for him the next; and also imply, when read in connection with the closing sentence of the paragraph from which they are taken, that the Democrats of the House voted for Peelle one day and for English the next. This would, indeed, have been "a *very* scandalous performance."

Is it possible, however, that the writer of the paragraph referred to really believed the facts to have been such as he intended his readers to suppose them to have been? Did he not know that *not one* Democrat who voted for Peelle one day voted for English the next? If he did not know this, why was he wilfully ignorant of facts so easy to ascertain? It will be a painful surprise to many who, irrespective of party, have admired the candor and fairness of the *Nation* in the discussion of political questions, to find that in this Presidential election year it can descend to the level of its "esteemed contemporaries," and be guilty of what they cannot but regard as "a very scandalous performance."

Very respectfully, G. W. Dargan.

House of Representatives U. S.,
Washington, D. C., May 30, 1884.

CIVILIZING AGENCIES IN KENTUCKY.

To the Editor of The Nation:

Sir: Your remark in last week's issue, that "the tenacity with which traditions of savagery hold their own in States like Kentucky, in spite of the church, the press, and the railroads, is a curious subject which it would take Herbert Spencer to investigate," suggests inquiries regarding the potency of these and other agencies in neutralizing such traditions, or in any manner producing social changes. As Mr. Spencer may not be able to give his attention to the study of social phenomena in Kentucky, it is desirable to have observers upon our own soil.

The church in Kentucky doubtless helps, as it does everywhere, to keep up the struggle against evil, and does much to prevent society from becoming worse than it is. No statistics can indicate the power or value of the wholesome influences exerted by religion, but there are in all communities many persons who are not in any considerable degree affected by these forces.

The area of Kentucky is about 40,400 square miles. The population in 1860 was 1,155,484, and there were 570 miles of railroad, or one mile of railroad for seventy-one square miles of area, and for 2,027 inhabitants. In 1880 the population was 1,648,690, and there were 1,807 miles of railroad, or one mile of railroad for twenty-two square miles of area and for 912 inhabitants. In 1860 there were seventy-seven periodicals of all kinds in the State, and last year there were 208. It appears to me doubtful whether there has been time for either the press or the railroads to exert an appreciable influence upon Kentucky traditions of any kind. Is there evidence that either of these agencies has anywhere extirpated or modified traditions of similar character or vitality? Railroads may produce such an effect if they bring into any region enough people with new traditions to form a new community, especially if they carry away and disperse in other lands a large proportion of the inhabitants holding the old traditions. Such traditions have often been modified and displaced by great wars, pestilences, famines, and tribal emigration.

I think the influences connected with business are sure to destroy these and all other distinctive Kentucky traditions. Whatever is gained, some things will be lost. There will be fewer homicides of the kind referred to; there will be less courage and less truthfulness in the new types of character than in the old. Social vitality or enjoyment, and the sense of personal honor, will decline, and avarice will in increased degree control social and public life. I think the good people in the State of Kentucky are as good as can be found anywhere, and as numerous in proportion to the whole population. Personal quarrels are more homicidal than in New England. The degradation of a blow and of an accusation of falsehood is intolerable to Kentuckians, while here it is often but slightly felt. The new business civilization is likely to develop its own type of homicide. Whether Kentucky or another part of our country is the more desirable as a home, is a question which people of different tastes will naturally answer differently. Judge Reid's martyrdom is a very sad one. It may help to develop a stronger feeling against such brutality as produced it. The method of social growth by martyrdom is costly and seems clumsy and wasteful, but, apparently, it has always been necessary.—I am, very truly yours,

J. B. Harrison.

Franklin Falls, N. H., May 29, 1884.

THE ABUSE OF BANK PROXIES.

To the Editor of The Nation:

Sir: Recent events have so emphasized attention to the checks and safeguards provided by the National Banking Law, that I venture very briefly to point out what I think is one of its most serious defects.

I allude to the fact that no provision of the law opposes the use on the part of bank officers at annual elections of *perpetual proxies*—a custom prevailing very extensively, and, I believe, almost universally. I am myself conversant with cases where proxies of sixteen years' standing, carelessly given, are still annually used at elections without the knowledge of the maker; and I know of one case where a general proxy was used for a number of years, then laid aside for two years, during which the maker ceased to be a stockholder, and then again used on the maker's name again appearing on the stock list.

I am not unmindful of the readiness with which proxies are given to those in control; but there is a conservative influence in the very fact of an annual application to the stockholder for an expression of confidence and approval. The want of confidence will often be expressed, not so much by affirmative and organized opposition as by the withholding of proxies; and this in itself calls attention to the fact, and works silently the remedy. I speak from some extended experience in corporate administration, and find but one expression on the part of prudent men as to the value of a provision in the banking law which would limit the use of a proxy to a period of sixty days succeeding its date.

Perhaps if such a provision were embraced in our railway laws, we should have less of underhanded leases, consolidations, and bond issues than we have been accustomed to have. L.

St. Louis, May 29, 1884.

"I ALLOW."

To the Editor of The Nation:

Sir: Your reference in the note on the 'Glossary of Hampshire Words and Phrases' (No. 987, p. 468) to the use of the word *allow* reminds me of a peculiar use of the same word in some parts of Ohio, notably in Hardin County, where I spent a few weeks in 1862. It was almost universally used instead of *intend*: thus, "I *allow* to go home to-morrow." A little girl watching her brother dawdling over some work in the garden, warned him of paternal intentions in these words: "Pap 'lows to whip yĕ if yĕ don't pitch in." If the little girl had lived in Maine she would perhaps have expressed herself thus: "Father is goin' to give you a good lickin' if yĕ don't work smart." The word *smart* would be reserved by the Hardin County people for the combination *right smart*, and one might hear a farmer boast of raising "right smart of oats."

Chas. G. Atkins.

Bucksport, Me., May 29, 1884.

Notes.

D. Appleton & Company publish this month 'Lal,' a novel with a tendency, as the Germans say, by Dr. Wm. A. Hammond.

Funk & Wagnalls have in press 'Pastoral Theology,' by Professor James M. Hoppin; and a popular 'Life of Wycliffe,' by John Laird Wilson.

S. W. Green's Son announces for early publication 'The Evolution of a Life,' being the memoirs of Major Seth Eyland, sometime Captain of the First New York Mounted Rifles.

Jansen, McClurg & Co., Chicago, have nearly ready 'The Labor Value Fallacy,' a discussion of Socialism and of Henry George's Theories, by M. L. Scudder, jr.; and 'The Times of Alchemy,' the sixth and concluding volume of the "Surgeon's Stories."

The Olmstead collection of Joel Barlow's literary remains, described at length in the *Evening Post* last winter, has come into the possession of Mr. Charles Burr Todd, and will be incorporated in a life of the poet on which he has been engaged for several years. The work will probably be published next winter.

Cassell & Co. are the publishers of 'Greater London,' by Edward Walford. The first volume is in all respects conformed to the series of 'Old and New London,' and those who are familiar with the latter work can form a very just idea of the present. The literary quality of Mr. Walford's writing is not remarkable, and it would be tiresome to read these chapters continuously, so crowded are they with facts and so little alluring in style. As a book of reference which may be agreeably consulted on occasion, this antiquarian and topographic survey of the outer zone of the Metropolitan Police District—the part of London not yet solidly built over with brick and mortar—is to be commended, especially to the owner of 'Old and New London.' One sojourning in the British metropolis for a few months would also find 'Greater London' a valuable upper-grade guide to places of interest. The illustrations are numerous, and many are from old designs and prints; but the engraving even of those which represent existing scenes has a crudeness that speaks of a bygone age, and not a few must have done service in other publications for many years.

The same publishers send us their new 'Illustrated Guide to Paris,' a handy volume in which the dictionary plan is successfully combined with general discourse of a practical kind. Full attention is given to the various routes from England, and several short excursions in and about the city are described for the benefit of tourists pressed for time. There are woodcuts, plans, etc., and a folding map which indicates the main features of Paris; it would have been well also to insert a number of maps occupying a page, to show on a large scale the more important sections. The index is sufficient if not generous.

Mr. Walton Van Loan, Catskill, N. Y., has issued a very pretty and helpful 'Bird's-eye View of the Mountain Resorts of New York State,' in which the lakes and rivers stand out in white from a drab ground. The view embraces the Thousand Islands, Ottawa, and Montreal on the north.

Root & Tinker send us a lithographic portrait of Col. Richard M. Hoe, which makes one of their series of "Men of Mark." Without being a work of art, this appears to us to be a very satisfactory likeness.

The eighth volume of Gardiner's 'History of England,' revised edition, contains the years 1635 to 1639, ending with the troubles in Scotland which preceded the Bishop's War. The two most important subjects treated in this volume are Wentworth's government of Ireland, and the Ship-money controversy. In regard to the Irish question, we have the sagacious remark (p. 65) that Wentworth's "life work was contention, not so much for the Royal authority as for the supremacy of intellect," and yet, he adds, "if Wentworth saw things to which the Irish people were blind, they too, in their turn, saw things to which he was blind, with all his wisdom." The chapter upon "The Constitutional Opposition" (chap. 84) contains the conclusion of the Ship-money affair. The tax was a necessary one, he holds, and the money was honestly devoted to the purposes for which it was raised; but it was levied in a way which was subversive of the liberties of the country, and this for the reason that Charles dared not summon a Parliament. To do this "would be to endanger the success of his ecclesiastical policy, and he had no mind to run the risk" (p. 269). This volume contains no material alterations, except that it begins with a chapter (Ireland under St. John and Falkland) which is expanded out of a few pages in the earlier edition.

A privately printed monograph on the medals of Giovanni Cavino, by Richard Hoe Lawrence, is an exhaustive study of one of the best sixteenth-century imitations of ancient coinage, and is sound testimony of the growth of specialistic culture of the arts among our men of leisure and means. Studies like this have a peculiar value as leading to a larger and more human interest in the bewitching study of numismatics than that of classical coinage in general would develop, fascinating as it is; and this monograph does Mr. Lawrence great credit.

In 1825 Angelo Mai, the celebrated philologist, published his catalogue of the Oriental manuscripts in the Vatican library. Since then, until lately, the work of cataloguing has been suspended. Under the pontificate of Leo XIII. a new state of things has prevailed, and by this Pope's direction, as a part of his liberal plan of opening the treasures of the Vatican to scholars, the cataloguing has been resumed, and it is announced that the Greek and Latin manuscripts are in great part catalogued, and that two volumes devoted to the Palatine Greek and Palatine Latin will be published in a short time.

The first annual report of the Wharton School of Finance and Economy in the University of Pennsylvania has just been published. It appears that detailed courses have been offered during the past year in the political and constitutional history of the United States, in theoretical and applied political economy, in public finance and administration, and in mercantile law and practice. Special attention has been paid to the practical questions of American finance—national, State, and municipal—and of American administration. It is interesting to note that the senior class, though small, is made up entirely of college graduates. It includes four graduates of the University of Pennsylvania (one having graduated in 1871 and being at present a member of the State Senate of Pennsylvania), and one graduate of the University of Tokio, Japan. Of this class, one intends to devote himself to politics, one to journalism, and one to the civil service of Japan, while two are undecided as to their future careers. Dr. E. J. James, Professor of Public Finance and Administration, is engaged in preparing an elaborate work on 'Taxation and Other Sources of Public Revenue,' which is expected to appear before the close of the year.

— In view of the positions taken by Professor Adams in the *Contemporary Review*, and by Professor Rogers in the *North American*, on the subject of international obligations for the suppression of dynamite plots, it is interesting to observe the facts in regard to the traditional policy of England as given in the second volume of M. Paul Bernard's work on Extradition—a work of so much importance that it was last year crowned by the French Academy. This author shows with what consistency England has adhered to the doctrine formulated by Palmerston in 1853, that "England has never undertaken to provide for the internal security of other nations." The apparent exceptions to this rule appear to have occurred either from reasons of friendly comity or from political reasons, and not from any acknowledged international obligations. The obligation, for example, to prevent enlistment in an army of a foreign Power with which England may be at peace, is regarded as a municipal rather than an international obligation. The doctrine of Bynkerschoek, "that the common law of nations does not impose upon a neutral state any obligation to prohibit the agents of a foreign Power which is at war with another foreign Power from enlisting men within its territory," is the international doctrine accepted by the English Government. At the same time it is held, in accordance with the same eminent authority, that "a neutral state *has a right, if it thinks fit*, to prohibit such raising of men for warlike purposes." In the exercise of this right England passed her Foreign Enlistment Act, and theoretically the Government tries to prohibit such enlistments. But her efforts are theoretical only. In 1860 Lord John Russell declared in the House of Commons that, at the moment when he was speaking, recruiting was going on in one part of London for Garibaldi against the Pope, and in another part for the Pope against Garibaldi. And yet the Government held that in this failure to enforce the law there was no infraction of international obligations, but simply, if we may so express it, something like a failure to enforce a Maine Liquor Law, in regard to which no foreign Power had any right to complain. The same view is held in regard to the extradition of conspirators, and in regard to the punishment of persons engaged in plottings against the people of a friendly Power. England has sometimes arrested and brought persons accused of such conspiracy to trial, but far more frequently the Government has declined to do so. But the question whether such arrests should or should not be made has been settled on national and political rather than on international grounds.

— M. Bernard (ii., 292-5) gives a very interesting and suggestive array of instances in proof of England's traditional attitude. In June, 1852, the police of Paris discovered a factory that was devoted to the making of infernal machinery for a general carnage in the following August. The correspondence that was seized showed that the inspiration came from London, and that the chief conspirator had been sent out by the "Democratic Committee," of which Ledru Rollin and Mazzini were the chiefs. In 1854 Magen received asylum at London. In the same year Déron, the instigator of a plot to blow up a train on the Northern Railway in France, found safe refuge in the English capital. A still more notable case was that of Pianori, who was condemned for having fired two shots point blank at the Emperor, but who succeeded in escaping to London, where he received hospitality, and was rewarded for his daring by Mazzini. The "Democratic Committee" caused a medal to be struck in honor of the attempt to assassinate the Emperor in the Champs Élysées, and, in a public meeting held to consider the event, orators commended the assault and deplored the death of the assassin as a martyr. When the police got wind of the plot concocted by Tibaldi, Grilli, and Bartolotti, the assassins sought and found a safe retreat in the great northern asylum. The notorious Pyat, just before the attempt of Orsini, hurled his warning defiance at the Emperor from London. In that "Manifesto of Assassination" he said: "In spite of all your precautions, in spite of your Chinese walls, your ports of entry, and your sanitary cordons, we shall come into your streets and shall appear before your eyes. You know that it is from London that we issue our thunderbolts and our water-spouts. Yes, the instigators of your woes live in England. England is the guilty one, the receiver of stolen goods, who at once protects us and goads us on." After the affair of the Rue Lepelletier, in which ten persons were killed and a hundred and fifty-six wounded, this same devil's advocate published a "Letter to Parliament and the Press" in glorification of such infernal methods. Another orator called out, "When will some heroic hand close the bloody account? Is it not time to avenge the dead and save the living? When a man raises himself above public justice he ought to fall before private vengeance." Even in 1871, when several of the Communists who had committed indiscriminate murder and arson succeeded in escaping to London, the Eng-

lish Government refused to depart from the line of conduct they had hitherto followed. Again and again the French Government, while admitting the right of political asylum, asked whether the English Ministers did not confound political crimes with violations of moral obligations that are universally binding. The answer was invariably either a denial or an evasion. In the light of these facts, as given by M. Bernard, we can hardly fail to appreciate the remark of the *Saturday Review* for April 19, when it says: "Nothing can be more natural than the wish generally felt here to see the agitators crushed, but it shows a certain want of imagination to suppose that the American Government is likely to undertake the task. To make the proposal would indeed be simply asking it to do what we have steadily refused to do ourselves." The same paper, after referring to the encouraging shelter given to Mazzini, "who," it says, "defended political assassination as heartily as any Irishman, and who did his best to practise it"; and after remarking that Hertzen was allowed to publish his infamous *Kolokol* in London, further says: "No request for its suppression would have been listened to a moment."

—The progress of a great American collection, even if it be temporarily housed abroad, should interest all of us. We have already had occasion to speak of the remarkable, almost unrivalled, Petrarch library of Prof. Willard Fiske, now a resident of Florence. The catalogue published on the eve of his departure was quickly made imperfect by fresh acquisitions, and among the very latest are some that deserve recording. Professor Fiske has purchased two more fine MSS. of the 'Rime,' an utterly unknown printed edition of 1523 (Venice, Gregorius de Gregoriis), the rare Valgrisi *duodecimo* edition of 1558 (Venice), the rarish folio edition of Albertino da Lissona (Venice, 1503), the uncommon Soncino (Fano) edition of the same year, with the sometimes-omitted dedication to Cesare Borgia, a second copy of the first Aldine edition (1501), printed on vellum; the first edition of Petrarch's treatise 'De vera sapientia' (Zwolle, Holland, *circa* 1485); a quarto edition of the 'De remediis utriusque fortunæ,' without place or date, and wholly unknown to the bibliographers; the oldest known specimens of Petrarch *centoni* by Valerio da Bologna, printed in 1520 (Professor Ferrazzi, in his 'Bibliografia Petrarchesca,' states that none existed before 1530); the original autograph MS. of a commentary on Petrarch by Peregrinus Moratus, a Ferrarese professor, written about 1520, which Tiraboschi and others speak of as lost; the Spanish version, by Peña, of Petrarch's 'De vita solitaria,' printed at Medina del Campo in 1553—an exquisite copy, bought at the Hamilton sale just concluded in London; a copy of the German version of 'Griselidis' printed by Zainer at Ulm in 1471, consisting of eleven folio leaves illustrated by ten remarkable woodcuts and engraved marginal arabesques; an edition of the 'Trionfi' printed at Florence in 1507, *a petitione di Ser Piero Pacini*—an edition of which the bibliographers were ignorant until the publication in 1874 of Hortis's catalogue of the Rossetti collection of Petrarchiana, so that now two copies are known to exist, whereas, curiously enough, of the previous Pacini edition of the 'Trionfi' (Florence, 1499) only a single copy, viz., that in the Victor Emmanuel Library at Rome, is extant. Both these editions have illustrations ascribed by some to Botticelli, by others to Baldini or Mantegna. Professor Fiske has also had the good fortune to receive as a gift from Professor D'Ancona, of Pisa, all his duplicates—among them several brochures hard to get. A new catalogue would still seem to be premature, yet Professor Fiske had hoped to have one issued before now, and only the state of his health has, we regret to say, prevented it.

—It must be a very narrow literary taste that would fail to find the revived *Mélusine* of MM. Gaidoz and Rolland enjoyable in a high degree. The first two numbers (April 5, May 5) are before us, and are simply charming. The very name of this monthly presents a fascinating problem for the philologist, and has occasion to be discussed in noticing Dr. Desaivre's 'Le Mythe de la Mère Lusine (Meurlusine, Merlusine, Mellusigne, Mellusine, Mélusine, Méleusine).' For the present, M. Gaidoz tell us that one may choose for himself among all these forms, in default of a documentary pedigree. If there is variety in the name, so also is there in the contents of *Mélusine*, beginning with a hint on the importance of popular juridical usages. The ordeal is cited as in point by a correspondent, who tells of the late prevalence of the trial by water for witches among the Montenegrins and Herzegovinians: to sink is to be innocent; to float, to be condemned. Two bits of folk-lore follow, one, from the Haute-Loire, concerning the origin of fleas. The good God, walking with St. Peter on the banks of that stream, sees a dreadfully bored, as well as ragged, young woman basking in the sun; and perceiving that her *ennui* comes from her idleness, he draws a handful of fleas from his pocket and throws them on her, saying, "Idleness is the mother of all the vices: there is something to occupy you." The rainbow is next made the subject of an exhaustive comparative study—as to its names in different languages (an amazing list); as to the notion that it draws water, which is confirmed by many extracts; as to its having a treasure buried under its ends; as to its being a ladder, a bridge; as to its ominous qualities, its transmuting objects into gold, its changing the sex, etc., etc. The subject is continued in the second number, where also the Great Dipper is treated in a similar manner. Folk-songs are still another feature, and very taking specimens are "La Légende de Pontoise," "La Magicienne," and one quite characteristic of the manners of its age, "Germaine." Most interesting of all, for some readers, will be M. Anatole Loquin's "Notes and Notelets on Our Popular Melodies," of which the thesis is: "In our MS. as in our printed collections of the 15th, 16th, 17th, and 18th centuries, and even of the 19th, are to be found a vast majority of the melodies published nowadays as indigenous and peculiar to this or that province." M. Loquin gives as an example "The Devil's Surprises," music and words, assigning the former to the second half of the 16th century; and he promises others. We might say more, but we have said little if we have not shown that a franc's worth of pleasure is to be got from each number of *Mélusine*, and that the editors know how to give a literary allurement to their special science. The office of publication is at No. 6, rue des Fossés Saint-Bernard, Paris.

—There is an alluring mysteriousness about the origin and composition of the Song of Songs—about its authorship, character, unity or complexity, and the class of poetry to which it properly belongs—which, inside and outside of the sphere of Bible students, provokes constant attempts at analysis and exposition. The latest attempt of the kind—a very attractive but not very learned one—is by an amateur in this critical field, but a veteran in others, Professor Friedrich Bergmann, of the University of Strassburg, who now, after almost half a century's wanderings through northern and western domains of literature, returns to Semitic studies, with which he began his career. His translation of the Song, with introduction and notes, appears jointly with a similar reproduction of Ecclesiastes in a little volume bearing this rather queer double title: 'Eine Kette von Liedern (bisher das Hohelied Salomos betitelt) und Der Greis Salomo (bisher der Prediger Salomo benannt)' (Strassburg). We soon learn that 'Chain of Songs means to be a literal rendering, on new etymological grounds, of the Hebrew words generally rendered Song of Songs—just as 'The Old Man' is substituted as a new rendering for The Preacher, or Ecclesiastes. The first title also shows that the author does not believe in the dramatic unity of the charming idyllic work ascribed by the fancy of collectors to King Solomon. He goes, in fact, to the very opposite extreme in breaking it up into as many independent little songs, more lyric than idyllic in character, as can possibly be discovered in it. He considers the songs to have been severally composed during the Macedonian period, in the third and second centuries B. C., and the 'Chain' to have been formed by collectors without a plan. We thus get, in a free and pleasingly rhythmic translation, brief erotic pieces, headed "Geheimer Mädchenwunsch" (Cant. i. 2-4), "Die Ziegenhirtin und der Schafhirt" (i. 5-8), "Der Ægyptische Rittmeister und seine Braut aus Engeddi" (i. 9-16), etc. This last heading, and the note attached to the piece, show how large a share the author's fancy has had in his critical work. The admirer of the Palestinian girl, who compares her (according to this translator) to his "mare in Pharaoh's cavalry," appears to him an Idumæan captain in the Egyptian service, speaking a dialect similar to that of his betrothed, who lived in Engeddi, where the Ptolemies held a garrison. The King, whose surroundings the fragrance of her spikenard penetrates, is an Arab emir, the commander of the squadron of auxiliary cavalry in which the captain serves. Equally lively flights of fancy can be discerned elsewhere, but some of the remarks are much sounder, and the book is, on the whole, very enjoyable.

—The continued deciphering of the collection of papyri with which the literary zeal of Herr Theodor Graf and the munificence of Archduke Rainer have enriched the Imperial Austrian Museum, more and more reveals the vastness of that antiquarian treasure. The scientific examination is carried on in the Egyptian division by Dr. J. Krall; in the classical, by Dr. K. Wessely; and in the Irano-Semitic, by Professor Karabacek. The twenty papyri belonging to pre-Christian times include a letter in hieratic style almost three thousand years old, a funereal tableau containing the well-preserved image of the dead Amasis, with hieroglyphic legends, and a mathematical writing in demotic characters. The Coptic pieces number about one thousand, all the three dialects being represented. There are some interesting new fragments of the Bible version in the Central-Egyptian dialect. A masterpiece of Alexandrian calligraphy contains a hitherto unknown speech against Isocrates—not *of* Isocrates, as a much-blundering report of the London *Times* has it. There are fragments of poetic, dramatic, philosophical, and patristic writings, and a "Metanoia" ("Repentance"), of the beginning of the fourth century, which is perhaps the oldest Christian manuscript in existence. Official documents issued under the Roman and Byzantine emperors, from Trajan to Heraclius, are exceedingly numerous. The hundreds of documents in Pehlevi, written on papyrus, parchment, or skin, are still more interesting. One of them, composed during the Sassanian occupation of Egypt in the time of Heraclius, is expected to furnish

an important key for Pehlevi decipherments. Of the Arabic papyri, upward of a thousand have been read by Professor Karabacek. The oldest dates from the 54th year of the Hegira, another from the 90th. No equally ancient Islamic documents, supplied with dates, have hitherto been known. The Arabic collection also embraces upward of 150 writings on cotton-paper, some dating from the beginning of the eighth century—that is, from the very time of the invention of this writing material.

—Dr. Robert Pöhlmann, Privat-docent in Erlangen—a writer of rising reputation in the field of history—has made a valuable contribution to the study of primitive institutions in a little pamphlet entitled 'Die Anfänge Roms' Its value consists not merely in the inquiry into Roman origins, but in the comparison made with the early history of other nations. The subject treated is not institutions, but mode of settlement, and the argument is mainly directed to disprove, at least for the Italians, the theory presented by Mommsen, and worked out more fully by Emil Kuhn, in 'Die Entstehung der Städte der Alten,' viz., that the original occupation was by districts, the city being a later product of *synoikismos*. In the general introduction Pöhlmann lays especial emphasis upon the sanitary and military advantages of the situation of Rome, considering the commercial considerations presented by Mommsen as of comparatively little weight in the early period. The discussion is mainly directed to establishing the thesis that the original settlement of the Italians was the city rather than the district, and that the territorial occupation was not according to patriarchal groups, but that these were wholly subordinate to the political organization. His arguments afford an interesting point of comparison with those of Mr. Ross, in his recent 'History of Land-holding among the Germans,' each writer aiming to disprove a generally accepted theory. Dr. Pöhlmann, however, assumes the correctness of the village theory, and uses it as an argument to disprove Mommsen's view, holding (p. 59) that the occurrence of Gentile names of districts would prove a system of settlement by isolated homesteads (*hofmässige Siedelung*), in this agreeing in the main with Mr. Ross and Mr. Seebohm.

—It is generally known that in 1879 Privy Counsellor Otto von Struve, director of the observatory at Pulkova, near St. Petersburg, visited America and contracted with the Messrs. Clark for the construction of an object-glass thirty inches in diameter. It was completed last year and accepted by Dr. Struve, who came to this country to examine critically its performance. The mounting for this great glass is now making at the shops of the Repsolds, where many cardinal improvements in the mounting and mechanical accessories generally have been devised. It may be expected that this telescope will be set up at Pulkova, and ready for work, at some time during the present year. A section of Professor Newcomb's late report relates to the new equatorial *coudé* at the Paris Observatory, a refractor in which the rays of light are brought to the object-glass after reflection from two plane mirrors. The chief advantage of this construction is that the observer does not have to follow the eye-piece of his telescope, but always sits in a given position in a comfortable room. This form of instrument is not suitable when the highest optical power is sought; but it surpasses all others in convenience of use. The French astronomers have lately devised a new method of supporting a revolving dome, wherein the base of the dome will be an annular caisson, floating in a similarly shaped trough filled with water so treated as to prevent its freezing. This novel construction will be applied to a dome of about sixty-five feet diameter, which will cover a great refracting telescope now in the hands of French opticians. Writing of observatory buildings, Professor Newcomb remarks: "It is a common feature of all or nearly all the Continental observatories, that quarters are provided for the astronomers generally in the building itself. This offers the great advantage that the astronomers are nearly always near their instruments, and may be regarded as absolutely essential to the efficiency of any large observatory, especially if it is not in the midst of a city."

BRAZIL AND SLAVERY.

O Abolicionismo. Por Joaquim Nabuco. London, 1883. 12mo, pp. 256.

THE fate of slavery in Brazil is seldom discussed among us, and, indeed, rarely enters our thoughts. The little work whose title we give above would, considering its object, hardly find an audience in the United States, or, if translated, a publisher. We can recommend it for its own sake, but we have read it with the deepest interest for its reflected light on that irrepressible conflict which ended, some would say, in April, 1865; others, in March, 1876. First and above all, it inspires a sense of profound thankfulness that there never existed in this country a party or a policy or a measure of gradual emancipation—we mean, of course, as directed against that purely Southern slave power which dictated the compromises of the Federal Constitution. The organized moral sentiment of the North rejected it; the logic of the South equally rejected it even as a refuge from the demands of immediatism—witness John Quincy Adams's futile proposal in 1839. Never, consequently, was there a time when agitation could be checked and disarmed by the plausible cry that the cause was already won ("a causa já está vencida—está moralmente ganha"). Our compromises over slavery extension had, it is true, this deadening effect upon the free-State conscience, and were followed by breaches of the public faith similar to those by which the slave-trade power in Brazil maintained itself in defiance of international conventions and domestic statutes. And it was precisely the state of mind which succeeded the Missouri Compromise—when everybody admitted the sin of slavery, but denounced the wicked abolitionists who would not stay quiet till "God in his own good time" should put an end to the system—that answered to the present condition of Brazil as described by our author.

"Yes," he says of his cause, "it is won, but before a public opinion disunited, apathetic, intangible, and not before Parliament and the Government, the concrete organs of opinion; before religion, but not before the Church; . . . before science, but not before the learned bodies, the professors, the men who stand for science; before justice and right, but not before the law which is the expression of it, nor before the magistrates, the administrators of the law; . . . before parties, but not before the ministers, deputies, senators, provincial governors, candidates all, who direct those parties, nor before the electors who form the plebs of that aristocracy; before Europe, but not before the Europeans established among us, who either in great proportion own slaves, or disbelieve in a Brazil without slaves, and fear for their own interests; before popularity, but not before the people; before the Emperor as a private person, but not before the Chief of State; before Brazilians in general, but not before Brazilians individually; in a word, to sum up, before virtual jurisdictions, political abstractions, eventual forces, generous and impotent sympathies, but not before the one tribunal that can execute the decree of emancipation for the black race—I mean the constituted Brazilian Nation."

The advantage which our federal system gave the abolition sentiment, by furnishing it a grand section of the country, free from the presence of slavery, as a basis of operations, has not been overlooked by Mr. Nabuco. No such condition exists in Brazil, where, on the other hand, the press has curiously maintained its constitutional right to be free even in opposition to slavery. This fact is the more noteworthy because our so-called republican government was absolutely powerless to protect free speech in one-half the country. Had the attempt ever been made by the Federal Executive it would either have failed signally or precipitated the rebellion. But, as every one knows, our slave power was, what Mr. Nabuco calls the Emperor in the sham parliamentary government of Brazil, the permanent prime minister, tolerating no administration that would not do its bidding.

In the Empire, as at the South, the Church has been hostile to emancipation, holding slaves and never denouncing the making merchandise of men. Prelates have been ready to go to prison at hard labor for their opposition to masonry, never to take the penalty of offending the slave power. The Church has done nothing for the marriage relation or for moral instruction among the slaves. It has not discouraged, or at least it has not been able to prevent, a cross between fetishism and Christianity *pari passu* with that between the races; the converted fetish-worshipper being, in our author's pithy definition, one who has simply exchanged hells. It has, of course, done nothing to hinder amalgamation, the great pursuit likewise of our Southern slave-owners, and their affected horror. But (a point hardly considered by Mr. Nabuco) Catholicism, to which the negro pew is unknown, has doubtless prevented the color prejudice which was of such great political importance to the South that never would a black representative from the North have been allowed to sit in Congress; and even the reception of a black Minister from Hayti, as the consequence of recognizing that country's independence, was declared incompatible with the further existence of the Union. Very exceptionally, indeed, as in North Carolina down to Nat Turner's insurrection, the free negro was allowed to vote, but in general he was absolutely disfranchised, and without exception socially kept at the bottom of the scale, whereas in Brazil no career or station is closed to him. The influence of the Church in this direction may be thought more humane than that of the Protestant sects at the South (as well as at the North), but it is questionable whether the logic of color prejudice with us—negro slavery being conceded to be a divine appointment—was not more serviceable to the opponents of slavery, and so in the end of greater benefit to the slaves themselves. The more sharply the line was drawn the simpler became the moral issue, the more shocking the inconsistency between the daily practice of the American people and its Christian and democratic professions. And, under the circumstances, for all the ends of government not pertaining to slavery, one must think it better that the white and not a mixed race conducted affairs at the South. The old Southern passion for politics, by the way, owing to the impossibility of any career in letters or the mechanic arts, finds a parallel in Brazil in the eagerness with which Government employment is there sought after.

We need hardly dwell on such inevitable points of likeness as the dearth of schools and the dread of enlightenment, the absence of a genuine public opinion, the ruin of the soil by shiftless methods of cultivation, the bankruptcy of great estates, the decay of provincial cities, and their failure to serve as centres of life and growth to the surrounding neighborhood—all forcibly described in a melancholy chapter on

the influence of slavery on the territory and population of the interior. Of greater interest is the attempted identification of Brazil with slavery, and of support of the latter with patriotism. "Whoever assails it is immediately suspected of connivance with foreigners, of enmity to the institutions of his own country. . . . To attack monarchy, the country being monarchical—or religion, the country being Catholic -is permitted to all; but to attack slavery is national treason and felony." In the United States, Mr. Nabuco goes on to say, the same confusion was fostered, and was carried to its logical development in the rebellion to preserve slavery. On other sides the resemblance can be traced from the very beginning—in the compromise with slavery for the sake of independence, just as, with us, for the sake of Union; in the careful exclusion of the shameful word slaves or slavery from the two constitutions; in the constant periphrastic avoidance of these terms, as when the Emperor (whose responsibility for the continuance of slavery shines forth in these pages) refers to the "elemento servil," and our statesmen used to talk of the "peculiar institution" and the "patriarchal institution." In Brazil this fastidiousness has been carried so far that the consolidation of the statutes officially ordered in 1855 appeared without any article relating to slavery, the legislation in regard to which was expressly set apart, on sentimental grounds, in a Negro Code—"all which," comments our author, "would be very *patriotic* if it ameliorated in any degree the condition of the slave."

We should be led too far if we undertook to summarize those portions of the work under review which argue the question of the legality of slavery at the present time in Brazil. Convincing as Mr. Nabuco's reasoning is, we feel (and probably he feels) that it will not prevail otherwise than by stimulating afresh the anti-slavery zeal of his countrymen, on whom the economic appeal is likely to make a far more powerful impression than the legal or the humanitarian. Here the example of the revival of the South (which, as he happily says, was forcibly saved by the North from committing suicide), under freedom, stands him in good stead, and the survivors of the little band of Northern abolitionists may rejoice to think that their work, finished at home, is still "marching on" in the Southern continent through the instrumentality of our author and his associates. In general we may remark that Mr. Nabuco exhibits a great and mostly accurate familiarity with the course of the anti-slavery conflict in the United States, to which he frequently alludes. Like his predecessors, he is a man of "one idea" to slaveholders and their apologists, but in reality possesses a broad and statesmanlike intelligence, well calculated to inspire the admiration of his readers. Slavery, he justly says, in his preface, is the enemy of all social and administrative reform, and must first be removed before anything else can be taken up. For that reason he makes it the subject of the first volume of a series which will in its entirety embrace the measures necessary to redeem Brazil from its low estate, give it an honored place in the family of civilized nations, and permit it to compete with its South American neighbors, behind which it now so disgracefully lags. The subject of the second volume, of whose appearance we are not advised, is economic and financial reform; and in the nine months since Mr. Nabuco's preface was written, the financial situation of his country has grown undeniably worse, not to say alarming.

THE LOGIC OF PROTECTION.

Government Revenue, especially the American System. An argument for industrial freedom against the fallacies of free trade. By Ellis H. Roberts. Boston: Houghton, Mifflin & Co. 1884.

THIS book contains the substance of a course of lectures delivered at Cornell University. The students of that institution are to be congratulated upon the privilege that they have enjoyed. The arid deserts of political economy are made to blossom with gorgeous metaphors, and the author, shaking off the tiresome restraints of British logic, soars aloft into the limitless realms of American poetical license, or wanders waywardly among the "multiform mysteries of commerce." The treatment of the science, far from being dismal, is provocative of joyous laughter. In spite, too, of the embittered controversies that are associated with his theme, Mr. Roberts contrives with a wonderful skill to avoid all argument upon disputed topics. The free-traders are notorious logic-choppers, and with a quiet contempt that illustrates his largeness of mind, he leaves them to buffet with their own sophistries. Taking his stand upon American common sense, he points out the hard facts of our busy workshops and teeming millions, and, disdaining to reply to theories, boldly bids the Briton first answer these.

The avowed purpose of these lectures being to exhibit the logical grounds upon which the protective policy rests, we have examined the method employed with especial care. It is wonderfully simple and expeditious. It consists in drawing a conclusion from one premise instead of two. The difficulties removed by this improvement in method, which is, we believe, a characteristic and indeed an essential feature of the American system, are enormous. Thus, Mr. Roberts, having with great research established the position that all the nations of the earth except two have laid burdens upon commerce, is able immediately to infer that protection is the only wise policy. The population of the European states that have clung to the old system being eight times as great as that of England, he triumphantly concludes that it is at least eight to one that England is wrong. This is not the method of Aristotle, but it is the method of Alexander with the Gordian knot, and saves an inconceivable amount of labor. In this instance Mr. Roberts greatly understates his case, for, as he observes that the Asiatic governments are, and always have been, "solid on the side of the industrial system," he could easily have proved that an Englishman knows only one-twentieth as much as any one else.

The effete British theory of rent our author, with much judgment, treats as so thoroughly exploded as to need no mention. Taxes upon land, he shows, are paid not by the landlord but by the consumers of the produce of the land. This truth, we trust, may dispel the mischievous delusion under which our Eastern farmers labor. Instead of whining about high taxes and Western competition, they should raise their prices and let the consumers sweat for it. Still, it would be better to do away with all taxation of land. It is highly objectionable, according to the American system, that the people should know how much they are taxed. As Mr. Roberts feelingly observes, "The plea is akin to the terrible examples of crime and degradation that are paraded before those whom we would control in the right way," while the true system of revenue "should be like the sun, appreciated for its light and fructifying power." Moreover, the tax upon land "is the sound of fetters and of shackles." Although not paid by the landlord, it is paid by the tenant or lodger. But when revenue is derived from duties on imports, no one contributes to the revenue unless he chooses to do so. If he is opposed to the duty on sugar, he can abstain from the use of sugar. If he objects to the tax upon woollen clothing, he can wear cotton; and if he objects to the tax upon that, he can go naked. As Mr. Roberts says, "Food, and perhaps fuel, are the only articles of first necessity, for clothing may be reduced to great scantiness and shabbiness without real suffering, such as hunger and intense cold will involve." The American system, therefore, "affects in no way the choice of vocation by its people. It leaves every man absolutely free to employ his industry as he chooses." We trust that these convincing statements will put an end to the idle talk about the oppressiveness of our duties. "No other branch of our statutes shows less of blundering, less of tendency to change, less of crude and ill-meant work. There is no mystery about our tariffs, save that which comes from the variety of our commerce, the diversity of our industries, and the vast sums of money which our continental growth and our foreign wars and the great civil strife have entailed."

But it is in dealing with the "balance of trade" that Mr. Roberts's powers are displayed at their best. The partisans of free trade, lulled to security by their confidence in their guides, have ceased to concern themselves much about this doctrine. The midnight awakening of the Turk, as described by Mr. Halleck, we should judge to be "not a circumstance" to what will happen when it is discovered by the nations of Europe that "against that danger of utter bankruptcy and disgrace Say and Mill have taken no precaution." It will not be the fault of our author if the necessary safeguards are not erected in our country. His researches have disclosed a depraved propensity among our citizens "to be squandering their patrimony on foreign commodities, or running into ruinous indebtedness to foreign merchants." The American system is designed to correct this propensity. The only possible way to prosper, for nations as well as individuals, Mr. Roberts shows, is to sell more than you buy. The nation whose imports continually exceed its exports is surely destined to ruin. To the casuist who points to the steady adverse balance against Britain, Mr. Roberts is ready with a reply that illustrates the boldness of his stand, and that will stagger the stolidest Anglomaniac. Britain is really ruined. Her apparent prosperity is not real. It is but a hollow shell which the first rude blow will crush to powder. We can imagine no more impressive subject for a Congressional painting than Mr. Childers in the act of pointing out to the members of Parliament, with all the complacency of British free-trade conceit, the fact that a penny of income-tax now yields £2,000,000, while less than twenty years ago it yielded but £1,250,000; and in the background this stern American statesman writing upon the wall — The balance of trade is against you!

Since no great work is faultless, we do not hesitate to criticise the work before us in one or two respects. Mr. Roberts might have, no doubt, easily replied to the objection sure to be raised by free trade theorists, that if the only way to prosper is to sell more than you buy, one-half the world must be ruined if the other half is to succeed. Under the Aristotelian logic this conclusion necessarily follows, as it is impossible for all mankind to sell to themselves more than they buy from themselves; and we think that Mr. Roberts might have decidedly strengthened his case by pointing out the fallacy of this argument. We should have been glad, too, if he had shown how it happens that countries that have rejoiced for long periods in protective tariffs have at the same time been afflicted with this

terrible blight of adverse balances; our own country, even under the American system, has not been exempt. Again, after proving that the domestic taxes upon our products amount to 22 per cent. of their value, and that duties upon imports should be at least as much, in order to put our manufacturers on an equality with foreigners, he neglects to show that foreign manufacturers do not have to pay any taxes. There is still another omission that we had hoped to see supplied in this book. American statesmen have frequently pointed out that when a protected manufacture is established, it stimulates surrounding industries, so that, in fact, all other occupations share in the advantage of the duty. But they have uniformly failed to show why these stimulating influences can never follow the establishment of an unprotected industry. Mr. Roberts's explanation is ingenious, but it seems to us to be not wholly satisfactory. Still, it will be better to lay it before our readers and let them judge for themselves:

"The petty pleas based upon a classification which assumes that the ocean of our industry is made up of painted cards, piled up by fancy, and lacking cohesion and vitality, are not worthy of the authors or of our subject. Our production is one like the deep, over which winds may sweep, and for the moment terrible depths may appear, and monstrous waves may arise; but its true surface is more level than earth presents."

On the whole, we can commend this book to our readers as one from the perusal of which they may derive much pleasure. The conscientious reviewer, however, to whom it is not permitted to skip, can hardly be blamed for wishing it had been more condensed. The number of words is out of all proportion to the quantity of thought that they embody, and upon observing that there were twelve chapters in the book, we were reminded of a story from 'Greville's Memoirs,' with which we shall close our review:

"A bishop in the House of Lords rose to speak, and announced that he should divide what he had to say into twelve parts, when the Duke of Wharton interrupted him and begged he might be indulged for a few minutes, as he had a story to tell which he could only introduce at that moment. A drunken fellow was passing by St. Paul's at night, and heard the clock slowly chiming 12. He counted the strokes, and, when it had finished, looked toward the clock and said, 'D—— you; why couldn't you give us all that at once?'"

GALLENGA'S IBERIAN REMINISCENCES.

Iberian Reminiscences: Fifteen Years' Travelling Impressions of Spain and Portugal. By A. Gallenga. Two vols. London.

WHILE Charles Albert, after his accession to the Sardinian throne, was sending his former fellow-Carbonari to the dungeons and scaffolds of Piedmont, Jacopo Ruffini, a friend of Mazzini, sent by him on a conspirator's errand to Genoa, was there arrested, and, fearful lest lack of courage might lead him to the betrayal of his accomplices, he put an end to his life in a terrible manner. "A young fanatic," we read in Gallenga's 'History of Piedmont' (London, 1855), "weary of an exile's life, and nurtured in the classical ideas of Alfieri's patriotism, was with the chief of 'Young Italy' when Ruffini's mother, after the bloody catastrophe at Genoa, together with her family, sought refuge in Switzerland. Affected by that exhibition of acute sorrow, the would-be Brutus and Timoleon offered to avenge the desolate mother by taking the tyrant's life. Supplied with a passport, money, and letters by Mazzini, he proceeded to Turin, in August, 1833, under the false name of Louis Mariotti. Mazzini's partisans at Turin had, however, either fled or lived in fear and concealment. There was no one to give the stranger advice or direction. . . . For nearly two months he watched for an opportunity to strike a blow. The attention of the police was at last awakened, and he was spirited away by a few friends, who had partly guessed his secret."

When the historian of Piedmont wrote this brief account of an attempt at regicide of which he had himself been guilty—for Mariotti was then the pseudonym, and afterward the English *nom de guerre*, of Gallenga—he had long ceased to be a fanatic. "The would-be Brutus and Timoleon," after roaming about in Corsica, Naples, Malta, northern Africa, and the United States, had settled and married in England, where he became professor of Italian and journalist, and had made his peace with "the tyrant" of Sardinia, who in 1848 and 1849 himself twice attempted to become the liberator of Italy. He had served Charles Albert during his campaign in Lombardy—which he described in his 'Italy in 1848' (1851)—and had entered the Sardinian Parliament, under the reign of his son, as a candidate of the Cavour Government. The story told by him of Mazzini's connection with regicidal plots roused the followers of that patriot to such a degree that Gallenga prudently withdrew to England; but he subsequently returned to his native country, and entered the Parliament of United Italy, though acting at the same time as correspondent of the London *Times*. A personal difficulty, arising out of a parliamentary debate, rendered his stay in Rome disagreeable, and, abandoning the political career, he devoted himself exclusively to journalistic pursuits, and, as one of the representative correspondents of the *Times*, successively visited the great theatres of warlike events or diplomatic complications: the United States, Denmark, Germany, Spain, Greece, Turkey, Russia, South America. His correspondence and notes he generally collected and shaped into books of travel. The volumes before us describe the Spanish Peninsula as he saw it in the latter years of the reign of Isabella (1865–6), during the revolutionary period of 1868–9, toward the end of the Carlist war and in the beginning of the reign of Alfonso (1874–5), and again in 1879–82. The work is dedicated to his second wife, also married in England, who shared with him "the good and bad" of the tours, and had shared with him a fortune. When he revised it he was seventy-two years old; but most of its pages are marked by the same vigor of thought and expression which characterized the author's début as an English writer. Witness the following summary *in nuce* of modern Spanish history:

"Having asserted their rights over their own land by their Moorish wars, the Spaniards looked abroad for a wider field of enterprise. They fought the Old World; they subdued the New; and so exhausted their energies in deeds of war as to unfit themselves for the work of peace. They depopulated Spain in their vain efforts to colonize America. They exercised so stolid a tyranny over Italy and the Netherlands as to become incapable of freedom for themselves.

"From the expulsion of the Moors to the downfall of the First Napoleon, Spain was the only guide of its own destinies. Its Kings and its priests sprang from the soil; they were typical of the national idiosyncrasies. For a long time the people here showed their preference for a sovereign who showed himself 'Muy Rey' and 'Muy Español.' And their saints and founders of monastic orders, their Dominics and Loyolas, imparted to their religious faith an earnest and savage zeal, which shocked Rome itself as too officious, excessive, and dangerous. The Spanish nation was a too willing horse; it bade its rider jump into the saddle, suffered it to rein it hard, to urge it on ruthlessly, to ride it to death. . . .

"Excess, however, even in Spain, could not fail to lead to reaction. The nation rebelled against tyranny and bigotry; it stood up for its rights and vindicated its liberties; it overthrew its ministers, banished its dynasty, proclaimed republics; it spilt its blood and exhausted its energies and resources in senseless civil wars; it condensed in a few months all the follies and repentances, the revolutions and restorations, which France had spread over a lapse of as many years."

The last lines show that the author is no great admirer of the republican experiments under Figueras, Pi y Margall, Salmeron, and Castelar. In reality, he has the greatest possible contempt for these experiments, and little regard for the successive Presidents of the short lived Spanish Republic. According to him, Castelar was neither the wisest nor the best of them, but, on the contrary, "the most irrational of them all." He, of course, was the most eloquent, and "he rehearsed history as the devil quotes Scripture." With all the enthusiasm of Mazzini, he lacked his "depth and earnestness, his narrow bigotry, his immeasurable and implacable self-conceit." Gallenga still loves the sun of the South, and admires the works of art treasured up in the monumental collections of its cities, but he has little desire now for its enervating Edens, little sympathy for its beggared and superstitious populations, and nothing but ridicule for all Latin attempts at founding commonwealths on the "simple plan of absolute freedom and unbounded mutual love and trust." He sees at the bottom of all the radical movements "in Spain, as well as in France and Italy, . . . a morbid, envious, and rancorous spirit of 'Liberty, Equality, and Fraternity,'" madly hostile to all independence of position and character, to honorable traditions and associations—such as an aristocracy nurtures—and destructive of all stability. With excessive acerbity he shows "how ignorant, how indolent and supine, a race of men" the modern Spanish politician—such as Sagasta, whom he detests—has to deal with; "how absolutely politics in this country are a matter of persons; how frequently and unblushingly parties change ideas; how causelessly they fall out and are reconciled; and what egregious misnomers are the various designations with which they distinguish themselves."

Next to Sagasta, Gallenga is severe on Montpensier, considered in his attitude toward his sister-in-law, Queen Isabella. The misrule and vices of the latter are mentioned with charitable allowance for fatalities of situation. Her reactionary guides, political or intimate—such as Narvaez, Gonzalez Bravo, Marfori—are branded as they deserve. Prim is treated with some personal sympathy, and Serrano rather harshly, while Cánovas del Castillo is almost the only Spanish statesman who is mentioned with respect. Alfonso himself—well, he is a reigning monarch. And the Spanish people? They are much better than their rulers. But there is little new in what Gallenga tells us of the Spaniard's personal dignity, loftiness of bearing, grace and courtesy, deference and punctiliousness, reserve and formality, fastidiousness in appearance, simplicity of habits, abstemiousness and endurance; or of his less amiable traits, which, with exceptionable charitableness, he derives from an exaggeration of their good qualities. "Disdain of everything base and mean tends to the development of conceit and vainglorioussness. Depth of conviction degenerates into narrow obstinacy, indocility, and intolerance. Indifference to comfort and luxuries makes man unenterprising and slothful," etc. He is somewhat more original in the view he takes of the Andalusians, specially considered, whom he is so far from deeming the light hearted people they are generally said to be, that he describes them as "a bilious race, with more than a dash of Oriental blood in their composition, with something gloomy and almost savage in their amusements. . . . Their levity is only frenzy." We might quote equally strong expressions concerning the Basque, the Catalan, the Portuguese; but for these topics, as well as

for a vast variety of others, interesting in themselves or from the way in which our author depicts them—things ethnographical, topographical, or social—we must refer the reader to the book itself. Without being either profound or gossipy, it is instructive and amusing throughout, in spite of the author's superciliousness in judging and criticising, of his British propensity for grumbling and caricaturing, and his journalistic habit of preferring to look on the dark side of things.

KEYNES'S FORMAL LOGIC.

Studies and Exercises in Formal Logic. By John Neville Keynes, M.A., late Fellow of Pembroke College, Cambridge. London and New York: Macmillan & Co. 1884. 12mo, pp. ix.-414.

THE chief advance in methods of education in recent years has been in the direction of training the student to do actual work in whatever subject he takes up, instead of being content to pour into him a knowledge of its theory. The two subjects which have been most urgently in need of this reform are geometry and logic, and they have been the chief gainers by the change. The school or college which has not introduced some such thorough drill in logical praxis as is given by Jevons's 'Studies in Deductive Logic,' or by the book before us, has omitted to make use of an important means of mental discipline. The two books are very similar in plan. In both there is first an exposition of a point of doctrine, and then a list of illustrative examples and test questions. That of Jevons is more elementary, but comes nearer to covering all the ground; in that of Keynes, the discussion is more exhaustive and usually more satisfactory: there is no shirking of difficult points, and there is a praiseworthy avoidance of metaphysical subtleties. If one has occasion to refer to a brief and perfectly clear statement of the view held on any subject by the English writers on logic (the author makes almost no allusion to German writers), he cannot do better than to take up this book. Admirably clear, for example, are the discussions of connotation and denotation, and of the extent of a negative term. There is an excellent criticism of Jevons's very weak treatment of contraposition, and of his unfortunate answer to the question, What is the precise meaning of the assertion that a proposition is false? On the subject of the implications which propositions make as to the existence of their terms, the author is much less satisfactory. The numerous examples are very well chosen and very instructive. The book has too much the air of being intended as an examination drill-book, but it answers that purpose to perfection. Any young aspirant for a certificate or an honor, who had conscientiously worked through all this "book-work" and all these problems, would be reasonably sure of making a good show before his examiners. It cannot be denied, by the way, that the art of examination has reached in England its highest possible state of development. A large percentage of the books published every year are books whose object is to promote "cram." Enough ability is expended in this way to give England a respectable rank among the makers of science, if it were reserved for legitimate uses. As it is, it does not perhaps altogether fail of a useful purpose. A man cannot be fitted to answer every conceivable question which it can occur to an examiner to put to him without incidentally getting a good deal of useful information.

Mr. Keynes's satisfactory treatment of the preliminary matter of logic does not prevent his book from containing a serious blemish, and that is the very large amount of space which is given to the syllogism. If all the work on logic done by Boole and his successors has had any effect at all, it should have clearly demonstrated the utter foolishness and weariness to the flesh of harping upon all the variations of the syllogism. All reasoning, where it is not immediate inference, is syllogism—exactly that and nothing more; but it does not follow that every one of the thirty-two possible forms of syllogism needs to be treated as if it were an independent species, totally unconnected with all the other forms. By the work of Boole, or of any one of his later followers, the thirty-two forms are shown to consist of two only which are essentially distinct—one universal, and one particular. To reduce them all to these two is no more violent a proceeding than to reduce every proposition to the form subject, copula, predicate, instead of getting up separate rules of logical procedure for each different verb in the language. It would be incomparably better to train a boy for a cram examination in chess, or even to make him learn by heart all the possible combinations in the game of tit-tat-too, than to drag him through the tiresome round of the scholastic moods and figures—for the reason that he could be trusted to find out for himself, in the former case, that he was engaged in a very foolish and useless piece of work.

The part of his book in which Mr. Keynes claims for himself originality is the fourth and last. In this he solves the complicated problems of symbolic logic without symbolism, as he says, but in fact he has not kept himself entirely free from that taint. He permits himself to write, with Jevons, a for the negative of A, and AB for A and B, but he draws the line at A+B for A or B. It is only a very little less symbolical to say that the negative of AB is a or b, than to say that it is $\bar{A}+\bar{B}$. His method of solving problems does not otherwise differ from that of Mr. McColl or Mr. Peirce (neither of whom he mentions), except that he uses the word *is* instead of a sign for the copula. Writers on symbolic logic (at least since Boole, who greatly overestimated the importance of the new method) have been aware that all their processes could be translated into words. They have not attributed any deep and mystic meaning to their symbols, but they have considered that they gave a very desirable compactness and manageability to complicated operations. As the early algebraists had to write the words *plus* and *minus* when they wished to indicate addition and subtraction, and could introduce the symbol y^3 to represent yyy only after a long struggle, so the formal logicians have conceived a peculiar horror for symbolism in logic. Symbolic logic is not a great branch of mathematical analysis—it is very closely on a par with the rudiments of algebra. It is a codification of certain processes which are elementary enough in whatever way they are put, but which are of an excessive simplicity when put in a simple way. By means of it, a child can be taught to solve the most difficult problem in deductive reasoning as easily as he can work out a system of simple equations.

In spite of its many excellent features, the greater part of Mr. Keynes's book cannot be considered as anything more than a final effort to perpetuate the dark ages of logical method—an exhibition of wasted ingenuity which it is painful to contemplate. There remains an urgent demand for an elementary text-book which shall actually embody the recent advances in logic, and which shall have the boldness to consign *Barbara celarent* and all such rubbish to a foot note, or to an historical appendix.

The Land Laws. By Frederick Pollock, Barrister-at-Law, M.A., etc. London and New York: Macmillan & Co. 1883. Pp. 218.

MR. POLLOCK'S 'Land Laws' belongs to the excellent series of "handy-books" entitled "The English Citizen," and is an outcome of that modern school of English antiquities of which Professor Stubbs is the acknowledged head. The dedication to Professor Stubbs—"collegæ collega, magistro discipulus"—is itself a terse indication of the character of the book: its author, it should be noted, is Corpus Christi Professor of Jurisprudence in the University of Oxford.

The book opens with a familiar and graphic sketch of an English estate, thus giving the reader at the outset an introduction to the problems which he is to study, on their concrete side. Good as this is, however, the American reader, and we should think many English readers as well, would be greatly assisted by an outline plan of such an estate. No feature of Mr. Seebohm's recent work on 'English Village Communities' was more instructive than the numerous maps of actual tracts of land, with their divisions; and if Mr. Pollock had given a similar one, so as to show the park, the farms, the commons, the freeholds, and the copyholds, it would have been of very great service. There are chapters upon "The Old English Customary Laws," "The Mediæval System" (*i. e.*, feudalism), "Legislation and Transformation," "Development of Modern Law," "Landlord and Tenant," "Modern Reforms and Prospects"—the whole, it will be seen, forming essentially a practical treatise for the use of "the English citizen," and the modern and practical point of view is the prevalent one; nevertheless, this is based upon a sound and thorough historical sketch. The relation to present problems and issues is illustrated by some remarks in connection with the land-tax, established in 1692. The author shows here (p. 126) that the income tax, the distinctively English form of taxation, "in our time is the real and effective tax on landed property for national as distinct from local purposes. It is a true property tax, being . . . assessed on the gross, not on the net value."

Historical questions principally are discussed in the six appendices to the book. The first (A) contains an examination of the much debated passage in the twenty-sixth chapter of the 'Germania' of Tacitus. The views here presented seem to us correct almost without qualification. For the words *arva per annos mutant*, we like best the last suggestion, importing the occupation of "a new tract for tillage from year to year," and this would be, in its working, practically an "alternation of crop and fallow." Note B is upon "the classification of Anglo-Saxon estates in land"; in the text Mr. Lodge's analysis in his essay upon the 'Anglo-Saxon Land Law' is followed, but it is criticised in some details in this note. Especially (p. 194) exception is taken to Mr. Lodge's category of "booked læns," and doubts whether estates of folk-land could be regarded as *læns* at all. "The essence of læn, as far as one can make out, was holding under a definite person as superior by specific services." Note C, "Villenage, Villein tenure, and Copyholds," is the longest of the notes, and in that part which treats of land tenure seems to us entirely correct; it contains also some interesting information about the "imperfect copyholders," principally in the west of England. The opening remarks, too, upon villenage are exceedingly good: but the history of villenage is somewhat confused. It is said (p. 197) that "at the time of Domesday the serf by blood was called *servus* (later *nativus*), never *villanus*." This is true if by "serf by blood" we mean chattel

slaves. This seems to be the meaning of *servus* in Domesday Book, but the *villanus* is, we think, clearly a *prædial* serf; we do not see how this can be questioned since the publication of Mr. Seebohm's book, at least for this period. And, as Mr. Pollock goes on to show, the term *villanus* gradually degenerated, superseded *servus*, and, by Bracton's time, is identical with *nativus;* in fact, we suppose the class of *servi* rose so that their legal status, apart from their relation to the land, came to be identical with that of *villani*. When it comes to the use of Archdeacon Hale's invaluable materials in the Domesday of St. Paul's, we cannot but think that the Archdeacon's *inference* (cited p. 200) is a mistake; that is, that in the *libere tenentes*, the *tenentes terras operarias*, and the *nativi* of the thirteenth century, "we have the representatives of the Villani, Bordarii, and Servi of the earlier age." Nothing is more certain than that the *custumarii* (with whom the *tenentes terras operarias* are clearly identical) were the representatives of the *villani* of Domesday Book; some other origin must be found for the *libere tenentes*, or freeholders by socage.

The other notes are upon "Primogeniture in socage lands," "'Cestui que use' at common law," and "Settlements and perpetuity." All these questions of the later history of the land law—uses and trusts, remainders and reversions, entails and settlements—are treated in a very interesting and perspicuous manner in the body of the work.

A Dictionary of the Anonymous and Pseudonymous Literature of Great Britain: Including the Works of Foreigners written in or translated into the English Language. By the late Samuel Halkett, Keeper of the Advocates' Library, Edinburgh; and the late Rev. John Laing, M.A., Librarian of the New College Library, Edinburgh. Boston: Lockwood, Brooks & Co. Vols. i., ii.: A–E, F–N.

NOTHING is so attractive to unregenerate humanity as a mystery. The least curious man will wade through the dullest three-volume novel to learn how it turns out, or sit patiently during as many long acts in the hottest and least ventilated of theatres rather than go away while the hero's fate is yet uncertain. Charades, rebuses, conundrums, puzzles of all sorts, nuts to crack, caverns to explore, excavations at Sanxay, at Assos, at Hissarlik, treatises on Egyptian chronology or the Accadian language—all testify to the same pervasive and never-dying curiosity; and so do the numerous books on anonymous and pseudonymous literature. The 'Theatre' of Placcius and the 'Library' of Mylius tried to satisfy the curiosity of the eighteenth century in regard to works in all languages. In the nineteenth century, evolution brought this subject, like so many others, within the grasp of the great law of differentiation. Each investigator found that he had enough to do to unveil the secrets of his own literature. Barbier and Quérard in France, Melzi in Italy, Collin for Scandinavia, Doorninck in the Netherlands, Rassmann and Weller in Germany, produced their well-known works. But before the appearance of the present book England had done almost nothing. There was a shelf-ful of discussions of the authorship of Junius, and considerable material dispersed through *Notes and Queries*, but excepting the small and useful 'Handbook of Fictitious Names' of Olphar Hamst (Ralph Thomas), there was no book of reference on the subject, no place to which one could turn to get information quickly. This was a *lacuna valde deflenda*, perhaps, but not at all *admiranda*, in view of the utter insufficiency of England's bibliography in every branch. It is only within a quarter of a century that England has had anything to show in this line that could in any way compare with the numerous bibliographical achievements of France and Germany. But that country, when it once wakes up to the sense of a deficiency and resolves to supply it, does its work well. For a catalogue, the five letters of the alphabet, now nearly completed, of the British Museum cannot be equalled anywhere; no bookseller's list has surpassed Quaritch's in bulk and in variety of information; in bibliography proper the 'Bibliography of Printing,' by Stevens and Bigmore, is admirable; in library economy the three volumes of transactions of the Library Association are full of matter and of promise; in journalism the *Bibliographer* has contained much that was useful, and the *Library Chronicle* bids fair to rank with the best. And now in the matter of anonyms and pseudonyms Messrs. Halkett and Laing have produced a thoroughly satisfactory work, well planned, well executed, well printed. It is true that the latter excellence does not derive from them, for their manuscript has outlived first Mr. Halkett, who, after twenty years of painstaking and persevering research, died in 1871, and then Mr. Laing, who lived to continue the work only nine years after his predecessor. It took two years more to carry the first volume through the press, the second followed at a year's distance, and librarians are now impatiently expecting the third, for they have found the others invaluable.

The titles are arranged in the accepted way, alphabetically by the first word not an article or one of the prepositions *of* and *on*. They are given in full, no matter how long they may be. An asterisk added to one denotes that a copy of the work has been critically examined by one of the authors. How thoroughly this was done is shown by the fact that seventy-three out of the first hundred titles have the asterisk—a number which will be seen to mean much when it is remembered that anonymous and pseudonymous books are likely to be the most out-of-the-way books, consisting in large proportion of perishable pamphlets. The authority on which the authorship is ascribed is given. Extremely brief notes occasionally explain doubtful points. At the end of the third volume there will probably be an index of the names of the discovered authors. There is little else to say of a work of this sort, unless one can point out that some book has been attributed to the wrong man, or can add some new discovery to the list. Haynes's 'Pseudonyms of Authors' offered plenty of opportunity of both sorts; but after two years' use of Halkett and Laing, we find noted in our copy only a single misprint (Landor for Lauder in the first page of the preface), and one error (the 'Essay on Intuitive Morals' is ascribed to Miss M. Cobbe instead of to Miss Frances Power Cobbe). It would not be difficult, also, to lift the veil of a few writers whose books have been published since the 'Dictionary' was issued, although we should not be the first to do so, so eager is the modern press to insure the fulfilment of the prophecy, "There is nothing hidden that shall not be revealed." Thus, to take examples in alphabetical order, 'Authors and Publishers' is by G. Haven Putnam; 'The Bitter Cry of Outcast London,' by the Rev. W. C. Preston; 'The Campaign of the Forty-fifth Regiment, M. V. M.,' by C. E. Hubbard; 'Dreams' (Boston, 1883), by Charles G. Fall; 'Ecce Spiritus' (Boston, 1882), by the Rev. E. F. Hayward; 'Faith and Unfaith,' by Mrs. Mattie Argles; 'Golden Rod' and 'Helen Troy,' by Mrs. Burton N. Harrison; 'John Pringle, Printer and Heretic,' by Miss J. K. Grant, and so on.

Messrs. Halkett and Laing give their authority in all cases, but often one is tempted to ask, *Quis custodiet ipsos custodes?* It is very well to add *Bodl.* or *Brit. Mus.* to a title, but, after all, these great names mean some one man who had to decide on the evidence that was before him, and may not have had all the evidence or may have decided wrongly. Even the acknowledgment of the supposed author is not always to be relied upon, for not a few books have been claimed by several authors. Messrs. Halkett and Laing are fortunate in having to deal to so large an extent with the past, whence no one will come to contradict them. In the hundreds of ghost stories, more or less authentic, which we have read, we do not remember one in which the apparition returned to claim the paternity of a literary work. Living writers and their friends are more sensitive. A whole book was written on the rival claims to the authorship of "Rock Me to Sleep, Mother." The "No Name Series" have had names put upon them even in advance of publication, but the names have not always adhered. 'Democracy' was claimed by a man who did not write it; and 'The Bread-winners'—to say nothing of the dozen writers who have been guessed at—has been positively ascribed to half-a-dozen, and is now said to be acknowledged by one. It will soon come to the point that a cautious man will not accept even the affidavit of a claimant, unless it is accompanied by quit-claims from all other possible authors.

An Older Form of the Treatyse of Fysshynge wyth an Angle (c. 1450). Attributed to Dame Juliana Barnes. Printed from a Manuscript in the Collection of Alfred Denison, Esq., with Preface and Glossary by Thomas Satchell. London: Simpkin, Marshall & Co.

ANGLING literature of the present century is most fortunate in having devoted to it two such able, patient, and conscientious lovers as Thomas Westwood and Thomas Satcheli, who by their joint and several labors have been of greater service to the collector in this line than any, or perhaps even all, of their predecessors. Their 'Bibliotheca Piscatoria' alone entitles them to the gratitude of every one interested in angling books, both for its admirable, carefully prepared, and voluminous information, and for the spirit of devotion to its task which shows on every page. 'The Chronicle of the Complete Angler,' by Mr. Westwood, with notes and additions by Mr. Satchell, has a charm rarely found in any bibliographical work, and the delightful 'Angler's Note-Book and Naturalist's Record,' a new series of which is about to be issued under the management of these Erckmann-Chatrian of fish literature, is, by all odds, the most scholarly and interesting periodical on angling ever published.

To Mr. Satchell alone we owe the transcript of this 'Older Form of the Treatyse of Fysshynge wyth an Angle.' The first imprint of this work was dated 1496, and made by Wynkyn de Worde; it varies in phrase and sense considerably from the one before us, which is scrupulously exact. Mr. Satchell has taken pains to preserve the spelling and punctuation, or rather no punctuation, of the scribe of the old fifteenth century MS., though from the great latitude admitted, or we might even suppose compulsory, in the orthography of that day, the correct spelling must be hard to determine. The *Athenæum* takes Mr. Satchell to task very mildly for his "levelling doctrine" in "degrading" the name of the author from the euphonious and aristocratic "Berners," as it is usually known, to "Barnes," though in the "Book of St. Albans" it is found as "Barnes," and altered ten years later by Wynkyn de Worde to "Bernes." How or when it became "Berners"

we are not told, but it was so known for several centuries, Berners and Barnes being used indifferently in mediæval spelling. We think Mr. Satchell is justified in reverting to the earliest if the most vulgar version.

Despite its antique dress, the 'Treatyse' is interesting and not difficult reading. It begins with a dissertation on the delights and benefits of "the seyd iijor desportes and gamys to fend the best of them as wyll as y can," deciding that "fyschyng with an angul" is the most agreeable, and describes the "angleer taking hys holsom walke and mery at hys own ease & also menny a sweyt eayr of dyuers erbis & floures that schall make hym ryght hongre & well disposud in hys body he schall heyr the melodyes melodeous of the ermony of bryde he schall se also the young swanys & signetes folowing ther eyrours Duckes Cootes herons & many other fowlys with ther brodys wyche me semyt better then all the noyse of houndes & blastes of hornes & other gamys that fawkners & hunters can make or els the games that fowlers can make & yf the angler take the fysche hardly then is ther no man meryer than he is in hys sprites."

On p. 20 are given "The xij Impedymentes" "wyche cause men to take no fyche with oute other commyn causes wyche may casuelly hap." The "other commyn causes" are found quite sufficient by the angler of the present day. Further on, Dame Barnes warns us against eating the "Barbyll, a quesy fyche, rawe," as that habit had been the cause of "mannys dethe." The last page very properly advises anglers not to be "to rauenous in takyng of your sayd game as to moche at one time whiche ye may lyghtly doo yf ye doo in every poynt as this present treatyse shewyth you in every poynt whyche sholde lyghtly be occasyon to dystroye your own dysportes & other mennys also as when ye have a suffycyent mese ye sholde coveyete no more as at that tyme."

There are many such unerring indications as the above that Dame Barnes possessed the true spirit of a sportsman, as well as a full confidence in her own prescriptions, despite her reputed holy calling. Mr. Satchell, assisted by Professor Skeat, has added a copious glossary, which is curious as well as useful. The words "nalles," "nowyer," "osmonde" might be as Choctaw to us, did we not there find that they mean "awls," "hour," and "best Swedish iron." The paper and typography of the book make it worthy of a place on any shelves.

A Simplified Grammar of the Danish Language. By E. C. Otté. London: Trübner & Co. 1884.

THE recent publication of a voluminous history of Scandinavian literature, and the monthly recurrence of a journal especially devoted to making known the literary and social activity of the Scandinavians, should have prepared a welcome for this latest volume (No. 8) of Trübner's collection of simplified grammars. Miss Otté's credentials consist of a volume on Scandinavian history (1874), a compact and reliable compend; 'Denmark and Iceland' (1881), a readable description of the present condition of these countries, forming one of Sampson Low's "Foreign Countries and British Colonies" series; and, in 1879, through her present publishers, a detailed and complete work on 'How to Learn Danish (Dano-Norwegian),' the first scholarly Danish grammar in the English language. We must call special attention to the last-named work, in order to emphasize the difference between it and the one now under consideration, as the two are not unlikely to be confounded. The Dano-Norwegian manual is a complete textbook for beginners in the Danish language, with rules, examples, and a key to the exercises; while this grammar addresses itself, according to the author's preface, to "those whose grammatical knowledge of other tongues, whether dead or living, enables them readily to master a new language, provided only its essential and specific characteristics are clearly presented to them." The proviso embodied in the last line of this sentence has been carried out with all possible brevity—indeed, the book may be considered too brief in some parts. At all events, it is a summary, with improvements, of the manual. In her former work, Miss Otté translated the recently-coined phrase *Dansk-Norsk* into Dano-Norwegian, and placed it upon her title-page to call attention to the fact that her book taught the language not only as spoken in Denmark, but also as spoken in Norway, and the peculiar relations between Danish and Dano-Norwegian were explained in the succinct introduction. In the present work, while the same end is kept in view, only four pages are devoted to explaining the nature of the identity of the language of Danes and cultivated Norwegians. It would have been preferable rather to have enlarged upon the theme, for the student who from Miss Otté's grammar goes to the modern Norwegian writers will find much to confuse him. Miss Otté promises to give special attention to the definite article as a suffix; but, though about a tenth part of her space is devoted to the subject, much is left unelucidated or not touched upon concerning this marked peculiarity of the Scandinavian languages. It is rather unsatisfactory to be told that "the terminal letter of the word, and certain considerations of euphony, determine whether *en*, *et*, and *ene*, or simply *n*, *t*, and *ne* are to be emplcyed in the formation of the article affix," and to be told nothing more. And the author might have noticed some of the very peculiar deviations in regard to the definite article in certain parts of Denmark.

The volume has evidently been written and printed with care, though a few slips have occurred. *Begrive*, p. 14, should be *begribe; Præstegård*, same page, *Præstegård; Hollænderinde*, p. 39, *Hollœnderinde; Hvad for en Gut mener De?* (not *de*), *Jeg så ham falde* (not *sa ham*), *Sammenlœgge* (not *Sammenlœge*), for a difference of meaning is here conveyed by the difference in spelling. Surely, Miss Otté did not mean to write *Fruentimmeret lå?* å can certainly not express the sound of o in *lo* (laughed). The sounds of å—equal to aa—are given as aw in awful and o in sorrow, but no rule is laid down for distinguishing them. Clearly, the last is the better and more common sound, and is well shown in the rhymed words at the end of this couplet of Björnson's

> "Vi læste, så Öjet blev stort og vådt;
> da smilte den Gamle og nikked blot."

When enumerating the exceptions to the rule for forming the ordinal numbers from the numerals, *femte* (fifth) and *ellevte* (eleventh) should be added. The preposition *af* also means 'by,' and *da* sometimes means 'then.' We can discover no mention of the frequently-used accented *é*. "The earlier writings of the Old Northern affords no evidence," etc., is an awkward sentence.

The fact that this grammar forms one of a series is disadvantageous to the purchaser. It consists of sixty-six duodecimo pages of large print, text, and eighty pages of publisher's catalogue, serving to give the required thickness of back for lettering, but also making a book too large to be carried in the pocket. Moreover, the cloth cover is a light gray, nearly white, which is irremediably soiled after the first two or three handlings. Mr. Sweet's tasteful Anglo-Saxon Primer furnished a far better model in size and binding. Finally, no good book is too small to deserve an index.

A Hand-Book for Travellers in Central and Northern Japan. By Ernest Mason Satow and A. G. S. Hawes. London: John Murray.

THE career of Ernest Mason Satow in Japan has been that of honorable scholarship, and the book before us is but one of its many goodly fruits. One of the best proofs of the excellence of the British civil service is the existence of such scholars. Apart from faithful routine service performed by men specially fitted for their duties, literature is enriched, and priceless knowledge becomes the easy property of the world. After two years' study of Chinese in Peking, Mr. Satow came to Japan, we believe in 1864, and immediately began the study of the Japanese language. He pursued it grammatically under the tutorship of the Rev. S. R Brown, an American missionary; but for pronunciation and living idioms he went among the people, and, note-book in hand, learned from their lips. Gifted with a philosophic mind beyond his years, the young man mastered the theory and practice of the tongue of Nippon, and then became a student of all things Japanese. He was noted for his researches into history, and made frequent journeys on foot to study famous battle-fields, shrines, temples, and cities, until Old Japan was as real to him as the nature and people of the Mikado's empire of to-day. His researches into both Shinto and Buddhism are profound, and in these subjects, especially in Shinto, the indigenous cult, he leads all students. To the great regret of those interested in Japan, he has recently accepted the appointment of British Consul-General at Bangkok, Siam.

A hand-book from such a scholar is more than a mere guide-book. While accurate, detailed, and crammed with just exactly that sort of knowledge most needful to the tourist, it is also a standard work for the library. The first edition of the book, in somewhat smaller compass, was soon exhausted, and the second, now before us, bears Mr. Murray's imprint, and has the benefit of good London labor on its make-up. It is a fat but pocketable volume of over seven hundred pages. The introduction is a handy cyclopædia in itself. After chapters on the language, weights and measures, money, bibliography, and detailed personal information for tourists, Dr. J. J. Rein contributes eight pages on the geography, climate, and weather. Twenty-four pages of text on zoölogy and botany, by specialists, who formerly lived in Japan, follow. The author furnishes a valuable epitome of the native religions, but the gem of this collection of pithy essays is the chapter on the pictorial and glyptic arts. This is from the pen of Dr. William Anderson, and is alone worth the price of the book. We know of nothing on Japanese art that puts the whole matter in such convenient and accurate form. In the body of the work, Mr. Satow has been greatly assisted by Lieutenant Hawes, of the Royal Marines, well known as an indefatigable traveller in Japan. No less than sixty-four routes or skeleton tours in central and northern Japan are described in detail, and the text is well helped out by clue-maps and plans of cities, while two finely-engraved larger maps are folded into the cover pocket. Should the traveller be storm-stayed, there is abundance of good reading matter in the dainty legendary lore which has overgrown the old sites. For those who wish to know exact history, there is also plentiful provision. For a day's stop-over at Yokohama, while the steamer is waiting, the work is too bulky, pretentious, and costly; but for every traveller, resident, and returned visitor, the book is a necessity.

The High Alps of New Zealand; or, A Trip to the Glaciers of the Antipodes, with an Ascent of Mount Cook. By William Spotswood Green, M.A., member of the English Alpine Club. London and New York: Macmillan & Co. 1883.

THE title of this book is itself something of a surprise to readers who have hitherto had but slight acquaintance with the natural features of New Zealand. The prevailing idea of the average man concerning that somewhat unfamiliar region seldom rises to Alpine heights and everlasting snows. To one not better informed it is therefore a revelation to find that there are in New Zealand mountain ranges of extraordinary grandeur, whose culminating peaks, varying from 11,000 to considerably over 12,000 feet in height, are covered with eternal snow, sending down many large glaciers, one of which—the Tasman—is eighteen miles long and two to three miles wide. The Aletsch glacier in Switzerland is fifteen miles long by one mile wide—a comparison, as regards size, much in favor of the New Zealand glacier; while Doctor Hector, of the New Zealand Geological Survey, comparing the area of permanent ice in the southern Alps of New Zealand with the ice-field of the Bernese Oberland, states the former at 160 and the latter at 140 square miles. The highest peak of the New Zealand Alps is Mount Cook, the altitude of which is given at 12,349 feet. The ascent of this peak seems to have been long regarded as a very difficult task, since the Governor of New Zealand, in 1873, offered official aid to any member of the English Alpine Club who would undertake it; but up to the time of Mr. Green's visit, no successful attempt had been made to reach the summit.

Mr. Green's book is an entertaining account of a six-months' excursion made by him from England to New Zealand for the express purpose of climbing Mount Cook, to accomplish which object his ambition had been stirred by Alpine experiences in more familiar fields, and an irresistible desire for new conquests. He secured the companionship of two Swiss mountaineers, one of them a professional guide in the Oberland, the other the proprietor of the Hôtel de l'Ours at Grindelwald. The narrative gives many details of the entire journey, but refers more especially to the month's campaign on the slopes of Mount Cook. The ascent proved, indeed, to be a very difficult one; and although all the serious obstacles were practically overcome, the actual summit was not reached by about thirty feet, as the highest point of the climb was gained so late in the day—6 P. M.—and under such conditions of weather, that it was necessary to begin the descent without the loss of another moment. In fact, the dangers of the descent were far greater than those of the upward climb, as the mountaineers were overtaken by night and a terrific storm which severely taxed their powers of endurance. The book is generally very pleasant reading, and gives an interesting glimpse of that portion of New Zealand visited by the author. It contains one or two roughly-sketched maps, and one highly-precipitous frontispiece, in which the artist seems to have done full justice to the difficulties of the very trying position in which the men found themselves during the night of their descent from the mountain.

Vom Sund zum Posilip! Briefe aus dem Jahren 1879 bis 1881. Von Fanny Lewald. Berlin.

'FROM THE SOUND TO THE POSILIPPO' is an attractive title, and was therefore preferred to the less poetical 'From Elsinore to Sorrento,' which would, however, have been more correct, as a portion of the letters were written south of the Posilippo. When the last letter was penned on July 20, 1881, the authoress had outlived her seventieth year. An active literary career of forty years lay behind that date. Fanny Lewald—not Fanny Stahr, though she was the wife of Adolf Stahr, a congenial writer, from 1855 till his death in 1876—is a household name in Germany. She has amused and instructed generations of thinking and unthinking readers. She is a prominent character in German female literature, and it is, therefore, interesting to hear her in the evening of life, after so many changes in the history of her people and in her own, after so many modifications of thought and conviction which those changes must necessarily have wrought in her susceptible mind. We find her still poetical and sentimental, patriotic, art-loving, joyously appreciative, Teutonic through and through, conversant with the latest in universal literature and thought, and still a master of pure, plain, and melodious German prose. She has not become philosophically serious or learnedly pedantic; has not contracted the habit of sermonizing and grumbling; has matured no political or social creed; has moderated her liberalism, and obtrudes no hobbies. Her business is, as it almost always was, to walk with you through pleasant paths of life or fiction and talk amusingly—not profoundly or with any remarkable originality—on nature, character, art, and literature. She still enlarges the long series of her novels—one of the last being 'Treue Liebe'—and in her sketches of travel is still as enthusiastic about Italy as when she wrote her 'Italienisches Bilderbuch,' some thirty-five years ago, or, jointly with Stahr, twelve years later, 'Ein Winter in Rom.'

Almost two-thirds of the book before us is devoted to Italy: to Verona, Venice, Rome and its environs, Naples, Sorrento; to natural and popular characteristics of the Peninsula, its literature and its art. The rest is descriptive of life at watering places in Mecklenburg and Nassau, of Denmark and Frankfort. Art, ancient and modern, is the leading topic in the letters from Italy, and also in those from Copenhagen, in which a glowing tribute is paid to Thorwaldsen, who, as a genius and a wedder of the antique to the modern, is likened to Goethe. The spirit of the latter, however, seems constantly to hover before the eyes of our authoress, inspiring and adored. In her adoration of ancient art, and even in her admiration of certain aspects of Italian life, she shows herself a not over-idealistic *païenne*, to use a word recently chosen with such gusto, as characteristic of herself, by Mme. Adam; and we look in vain for anything indicating an inclination to worship at the Christian shrines as such (she was a Jewess to the age of sixteen), to pay homage to the great characters of the Roman Church, or to combine religious sentiment with the artistic. Of the Italians of our times, the Venetian patriot and republican Manin is mentioned, as a former acquaintance, with warm affection and admiration. The restorers of Germany's Imperial power, Wilhelm and Bismarck, receive the incense of pious patriotism, and there are effusive reminiscences of the great and terrible days of 1870–71; but the authoress remains a woman throughout—a woman fond of peace and contemplation, of nature in her idyllic stillness, and of society in its domestic activity.

Memorie and Rime. By Joaquin Miller. Funk & Wagnalls. 1884.

ONE of the obvious characteristics of Joaquin Miller's genius is its need of large compass to work in: there must be air enough, ground enough, and some great feature in the landscape as preliminaries to inspiration. From this fact, in connection with his frequent change of the scene of his imagination, there results in all his writings a quality of spaciousness which is an element in his originality. In the present volume, which is made up of prose with a few intercalary poems, he ranges over the whole territory of his travels, from the base of Mount Shasta, whence his hegira began, to Rossetti's dinner-table and the land of the daughters of "Miriam," and back and forth from John Brown's grave to the summit of Mount Hood. If the "Memorie," as the poet terms his reminiscences, is to be taken as the simple truth, without that admixture of fiction which is generally tolerated in persons of a lively imagination, their author has had a remarkable experience for the basis of his poetry, and, be it added, as honorable as it was exceptional. Despite their easily-noticed lack of cultivation and their droll sequences of thought and feeling, these tales of human daring, with their recognition of simple worth in men and women of the frontier, and even the unchecked and unreasoning sympathy of the poet with all the "causes" that flaunt across his way, show an original tenderness and strength, an innate directness of moral perception, that possibly have not been given their due weight in accounting for the success of Joaquin Miller's first verses. The personal tone of this volume is thoroughly modest and almost oppressively sincere; unfortunately, the first contact of the young poet with civilization when he went to Europe, seems to have, so to speak, Italianated him, or at least his literary style and subject. Some evil influence came over him, for though he has written now and then a fine, simple poem, unaffected either in the theme or treatment, he has never excelled the 'Songs of the Sierras' in energy or equalled them in interest, except in this occasional way. His last volume only proves once more to him, if he has eyes to see it, that in the nature and life from which he drank the springs of existence lie the springs of his art; but when he goes to Venice and to Egypt he loses power at each remove, and, at home, when he takes to imitating Bret Harte, or others of that ilk, he loses his own peculiar mastery.

There is a good deal of bad poetry here, but it is fatuously bad. There is, on the other hand, some fine imaginative work in prose. We suspect that the reason why Joaquin Miller is such a puzzle to the public is, that to the genuine power of a poet he has added, through wrong judgment, due to defects of education, a misunderstood theory of the ends and means of literary art. There is a falsity in his mode of expression which he has derived from culture; but in his radical sympathies, judgments, and ideals there seems to be a thorough sincerity. Novelty is not the main mark of the collection, nor the affectation that imports sentimentality into the miner's life; but if one takes pleasure in seeing the fine workings of an unconventionalized sense of duty, or the basis of the sense of brotherhood among men as it grows up among the unallied emigrants and pioneers, or even in the mere physical look of the wide prospect of the Northwest, he will find them better represented here than in any book by other writers, although, truth compels us to add, the reader must hunt for the nuggets amid the refuse, as if he were himself a gold-seeker.

Tales, Poems, and Essays. By Anna Letitia Barbauld. With a biographical sketch by Grace A. Oliver. Boston: Roberts Brothers. 1884.

THE contents of this volume were primarily meant for use in training children's minds, and once, in our grandmothers' days, they served

this purpose very well; but since children have come to have a literature of their own, these antiquated homilies and allegories seem so awkward in their ways of engaging attention as to be comical. "The Hill of Science" doubtless still looms as loftily athwart the pathways of the young as in the allegoric vision of the pious and kind-hearted schoolmistress whose perennial smile made Miss Burney's jaws ache at the sight; and eyes as old as hers may still see Genius darting up the mountain "like an eagle," outstripped at last by Application's "slow and unremitting pace," with other similarly highly instructive charades of the scenic solitude. But nowadays this same hill has been turned into a kind of summer school, and has entirely lost its old character of a great moral show. The meaning of the change is that we address the child's moral sense less exclusively than of old, and endeavor rather to awaken his intellectual curiosity and instruct him in the employment of his eyes and fingers on real objects. Some people think that this effort to give knowledge as well as to form character by means of books has gone too far, and to the feelings of such reactionists the republication of tales like these of Mrs. Barbauld is in large part due. "Let us teach morals," they say, "in public schools, in science primers, in Rollo books and Grimm's tales—everywhere"; and forthwith here is a reissue of dull, diffuse, worn-out essays and machine rhymes, the last thin product of the exhausted eighteenth-century soil.

The morality of these misnamed tales (they have no story) is excellent, but its effectiveness in dissenting families whose idea of poetry was Young's 'Night-Thoughts' was probably much greater than could now possibly be the case with American youth of the strictest bringing-up. Boys and girls old enough to read and inwardly digest the essay "Against Inconsistency in Our Expectations," for example, have senses and brains that make stronger demands for reality and quickness of movement in what claims their attention than did the non-conformist nurselings of Palgrave Green; and they have the craft to satisfy themselves. The popularity of this volume among parents would mean an increased interest in road-agents among the children. Let us teach morals, if necessary, by tales; but no child will be long imposed on by giving him the Decalogue as a novelette in ten chapters—a feat in moral legerdemain which would be the *ne plus ultra* of Mrs. Barbauld's method. There has been growth since her day, and to substitute for modern books those of our grandmothers is to make pedagogic Bourbons of ourselves. Before we had the lives of the heroes and the saints so that children could read, understand, and love them, weak imitations of Bunyan for infant minds may have been profitable; but now that a large part of the noble tradition of the world has been put into child's speech, allegories about climbing hills, and dreams about the tortures of the Court of Fashion, and sermons on prejudice might as well rest undisturbed among the débris that clogs the ways of that same mountain of Fame which usually closed the vista of the author's ideas. The memoir that prefaces this volume is pleasantly written, with much detail, but contains nothing new.

Whirlwinds, Cyclones, and Tornadoes. By William Morris Davis, Instructor in Harvard College. Boston: Lee & Shepard. 1884. 90 pp.

THOUGH called only an essay, this little book is really a full treatise upon meteorology, and deserves to be a college text-book. It is the best general view of the science in the English language, but this is not saying much. In arrangement it is felicitous and logical, and this is saying a good deal. Its distinctive feature is the importance and priority which it attaches to a disquisition upon the "Equilibrium of the Atmosphere," a subject usually shirked. The opening sentence of the chapter upon this topic will explain its title: "When the air is at rest it is normally densest and warmest next to the earth's surface, and becomes thinner and cooler at successive altitudes above it." Readers will observe that the old-fashioned dogma of an "equatorial upper current" is conspicuous by its absence from this statement.

The ground for the criticism that it is not saying much to say that this book is the best, is that all existing text-books upon meteorology are either so unintelligent or so uncandid as to ignore the fundamental element in all storms, namely, the heavy downward currents, which necessarily constitute exactly one-half of every disturbance, and which stand to the upward currents in the relation of cause to effect. The reason for thinking it likely that this omission in the descriptions may be intentional is because the phenomenon is so obvious. And the motive for the evasion is to be found in the circumstance that nobody knows much about the philosophy of these downward currents, and writers do not like to confess ignorance; they prefer to belittle the facts instead. It is not necessary to repeat the arguments which have been several times stated in these columns, in criticising other weather-books, to prove the superior significance of the heavier currents of air in causing storms. If Mr. Davis is surprised at being thus taken to task, he need only be referred to the very first paragraph of his treatise, which appropriately commences with a clear and succinct definition of a storm, but which contains no intimation of the existence of any vertical movement of air except in an upward direction. Yet the author's object is professedly to explain *how* these disturbances arise. That he cannot do so he once, indeed, admits, upon page 17, as follows: "The beginning of the upsetting in a tropical cyclone is not *fully* accounted for by observation." (The italics are ours.) Now the beginning of *every* upsetting of air must be the top-heaviness of cold upper strata; and every explanation which neglects this fact must be defective.

Light in Lands of Darkness. By Robert Young. Cassell & Co. 1884.

THE success of a previous volume upon 'Modern Missions' has encouraged the author to prepare the present work, the object of which is to deal with some of the mission-fields that are least known. The range he moves over is so wide that his condensation is sometimes the barest summary. "He has endeavored, however," he assures us, "in each case to find room for most of the outstanding facts." By "outstanding" we are to understand "important." There is an introduction by the Earl of Shaftesbury which may be safely skipped. It is an advertisement or send-off of a kind which is too common. Mr. Young's aim has been to give special prominence to the earlier phases of the various missions whose operations he describes, but it will be found that his beginnings are seldom earlier than the middle of the eighteenth century, and the most of them are later still. The limitations of his subject are greatly to his advantage, for the missionary work that has been carried on in the remoter fields has been most fruitful in adventure and heroic traits. The opening chapters treat of Greenland and Labrador, the next of the Patagonians and Fuegians. The four succeeding chapters deal with Asiatic missions, to the Syrians, Armenians, Nestorians, and Persians. A chapter upon Egypt will be of special interest at the present time. Finally, the Jews have a hundred pages to themselves, introduced by a history of their persecutions, some of which are of immediate interest, and are likely seriously to hinder those efforts for their conversion which at the best were meeting with but moderate success. Mr. Young's book is never given over to detraction and abuse, as would have been the case thirty or forty years ago. Sometimes it is almost sympathetic in its dealing with the alien faiths. It is incomplete because of its treating of Protestant missions only. There are no passages here of such engrossing interest as Mr. Parkman's 'Jesuits in North America,' none that his genius could make so fascinating and pathetic. Those who have read Montalembert's 'Monks of the West' will recall chapters in that wonderful book which make Mr. Young's somewhat mechanical recital seem even duller than it is.

The Guĕguĕnce; a Comedy Ballet in the Nahuatl Spanish Dialect of Nicaragua. Edited by Daniel G. Brinton, A.M., M.D. Philadelphia. 1883. 8vo, pp. 94.

To deal justly with this little volume it should be divided into two parts: the introduction, consisting of fifty-three pages, and the comedy proper. In the former Mr. Brinton has given us a sketch of the Nahuas and the Mangues—two of the tribes found in Nicaragua at the time of the conquest, together with an account of the dramatic dances of that country, of the musical instruments in use there, and a specimen of what may or may not be native music. Like all of Mr. Brinton's work of this character, it is well done, and to those of us who are familiar with his methods, it recalls the 'Floridian Peninsula,' his earliest and, all things considered, his best book.

In regard to the comedy itself there is not much to be said, certainly nothing in its favor unless the fact that it is used as a peg upon which to hang the introduction can be so considered. Its worthlessness in a philological point of view is virtually conceded when we are told that "it is composed in a mixed dialect, a jargon of low Spanish and corrupt Aztec (Nahuatl)," unintelligible to the natives themselves at the present day; and that it is not a picture of aboriginal manners and habits of thought is evident from the context even without the admission that "it is of comparatively recent origin," "its antiquity and authorship" being "alike unknown." So far as plot is concerned, it has none or next to none. The hero, Guĕguĕnce, is a thoroughly disreputable old man, whose "indifference to truth, cynical impudence, licentious jokes about and before his sons, and the unscrupulous tricks of which he boasts," make up the burden of the play, and form, as we are told, "a marked type of the peculiar sort of humor which the native mind preferred, and of the class of actions in which it especially found amusement." This may or may not be so. We cannot disprove it, and for that matter neither does our author prove it; but even if it be true, and we admit that a knowledge of this play is necessary to give us an idea of the sort of humor characteristic of the tribes among which it was enacted, we can only say, as Sam Weller did of learning the alphabet, "that it is not worth while going through so much to get so little."

Diseases and Injuries of the Horse. By F. O. Kirby. William Wood & Co.

THIS work is chiefly a compilation from Fitzwygram, Williams, Robinson, Youatt, and other standard and modern authorities. The au-

thor, while disclaiming originality, says that he has introduced into the book many practical ideas which are the fruits of his sixteen years' experience in equine matters, and then endeavors to present a concise and practical manual of the diseases and injuries of the horse, together with most recognized remedies and the best courses of treatment. The elaborate treatises upon veterinary medicine and surgery which are at the command of the professional veterinarian are not strictly necessary for the use of non-professional readers; hence physiology and pathology are rarely discussed by Mr. Kirby, who is content to present in a general way the best methods of nursing and treatment. Rules for determining the age of a horse by the condition and appearance of the teeth (which are not of much value after a horse has passed its ninth year) are added, besides a valuable posological table for the horse, with the action of the medicinal substances. The book is handsomely and attractively printed, and, while containing no new discussions, can be recommended to non-professional readers as a compilation of reliable information.

A Brief Handbook of English Authors.—A Brief Handbook of American Authors. By Oscar Fay Adams. Boston: Houghton, Mifflin & Co. 1884.

THESE two little books are very handy, and, considering their size, very valuable works of reference. The aim is limited, but it has been well carried out. The American handbook contains a much larger list of names than can be found in any other publication of the same kind. There may be those who look upon this as an objection, but it is to be remembered that it is about inferior authors that men usually find it most difficult to secure the information which is especially desired. The facts contained in these volumes, so far as we have been enabled to test their accuracy, can be received with confidence.

Shaw's New History of English Literature, together with a History of English Literature in America. By Truman J. Backus, LL.D. Revised Edition. Sheldon & Co. 1884.

HISTORIES of English literature, though passing away as text-books in higher institutions of learning, still form part of the curriculum in the numerous schools in which the superstition yet lingers that a knowledge of literature can be got by reading about it instead of in it. They are probably better, it is fair to say, than nothing. The present work is one of the most time-honored of this class of text-books. The original, which was excessively wordy, has been subjected to several revisions; it has received a good deal of addition, and, what is better still, has suffered a great deal of excision. It can bear still further improvement. The account of Chaucer, for instance, is sadly behind the present state of knowledge. It is strange to find, also, Shaw's absurd description of the plot of 'The Faery Queene' (page 81) retained through all these successive revisions: especially when Spenser's entirely different view of it can easily be ascertained by reading his letter to Sir Walter Raleigh, invariably prefixed to the poem. Still, this revised work, though of a class of which we cannot speak highly, is, as a whole, a fair one of its class.

Round the World. By Andrew Carnegie. Charles Scribner's Sons.

THIS is a thoroughly unconventional book. It is devoid of table of contents, chapters or chapter-headings, index, foot-notes, or "all that is at enmity with joy" in reading a frank, off-hand story intended for private reading alone. Hardly a guide-book is hinted at, and from the first seat in Pullman to "home again" in Pennsylvania, there is an utter absence of the infirmities of the average bookmaker. Fresh, unstilted, full of jest and merriment, the narrative flows on, rippling into poetry, with here and there an eddy of political economy and criticism. Scouting all idea of giving information, the author fills his pages with bits of wisdom and nuggets of philosophic comment on men, customs, countries, and trade. He looks into the possible future, but avoids prophecy as to particulars. He is a hearty Scotchman, and in his strictures on British policy in India are his severest words. The Pacific, Japan, China, Annam, Singapore, Ceylon, India, Egypt, Europe are visited, and the author of an 'American Four-in-hand in Britain' seems still on the box with whip and reins, so open-air-like is the tone of the book. The closing pages are of much practical value, and set forth cogently the advantages of a trip around the world.

BOOKS OF THE WEEK.

A Palace-Prison; or, The Past and the Present. Fords, Howard & Hulbert. $1.

Baker, G. M. The Reading Club and Handy Speaker. Boston: Lee & Shepard. 15 cents.

Bardeen, C. W. Outlines of Sentence-Making. A Brief Course of Composition. A. S. Barnes & Co.

Black, W. N. Storage and Transportation in the Port of New York. G. P. Putnam's Sons. 25 cents.

Blackmore, R. D. The Remarkable History of Sir Thomas Upmore, Bart., M. P. Harper & Brothers.

Bolt, Robert A. Eustis. A Novel. Boston: J. R. Osgood & Co. $1.50.

Brown, Dr. E. F. The Eclectic Physiology. Cincinnati: Van Antwerp, Bragg & Co.

Caine, Prof. W. Symbolic Algebra; or the Algebra of Algebraic Numbers. D. Van Nostrand.

Cassell's Illustrated Guide to Paris. Cassell & Co. 40 cents.

Crommelin, May. In the West Countrie. Harper's Franklin Square Library. 20 cents.

Daly, F. Henry Irving in England and America. 1838–84. London: T. Fisher Unwin.

Dixon, Dr. R. B. What is to be Done? An Emergency Handbook. Boston: Lee & Shepard. 30 cents.

Dobson, A. Beaumarchais's Le Barbier de Seville. Oxford: Clarendon Press.

Dubois, E. C. Broken English. A Frenchman's Struggle with the English Language. Boston: Lee & Shepard. 50 cents.

Elliott, R. S. Notes Taken in Sixty Years. Boston: Cupples, Upham & Co.

Farrar, Capt. C. A. J. Wild Woods Life; or a Trip to Parmachenee. Boston: Lee & Shepard. $1.25.

Foster, W. E. Stephen Hopkins, a Rhode Island Statesman. A Study in the Political History of the Eighteenth Century. Providence: S. S. Rider.

Godwin, P. Prose Writings of William Cullen Bryant. Vol. I.—Essays, Tales, and Orations. Vol. II.—Travels, Addresses, and Comments. D. Appleton & Co. $6.

Gindely, Anton. History of the Thirty Years' War. Complete in two volumes. G. P. Putnam's Sons. $4.

Grant, R. An Average Man. Boston: J. R. Osgood & Co. $1.50.

Gronlund, L. The Coöperative Commonwealth in its Outlines: an Exposition of Modern Socialism. Boston: Lee & Shepard. $1.

Hale, Rev. E. E. The Fortunes of Rachel. Funk & Wagnalls.

Haswell, C. H. Mechanics' and Engineers' Pocket Book of Tables, Rules, and Formulas. 45th ed. Harper and Brothers.

Hill, D. J. The Elements of Rhetoric and Composition a Text-Book for Schools and Colleges. Sheldon & Co $1.

Hurst, Rev. J. F. Short History of the Reformation. Harper & Brothers.

Howe, Maud. The San Rosario Ranch. Boston: Roberts Bros.

Jenness, Annie. Barbara Thayer. Her Glorious Career. Boston: Lee & Shepard. $1.

Jevons-Hill. The Elements of Logic: a Text-Book for Schools and Colleges. Sheldon & Co. $1.

Kirk, Ellen Olney. A Midsummer Madness. Boston: J. R. Osgood & Co. $1.25.

Lang, A. Molière's Les Précieuses Ridicules. Oxford: Clarendon Press.

Mackenzie, Rev. J. Day-Dawn in Dark Places: a Story of Wanderings and Work in Bechwanaland. Cassell & Co. $1.25.

Maupas, M. de. The Story of the Coup d'État. D. Appleton & Co. $1.75.

Meyer, Rev. H. A. W. Critical and Exegetical Hand-Book to the Epistles to the Corinthians. Funk & Wagnalls. $3.

Morley, J. Ralph Waldo Emerson. An Essay. Macmillan & Co. 20 cents.

Mothers in Council. Harper & Brothers.

Murfree, W. L., Sr. A Treatise on the Law of Sheriffs and other Ministerial Officers. St. Louis: F. H. Thomas & Co.

Phillips, W. The Lost Arts. Boston: Lee & Shepard.

Phillips, W. Daniel O'Connell. Boston: Lee & Shepard.

Russell, W. C. John Holdsworth, Chief Mate. A Novel. Harper's Franklin Square Library. 20 cents.

Smith, P. H. Acadia: a Lost Chapter in American History. E. W. Nash. $2.

Steele, J. D. An Abridgment of Hygienic Physiology, with References to Alcoholic Drinks and Narcotics. A. S. Barnes & Co.

Stevenson, A. F. The Battle of Stone's River, near Murfreesborough, Tenn. Boston: J. R. Osgood & Co. $3.

Taylor, G. Clytia: a Romance of the Sixteenth Century. W. S. Gottsberger.

Thomson, W. H. The Great Argument; or Jesus Christ in the Old Testament. Harper & Brothers.

Townsend, Virginia F. But a Philistine. Boston: Lee & Shepard. $1.50.

Turner, G. Samoa a Hundred Years Ago, and Long Before. Preface by E. B. Tylor. Macmillan & Co. $2.50.

Walford, E. Greater London: a Narrative of its History, its People, and its Places. Cassell & Co. $4.

Westbrook, Rev. R.-B. Man—Whence and Whither? Philadelphia: J. B. Lippincott & Co. $1.

Wyman, W. H. Bibliography of the Bacon-Shakespeare Controversy, with Notes and Extracts. Cincinnati: Peter G. Thompson.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & Co., N. Y.

The most popular novel of the year in England is

Called Back.

16mo. Leisure Hour Series, $1.00; Leisure Moment Series, 25 cents.

HENRY HOLT & CO., N. Y.

NEW CATALOGUE OF BOOKS ON History, Philosophy, Politics, Social Sciences, Religions, Travels, etc., Old and New, in English and Foreign Languages, will be sent on application, as well as separate catalogues on AMERICANA and SCIENCES. Address,
LEON & BROTHER, Booksellers,
5th Avenue Hotel, Place 3,
Corner 5th Ave. and 23d St., N. Y. City.

A YALE GRADUATE, of some experience in European travel and five years' experience as teacher, will conduct a small party of boys on a vacation tramp up the Rhine and in Switzerland. $400 *covers all expenses.* Satisfactory references given and required. For particulars, address
H. S. GREEN,
Principal Wilkesbarre Academy,
Wilkesbarre, Pa.

A NEW AMERICAN NOVEL.

Barbara Thayer:

HER GLORIOUS CAREER. By Annie Jenness. Cloth. Price, $1.00.

*** "The author has been welcomed upon the platform as a brilliant and impressive speaker. Those who have listened to her eloquent and fervid utterances will not be surprised that, in starting out in a new venture, she has achieved a flattering success."—*Boston Home Journal.*

"The social problem discussed is the question whether or not a woman should marry who has loved unlawfully, and the author treats it with unusual frankness."—*Budget, Boston.*

"The work will provoke a variety of comment, and its readers will probably divide into two constituencies."—*Commonwealth.*

Sold by all booksellers, or mailed on receipt of price by the Publishers,

LEE & SHEPARD, Boston.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

READY THIS WEEK:

THE HISTORY OF THE DIS-

coveries of America to the year 1525. By Arthur James Weise. One large octavo volume, with maps.

The author's researches during eight years have been remarkably rewarded, and his judicious treatment of his interesting subject shows that he wrote to make plain to the general reader, the teacher, the man of letters, and the critic a great number of historical and geographical facts hitherto unknown to the people of this country.

*** *Putnam's New Catalogue sent on application.*

$175. EUROPE.

New York to Glasgow by Anchor Line Steamships, through the Trossachs to Edinburgh, Melrose Abbey, Abbotsford, Kenilworth, Stratford-on-Avon, and London, and return, $175 to $195, according to room. All necessary expenses included to London or Paris. All travel and hotels first-class. Tickets good for one year. Paris included for $25 additional. Leaving New York June 14, 21, or 28. Apply at once to
E. TOURJEE, Franklin Square, Boston.

The Nation.

NEW YORK, THURSDAY, JUNE 12, 1884.

The Week.

THE chief reason for Blaine's nomination was that he was the favorite of a large majority of the Convention. Of that fact there can be no question. He did not have enough on the first ballot to nominate him, not because a majority of the delegates did not prefer him in their hearts, but because some of them doubted the expediency of nominating him in the face of independent opposition. In addition to these doubters, there were a certain number of committed Blaine delegates held in reserve in order to be brought forward on succeeding ballots, thus producing the effect of growing strength. Just how many of these there were cannot be estimated, but there were enough of them to set the tide, and with a convention made up of such material, that was all that was necessary. The reinforcements which came to him on the second, third, and fourth ballots were mainly from the South and West, and came in accordance with combinations and bargains which had evidently been made with great care and with no regard whatever for appearances. The effects of the Powell Clayton bargain were shown in the straggling recruits from the South on the second and third, and the final break which started for Blaine in the Alabama delegation at the beginning of the fourth. A fit companion for this bargain came immediately after in the delivery of Logan's squad, and finally the return for this support in the nomination of Logan for the second place. Blaine was the one candidate who was willing to make bargains in return for votes, and the ease with which his friends made them and carried them out is only fresh evidence that he was the candidate who came most nearly to the hearts of a majority of the delegates.

From the outset a combination between the Independents and the Arthur men was an impossibility. The former were determined to support no candidate who was not upright, able, and clean. The Arthur men had no sincere sympathy for reform. They were willing to pretend to be reformers if by so doing they could induce some of the Independents to come to their aid. Rather than help to nominate a reform candidate, who, if elected, would have no sympathy for them, they were willing to see Blaine win. Like the Blaine men, they were opposed to allowing the Independent tail to wag the Republican dog, and both worked together to send the dog into the campaign without any tail. The Independents were in a hopeless minority from the start, but in refusing sturdily to enter into any bargains, or to follow any plan which had in view anything less than the nomination of honest men, they represented the will of their constituents, and at the same time forced the Blaine and Arthur men to put the party in an open anti-reform position.

It appears now that it is "free trade," which is at the bottom of the whole thing. At least the *Tribune* says so. It is the free-traders only who dislike the ticket and are going to oppose it. Why they do so, we need hardly explain. It is, however, best to be frank; they do it to put money in their pockets. They say Mr. Blaine is a bad man, because they receive gold from the British Treasury. Why the British Treasury pays out gold for this purpose is also plain enough. It does so because it knows that if Mr. Blaine were elected he would not permit the tariff to be lowered. Nay, in the opinion of many British publicists he would order it to be raised 25 per cent. within a week after his inauguration, and would also direct the subsidization of at least ten ocean steamship lines. No wonder then that the free-traders are anxious to keep him out of the White House, and stick at nothing in order to accomplish their purpose. They ought, however, in common decency to refrain from inventing lies about him. Take what they call the "Mulligan" letters, for instance, which they say Blaine wrote. It is hardly to be believed, of course, but it is none the less true—there are no such letters. There is no such man as Mulligan—all a fiction, we assure you; perfectly disgraceful!

This is not the first time Mr. Blaine has suffered in this way either. In 1876 a number of charges were made against him. They were all false—not a word of truth in them. Why were they made then? Simply because some "rebel brigadiers" wanted to injure him. These men, smarting under the numerous defeats that Blaine had inflicted on them during the war, when he commanded the famous Blaine division on so many bloody fields, just sat down and concocted a lot of stories about railroads and things and fastened them on him. And yet people talk about Southern chivalry. Here was a man who had sent them flying wherever he met them—all over Virginia and Georgia—and when peace came, instead of letting bygones be bygones, they began to try to lay him low with the poisoned arrow of detraction, after having tried their shot and shell on him in vain.

The Texas Germans, a large part of the voting population of the State, are said to be a good deal dissatisfied by the arguments of those who insist that we need Blaine for the sake of a "vigorous foreign policy." They say that they left Germany because the foreign policy of that country was too vigorous for them, and came here under the idea that the citizens of this country were not to be disturbed by foreign broils or commotions, or taken away from their homes and business for the Monroe doctrine, the Balance of Power below the equator, or anything of the sort. A German who left his own country to save himself from fighting for Bismarck would hardly care to go to the wars here for Jim Blaine.

There has probably never been anything heard in any country at any time at all comparable with the Blaine yell as it reached its fullest dimensions in Thursday night's proceedings at Chicago. As the chief Blaine organ, the *Tribune* of course has the best description, or rather series of descriptions of it. We will give them here in the order of their appearance in the *Tribune's* columns: A "tornado"; a "sudden explosion"; a "roar fully as deep and deafening as Niagara," under the force of which the "air quivered, the gas lights trembled, and the walls fairly shook"; a "match in a powder magazine"; a "whirling cyclone"; and finally, a "shrill yell as of thousands of wild animals went through the hall. It was the soul of Blaine abroad among the people."

The narrative of "the Blaine crowd's" performances at that evening's session reads more like an account of a mass meeting of maniacs than anything else. They were all evidently under orders to yell their utmost whenever Blaine's name was mentioned by anybody. They interrupted their own speakers as well as those of other candidates, and whenever there was a pause for a moment, shouted Blaine. Anything more absurd than the display of a helmet with a white plume upon it, which was the climax of the "enthusiasm," it would be difficult to conceive; but it was conceived and executed when, in response to Judge Foraker's casual allusion to Blaine, the helmet was borne to and fro through the hall amid perfect howls of admiration and delight. The plume was the invention of Bob Ingersoll eight years ago, and it is melancholy to reflect that while it remains as the oriflamme of the Blaine boom, Bob himself has lost faith in it. No other reason for Blaine's nomination has been found to take its place. The speeches of the men who nominated him on Thursday will be searched in vain for one. The only advocate who came anywhere near giving one was poor Tom Platt, who was put upon the platform to say that he was in favor of Blaine's nomination because "his turn had come."

The campaign for Blaine in this State was opened at Peekskill on Monday evening, and the first speaker, the sounder of the "key-note," was Jimmy Husted. He described the ticket as a combination of statesman and soldier—the "Plumed Knight of Maine and the Glorious Black Eagle of Illinois." He was very eloquent over the unprecedented spectacle of a private citizen steadfastly refusing to have his name considered or discussed, and being fairly dragged from retirement and thrust into a Presidential nomination by the irresistible will of the people, who nominated him "over the heads of the politicians themselves." When Steve Elkins, Pow Clayton, Tom Platt, and the other boomers read that announcement they will wonder what it was that they were in Chicago for last week. In his peroration, which was a very lofty flight, Jimmy said that the "unquestioned ability, the unfaltering patriotism, the unimpeached integrity" of Blaine "combined

with a public record which challenges the admiration of mankind," made a platform almost unnecessary, but the Convention had promulgated one which was a "concentration of all his political ideas and of all his public acts." Chauncey M. Depew followed Husted, but seemed to put much less heart into his work. The best he could do was to tell a very old story about the kick of a mule. He made no allusion to either a Plumed Knight or a Black Eagle, and consequently aroused very little enthusiasm.

The newspaper opposition to Blaine becomes more portentous every day. The list of the Independent and Republican journals which are openly committed against him stands now: New York *Times*, New York *Herald*, *Harper's Weekly*, *Puck*, *Evening Telegram*, Brooklyn *Union*, Rochester *Post-Express*, Rochester *Herald*, Syracuse *Herald*, Flushing *Times*, Boston *Advertiser*, Boston *Transcript*, Boston *Herald*, Springfield *Republican*, Philadelphia *Record*, Philadelphia *Times*, Chicago *Times*, Chicago *News*, New Haven *News*, and the New York EVENING POST. In addition to these the Chicago *Inter-Ocean*, the St. Louis *Globe-Democrat*, the Buffalo *Express*, the Buffalo *Commercial Advertiser*, the Philadelphia *Telegraph*, the Boston *Journal*, the Worcester *Spy*, and many other Republican party journals consent to support the ticket, but admit that they have small hope of seeing it elected. We do not believe any candidate of any party ever entered upon a Presidential canvass with such tremendous odds as these against him. In this city the *Tribune* is the only paper which supports Blaine squarely. The *Commercial Advertiser* has not defined its course clearly, but it evidently has no intention of advocating Blaine, for it says that his nomination was a "glorious victory" won by the "Star-route gang, the cow-boys, and the intriguing politicians." The *Mail and Express* is doubtful also, saying that "this may be a bad year for Republicans, unless entirely united and well guided."

There is a curious muddle in Virginia over the Republican electoral ticket. Both the Mahone Convention and the Straightout Convention chose full electoral tickets when they chose delegates to Chicago. The Mahone delegates went there as Arthur men, but as soon as Blaine was nominated they came out unanimously for him. This left the Straightouts, who went there as Blaine men, in an unpleasant position, and their feelings have been much harassed since by the enthusiasm with which the Mahone contingent has been welcomed in the Blaine ranks. They claim that their electoral ticket is the only genuine Republican one, and Mahone makes the same claim for his. He has much the larger following, and as proof that his is the only "regular" Blaine party, his organ, the Richmond *Whig*, makes the following statement: "One of the firmest friends of Mr. Blaine, who is also one of the most brilliant journalists of the country, as the friend of Mr. Blaine visited General Mahone in person, and informed him that Mr. Blaine had authorized him to say that Mr. Arthur could not have been a better friend to General Mahone than he (Blaine) would be." This is very hard on the Straightouts, who were organized expressly to give Blaine a following in Virginia.

Among the cheering despatches received at the Blaine headquarters in Chicago on Thursday was one from Colonel Ethan Allen, of this city, who made the startling announcement that he "spoke for 500,000 honest Independents" in this State, who demanded Blaine as President, apparently in order to defy "a minion of royalty calling himself a Chancellor, and hailing from Berlin." It is but right to say to Prince Bismarck, who is doubtless the person here alluded to, that the popular estimate of Colonel Allen's strength in this State is very much lower than this, and we would advise that no military or other preparation be made in Germany to repel either him or Blaine without further inquiry. Careful estimates by competent observers, in fact, put the Colonel down as speaking for about ten men, including himself, and all of very doubtful "independence" and a very moderate amount of common sense. Some hold that even this is much too high. In fact, there is a strong suspicion that they are a small band of blatherskites whom the Chancellor himself and his dachshund would have no difficulty in disposing of in five minutes.

The despatch on Thursday, from London, containing the *Standard's* assertion that "the chief importance of the Convention now sitting in Chicago is to decide how far the choice of a candidate can be influenced by the Irish faction in favor of stirring up ill blood between England and America," has excited considerable amusement. But it illustrates curiously the small pains taken by even the best London papers to have American affairs treated by competent hands. The *Saturday Review's* articles on American politics have long been relished on this side of the water for the truly entertaining number and variety of their blunders. But journals of much more pretension to accuracy also show a strange inability to get below the surface of American political phenomena. The *Standard* is one of the best equipped morning papers in London, as far as editorial writing is concerned, and yet it appears to have fallen a victim to the delusion about the influence of the "Irish vote" on American politics, which is now a favorite bogie of the London clubs. Some of this is evolved from the inner consciousness of the writers as the only possible explanation of the failure to prosecute the *Irish World* and O'Donovan Rossa, but more of it is due to the twaddle about the Irish-Americans furnished by Mr. Goldwin Smith to the magazines, and some, probably, to the talk of the old Tory Squire who acts as London correspondent of the *Tribune*, and whose knowledge of American public opinion is as defective as Mr. Smith's. Indeed, we believe he has never been in this country except when he travelled here for a short time with his tutor when a young man.

There was a story the day after the nominations were made that Blaine had telegraphed to Gould, Sage, and others of his Wall Street supporters, to make a little boom in stocks, with the view of counteracting the popular impression that the business world was afraid of him and his "brilliant foreign policy." Whether there was any truth in this we do not know. As a matter of fact, however, stocks did go up a little, after the news of the nominations came, and the *Tribune*, which is almost the only Blaine paper worth notice, called attention to the fact, in terms almost pathetic. But the subjoined table showing the prices the day before the nomination and yesterday, makes it appear as if either Gould and Field and Sage were "going back" on him, or were unable to spread their views of the ticket among the moneyed men:

Four Democratic State Conventions were held on Thursday—in Connecticut, Maryland, Vermont, and Alabama—and in all of them the sentiment was "unanimously in favor of the old ticket." We believe it is a fact that this has been the case with all the Democratic Conventions which have met thus far. The party is nearer a unit on this line of policy than it has been on anything else for years. There are probably not half-a-dozen men in it who have the slightest idea that Tilden will be a candidate, but the whole party would like to have the Republicans think he will be. Now that Blaine is nominated we may look for the "sentiment for the old ticket" to disappear, and something to be developed in its place which may make the Republicans feel very anxious.

Mr. Hubbard, one of the lawyers engaged in extraditing Eno, has complained to our correspondent at Montreal that we unjustly accuse him of a desire to "kidnap" the prisoner. If he will read more carefully what we have said on this subject, he will perceive that we used the word kidnap in a broad, perhaps somewhat too broad, sense. We did not suppose, nor did we say, that Mr. Hubbard was dogging the footsteps of Eno with a gang of hirelings ready to seize upon, gag and bind him, throw him into a hack, and bring him across the border. What we are afraid of is that if Mr. Hubbard succeeds in getting Eno extradited for forgery in the second or third degree (the possibility of which we very much doubt), he will then be tried here for an entirely different crime, and that somebody is endeavoring to get him here for such a purpose. This would result in more trouble over the Ashburton treaty, and it would be much the same sort of trouble that kidnapping would produce.

It is satisfactory to know that the outrageous mismanagement of the Newark Savings Bank is to result in proceedings against the directors. It looked rather badly for them when the Chancellor, on the second fail-

ure of the bank, made a public announcement through a newspaper interview that he meant to inquire into their behavior, but it looks worse now. The depositors who are proceeding against them say in their petition that in April, 1884, the managers lent to the firm of Fisk & Hatch, of this city, United States bonds and cash to the amount of $1,225,227 34, receiving bonds of the market value of $278,718 15 and $95,000 in cash, leaving a balance due the bank of $851,508 59. The amount was subsequently reduced to $848,-632 04, which remained in the hands of Fisk & Hatch wholly unsecured until the firm became insolvent. This loan was, the petitioners say, contrary to the provisions of the order of the Chancery Court and in disobedience and contempt thereof, and so far as the petitioners have been able to ascertain, it was not secured by any collaterals whatever. In further disobedience of the Chancellor's orders, the managers, it is said, permitted unregistered United States Government bonds to the amount of $2,036,000, part of the assets of the bank, to be taken and kept in the office of Fisk & Hatch, under an agreement made by the managers on behalf of the bank and the firm, that the firm might use the bonds at their discretion provided they replaced them with other securities of equal value; that Fisk & Hatch, under color of that agreement, appropriated to their own use all these bonds and replaced them with railroad bonds and other securities of less market value, and after so doing became insolvent and unable to refund to the bank, in consequence of which the bank became insolvent.

The power to punish for contempt in New Jersey is, we believe, unlimited, and the value of it in this case is obvious. The directors are wealthy men, and by means of their wealth can easily and summarily "purge" themselves, as the lawyers say, of their contempt. If they cannot prove their innocence of the charges, it will probably not be necessary for the Chancellor to send them to a Newark dungeon, and have them squeezed on the floor under heavy weights; all that they will have to do will be to agree to use their money to make the bank good. The peculiarity of the case is that the general fact of mismanagement is not denied. The only question is, Who was guilty? and this, we have no doubt, the Chancellor will find out far more quickly than the District Attorney or the Grand Jury would.

If "liquidation" is a good thing, the receivership of the West Shore Road ought to be hailed with satisfaction by everybody in the country. The road was built in a curious way. Most railroads in the United States have been built cheaply, in order that the earnings might begin as soon as possible, and be applied in part to making the equipment and construction complete. The West Shore Road, which is intended to compete with the Central, was built on the opposite plan of turning out a fully constructed and equipped road, and its actual cost was, as nearly as possible, $100,000 a mile. There were no jobs or irregularities, we believe, connected with the construction, and the road is bonded for its actual cost; the stock being worth nothing. The bonds have fallen to about 40, which would make the property worth $20,000,000 instead of the $50,000,000 it cost, and as it cannot pay its interest, it has been put in the hands of receivers. The case illustrates the enormous risk of railroad building, and shows why, as a general thing, people cannot be got to build railroads on the chance of making 6 or 8 per cent. out of the venture. The chance of profit has to correspond with that of risk.

The coupons of one of Gould's roads—the Texas and Pacific—which fell due on the first, were taken up in a manner the legality of which is of interest to every bondholder in the United States. They were not paid off, but "bought up" by the Missouri Pacific, another of Gould's roads, and appear to be now held by that corporation as an outstanding claim against the Texas and Pacific. Mr. Gould is himself quoted as saying that this same device has been resorted to "two or three times before." If coupons can be taken up in this way without being cancelled, the effect must be to render the mortgage security very precarious. It cannot be foreclosed by the holders of the bonds, because their mortgage interest is not in default; but the holders of the old "bought" coupons could put the road in default at any time, and get a receiver appointed, and enable the management to accomplish a great variety of frauds. We have no idea that any respectable court would hold a mortgage to be in default as to one set of holders, and not in default as to another; it would probably decide the coupon to be extinguished by the payment, and merely to be evidence in the hands of the purchaser of so much money lent to the road without security. But in the present condition of the Gould roads, such "purchases" of coupons are food for unpleasant reflection among the bondholders.

The reception of Col. George Bliss into the Catholic Church yesterday is one of the most interesting events of the season, and may have an important influence on local politics. The Colonel is an intensely practical man, who abhors sentiment of all kinds, and has never been supposed to bother himself much with religious or philosophical speculation. When the news of his going over to Rome, therefore, first reached us, we concluded that it was due simply to that desire of "rest" which has carried so many troubled souls into the Catholic Church, and ascribed it to the worry he has recently undergone about the Star-route trials, the $50,000 he made out of the proceedings as counsel, and the unseemly charges made against him by his associate, Mr. Ker. According, however, to an intimate friend of his, reported by the *Sun* this morning, his conversion is the result simply of "a fight of mind and argument" with Monsignor Capel. In other words, the two intellects came in collision and Colonel Bliss went down before the churchman's logic. We are glad to say, for the honor of the bar and the local Machine, however, that the Colonel resisted stoutly, and was not convinced without great trouble, or "much labor," as the reporter calls it. He will be an honor to his new church, and will be able to give even the most astute of its prelates some useful hints in the art of management. If they should send him out as a preaching friar, he would bring home at least a brace of converts every night.

Among the warm-weather topics in the columns of our contemporaries, we miss this year the old-fashioned article, showing what precautions should be taken against exposure to the sun, and also the New York as a summer resort article. But a new topic is at hand in the "cold-blast" system of refrigeration in use in Boston and this city, which is said to have proved a success, although no attempt has thus far been made to apply it to anything but the cooling of articles of food. What we need as much as this is its application to the refrigeration of parlors, dining-rooms, and bed-rooms. In a climate like ours an apparatus by which a house or a room could be cooled, and kept cool, would be one of the greatest luxuries imaginable, and if the accounts of the "cold-blast" system are true, there seems nothing to prevent its use for such purposes. A furnace, if we were not accustomed to it, would seem a most improbable domestic appliance; the time may come when we shall be able to get cool as easily as we can now get warm, and, in fact, when the temperature of the air will be as much at our command as that of the water we use now is.

The sharp competition between the ocean steamship lines has produced another fast run by the new National steamer, the *America*. Her time was 6 days, 15 hours, and 41 minutes, and her record has been beaten only by the *Oregon's* 6 days, 10 hours, and 10 minutes. The peculiarity of the *America* is said to be that in her model and finish she somewhat resembles the old clipper-built sailing vessels that were the fastest on the ocean in the days before the American mercantile marine had been destroyed by protection. She is not an American vessel, however, either in build or ownership, and we shall not have any such vessels just yet. John Roaches and Bill Chandlers are our substitute both for a navy and a mercantile marine.

There is a story from a good source, that both the Mahdi and Osman Digna have sent word to the Sultan that they are willing to lay down their arms on his order, and treat with him directly, if he will protect them against the English. This even if true, however, is of little consequence. The inexpediency of letting the Sultan meddle in Egyptian politics was thoroughly settled by the Powers at the beginning of the present troubles, even if he had the money or the troops to make his meddling effective. He has neither, however. The Mahdi is much more likely to get help or protection from France than from him; that is, French opposition and intrigues are much more likely to cause England to let the Sudan alone than anything any Mussulman power in or out of the Sudan can say or do.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 4, to TUESDAY, June 10, 1884, inclusive.]

DOMESTIC.

THE National Republican Convention at Chicago was uneventful on Wednesday. Throughout the morning there was considerable talk of General Sherman as a "dark horse," but the movement was nipped in the bud by a letter from him to a friend absolutely refusing to allow the use of his name. It was conceded by Blaine's managers that they made a mistake in putting forward a man of Powell Clayton's reputation for temporary Chairman.

About 11 o'clock on Wednesday morning the Convention reassembled. After some preliminary business Mr. Hawkins, of Tennessee, offered a resolution pledging all delegates to support the nominee of the Convention, whoever he might be. He said that he thought its adoption desirable on account of certain "whispers in the air." A number of speeches were made in opposition to it, the most notable being that of George William Curtis. He reminded the Convention of what was said and done four years ago, when Mr. Campbell, of West Virginia, declared that he was a Republican who carried his sovereignty under his own hat, and when (under the lead of Garfield) the gentleman who presented a similar resolution was induced to withdraw it. He therefore asked this Convention to assume that every delegate was an honest and honorable man. He characterized the resolution as one which was unworthy to be ratified by a body of free men. Mr. Hawkins said that as his resolution had developed so much opposition he would withdraw it. This was the second notable victory for the Independent element of the Convention. The Committee on Permanent Organization reported General John B. Henderson, of Missouri, for Permanent Chairman, and this was agreed to. On taking the chair General Henderson made complimentary allusions to all the prominent candidates, which were heartily applauded, but when Blaine's name was reached the audience cheered for five minutes. Several minor resolutions were offered, and the Convention at 12:20 P. M. adjourned until 7 P. M. to await the report of the Committee on Credentials. At that hour the Committee were not ready with their report, and an adjournment was taken until Thursday.

During Wednesday night and Thursday morning the Arthur and Edmunds leaders were in conference trying to settle on a definite course of action. The only decision then reached was to stand firm for their respective candidates against Blaine until one or two ballots indicated clearly the situation. Then would be the time for further united action. The Convention was called to order about 11 o'clock on Thursday morning. The Committee on Credentials made a unanimous report, which was adopted, giving the sitting members all the contested seats except in two cases where delegates and contestants were admitted to half a vote each. Mahone's delegation from Virginia were admitted. The rules of the last Convention were substantially adopted. An effort to adopt a new plan of representation giving additional delegates to States with Republican majorities was violently opposed and withdrawn, the old method being continued.

The platform approves President Arthur's Administration; demands that "the imposition of duties on foreign imports shall be made not for revenue only, but that in raising the requisite revenues for the Government such duties shall be so levied as to afford security to our diversified industries and protection to the rights and wages of the laborer"; pledges the Republican party "to correct the inequalities of the tariff, and to reduce the surplus, not by the vicious and indiscriminate process of horizontal reduction, but by such methods as will relieve the taxpayer without injuring the laborer or the great productive interests of the country;" favors Government regulation of railway charges to prevent unjust discrimination; advocates the enforcement of the eight-hour law; denounces the importation of contract labor from Europe or Asia, and advises an extension of the civil-service reform system, the forfeiture of unearned land grants, the repeal of the limitations to the Arrears of Pensions act of 1879, the restoration of the navy to efficiency; on the adoption of this an adjournment was taken.

The presentation of candidates took place at the Thursday evening session, continuing until 2 o'clock on Friday morning. General Hawley's name was presented by Augustus Brandegee, General Logan's by Senator Cullom, Blaine's by Judge W. H. West, the blind delegate from Ohio; President Arthur's by Martin I. Townsend; Senator Sherman's by Judge Foraker; and Senator Edmunds's by ex-Governor Long of Massachusetts, seconded by George William Curtis. This cleared away all preliminary work.

At 11:20 o'clock on Friday morning the Convention again met and the balloting was immediately begun, and continued until a nomination was made on the fourth ballot. The figures on the four ballots, in order, are as follows: James G. Blaine 334½, 349, 375, 544; Chester A. Arthur 278, 276, 274, 207; George F. Edmunds 93, 85, 69, 41; John A. Logan 63½, 61, 53, 7; John Sherman 30, 28, 25; Joseph R. Hawley 13, 13, 13, 15; Robert T. Lincoln 4, 4, 8, 2; W. T. Sherman 2, 2, 2. These figures indicate clearly the steady and rapid gains made by Blaine, the steadfastness of Arthur's vote until the last ballot, and the inability of the Blaine opposition to effect a combination on a "dark horse." At the end of the third ballot Blaine lacked only 36 of a majority, the whole number of votes being 820. His gains up to this time had been made by twos and threes from many States. The opposition now became alarmed and an effort was made to secure an adjournment. The motion was lost—364 to 450. This was a victory for Blaine, and his nomination was clearly foreshadowed by the vote. The fourth ballot then began. Alabama was the first State to break, Blaine gaining six, followed by a gain of two in Florida. When Illinois was called the chairman of the delegation arose, withdrew the name of Logan, and cast 34 votes of that State for Blaine. This assured Blaine 414 votes, or three more than a majority. The change was made on the receipt of a telegram from Senator Logan ordering it. Rapid gains followed from other delegations, until Blaine reached a total of 544 votes, 133 more than a majority. The excitement in the Convention Hall was intense and the noise deafening. The nomination was then made unanimous. At the evening session, Senator John A. Logan, as a reward for his part in the Blaine victory, was nominated by acclamation for the Vice-Presidency. This completed the work of the Convention, and it adjourned *sine die*.

The Massachusetts Reform Club on Saturday repudiated the Republican nominations, and voted to request the Independent voters throughout the country to join them in active and immediate efforts to secure the nomination by the Democratic party of such men as can command their support, and, failing in that, to call a convention at the earliest practicable day to nominate candidates in full sympathy with the reform sentiment of the country. Charles Francis Adams, jr., is Chairman of the Committee appointed to carry into effect the will of the Club.

A number of Democratic State Conventions were held on Thursday. In Connecticut there was a strong sentiment for the old ticket. The platform favors a tariff for revenue only. The Maryland Democrats elected delegates to the National Convention, and adopted a platform asking for a reduction of taxes and that the "great fraud" of 1876 shall be righted by a majority of the electoral votes of the American people. The Vermont Democrats declared for a revision of the tariff limiting the revenue to the needs of the Government when economically administered. P. W. Redington was nominated for Governor. Nearly all the delegates elected from Alabama are for Tilden and Hendricks.

In the House of Representatives on Saturday, Mr. Hoblitzell (Dem., Mo.), from the Committee on Reform in the Civil Service, reported adversely bills to repeal the Civil-Service Act, and they were laid on the table. The Committee unanimously approved and praised the work of the Civil-Service Commission.

The River and Harbor Bill was considered by the House of Representatives on Monday in Committee of the Whole. It appropriates about $13,000,000.

In the House on Tuesday Mr. Morrison, Chairman of the Committee on Ways and Means, reported a concurrent resolution providing for the final adjournment of Congress on Monday, June 30, at 3 P. M.; adopted without division.

Before the House Committee investigating the Star-route trials Charles D. Colman, an attorney of Plymouth, Mich., testified on Tuesday that William A. Cook, one of the Government counsel in the prosecution, accepted several hundred dollars to prevent the indictment of Doctor Colgrove, a Star-route contractor.

Representative Hewitt (Dem., N. Y.) was authorized, on Thursday, by the Ways and Means Committee to report favorably a bill carrying into effect the reciprocity treaty with Mexico.

An estimate of the wheat crop of the country, based upon statistics compiled in various States, places the total amount for the present year at 516,000,000 bushels.

The Court of Alabama Claims on Friday decided in the case of the *Boston*, which has been under advisement for a year, that the *Boston* was not a cruiser.

The Governor of Massachusetts has given his approval to the "act to improve the civil service of the commonwealth and the cities thereof," by the appointment of a civil-service commission with special powers.

The schedules in the assignment of James D. Fish, late President of the Marine Bank of this city, show that the nominal value of his real and personal property is about $4,000,000, and its actual value $582,000. His total liabilities are $4,230,000.

The Standing Committee of the electors of Harvard College announce the following candidates selected by the electors at-large for the five vacancies in the Board of Overseers to be filled commencement day: Charles R. Codman, class of '49; Richard M. Hodges, '47; Robert D. Smith, '57; Henry Cabot Lodge, '71; Augustus Hemenway, '75; T. Jefferson Coolidge, '50; Henry S. Russell, '60; Francis W. Palfrey, '51; Charlemagne Tower, '30; Frederick L. Ames, '54.

General James Watson Webb died in this city on Saturday at the age of eighty-two. He was an officer of the army in early life. In 1827 he became the editor and proprietor of the New York *Courier*, which two years later became the *Courier and Enquirer*. It was an influential Whig journal under his editorship. It was eventually merged in the *World*. In 1861 General Webb went to Brazil as United States Minister, a post which he held for four years. He was the author of 'Altowan, or Adventures in the Rocky Mountains,' two volumes, published in 1846, and of 'Slavery and its Tendencies,' published in 1856. For many years he has taken no part in public affairs, except, occasionally, to write letters to the newspapers on political topics.

Charles Fenno Hoffman, the poet and novelist, who at one time occupied an eminent

place among the literary men of the country, died in Harrisburg, Pa., on Saturday, at the age of seventy-eight. He was connected with the *Knickerbocker* and *American Monthly* magazines, and the *Literary World*. In 1840 he published 'Greyslaer,' a romance founded on the trial of Beauchamp for the murder of Colonel Sharper, of Kentucky. This established his position among American authors. He published in 1842 a collection of his poems under the title of 'The Vigil of Faith and other Poems.' His greatest successes as a poet were in lyric compositions. In 1849 he was seized with a mental disorder which put an end forever to his literary labors.

Noah Hayes Swayne, ex-Justice of the Supreme Court of the United States, died in this city on Sunday at the age of 80. On January 4, 1862, he was appointed by President Lincoln a Justice of the United States Supreme Court. Judge Swayne discharged his judicial duties with faithfulness and ability for nineteen years, resigning on January 25, 1881.

FOREIGN.

Earl Granville and M. Waddington, the French Minister, have agreed upon the basis of the conference on Egyptian affairs, and the terms of the agreement have been imparted to the Powers. They affirm, it is reported, the principle of the temporary occupation of Egypt by England, to which, however, no limit is fixed, and propose an international control of the Powers to audit the whole system of the revenue and expenses of Egypt. England recognizes the suzerain rights of the Porte throughout all Egypt including the Sudan, and France formally abandons all claim to a dual control.

The *Pall Mall Gazette* on Monday published an outline of what is believed to be the provisions in the agreement upon which the Egyptian Conference will be based, recently made between France and England. Among the provisions are a loan to the Khedive from England of £8,000,000, multiple control in which all the Powers shall be represented, British occupation for three and-a-half years, and a Turkish expedition of 15,000 troops for the pacification of the Sudan. The *Daily News* said the article is a tissue of inventions, but the *Pall Mall Gazette* on Tuesday reiterated its assertions, and added: "At least, in regard to the proposed English loan of £8,000,000 to the Khedive we were absolutely correct. All the jugglery and self-deception of the Government's protests will not affect the simple fact that England is to be in a permanent minority on the Board of Audit. Our French colleagues make no secret of their determination to convert the Board of Audit into an effectual control. The Ministers know that this is true. The only way for the Government to prolong its existence is to sacrifice this agreement."

In the House of Commons on Tuesday Mr. Gladstone said that the rumors that Turkey had been asked to pacify the Sudan were unfounded, but that negotiations with Turkey were in progress looking to that Power's occupation of certain Red Sea ports.

Reports reached Cairo on Tuesday that the rebels nine days ago massacred Hussein Pasha Khalifa, commander at Berber, and all his family, a garrison faithful to the Khedive, and the European traders who still remained at Berber.

Osman Digna's persistent attacks on Suakim are on account of El Mahdi's intention to cross over to Mecca before moving northward. He therefore requires that the seaport tribes be dispersed. Osman swears that he will capture Suakim. His forces now number 7,000 men.

The rebels have captured Abu-Hamad, and El Mahdi has appointed a rebel Governor over that town.

Rumors reached Cairo on Thursday that General Gordon had escaped up the Nile from Khartum on board an armored steamer. The next day it was announced that he had not escaped, but was making reconnoissances above and below the city.

The whole British garrison paraded the streets of Cairo on Thursday for the purpose of impressing the natives and overawing secret societies. The sentries were doubled because of a rumored attempt to explode the citadel.

The Sultan of Turkey has received advices from El Mahdi and Osman Digna declaring that they are desirous to treat directly with the Sultan without foreign intervention. They offer to lay down their arms if the Caliph gives the order and engages to protect them against English invasion.

The London *Times* says that the friends of General Gordon have made arrangements to send messengers to Khartum with letters and copies of reports of the debates in Parliament on the Sudan question and of the proceedings of the various meetings held, at which the Government was urged to relieve General Gordon.

Advices from Admiral Hewett dated Adowa, May 28, state that he has had an interview with King John, and that great honors had been shown him by the King. On Monday it was announced that King John had accepted the treaty prepared by Admiral Hewett.

The Irish Executive has written a letter to Lord Arthur Hill stating that the Government has decided in future not to permit counter demonstrations on the part of the Orangemen to be held at the same time and place as Nationalist meetings. It will not interfere with such counter demonstrations, however, provided they are held at such times and places as will not bring hostile bodies into collision. The policy of the Government is to maintain the right of public meeting and to preserve the public peace. This decision has exasperated the Loyalists in the north of Ireland.

Lord Arthur Hill has written a reply to Earl Spencer, Lord Lieutenant of Ireland, in which he expresses regret at the policy of the latter in reference to public meetings, as being calculated to encourage disloyal and hamper loyal subjects who are in a legitimate manner opposing the spread of doctrines perilous to the throne.

There was no Orange meeting held at Newry, Ireland, on Sunday. The Nationalist meeting was held outside the town. When on their return the Nationalists arrived opposite Orange Hall, they threw stones at the windows. Shots were fired from the building. The police and troops interfered, arresting four Nationalists and several Orangemen. Many persons were injured in the affray. The disturbances continued on Monday, and two Orangemen were beaten.

The chiefs of the dynamite party in Paris declare that the authors of the last London explosions have escaped from England, and are now in perfect safety.

The English Government on Thursday called the attention of the French authorities to the immunity enjoyed by dynamiters in Paris in making preparations for outrages.

Mr. Gladstone announced on Wednesday that the Government intended to deal with the subject of redistribution of Parliamentary seats during the present Parliament.

Owing to the opposition of both the landlord and the Nationalist members of the House of Commons, the Government will drop the Irish Land Purchase Bill.

London *Truth* printed a rumor on Thursday that James Russell Lowell, the American Minister to England, would resign. Mr. Lowell has denied the rumor.

The Grand Lodge of Masons of Great Britain has adopted a resolution introduced by the Earl of Carnarvon expressing regret at the recent anti-Masonic encyclical letter of the Pope. The resolution affirms that "the law, the practice, and the traditions of the Masonic order and the position of its rulers prove that the Pope's charges are utterly unfounded."

Earl Granville is preparing a note to Washington in relation to the collection of conspiracy funds within the jurisdiction of the United States.

The new treaty between France and Anam has been signed. By its terms the provinces of Bin-thuan and Than-goa are restored to Anam. A customs system similar to that in force in Cochin-China is established. A French military occupation of all strategic points in Anam and Tonquin may be effected if necessary. A permanent French garrison will hold a portion of the citadel of Hué, capital of Anam. The French President in Cochin-China will represent Anam in all her foreign relations, and Anam will form a customs union with Cochin-China. The Departments of Public Works, of Postal and Telegraph Service, and of Finance and Customs will form a single branch of administration under the direction of a French agent.

The French Parliamentary committee of inquiry into the importation of American salted meats has approved a report agreeing to such imports after the meat is, by microscope or otherwise, minutely examined. The report at the same time urges the prohibition of the importation of fresh meats from countries where it is known that trichinosis exists.

The committee of the French Chamber of Deputies to which the bill providing for a revision of the Constitution was referred has adopted the bill in the form proposed by the Government.

The race for the Grand Prix of Paris, $20,000 in specie, was won by five lengths on Sunday by the Duke of Castries's Little Duck, ridden by Cannon.

The five Spanish Commissioners sent by the Government to examine into the condition of Cuba have arrived at Havana, and have already made some investigations. One of them says that a longer possession of Cuba by Spain would be ruinous to the latter, and that it would be better to sell the island, as that would be the only way out of the complicated situation.

The foundation-stone of the new German Parliament building was laid on Monday by Emperor William. A brilliant assemblage of notables was present. Prince Bismarck read the Emperor's speech.

A woman who was arrested on Wednesday at Váranda, Hungary, confessed that she had poisoned four husbands and also hundreds of women during the past two years. A number of accomplices were arrested.

It is reported that King William of Holland has secretly affianced his three-year-old daughter, Princess Wilhelmina, to Prince Baudouin, son of the Count of Flanders, heir apparent to the throne of Belgium, in order to reunite Holland and Belgium.

The American Chargé d'Affaires at Constantinople on Thursday presented to the Porte the reply of the United States to the recent note sent to Washington by Turkey, stating that the existing treaty between the two countries would expire June 5, and recalling the fact that the Porte denounced the existing treaty. The reply states that the two countries, having failed to sign the provisional convention, and the Porte insisting that the treaty has expired despite Minister Wallace's objection, the United States thinks it best to fall back upon the old treaty of 1830 which secured the most-favored-nation treatment. The Porte has decided to maintain the existing tariffs with the Powers, the treaties with which will soon expire, until fresh conventions have been concluded.

Forty-five of the crew of the sealing brig *Confederate*, recently wrecked on an ice-floe in Notre Dame Bay, have been rescued by the steamship *Plover*. They arrived at St. John's N. F., on Tuesday. The ice forced the *Plover* to retreat, and twenty-nine of the crew were left behind on the floe.

THE REPUBLICAN TICKET AND PLATFORM.

THE nomination at Chicago means the triumph of agencies which have been long at work for the disintegration of the Republican party. When it came out of the war, in control of an overflowing Treasury and a vast patronage, nothing could have saved it from the clutches of the corrupt and jobbing element which rapidly grew up within its ranks, as the old leaders died out, but the stimulus of new ideas and new hopes, or the appearance on the scene of a purified opposition, offering a new polity for the national acceptance. Neither of these things has come to its rescue. The country has been on the whole too prosperous and happy since the peace to offer any soil in which the seeds of a new enthusiasm could be sown, and the Democratic party has continued to stand, with curious fidelity, for most of the things in politics and society which the bone and sinew of the Republican party hates and fears.

The attack of the corrupt influences on the party began almost as soon as General Grant took office. They slowly gained ground under his Administration, until they produced scandals which led to the loss of both houses of Congress before he went out of office. They would have led to the loss of the Presidency in 1876 but for the peculiar condition of the Southern States. The party was really in almost a wrecked condition in the Northern States, from which it drew all its moral strength, when Mr. Hayes entered the White House. The nomination and election of Garfield was a great, and, it would now appear, a final effort of what has been called "the better element" in the party, to save it for those ideas of justice and progress which had called it into existence. We can say this even to those who would criticise some acts of General Garfield's short Administration most severely. No matter what his failings or shortcomings may have been, his election was due to the votes of those who believed him to stand for purity and reform, and who highly respected his personal character, and recalled his military and Congressional career with pride and pleasure.

The jobbing, corrupt element in the party, which sees in politics simply a means of distributing dividends out of the national exchequer, and to which all political issues are simply devices to distract public attention from their industry, has long been slowly coming to a head, in the fashion of a tumor, in Mr. James G. Blaine. A cold, silent man could never become the lodgment of this gathering humor. To serve the purpose of this portion of the party, the champion had to be a cheerful, jolly, hail-fellow-well-met, not over-particular, audacious, unscrupulous, and faithful-to-his-friends sort of man whose own weaknesses would give him sympathy with the prevailing weaknesses of his followers. Such a man they have got in Mr. Blaine. What he thinks about the main questions of the day they do not know and do not care. All they know is that if he were in power no man would have the cold shoulder turned to him because of his "crookedness," and there would be in politics much of the noise, and tumult, and surprise in which they delight, and in which good opportunities for adventurous spirits most abound.

It is not, however, the existence of such a section of the party, or its success in finding a representative, which makes the present crisis so grave; it is the fact that it has ventured at Chicago to nominate him, in defiance of the conscientious scruples and protests of a large body of the voters. We believe the nomination of Mr. Blaine is unique in party history. We can recall no case in this or any other parliamentary country in which a majority has forced on a large minority a candidate to whom the kind of objection is made which the Republican minority makes to Mr. Blaine. In all great bodies of civilized men accustomed to act together in any public matter, a charge of personal dishonor against a candidate, which any considerable portion of those who have to elect him sincerely believe, has hitherto been considered a fatal objection to his being put in nomination. It is no answer to this that the majority does not believe the charges, or does not care whether they are true or false. On this point the majority is not at liberty to force the convictions of any respectable minority, however small, and convert a great public debate into a contention over the morals of an individual.

But this unique, unprecedented thing the Chicago Convention has done. It asks a large and, by every one's admission, influential minority to accept a candidate believed to be personally base and to represent more than aught else the corrupt and dangerous element in American politics. It has done this after warnings and protests extending now over many years. It has done it, too, without being able to excuse it as a sacrifice made on behalf of any cause, measure, or idea. For nobody ventures to say what purpose Mr. Blaine's election would serve, beyond illustrating the power of that species of gush which it is the fashion to call "magnetism." What makes the matter all the worse is, that the situation thus created is one in which no compromise is possible. One can, in acting with a party, sink objections to a candidate's opinions, or to his manners, or to his temper, or to his public aims or policy, or to his political career, for the sake of the great things which party unity may be expected to bring about. But no voter can sink his objections to a candidate on the score of personal dishonesty. No voter dares to tell his friends or his family that he is going to vote for a man knowing him to be a knave. In dealing with this class of objections his obligations to human society take inevitable precedence of his obligations to any party, however old, honored, or useful.

What is to be the issue from this deplorable and disastrous but deliberately created muddle, it is yet too soon to forecast. That Mr. Blaine cannot be elected, we look on as certain. Whether he can be defeated without ruining the organization which is being prostituted in the service of his selfish ambition, remains to be seen. The extent of his defeat —that is, the size of the majority which will remove him permanently from the political arena—will depend largely on the action of the Democrats. They have now an opportunity offered them such as has not presented itself for a quarter of a century. That they will make a good use of it, all experience forbids us to hope. That they will offer deliverance or relief to disgusted Republicans by nominating such a man as Cleveland or Bayard, when Tilden, or Flower, or Jefferson Davis, or John Kelly is within their reach, is something which it would be very rash to predict. But as strange things as this have come to pass. Whatever happens, we believe a great political purification will be the result, and we shall somehow have a party which will represent the American people in its noblest mood, and will adequately express the national respect for the virtues by which governments as well as homes are maintained and defended.

The platform adopted at Chicago is an admirable specimen of the kind of document of which Abraham Lincoln said: "For people who like that sort of thing, that's just the sort of thing they would like." The uncertainty of its utterances on most topics of the day is in fact a strong confirmation of what we said on May 29 about the importance of the nominations. The opinions of the parties are on most questions of the day now very much alike. What most concerns the voter is not what the Convention says about this or that or the other thing, but the kind of men it offers for the work of administering the Government. The Chicago platform sounds as if it was the product of the powerful minds who keep up the Blaine boom in the columns of the Philadelphia *Press*.

After "pointing with pride," lamenting the death of President Garfield, and commending the Administration of his successor, it settles down to solid work on the construction of the tariff plank. We need hardly say that this plank is a model of soundness and safety. Publicists of a different stamp would probably have seized this opportunity to demand a tariff which would raise the revenues of the Government in such a way as to disturb all our industries, rob the laborer of his rights and wages, deprive active and intelligent labor of its just reward, and the laboring man of his full share in the national prosperity. The Platform Committee, however, puts from itself, in the boldest and manliest way, all such nefarious designs, and demands:

"That the imposition of duties on foreign imports shall be made, not for revenue only, but that in raising the requisite revenues for the Government such duties shall be so levied as to afford security to our diversified industries and protection to the rights and wages of the laborer, to the end that active and intelligent labor, as well as capital, may have its just reward, and the laboring man his full share in the national prosperity."

In other words, it demands the kind of tariff for which all good men have been longing for thousands of years, and which when in fair working order will go very far toward banishing sin and sorrow from the world. It is not surprising that after this it should reprobate "the reduction of the surplus by the vicious and indiscriminate plan of horizontal reduction." Some people whom we

will not name would substitute for this methods which would relieve the taxpayer by ruining the laborer, and throw the great productive industries of the country into confusion. The Platform Committee countenances no such schemes. Instead of horizontal reduction, with its attendant vice and horror, it proposes "such methods as will relieve the taxpayer *without* injuring the laborer, or the great productive industries of the country." How simple as well as wise this seems, now when we see it in print, and yet how long the world has blundered on without discovering this mode of reducing taxation. Is there not something solemn as well as mysterious in the nearness to the surface at which nearly all the great treasures of the human understanding have been found!

For "the sheep husbandry" of the United States the platform has a kindly word, as might have been expected. It is, as might have been expected too, in favor of "the best money known to the civilized world," and leaves to the voter, as a gentle intellectual exercise during the hot summer months, the task of finding out what kind of money that is. It claims for Congress, too, the power of regulating inter-State railroads, and calls for "a bureau of labor and the enforcement of the eight-hour law," and denounces the importation of "contract labor, whether from Europe or Asia," as "against the spirit of American institutions," but does not explain how this can be. Contract labor is labor which the owner contracts to sell for so much wages. How such a sale conflicts with "the spirit of American institutions" needs elucidation. If there be "such a spirit," it favors above all things the right of every man to dispose of his commodities in the best market he can find. If the drafters of this plank were not such good men, we should suspect them of favoring the right of some laborers to take away from other laborers the right to do what they please with their own. There is no American "spirit" which countenances anything of this kind.

On the pension question the platform goes far enough to please any claimant, and demands an efficient navy without, however, denouncing Robeson or Chandler. It calls for a law to suppress Mormon polygamy and divorce the civil from the ecclesiastical power in Utah, but gives Congress no assistance in discovering what kind of law that should be; but whatever it be, it recommends that it should be enforced when passed, a position which none but the really depraved will assail.

The plank on the nature of the United States Government is one of those models of soundness which occasionally make platforms such good reading for the young. We extract it entire:

> "The people of the United States, in their organized capacity, constitute a nation and not a mere confederacy of States. The national Government is supreme within the sphere of its national duty, but the States have reserved rights which should be faithfully maintained; each should be guarded with jealous care so that the harmony of our system of government may be preserved and the Union be kept inviolate. The perpetuity of our institutions rests upon the maintenance of a free ballot, an honest count, and correct returns."

There is here, as will be seen, no concession to the doctrine that the national Government is *not* supreme in its own sphere, or that the States have *no* reserved rights, or that no one need care about the harmony of our system, and that it makes no difference whether the ballot-boxes are stuffed and the returns falsified at our elections or not. On all these points the position of the Convention seems absolutely impregnable, and must commend itself to the approval of every good man.

THE WEEK AFTER THE DEBAUCH.

THE gravity of the step taken by the majority of the Chicago Convention becomes plainer every hour. The dissatisfaction with the nominations has in fact already, as the Springfield *Republican* remarks, assumed the proportions of a political revolution. Only three or four journals of weight or influence in the party accept them and announce an intention to support them. These, too, are already on the defensive, and are pleading for the ticket in an apologetic tone, which shows clearly enough that they consider the battle already lost. The *Tribune* of Monday morning argues pathetically that Blaine is not a "tattooed man," or that if he is, so were George Washington, General Jackson, and General Garfield. It maintains, moreover, that "virtue is not really confined to a few Pharisees," meaning, we presume, that there is good even in "Pow" Clayton, "Steve" Elkins, "Tom" Platt, and "Black Jack." It may be that these conspicuous citizens are not as bad as they are painted; but think, brethren, of beginning a Republican campaign with an appeal *ad misericordiam* on behalf of the candidates and their leading supporters!

In truth, unless all signs fail, we are promised, in case the Democrats do as many think they will do for once—make a sensible nomination—a repetition in this State at least of the campaign of 1882, and the burial of Mr. Blaine under a monumental majority. We grant freely all that is said about Mr. Blaine's being the choice of the majority of the Convention, and even of the majority of the party. But it seems to have been forgotten by those who nominated him that to win victories at the polls, it is not enough for them to be the majority of the party; they must also be the majority of the nation, and to be the majority of the nation a party must be as large and harmonious as possible. If there is a fastidious or uneasy minority, everything in reason must be done to keep it in the ranks on election day. Nothing in fact will justify managers in sending any considerable portion of the party away from a Presidential Convention disgusted or disheartened, except a regard for principle. To split over candidates, and above all to split, or run the risk of a split, over *one* candidate in a country which contains at least one million of citizens eligible for the Presidency, is surely the height of folly—such folly as has never before been witnessed in party history. If Blaine stood for any cause or principle, if he were the champion or apostle of some idea, the leader in a great movement, there might be some sense in sticking to him at any cost and forcing him on the party, as a mere trial of its fidelity. But Blaine stands for nothing but "Jim Blaine." He has served nothing all these long years but Jim Blaine. When he triumphs in anything, nobody but Jim Blaine is the better of it. Under these circumstances the abuse and depreciation of the Independents and "kickers" is so fatuous that it is no longer funny. The "shouters" actually seem to have persuaded themselves that it is only the Independents they are to meet at the polls in November, and that, as they themselves can easily show more votes, all is well. Surely, this is the height of midsummer madness.

The same thing may be said of the reproach that the Independents have nothing to complain of except that "their man" was not nominated. They had nom an to nominate. It is their very failure to agree on any one which makes their present revolt so serious. People who go into politics simply to support some favorite or hero generally get over their disappointment very quickly, and are apt after the first pang has passed to be able to "take off their coats" and go to work for somebody else. But what makes the present crisis in the Republican party grave is that the Chicago ticket does not represent simply the triumph of somebody else's man, but represents to the dissatisfied a distinct outrage on their moral sense. It represents to them the success of rascality and corruption in the party councils, and an attempt to place the Presidency for four years at the disposal of jobbers, speculators, intriguers. Granted that they are mistaken in all this, granted that they foully wrong Jim Blaine, Black Jack, and Steve Elkins, and Pow Clayton, and Tom Platt, and Filley—how does all this mend matters? Do the friends of Mr. Blaine, after all that has happened, expect to convert them between now and the first Tuesday in November? If Mr. William Walter Phelps and the *Tribune* have been unable to enlighten them within the last three months, are they likely to succeed in the next four? Considering how much Mr. Blaine and General Logan have been before the public for the last ten years, are the impressions they have made during that period on a large class of highly-respectable observers likely to be corrected during the heat of the canvass by such praise as their buglers are likely to contribute to their campaign newspapers? There is only one answer to be made to these questions.

The question before Republicans to-day is not how to defeat Blaine, for he is defeated already, but how to prevent his defeat from inflicting injury on the cause which the party which has had the madness to nominate him has served so long and so well. And then, the examination of his record has only just begun. It contains materials for fully four months' summer reading. Every week of July, August, September, and October will probably bring additions to the wretched story, and if they would make only him and William Walter Phelps blush it would not matter much. But everybody who has ever voted the Republican ticket will have to hang his head along with the candidate and such of the "shouters" as have any shame left.

THE ATTEMPT TO KIDNAP ENO.

According to the latest news from Montreal, the Grand Jury have refused to indict Eno for bringing "stolen money" into Canada, no doubt on the ground that he is not, within the meaning of the law, a thief; that he has, properly speaking, brought no "stolen" money into Canada, and that the attempt to indict him for such an offence is, in all human probability, an attempt to punish him by means of a legal quibble. It must have occurred already to many of those who have followed the proceedings with care that if such an indictment would hold water, the general complaint against the extradition treaty with England, that it does not cover criminal breaches of trust, is nearly groundless. If Eno really committed the offence of bringing stolen money into Canada, there is hardly a swindler of any species who gets off with any money in his pocket who does not commit it; and all of them, immediately on arrival in Canada, might be brought up, tried, convicted, and sent to jail, and that too by the Canadian courts, at the instance of any American complainant, without any trouble over the extradition treaty at all. The very convenience of this theory makes it suspicious.

The attempt to punish Eno by Canadian law having broken down, the kidnapping venture under the extradition treaty is now to be made, and for this purpose it is said that an indictment for forgery in the second and third degree, found last Thursday by the Grand Jury of the Court of General Sessions, is to be used. The requisition must be made, if at all, by the President or by his authority, and the matter is one which would in the ordinary course of events be referred to Mr. Frelinghuysen. The demand for the surrender must specify the crime, and charge it with such particularity and detail as to enable a fair-minded judge to determine whether it comes within the list of treaty crimes. Forgery is the only crime under the treaty for which Eno can be extradited, and this offence has always been assumed to be the old common-law crime of forgery, known as such to the law of both England and America. The treaty was ratified in 1842, when this was, we believe, the only crime known as forgery in both countries. It consists in making a false instrument, a will, a deed, a bill or note, with the intent to defraud. In this State we have changed the old law of forgery in a great many respects. The crime of forgery in the second degree, for which Eno has been indicted, contains a great variety of offences, among others, forging the seal of the State and counterfeiting bank-note plates, and also the forgery of an "instrument or writing being or purporting to be the act of another," affecting in some way a pecuniary demand or obligation or rights of property of some sort (Penal Code, Section 511).

Eno, it is said, has laid himself open to an indictment under this section by raising money on paper signed by him as President of the Second National Bank, immediately after his resignation. This is certainly a violation of the spirit if not the letter of the act, and might warrant an active prosecution were Eno amenable to our courts. But to pretend that this comes under the extradition treaty is, it seems to us, a grave mistake. If we can get Eno back for one kind of crime not covered by the treaty, we can for another, and may dispense with the treaty altogether. Nothing would be easier than to pass a statute making any embezzlement, swindling, and criminal breach of trust, by means of false writings, "forgery," and then demand the surrender of any and every swindler who runs off. Of course, any objection to extraditing Eno for forgery in the second degree applies *à fortiori* to an attempt to extradite him for forgery in the third, because this crime is still further removed from the old common-law offence. It is really corrupt falsification of accounts (P. C., Sec. 515).

It is much more important that the existing treaty with England be faithfully observed than that Eno be extradited. What this country needs is a treaty embracing all criminal breaches of trust, such as we have with other countries, and we are not likely to get it, if we give the Canadians and the English the impression that we care little or nothing about treaty stipulations, but are mainly anxious to get hold of the criminal by fair means or foul. The proceedings in this case have already aroused a good deal of international distrust, and have had the ridiculous effect of converting a scoundrel into a popular hero, and that too in the place where it is least for our interest to have the slightest sympathy with fugitives from our justice.

BISMARCK AND THE REICHSTAG.

The late great debate in the German Reichstag on the prolongation of the Socialist Law, more than any other debate in that body which we remember, was characteristic at the same time of the high intellectual and low parliamentary level of legislative discussions in the political centre of Germany. It is not often given to read a series of speeches on one topic so spirited, so sparkling with wit, sarcasm, and knowledge, and so free from oratorical bombast and partisan nonsense, as was the chain of speeches delivered on May 8 and the following days by the Conservatives Minnigerode and Minister Puttkamer, the Liberals Stauffenberg, Richter, and Bamberger, the Ultramontane leader Windthorst, the Socialists Geiser and Bebel, Prince Bismarck, and others. It was a brilliant tournament, in which representatives of all political fractions, of all shades of opinion, freely took part with bright weapons; it was a desultory, amusing tilt of many groups; but it was not a parliamentary battle for leadership and power, not a grapple of mighty parties. For Germany has no parties strong enough to lead the nation or wrest power from those who wield it; it has only political fractions which occasionally — quite exceptionally—combine in sufficient strength to clog the wheels of Government, but again and again prove their inability to give them direction. He who is the Government, Prince Bismarck, plays with those fractions with consummate skill, combining from time to time some of them into a temporary alliance for his purposes, and dividing his opponents. He is sure of victory sooner or later, and he achieves it with equal shrewdness, pluck, and audacity. The threat of dissolution was his strongest weapon in this last contest. His supporters or temporary allies were the German Conservatives, the Imperial party, and the National Liberals, as a compact body, besides portions of the German Liberal party (into which the former Secessionist and Progressist fractions were lately fused) and of the Centre, or Ultramontane, party, a few Alsace-Lorrainers, and a few members of the smallest fractions. Only the Social-Democrats, the People's party, and the Poles were undivided in their opposition to him. His triumph was signal.

His own two speeches contributed not a little to shape the result. They were not the best he ever made, and perhaps inferior in brilliancy of extemporization to those of his bold, almost reckless, antagonist, Richter, and in weight of argument to the more elaborate effort of Bamberger. His retrospective points were thrusts which could not be parried. He appealed to a record of personal activity and success in which, from the exclusive standpoint of German patriotism, not a flaw can be discovered, and easily ridiculed the inconsistencies, in principle and action, of his most vehement opponents, the Socialists alone excepted. His *obiter dicta*, in which he so often indulges, were equally instructive and amusing—especially those concerning Russian Nihilism, which he stated to be less dangerous to the state than German socialism, while this was still less "venomous" than Democratic liberalism. His own socialism, while eclipsing the liberalism of his radical assailants, could hardly be gainsaid by the more moderate debaters at a moment when he demanded the continued free use of repressive measures against subversive theorists. He seemed to delight in the strangeness, or even equivocalness, of this position, as marking the boldness with which he dares to combat the most dangerous foes of society with their own arms, and the assurance with which he walks along the narrow line dividing the sublime in politics from the ridiculous. His State Socialism may originally have been what the Socialist Liebknecht even now asserted it to be, a rôle assumed for deception, for causing a diversion in the rear of the Progressists, but it has certainly become something more sincere and much more serious, as a multitude of legislative measures, eagerly and persistently pressed by him, evidently shows. Bamberger was right when he declared Prince Bismarck's policy to be deeply steeped in socialistic heresies. Like the Spanish commander Spinola (of whom his antagonist Maurice of Nassau said that while others deceived their enemies by foreshadowing movements which were not to be made, he deceived his by showing what he really intended), Bismarck has, in his legislative tactics as well as in his diplomatic strategy, often misled his opponents by true announcements which were considered feints.

Not content with accident insurance, care for the aged and sick, agrarian protection, taxation of banking speculation, and a number of similar urgently pushed measures, Prince Bismarck has now gone a long step further, announcing his belief in the French dogma of

the right of laborers unable to find employment to demand work from the Government. He slightly blunted the keenness of the expression by asserting that his belief was grounded on a principle embodied in the old Prussian laws as well as in the doctrines of Christianity, but his declaration was broad and emphatic: "The man who can find no work has a right to say, Give me work! and the state is bound to procure him work." "Give the laborer the right to demand labor, as long as he is well; assure him nursing when he is sick; assure him sustenance when he is old." He unsparingly reproached the Reichstag with intentional dilatoriness in deliberating on laws which the welfare of the laboring classes pressingly demanded. The committee to which the Accident Insurance Bill was referred did not lack diligence, he said, but it lacked faith in the utility of the measure; it lacked seriousness of intention. "But the Government," he added, "cannot break off the discussions on these subjects, even if we have to sit here till August, or till the natural expiration of your term. The Government cannot budge from its place; we must have your answer to the Accident Insurance Bill, 'yes' or 'no.' Only when something weighty in this line, for the benefit of the largest but not happiest class of people, will be achieved—but not till then—will it be possible for the Government to propose the abrogation of the exceptional laws." Such declarations were made with effect. In vain did Windthorst, who proposed religious substitutes, contend that the repressive measures were useless or worse than useless—and in vain did Richter declare that the Socialist party in Germany was the shadow of Bismarck's greatness. He was answered with jokes.

THE RESULTS OF THE GORDON DEBATE.

LONDON, May 24.

THAT game of parties in which the fate of the Ministry is now obviously involved grows more delicate, complicated, and uncertain every week, almost every day. Till the troubles of Egypt began to thicken at the end of last year, the strength of Mr. Gladstone's Cabinet, though it had once at least before received a serious shake, and though it had lost three of its most conspicuous members by the successive secessions of the Duke of Argyll, Mr. Forster, and Mr. Bright, remained intact, and its hold on its party in the country unusually strong. But during the last six months there has been a marked change. The impression has gained ground that however able and industrious in home affairs, the Government is not vigorous or far-seeing, or, at any rate, is not destined to be successful, in foreign affairs. Although the loyalty of the local party leaders remains unshaken, moderate or doubtful men throughout the country grow colder and colder in their allegiance, while in the House of Commons itself the number of waverers increases, and those nominal adherents who are always on the watch for an opportunity of damaging their own party, a section which is usually larger in the Liberal than in the Tory party, grow bolder, and openly proclaim their intention to desert. On each successive occasion when the Ministry have been challenged by the Opposition their majority has been numerically weaker as well as less hearty, till ten days ago, in the division on Sir Michael Hicks-Beach's vote of censure, it fell to twenty-eight. This figure, small when compared with the majority of sixty or seventy which they commanded in their earlier days, has alarmed their friends at home, and been received on the Continent of Europe as evidence of their rapidly approaching downfall. That it is serious no one will deny. It is, however, less serious than is commonly believed. In the first place, a certain number of Liberals who would have supported the Ministry had they believed it to be in peril absented themselves, in order, as they said, to teach it a lesson, to warn it to show a little more spirit and foresight in dealing with Egypt. It might probably have had thirty-eight instead of twenty-eight votes if its existence had been known to be endangered. Secondly, the Parnellite members present, thirty-one in number, voted against it. Their behavior was singular and instructive. They did not speak in the debate. They did not formally declare their intentions, but it was generally understood that they would support the Ministry, not, of course, from any friendliness to it, but in order to secure the passing of the Franchise Bill, which will, as they expect, considerably strengthen them in Ireland. So well was the secret of their action kept that up till the last moment both Tories and Liberals believed they would vote with the Government, and some Liberals who disapproved of the behavior of the Government walked out of the House of Commons, saying that as the Government were to have the Irish they might safely abstain. It was not till the last members were being cleared out of the House into the lobbies that the Parnellites rose in a body and walked toward the Opposition lobby, and one or two hesitating Liberals who had waited to see what would happen had just time to rush back and record their votes when they perceived that this unexpected loss might render the situation perilous. Had these thirty-one Parnellites voted with Mr. Gladstone, he would have had a majority of ninety instead of twenty-eight. Nobody would have been frightened by that result, yet in reality it would have been precisely the same thing as a majority of twenty-eight, for all know that the Parnellites are substantially hostile to every Government, and seek only to play their own game. A majority of ninety with them would have been as dangerous as one of twenty-eight without them—more so, perhaps, for it might have lulled the Government into an ill-grounded security. As it is, the English are at last beginning to realize what they have to expect from the Irish Separatist party, and how difficult it will be to keep any Ministry on foot when that party holds the balance in the House of Commons.

Though this division is therefore no deathblow, it is a grave warning to the Government. I have endeavored to point out, in a previous letter, that they have latterly been kept in office owing to three causes—firstly, the personal popularity of Mr. Gladstone with the local Liberals, both leaders and followers, through the north and west of England and Scotland; secondly, the anxiety to pass the County Franchise Bill, whose fate is of course involved with that of the Ministry; thirdly, the incompetence and dissensions of the Opposition. The question is, how long these forces will continue to act against the tendency, always observable in English politics, for a loosened majority to become constantly less loyal, and of a discredited Government to receive less and less credit even for what it does well. Many members who have supported the Ministry against the votes of censure of this session have done so avowedly not because they approved of their conduct of Egyptian affairs, but because they thought that a Tory Ministry would be far less capable and more dangerous. This is a feeling which helps a threatened Cabinet once, twice, thrice, but the oftener it has to be appealed to the feebler is the response. The belief is now pretty general that if things go on as they have done in Egypt, and if nothing more is heard of General Gordon for two months to come, a vote of censure debated in the middle of July would result in the defeat of the Government. The European Conference which they have been endeavoring to convoke to resettle the financial system of Egypt, opens up another vista of trouble. It is understood that France desires that the deliberations of this Conference should not be confined to finance and the law of liquidation, but extend to the international position of Egypt, and afford an opening for her claim to have some share in any protectorate which may be assumed over Egypt. The Government have, in answer to the searching and often-repeated interrogatories addressed to them on the point, intimated that they object to this attempt. But their language has been supposed to lack decision; and it is surmised that, although they are wholly opposed to the renewal of any dual control to be exercised by England and France jointly, they would be willing to surrender whatever exclusive power they now possess in Egypt into the hands of the collective Powers, and thus find a mode of retiring from Egypt and washing their hands of further responsibility.

If the country would support this course, the horizon would be sensibly cleared. The longer prudent men ponder over the Egyptian problem, the more fruitful in difficulties, the more barren of substantial benefits to England, does it appear. But will the country consent? Could the Government survive a proposition which would seem to sacrifice those interests both in Egypt and the Suez Canal of which so much has been said, and which formed the main part of their justification for the expedition of 1882? (I do not myself think they will make it; still they may come so near it as to make the point worthy of consideration.) If they were as strong now as they were when they came into office, four years ago, they might carry it. They could then have washed their hands of Egypt, as they did of Kandahar, and as they have very nearly done of the Transvaal territory. But now that they have made such considerable efforts in Egypt, and such sacrifices of men and money to put down Arabi, support Tewfik, protect Suakim from the fierce tribes whom Osman Digna leads, they would be exposed to serious charges of imprudence and weakness. They would be, in fact, condemning their own previous action. A numerical majority of their own party might agree with them, but it would do so with some shame for the past, while the minority of disapproving Liberals would be influential both in the press and socially. The cry would be raised that we were surrendering everything to France; the mercantile class would be alarmed about the Suez Canal; the sneers of the Continental press at our retreat, however unworthy of regard, would wound the pride of the nation. Questions of foreign policy seldom come home to the bulk of our people, unless they involve some broad and simple moral principles; hence, where the opinion of the upper classes happens to be hostile to a Government on such questions, it enjoys a disproportionate weight—a weight which in this instance would probably be decisive.

Not the least curious part of the present situation is the influence which the Egyptian difficulty exercises on the fortunes of the Franchise Bill. The House of Lords, as the organ of the Conservative party, is of course hostile to the bill. Were it to obey its impulses, it would at once reject the bill. This, however, would exasperate the masses, and create an agitation against the Lords themselves; so that they

must needs walk warily, and strike the balance between the loss to their own party by its passing and the injury to the House of Lords which its rejection might cause at present. The balance shifts this way and that, according to the greater or less strength of the Ministry, which, again, depends on the news from Khartum and the prospects of the Conference. The first result of the division on Sir M. Hicks-Beach's motion was to embolden the Tory leaders; so the leading Tory paper announced authoritatively that it had been determined to throw out the bill when it reached the Upper House. Lord Salisbury is, however, so unstable a politician that it is quite possible he may change his mind once or twice or three times within the next six months. If the Ministry is then strong, he may bow to necessity. If untoward events in Egypt have further weakened it, he will make the rejection of the bill a challenge to the Government to dissolve Parliament. And the game that is now being played in the House of Commons round the bill in Committee is played mainly with a view to the Upper House, the object of the Government being to make it more difficult, that of the Opposition leaders to make it more easy, for Lord Salisbury to find pretexts for throwing out a measure which the Tory leaders have never condemned in itself, but only because, they say, it ought to be accompanied by a redistribution of seats. Y.

GUIZOT'S CORRESPONDENCE.—I.

PARIS, May 22.

UNDER the title 'M. Guizot in his Family and among his Friends,' Mme. de Witt, the surviving daughter of M. Guizot (her sister also bore the name of De Witt, as the two sisters had married the two brothers), published a few years ago a volume which met with much success, and which had a real charm of style. Mme. de Witt presented in that volume a true picture of the life of Guizot, who even at the height of power always preserved the simplicity of a Calvinist, of a scholar; who lived and died poor, though he had been Prime Minister of France for a number of years. The success of this work has led Mme. de Witt to give a new volume—'The Letters of M. Guizot to his Family and to his Friends.' There is no introduction to the volume; the publisher does not inform us on what principles the selection of the letters has been made: what has been admitted and what has been suppressed. He does not even tell us if this is the whole correspondence of Guizot, and we are left to believe that it is.

The correspondence begins in 1810: M. Guizot wrote from Paris to his mother, who lived at Nîmes. He was then translating Gibbon's history and writing in the *Gazette de France;* he received 36 francs for an article, and was allowed to write five every month, whence he derived a monthly income of 180 francs. Pauline de Meulan, who became afterward Mme. Guizot, also wrote in the *Gazette*, and she received 200 francs a month. Mlle. de Meulan was a very distinguished person: her family had been ruined by the French Revolution, and she had begun to write in order to help her relatives. The marriage took place on the 7th of April, 1817, and soon afterward M. Guizot was named Professor in the Faculty of Letters. There is a great gap in the correspondence, extending from 1811 to 1821; possibly the letters of that period are to be published hereafter. It would be very interesting to know what M. Guizot wrote to his friends during the eventful period of the first Restoration, the Hundred Days, and the first years of the second Restoration.

In 1821 he has become acquainted with M. Charles de Rémusat, whom he calls "my dear Charles," and with M. de Barante. To the latter he writes from Nîmes: "In the actual state of the administration and of social order, the departments are condemned to a policy of expectation; the least activity is absolutely impossible to them. So long as it is so, there will be nothing to create, nothing to hope for. We must perforce come out of this situation, give all the elements representation, allow life to manifest itself where it exists. Reason, to be sure, can only come from above, but life can only come from the bottom; it is with the roots of society as it is with the roots of a tree. Our problem is the creation of a government. Well, there is everywhere a government all ready; we must accept it, regulate it. It is in vain that we mix together in Paris deputies and ministers; out of this mere laboratory there comes no heat nor light." This is a curious protest against French centralization. The judgments of M. Guizot are sometimes pointed, and even hard. "I am going to dine," he writes to his wife, "at Mme. de Broglie's with Benjamin Constant, the most clear-sighted and the most powerless of men, who will always do what he does not want, to obey people whom he despises." The lectures of M. Guizot were found too liberal; his readings were suspended in October, 1822. "I expected this," says he to M. de Barante. "I regret a little this small tribune, where I could have some direct action on men who will have some influence on the future. My compensations are the use of my whole time and my liberty. . . . I am sure that this country is not going to perish or to be enslaved. . . . Though we are no more twenty-five, we are still young." Guizot, even in 1821, under the Restoration, was conscious of his own powers and of the powers of France; he felt that his day would come. Mme. Guizot died in 1827, in the autumn, on her return from Plombières. "I am," writes Guizot to M. de Barante, "like a man who has no more home, and who will spend his life in the street." He did not remain long in the street. Mme. Guizot had a niece, Mlle. Élise Dillon, who became the second wife of M. Guizot on the 8th of November, 1828.

This great event and the Revolution of 1830 mark a second interruption in the correspondence. We find no letters between the end of 1828 and the middle of 1830. At that moment his own election as deputy was at hand at Lisieux, in Normandy, and was quite assured. He was himself on his way to Nîmes, where he went to forward the elections of his political and personal friends. M. Guizot, on his return from Nîmes, heard of the famous "Ordinances" of Charles X. On the 27th of July he received a note from Casimir Périer, and found at his house some of his colleagues. He was among the men who came into power in 1830; he was Minister of the Interior for three months, and in the beginning of November he retired with his most conservative colleagues, the Duc de Broglie and Casimir Périer. Lafitte then became President of the Council. In the spring of 1831 Guizot made his first electoral visit in the Department of Calvados, where he had been elected three times, chiefly by the influence of the Duc de Broglie. "I am struck," writes Guizot to his wife, "by what I see. I find in every township (commune) two, three, four men of probity and sense, very well disposed to support a good government and to defend it against the *brouillons.* Only you must rally them, give to them a confidence which they do not feel in isolation, make them feel that their intentions are known, accepted—that their efforts have some value." "I have seen there the type of the Norman peasant of our comedies. It becomes rare; the language, the manners, the ideas all become uniform, like the costume." At Lisieux he writes: "I am here in the midst of all the passions of a town. Lisieux is on fire. The Opposition was working for a week in order that I should not have an *entrée.* They have succeeded in depriving me of the music. The *chef de musique* is *commis greffier* of the tribunal; the president and the *procureur du roi* have threatened him with the loss of his place. He has meditated: his wife and children have triumphed over me. I had only the drums. To-day we shall have a balloon. Everything is *orageux.* But they tell me that I shall have the majority." He had to make several speeches—"*margaritas ante porcas.*" I have never heard anybody speak as well, with such an air of inspired authority, such a noble countenance as Guizot. No wonder he says: "My rural electors, without much understanding what I said, seemed charmed." Here is an excellent sign of the times; in order to understand it, one must remember that in 1831 there were some fears of war between France and Europe: "An old captain of the old army, more than six feet high, took hold of me: '*Vive* M. Guizot! *vive* our deputy! Yes, Monsieur Guizot, you are a good man. I am not for war, sir, I am not; but I know what war is. But if the Prussians come back, I am always there, my dear M. Guizot. They won't find many as tall as I am, I know, but there are some tall ones left. I am captain now; I am married; I must settle in life. I am not for war, my brave M. Guizot, but I am for my country. *Vive le Roi!*'" The letters of that period are almost as incomprehensible, at times, as if they were documents of the sixteenth century. Who cares now for the Ministerial combinations of 1831? for the articles of Armand Carrel? for the intrigues of Dupin, of Lafitte? The daily account of parliamentary government is somewhat dull. It is hardly possible to read a newspaper of a few months after date. The letters of M. Guizot produce often the same effect; they seem unreal, as if they dealt with shadows: "M. de Talleyrand has a bad cold, and must cease taking the waters. Mme. de Dino has left Baden for Ems. The Carlists have made of Baden their headquarters," and so on. This was written before the days of telegrams. I decidedly prefer telegrams.

The letters become more interesting when the historian, the moralist speaks. M. Guizot writes to Mme. de Gasparin: "My heart is very materialistic. I want the real presence. Not that I disdain memory, dreaming, writing, shadows, which have their merit in the absence of the realities, but pure shadows which don't give me a moment of illusion. Nevertheless, I am very spiritualistic, too, and of the most solid spiritualism, for I am as adverse to pantheism as to materialism. I do not believe that our soul, the soul of each of us, is merely a portion of the one universal spirit, a portion detached for a moment from the great All, to which it belongs as the ray of light belongs to the sun, as the spark belongs to the fire, and which returns to it and confounds itself with it, after having shone a moment as a bit of matter. I care no more for this pretended spiritualism than for brutal materialism. It abolishes equally our individuality, which is our moral being, and takes away from us all hope of a future. Each soul is for me a real, personal being, which will remain real and personal all through eternity as it is now in this world. It is in my eyes the great intellectual superiority of Christianity to conceive thus the human soul and its destiny. All the religions of the East are pantheistic." Guizot always retained these ideas, and we find him the same in one of his last works, in his 'Christian Meditations.' By vocation he was

a minister of the Gospel, a Christian philosopher; he might have been the Bossuet of the French Protestant Church. He was thrown early in the turmoil of politics; he tried to found constitutional and parliamentary government in a revolutionary country. He had some admirable qualifications for the task: a profound knowledge of history, especially of English history, a noble character, an extraordinary eloquence; he had an incredible faith in himself—never doubted, never hesitated; he was a true doctrinaire, dogmatic even in the smallest matters: "I feel no doubt, no discouragement; on the contrary [this was written to the Duchess de Broglie after the attempt of Alibaud on the life of the King], the more I go on, the more I believe in our principles." He was not blind, however. He believed in the natural depravity of man: "I am not as uneasy as many; by instinct, by a number of obscure causes, I believe that the King will live, but I am alarmed by the inner dispositions, by the moral state of those thousands of men, without faith, withou tlaw, without heart, without bread, who wander in the midst of an uncertain and weak society. How much time, how many efforts, what divine protection and human wisdom will not be necessary to cure at the same time these hideous wounds and this general malady of languor!"

Guizot liked to theorize; he had marked the great lines of a system; the great masses, the *residuum*, were to have no place in the electoral system; a legal solution was to take place; the electoral rights were to be the price of labor, of work, of an effort represented by a certain amount of property. Universal suffrage seemed to him a chaos, the chaos of ignorance and of vice. On all these points he was absolutely sincere; his political faith was only the wrong side of his Calvinistic faith. He did not believe in the natural excellence of mankind, in the necessary triumph of good sense, of virtue, of truth. "We are surrounded," he writes to Mme. de Gasparin, "with weakness, with reticence, with treason, with folly. I feel myself at times like a drowning man. I must then make an effort, look for an occasion. I don't know whether I shall find it." He felt tied to an almost impossible task: "I am tied to a mission. I must accomplish it in all its extent, with all its difficulties."

Correspondence.

"I ALLOW."

To the Editor of The Nation:

Sir: As a further contribution to the uses of the words "allow," "bang," and "smart," I give you what follows. I lived for many years in Claiborne Parish, Louisiana, and there heard the word *allow* or *'low* constantly used in the sense of *intend*, and in the past tense for *said*. In the sense of *intend* it is used a great deal by the whites as well as the blacks; in the sense of *said* it is not much used by the whites, but a negro in giving the substance of a past conversation will say, "He 'lowed he didn't see you." There is perhaps a tendency, however, to confine it to such expressions as "He 'lowed he'd come," "He 'lowed he'd give a dollar for it," "He 'lowed he'd die first," etc., where the sense is akin to *intend*, and nearly equal to *he said he intended*, etc. *Bang* is used there as given in your notes: "That *bangs* me"; but also in this way, "That bangs anything I ever heard of." This last will perhaps be more frequently put, "That *outbangs* anything," etc.

The farmer in Claiborne Parish does not speak of raising "right smart of oats," but "a right smart chance of oats," or "a fine chance of oats."

I have not had my attention especially called to the subject here in Virginia, but I think the negroes use *allow* or *'low* in the two senses given above. S. T. M.

Lexington, Va., June 7.

Notes.

G. P. Putnam's Sons have issued a new edition of Colonel Brackenbury's 'Frederick the Great,' in which the twenty-two maps and battle-plans omitted from the first edition have been inserted.

A. S. Barnes & Co. announce 'The Elements of Morality,' translated by Mrs. Hiram Corson, from the French of Paul Janet. The volume is meant for the use of schools and colleges.

Haswell's 'Mechanics' and Engineers' Pocket-book' (Harper & Bros.) has reached its forty-fifth edition. It has just been thoroughly revised by the author.

A revised edition of Batterson's 'A Sketch Book of the American Episcopate During One Hundred Years' has been issued by J. P. Lippincott & Co. It is really a biographical dictionary of the Bishops of the American Church up to the date of publication, and will be useful as a hand-book to those who have occasion for such knowledge.

S. E. Cassino announces for immediate publication 'A Manual of the Mosses of North America,' with plates.

Estes & Lauriat have in preparation an edition of Moore's 'Lalla Rookh,' to be illustrated by nearly two hundred colored photogravures.

Lee & Shepard have issued in large pamphlet form the two popular addresses of Wendell Phillips, 'The Lost Arts' and 'Daniel O'Connell.'

'The Abolition of the Presidency' is the title of a pamphlet to be issued at once by R. Worthington. Its author is Henry C. Lockwood, of the New York bar.

'The Problem of Negro Education' is a pamphlet by George R. Stetson, which forcibly presents the well-known educational needs of the South, and advocates national aid. Its statements are largely based on the personal observation of the writer.

A hundred poems from the pages of *St. Nicholas* have been printed in a pamphlet by the Century Company to be distributed among musical composers as texts for songs, a collection of which for families and young people will be published as the 'St. Nicholas Song Book.' Copies of the pamphlet can be obtained of the Century Company, and contributions must be handed in by January 1, 1885.

The *Library Journal* for May, apropos of a premature report that the Astor Library would not be opened in the evening, urges the plan already advocated in the *Nation*, by which a single room only would be provided for readers and no books issued to them except such as had been called for in advance. In connection with the same subject of extending the usefulness of libraries, the *Journal* reprints the statistics given by Mr. Green, of Worcester, in respect to the use of the public library of that city on Sunday. From these it appears that during the twelve years that the experiment (it can hardly longer be called so) has been tried, the number of persons using the library has risen from 7,179 in 1873–74 to 14,946 in 1881–82. The readers devote their attention mainly to current literature, to the exclusion of serious study, and are largely made up of persons not church-goers, who have no pleasant place to spend Sunday and no private means of intellectual entertainment. Mr. Green justly regards his experience as a proof that the institution of Sunday-reading in the libraries works for moral reform in a very marked way.

The St. Louis *American Journal of Ophthalmology*, announced some weeks ago, has issued its second number. Its main object is to give a full record of the work of American ophthalmologists, a province hitherto unoccupied in our periodical literature.

The spring number of the *Bulletin of the Boston Public Library* contains the usual information in regard to new books, and continues the very valuable list of works on American local history. Its novel feature is a curious catalogue statement of the paper currency printed by Franklin, by Mr. John H. Hickcox, the writer on the history of American coinage and of New York bills of credit.

We have received *Florentiner Blätter*, a new German paper, published at Florence; its contents have a somewhat light character, as befits its climate, and include novelettes, poems, and travel sketches, together with essays and reviews.

The Department of Mechanical Engineering of Cornell University has lately profited by the generosity of Hon. Hiram Sibley, who will expend $35,000, in remodelling Sibley College and erecting a line of shops.

The money necessary to send the Babylonian exploring expedition which is to be directed by Dr. William Hayes Ward, of the *Independent*, has been contributed by a single individual. It is understood that the party will start this year.

The *Academy* states that the Council at Cambridge have voted unanimously to offer the new honorary degree of Doctor in Letters to Professor George Stephens of Copenhagen, whose *opus magnum*, 'Old Northern Runic Monuments of Scandinavia and England,' has just been completed by the issue of its third volume.

The Phi Beta Kappa oration at Harvard this year will be delivered by Prof. R. C. Jebb, of Glasgow; and in view of the fact that probably many persons will be led by Professor Jebb's reputation to make arrangements to be present on the occasion, we shall doubtless render a service by announcing the subject which he has chosen. It is "Ancient Organs of Public Opinion," and we understand that its scope will be to consider the chief agencies which in ancient Greece and Rome performed some of the functions of the modern newspaper press. The subject is a novel and attractive one, and admirably chosen for the occasion, since, while no one but a classical scholar would venture to discuss it, it cannot fail to be of interest also to students of the various other branches of knowledge which are represented in the Phi Beta Kappa Society.

Thomas Maitland, Esq., of this city, has in his possession, intrusted to him for sale by a South Carolinian family, in which they have been since they were painted, three heads by Copley, in excellent condition, and good examples of the artist. They are portraits of Lord William Campbell, last Governor of South Carolina, Lady William Campbell, and a relative, Mrs. Colin Campbell, née Izard. These should not remain private property, but go into some of our public galleries or the National Portrait Gallery of London. Copley is better known and more appreciated in Boston than in New York, and really good heads by him, such as these, should not, at any rate, wait long for a purchaser.

The recent election of an Oxford graduate, Mr. Creighton, author of a learned 'History of the Papacy During the Reformation Period,' to the newly-founded Professorship of Ecclesiasti-

cal History in the University of Cambridge is an interesting illustration of the growing freedom of intercourse and liberality of spirit in the English universities. Thirty years ago it would have been thought preposterous for any one but a Cambridge man to stand for such a chair in Cambridge. Nor would any one but a clergyman of the established Church have been deemed eligible. The chair, however, has been founded free from all theological or clerical restrictions, and although the successful candidate happens to be a clergyman, it is understood that this was not considered at all by the electors. Mr. Creighton was a brilliant lecturer at Oxford some years ago, and has since then held a living in the north of England.

We learn from Florence that Professor Villari has negotiated for the purchase of the Lord Ashburnham MSS. stolen by Libri from the Italian libraries and sold to his lordship, above two thousand in number, the price for the repurchase being 600,000 francs. It is singular that a nation should be compelled to pay such a price to regain its stolen treasures.

The termination of the new façade of the Duomo of Florence has given rise to a violent controversy—whether the triple façades shall be crowned by three cuspidal structures, as designed by Di Fabris, the architect of the admirable completion, or by basilical forms. The direction has most unfortunately yielded to the popular and ignorant clamor in favor of the basilical form, which will be out of keeping with the work already done. The taste of the Florentines has not in modern times distinguished itself, and in this case proves true to its bad precedents.

The completion of the official narrative of the war of 1870-71, published by the German Government, is the occasion of the issue by Count von Moltke of a circular to the German people, calling attention to the desirability of studying the conflicts sustained by Prussia in the middle of the last century, the results of which extended and assured the foundations of the German empire, and made possible the successful issue of the war of 1870-71. The wars of Frederick the Great will first be taken up.

The report made by M. d'Arbois de Jubainville of his mission to Ireland, undertaken, by direction of the Ministry of Instruction of France, for the purpose of studying Celtic manuscripts and documents, which originally appeared in the 'Archives des missions scientifiques et littéraires,' 3e ser., vol. 10, has lately been issued as a *tirage à part* under the title 'Rapport sur une mission littéraire dans les Îles-Britanniques.' The fruits of this expedition will be put to profit in the forthcoming second volume of the author's 'Cours de littérature celtique,' the first volume of which was published in 1883.

Henri Harrisse's important work upon Columbus, which will form volumes seven and eight of the 'Recueil de voyages et de documents pour servir a l'histoire de géographie depuis le XIIIe jusqu'à la fin du XVIe siècle,' is now in press. The archives of Genoa, Seville, and Madrid have been drawn upon, in the compilation of the work, which will probably constitute the most extensive and exhaustive treatment of the life and voyages of Columbus.

A recent African traveller, Gottlob Adolf Krause, has just published a sketch of the Ful or Fulbe, Pullo, Fellata language of Africa, with an interesting historic and ethnographic introduction on that nation, and some texts of the language. The Fulbe write their native language by means of the Arabian characters, but the author gives the transcription into Professor Lepsius's scientific or standard alphabet. The area occupied by the Ful people extends from the Atlantic ocean through Western and Central Sudan almost to the Nile and Abyssinia, and its surface equals about one-fourth of that of Europe. The tribes composing the race differ considerably in their exterior, especially as to complexion, but are gifted and intellectual people, whose states and kingdoms rival in power and extent those of many Asiatic nations of history. The formation of the Ful kingdoms on the middle and lower Niger River and east of it is of recent date, for the Ful emigration from their native country, in Senegambia, to these eastern parts is not older than the eighteenth century of our era.

Librarians who wish to have the complete works of Montesquieu must add to the edition of Laboulaye a little volume which will be printed to correspond with it at Bordeaux by the printer Gounouilhou. It will be edited by M. Céleste, Sub Librarian of that city, and will contain thirty-two unpublished letters of Montesquieu, with biographical and bibliographical memoranda relating to him. Among other things there will be a list of his writings, some of which are still in manuscript, it is not known where, but perhaps in the family archives. The letters were found in the papers left by M. Lamontaigne, the last perpetual secretary of the Academy of Bordeaux. One of them is particularly interesting. Montesquieu states that he is spending eight hours a day in preparing his 'Esprit des lois.' He enjoys seeing the work get on. "I am enthusiastic about it," he writes. "I am my first admirer. I do not know if I shall be the last."

A curious discovery has been made by M. René Kerviler, who has found in the Gaulish *mardelles* (conical excavations) on the lower Loire numerous projectiles of a cylindro-conical shape, like the modern rifled cannon balls. The same form, he points out, is to be seen on ancient monuments, and is used in some of the Polynesian islands. There is nothing new under the sun. The most careful and costly experiments of modern artillery practice only lead to the result reached centuries before by the barbarian with his sling or the Roman with his catapult.

—Two French libraries, the one curious, the other important, are analyzed in *Le Livre* for May. That of the Senate, which was newly catalogued in 1882, has undergone many vicissitudes since it was founded (in 1818: in Napoleon's time the Senate had little need of books). Among its many rarities is the trial of Gilles, sire de Rays, who was none other than Bluebeard Campan's MS. catalogue of the books of Marie Antoinette, preserved in the National Library, shows that there were many French, more Italian than in any other foreign tongue, and singularly few German; in English, nothing at all. Poetry abounded, but historical works numbered 184 out of 510. Mr. Van der Haeghen, who writes of this library, tells of the Queen's encouragement of music, and mentions her patronage of the superb quarto edition of the works of Metastasio. He might have pointed also to the name of "La Reine" at the head of the "Noms des Souscripteurs pour le Recueil des Airs, Romances et Duos" composed by J. J. Rousseau, in the posthumous quarto edition of 1781. But Rousseau is sufficiently celebrated in this number, having a whole article to himself from the pen of R. Chantelauze. His relations with Thérèse Le Vasseur are the theme of this very interesting summary of rare documents, and every Rousseau collector will desire to secure the accompanying full-length portraits of Thérèse and Jean Jacques—the latter in his common character of botanist. M. Chantelauze relates an amusing anecdote of his own rebuff at the former Hôtel de Saint-Quentin, in the rue des Cordiers, where Rousseau first met Thérèse. "We have no lodger of that name," said the concierge, "and you shall not go up," adding that she was tormented by disreputable inquirers for that person, who had left the premises many years ago, whom she had never known, and whose address she could not furnish. But M. Chantelauze dwells chiefly on the causes of this strange attachment, half dishonorable, half highly creditable to the man, with perhaps a trace of redemption for the woman in her sympathy with and kindly patience for his bodily infirmities—in the earlier part of their union, of course. The famous marriage is described from unfamiliar sources; and, valueless as it was legally, it must be allowed a moral dignity which evidently powerfully affected the witnesses. The question of Rousseau's death is again discussed, with the aid of Houdon's death-mask, and suicide by shooting is the conclusion reached.

—In this as in most other tests of the accuracy of the 'Confessions,' the result is favorable to the truthfulness of their author, whose intention clearly was to record facts as they were. That he saw them too often as through a glass darkly, is of course past dispute. A very interesting annotation upon the passage relating to the conversion of Mme. de Warens and her abandonment of her husband, in 1726, is printed in the *Revue Politique* for May 17, based upon a letter from M. de Warens to his brother-in-law, which has just seen the light in the *Bibliothèque Universelle* of Lausanne. The account given by the injured spouse is altogether plausible and consistent with what we know of his wife's character. The incident is invested with a certain amount of humor by reason of Mme. de Warens's prudent carrying off of the family silver, and her various shifts to allay suspicion as to her real designs. The whole chapter deserves to be bound up with the 'Confessions.'

—The *raison d'être* of Prof. T. W. Hunt's edition of 'Exodus and Daniel' (Boston: Ginn, Heath & Co.) is anything but obvious. We agree with the editor when he asserts that it is not "altogether gratifying to the pride of an ingenious American scholar that he should be dependent upon foreign sources for the best results in this department." But is the work which he has selected one sufficiently important to call for an American edition? Is he himself qualified for the self-imposed task? As to the first point, what we need is Wülcker's reëdition of the manuscript, and this should have been waited for. Besides, neither the 'Exodus' nor the 'Daniel' is suited to class-room work. They are not, as the editor supposes, specimens of "classic" Anglo-Saxon literature, but are both corrupt in language, and—the 'Exodus' at least—confusing in narrative and usually uninteresting. As to the second point, Professor Hunt's editorial qualifications, the less we say the better. Any one who classes Henry Sweet among the editors of "Middle English" and omits him from the list of great workers in "Earliest English" (see Preface), is hopeless. The student who can gain from pp. 8 and 10 any knowledge whatever of the Cædmon question must indeed be a prodigy. The text is carelessly given, sometimes the length of vowels being indicated, sometimes not. In this respect the vocabulary is even worse than the text. So far as we can determine, Sievers's Anglo-Saxon grammar is wholly unknown to Professor Hunt. No man familiar with Sievers's aim and method could have thus peppered his pages with First English, Earliest English, Middle English, Saxon, Anglo-Saxon, Gothic, and Teutonic.

—M. Louis Ulbach, having passed through Spain, has arrived at Lisbon, and expresses his content at that beautiful city, which has seen eighteen earthquakes and eight fires and yet is

not deserted by its inhabitants. They love it and would not have it other than it is. Unlike the people of Amsterdam, of whose canal and drainage projects M. Ulbach told us a year or more ago, the Lisbonese will not deface their lovely harbor with docks, but put off the scheme "á manhã," till to-morrow. M. Ulbach notes the absence of grass, whose loss to him more than counterbalances the luxuriance of tropical vegetation, and the cheapness of everything, though one's payments sound enormous, 400 reis an hour for a carriage, for instance, or 1,080 for a stylish equipage, the latter after all only four francs. He is amused by the custom of numbering not merely every house in the street but every opening, be it door or window, so that if the proprietor should take a fancy to divide his house he need not be driven to designate the new entrance by the old number with an A or a ½ added. He was amused, too, at the exuberance of invective indulged in by quarrelling porters, who took, nevertheless, very good care not to come to blows. We have seen the same thing related of London cabmen and of street people in China and Japan. But Lisbon is really a very quiet, peaceable city; the police are invisible. So are ours, for that matter, when they are needed; but they are not needed in Lisbon, according to M. Ulbach. There is a most complete liberty, of speech, of the press, of the theatre, of caricature. The King, the Queen, the Princes are ridiculed in prints that everybody laughs at when they are laughable, and nobody is prosecuted for any more than *Punch* is prosecuted for elongating Gladstone's shirt collars. M. Ulbach wonders and envies, and recalls his own condemnation under the Empire to six months of prison for having quoted from an historical dictionary authorized by a Minister of the Emperor a definition of the name Napoleon which the court thought disrespectful. He asks whether human nature is so very different in France and Portugal, and whether a little more liberty, or, indeed, complete liberty would not be as safe in Paris as it is in Lisbon. And he hints that the fracas made about the Prince Napoleon's proclamation was unnecessary and ill-advised. It may be, but a country where there is no strong party feeling is very different from a country where there are three parties hating one another rancorously, because each has suffered from the other, if not in this generation, then in the previous or the one before that, exile, confiscation, or death.

—A sentence from one of the letters of Thomas Chatterton to his mother in Bristol, written from his London garret and referring to what proved to be his last hope, is so appropriate to a recent interesting theatrical event in London as to seem almost prophetic. "Mr. Barrett," he wrote home, when he was trying as a last resource to obtain a situation as surgeon, "has it in his power to assist me greatly, by giving me a physical character." And Mr. Wilson Barrett has certainly assisted his memory greatly, and given him a new "physical character" of a most attractive kind, by his fine impersonation of the boy-poet in the new one-act drama called "Chatterton," by Messrs. Jones and Herman, the authors of the extremely successful "Silver King." The piece was produced at a recent matinée at the Princess's Theatre in London, and is announced for repetition, although it is hardly of a nature to be placed upon the regular programme. The scene is laid in *Chatterton's* garret at No. 39 Brook Street, Holborn—a miserable attic, containing only a table, a chair, and bed, with a window overlooking the roofs of London toward St. Paul's in the distance. The play begins with a clandestine visit of two ladies of rank to *Chatterton's* room. One of these, the *Lady Mary*, has received some anonymous love-verses which she suspects to come from the poet, whose passion she returns. Her suspicions are confirmed by a comparison of the handwriting of the verses with others lying on *Chatterton's* table, also addressed to her. Horrified at his poverty and privations, she leaves a letter and money under the papers on the table, bidding him keep up heart, and promising him love, honor, wealth, and fame. The landlady, *Mrs. Angel*, only just succeeds in getting her away before the poet returns. He rushes impetuously on the stage with the anxious question, "Has any one been?" Mr. Wilson Barrett is handsome and young-looking, and in his dark claret-colored clothes, with long auburn hair and pale face, he represented in a striking manner the proud, precocious boy of eighteen, in whom idealism and hunger were struggling for the mastery. The landlady keeps her promise to the ladies not to betray them, and the conversation which follows reveals *Chatterton's* ambitions and aspirations, his failures and disappointments, his longing for love and fame. "They are up there!" he exclaims of the latter, pointing upward, "and I am down here." No word has come in answer to his verses, so it is clear that the lady despises him. "Why not take a situation of some sort?" suggests the good-hearted *Mrs. Angel*. "I will," he cries, "but not such as you mean. It shall be the situation which we all must take ere long. You cruel, old world, with your selfishness and your money and your ease, I will thwart you yet. I will go and be with Milton and Shakspere and Chaucer." His landlady can make nothing of all this, so she leaves him with much good advice, and invites him to dinner. "Thank you, I am not hungry," is the instant reply, taken from *Chatterton's* biography, and made most effective by the sudden change of tone from piteous appeals and despair to dignified but kindly pride. Left alone, a monologue reveals still further the poet's state of mind, in which the passionate yearning for sympathy and success is yielding step by step to a convinced despair and its natural outcome—suicide. He picks from the table the latest verses he has written to the *Lady Mary* and reads them aloud. When, a moment later, in looking for tinder, he comes upon a bottle of poison, bought some time previously, his fate is sealed, and rather than face the "ribald, loveless, unashamed old age" of men like his drunken fellow-lodger, *Nat Boaden*, whose prescription of "four magic words, 'don't know, don't care,'" as a cure for all ills, he is quite unable to follow, he drinks it off. Devoting the remaining moments of life to "putting his house in order," he tears up his poems and strews them on the floor, and then suddenly discovers the message and the money of the *Lady Mary*. Overwhelmed with joy at the consummation of all his hopes, he forgets what he has done, and crying in rapture, "I come! I come!" he starts to go to her, when the poison takes effect and he falls upon the floor. After a very prolonged and realistic death-struggle he dies, tearing up her letter that she may not be made to suffer for his sake, and with his last look directed to the cruel city, over which the sun is just setting.

—As will be seen, the authors have introduced new scenes and motives into *Chatterton's* life, but the play remains essentially a monologue. The character of *Chatterton* is well conceived and the language is forcible and highly poetical throughout, but the subject is too painful and not sufficiently dramatic to become popular. Its chief interest lay in the opportunity it afforded Mr. Wilson Barrett for a display of new power and insight. Mr. Barrett's elocution is, to say the least, as good as that of any English actor; he has a fine physique, his acting is refreshingly free from mannerisms and sensational methods of any kind, and his rapid advance to the front rank of the profession justifies much hope of his future. What he now needs is a good play. This he will try to find in "Hamlet," which his company is rehearsing, if he has not already found it in the drama which Lord Lytton—if rumor speaks the truth—has placed in his hands.

—Among the various cases of similarity—which the outspoken call plagiarism—that have occupied the literary journals of late, we do not remember to have seen pointed out the resemblance between Hawthorne's "Birthmark," one of the tales in his 'Mosses from an Old Manse' (first published in 1846), and Paul Deltuf's 'Tragédies du Foyer' (published in 1868). Hawthorne's story, it may be remembered, is of a wife, exceedingly beautiful, but with one defect, the mark of a hand on her cheek, which is hardly noticed by her lover while he is wooing her, but attracts his attention and becomes his aversion after they are married. So completely does it occupy his thoughts that he determines to efface it, and subjects her in his laboratory to powerful influences that at last remove the mark, but carry with it her life. The groundwork of the French tale is the same: in both stories the lover overlooks the defect, and the husband sees it and grows more and more to hate it; in the one story the husband is a great chemist, in the other he consults a famous alchemist; in both the remedy drives away the defect, but at the same time extinguishes the life. And there is one similarity of detail that indicates a knowledge of Hawthorne on the part of Deltuf. In both the mark—on the cheek in one case, on the shoulder in the other—is on the left side. But if the Frenchman used Hawthorne's *motif*, he did not borrow his treatment of it or his style, and he is not by any means to be called a plagiarist. The French tale seems coarse beside the delicate handling of the American; the characters are unsympathetic, the satire is commonplace; the author is even reduced to use the supernatural. Hawthorne's hero reaches his aversion to the fatal mark through his own half-morbid musings; Deltuf's prince is brought to it by influences from without—by overhearing his courtiers' raillery and by the insinuations of his wife's disappointed rival. Hawthorne's story is much more a *tragédie du foyer* than Deltuf's, which is almost a fairy tale of a guardian angel, and a prince, and a court with its usual personages—usual, at least, in fairy tales and in plays—foolish courtiers, an envious beauty, and a pompous chamberlain.

—The Council of the Royal Astronomical Society have awarded the gold medal this year to Mr. A. A. Common, for his photographs of celestial bodies. President Stone, in placing the medal in Mr. Common's hands, remarked to the Society that their Council had been less influenced by originality in the methods adopted than by the great practical success which has attended the efforts of Mr. Common in this important field of astronomical research. He began with a five and one-half inch refracting telescope ten years ago, and from time to time enlarged his facilities for celestial photography, until in 1879 he was in possession of a great reflector of three feet diameter, whose superior character is well known in astronomy from its behavior in observing the moons of Mars and the fainter satellites of Saturn. Early in 1880 the first attempt was made to photograph the nebula of Orion, resulting in failure; and it was not until about two years later that a really fine photograph of the nebula was secured. Mr.

Common was among the first to obtain a photograph of a comet. His photographs of Jupiter and Saturn are described as being beautiful, and he has lately applied himself with success in the direction of obtaining photographic star-maps. President Stone called attention to the fact that Mr. Common is an amateur astronomer, and that the records of their Society are rich in the labors of amateur workers. The amateur who can provide himself with sufficient instrumental means for original research need fear no professional rivalry, and it is in work of this class that the most striking advantages in astronomy are to be expected.

—Dr. Th. von Oppolzer, of Vienna, has lately published an ingenious attempt to explain the well-known discrepancy between the observed value of the secular acceleration of the moon's mean motion, and that derived from the mathematical theory by Delaunay and Adams. This difference has heretofore been supposed to be accounted for, in an indefinite and unsatisfactory way, by the continued retarding action of the tides on the rotational velocity of the earth; but Oppolzer, accepting the now generally believed pervasion of interplanetary space by comminuted cosmical matter, proceeds to estimate the three-fold action of such matter on the motions of moon and earth. First, the masses of both bodies are continually receiving slight increments from the accumulation of this dust upon their surfaces. Second, a part of this increment of the moon's mass acts in such a way as to decrease its tangential velocity. Third, the continued deposition of cosmical dust on the surface of the earth changes its rotational velocity, affecting thus the apparent motion of the moon. All these effects are reduced to numbers, in the form of coefficients of terms in the moon's mean longitude multiplied by the square of the time, and by an unknown quantity which represents the thickness of a layer of cosmical dust which falls on the surface of the earth in a century. If this latter be supposed to be 2.8 millimetres, the entire discrepancy in the secular acceleration of the moon's motion disappears. And on the same hypothesis, the density of the medium surrounding the earth and moon is equivalent to the density of air divided by 3,760,000,000,000. Dr. von Oppolzer's paper will be found entire in No. 2573 of the *Astronomische Nachrichten.*

—A small but attractive collection of pictures by American artists has been opened at the galleries of the American Art Association, and besides some which we have seen in other exhibitions, has several new contributions of decided merit. A landscape by Charles Linford, No. 64, has a strong resemblance to the work of Mr. Inness in some of that painter's best points, but there is a wide distinction in manner of working. Mr. Linford's feeling for color is excellent, and in management of general effect, thoughtful and strong. He lacks firmness in drawing, and his forms are sometimes indicated with an indecision and uncertainty of line not easily explicable in company with so much excellent handling of detail. We imagine that a course of severe study in tree form with pen and ink would in a measure correct this defect, which is a serious drawback. Three heads of cherubs by the late George Fuller is a characteristic sketch by that poetical painter, slight, but exquisite in sentiment. A "Morning on York Creek," by Mrs. S. W. Whitman, is a pleasant color motive, painted broadly and with little reference to detail, but good as far as it goes. "Sunset—Early Winter," by Mr. Macy, is one of the best realizations of that oft-attempted motive that we have seen, tender in color and true in twilight effect; and "The Pasture Lot," by J. Francis Murphy, is in an excellent vein. "A Cornfield," by Hamilton Hamilton, is a study of especial interest in its peculiarly American subject, one, by the way, of the very few in which our landscape has a distinguishingly pictorial motive. "A Market Place, Venice," by Mr. Grover, is an honestly painted, excellent study of the material with which Venice abounds, truer in its light and effect of color than such things generally are. A small study of November, by George H. McCord, is attractive for its simplicity and harmonious tone; "A Winter Twilight," by MacEntee, is in his usual vein of poetic feeling; and a "Scout," by Leon Moran, resembles in its qualities his admirable "Vidette" in the Water-Color Exhibition. Mr. Boggs's "Old Houses on the Canal, Dordrecht," which was skied in the Academy exhibition, here shows all its qualities and proves to be a very noble work, large in treatment and subtle in color, without any of the meaningless bravura which we have had to blame in some of the younger adherents of the French school. Seen from the proper distance Mr. Boggs's picture is strong in realism and careful in execution. "A Quiet Haven," by Harry Chase, we were able to praise in the Academy, and it appears to still better advantage here. A brutal piece of realization, the motive of which is inexplicable, is a head of an old woman by J. Carrol Beckwith, called "My Model," a piece of bloated, disgusting humanity, painted well enough to be to the last degree repulsive, and with no attraction of art to redeem it. Such studies are not fit subjects for exhibition, however much they may amuse the painter. They should at least have humor or fine color to redeem them; this has neither.

MASSIMO D'AZEGLIO'S LETTERS TO HIS NEPHEW.

Lettere inedite di Massimo d'Azeglio al Marchese Emanuele d'Azeglio: documentate a cura di Nicomede Bianchi. Turin: Roux & Favale. 1883.

THE friends and relatives of Massimo d'Azeglio have done all in their power to supplement his 'Ricordi,' cut short by his death and ending where his political career began. Thus, we have a continuation of the 'Ricordi' by Torelli, his political correspondence edited by Rendu, his letters to Torelli, to Panizzi, to his second wife, Luisa Blondel, and lastly the recently published letters to his nephew, Emanuele. Emanuele d'Azeglio, son of Massimo's elder brother, Roberto, was always treated by his uncle rather as a brother than as a nephew, and the affectionate relations that existed between them are manifest on every page of these letters. In May, 1849, when Massimo became Prime Minister, Emanuele was Secretary of Legation at the Court of St. James, and through his uncle's influence was appointed Minister to England in August, 1850.

The delicacy and high sense of honor which characterized Azeglio are conspicuous in the allusions made to this appointment. For example, in October, 1849, he writes: "It is your misfortune to be the nephew of your uncle, otherwise I should suggest your name to the King; but people would say that I was pushing my family." In December of the same year: "Before falling back into the mob I will try to arrange your matters and have you finally made Minister at London, so that you can get besmoked at your ease." In announcing the appointment he says: "You see now that you have lost nothing by waiting. As for me this is the only reward that I ask for my services. I had set my heart on it, I have succeeded, and I wish for nothing more." He refused all offers of pension and decoration when he retired from the ministry, so that this was actually "the only reward" that he had for his services. At the same time Azeglio may well be absolved of nepotism, as his nephew continuously occupied the post of Minister to England for nineteen years; *i. e.*, seventeen years after his uncle's retirement.

The letters are one hundred and ninety-nine in number, and cover a period of twenty-four years (1841–1865). Almost all of them touch more or less upon political matters, and nearly half of them were written while Azeglio was at the head of affairs. While he appreciated the honor of being Prime Minister, his functions were always irksome to him, and at the first, during the vexatious and tedious peace negotiations with Austria, the strain upon his delicate nervous organization must have been very great.

One searches in vain, however, for a lapse from the gentle humor that pervades most of his correspondence. Not even Austria's ultimatum of July, 1849, could disturb his playful serenity. He writes:

"I send you Austria's astounding ultimatum. I have no time to add anything. And, indeed, what can I say? Evidently they want to crush us, or rather to sign peace at Turin and abolish the *Statuto*, or at any rate to impose such a peace as will make it a dead letter. Next will come alliance offensive and defensive with Austria, which will mean for these fine gentlemen of Paris having the Russians on the Pont Beauvoisin. It is well worth while to boast the name of France! Something very queer will come of all this. As for me, I have done all that lay in my power for my country's good; I am perfectly calm. For that matter I had rather fight than be forever at a desk."

Although France interfered in behalf of the Sardinian Government at this juncture, this did not enable Azeglio to carry his point of complete amnesty with Austria, and he was obliged to except eighty-five persons from amnesty. This was a grievous disappointment to him, but he consoles himself in characteristic fashion under date of August 10, 1849:

"If France refused us her aid in the matter of amnesty, we have got out of it all alone, which is still better. As for our successive concessions, concessions are common to all contracts. And if I did not present the question of amnesty as one of the chief questions at issue, it is because I only named those upon which I wanted advice. Amnesty is a question of honor, and on points of honor Piedmont only advises with herself. (Roll of drums.)"

Again, a fortnight later, he writes:

"After all it does not seem to me such a dreadful thing, eighty-five persons out of a population of five millions privileged to emigrate with all their goods and chattels, with the understanding that it is for the present, and with the assurance that they may return if they ask to do so, and it does seem to me that it was not such a very simple matter for us, so thoroughly mauled as we were, and with nothing but our own strength to rely on, to get even that out of those who mauled us. I assure you that our soldiers and peasants would have been very little disposed to let their backs be broken for the sake of eighty-five brethren; we had not a sou left, and nobody was willing to give us any unless peace was signed."

He had little hope that the Chamber of Deputies would ratify his treaty. In the same letter he says:

"The majority is the result of the intrigues of the *Concordia* (the organ of the Reds) and of Young Italy, and represents Piedmont as well as I represent the Grand Turk. I have no complaint to make of the attitude of the Chamber towards me personally, for it has always shown me good will; but things will not move on any the better for that."

Compelled finally to dissolve the Chamber and appeal to the country, he communicates the popular vindication of his course in these words:

"Here we are at the head of a majority of fifty, which will doubtless have to be trained,

but which, such as it is, none the less exists. I have avoided illegalities, *coups d'état*, edicts; and lo the King, the dynasty, the monarchy, the throne, the altar, and the whole jolly kit, without reproach, and with a fair and fine reputation for fidelity, well and duly attested. As far as I am concerned everything looks smiling, for I foresee the possibility of a seemly ending of my ministerial career. If things settle down to a normal condition I can surrender the reins to other hands, sing the *Nunc dimittis*, and become a free and independent man again. I shall have nothing left to me from my political career but a lively recollection of the most colossal bore that I have experienced in my whole life, and a pretty collection of grand cordons to adorn my person on grand occasions."

The personal and political relations between Azeglio and Cavour have been much discussed, but it is only since the publication of these letters of Azeglio's and of Chiala's 'Lettere edite ed inedite di Cavour' that Azeglio's disinterestedness and Cavour's ambition stand fully revealed in all their incompatibility. In April, 1851, Azeglio writes:

"Things are moving here. Cavour is expressly made to manage affairs and Parliament. But he is as despotic as the devil, and I, who don't fancy tyrants, was on the point of resigning the other day on account of Persano [Admiral Persano], to whom injustice was done. The matter is now settled for the better, but withholding my resignation was the greatest sacrifice that I have ever made in my life for the King and the country, and if I may tell you my idea, I do not propose to drag along a great while, as I do not see when I can ever get out of it, and I am now absolutely tired out, body and mind. All this to you, my trusty fellow, and let it go no further, for here it is a dead secret."

When Cavour abandoned him he bore him no ill-will. Witness several letters. In June, 1852, he writes: "You will soon see Cavour in London. Be as kind and attentive to him as you can. He is a man capable of serving the country and likes to be petted." In July, 1852:

"Cavour will arrive [in England] soon, or is, perhaps, already there. I am continually pondering how this trip may be made of use to him in the way of taming the colt and making him serviceable in harness for the car of state. Unfortunately, his chief defect consists in a love of domineering, which is to liberals with 100,000 francs income what holy orders are to priests; and at forty years, when one has been a spoiled child up to that age, conversion is difficult, all the more difficult if ambition be added, which is about as conspicuous among human passions as love, anger, and jealousy.

"You will say that I am amusing myself by drawing the portrait of my so-called competitor. But, as you know, he has no more zealous ally than myself, and I would gladly cut off a small bit of my person if, by so doing, I could fit him to enter into my political inheritance, and would pray that God might secure it to him for a hundred years. But after all it would be slow business—would require I know not what. But you take my idea, and who knows but your imagination may prove more fertile and find a remedy.

"For example, he will see Palmerston, Minto, Gladstone, and so forth. Couldn't you get up some sort of combination so as to beat into his head the fact that in this world, where we have to treat with people within and without, he cannot expect to make everything and everybody bow down to him as used to be done in the house of his father, the Marquis and *vicario;* that it is a very fine thing to talk well and to be ready with clever retorts, but that this faculty is only to be prized when used to support a serious and well-advised policy? I know that what I propose to you is a hard matter, and that the gentlemen that I have mentioned will not feel much like undertaking to skin the cat for us. But for all that, I wanted to give you my idea, and I leave it to you to carry it out as you think best."

In October, 1852: "I have seen the impious rival. I may be mistaken, yet methinks I read in his face that he hath projects, and that something is brewing." Something was brewing, and Azeglio's ministry fell. Soon after this Azeglio began to make preparations to visit his nephew. He passed about four months in England, returning to Turin the following June. The letters written after his return are full of references to England and the English, whom he as well as Cavour admired. He now sat himself down at his easel again with no lack of patrons, yet he seems to have had himself some doubt of the quality of his work, which was not of the best. He expresses this doubt in one of his letters with such ironical reference to John Bull's artistic taste that the passage is worth transcribing: "If I have formed a correct idea of the London planetary system, my pictures ought to sell there not because they are good, but because they are painted by an ex-Prime Minister." The King placed at his disposal a large room in the building of the Academy of Fine Arts, and here he took up his abode. While fitting it up he wrote: "Since I shall, in all probability, fall asleep with my fathers in this den, I am going to make unheard-of efforts to have it as comfortable and tasteful as possible." His words were prophetic, for he died in that very room.

The Government felt the need of D'Azeglio's name and influence in the negotiations which followed the Crimean war, but although he bore Cavour no ill-will for the unhandsome manner in which he had ousted him, he could not bring himself to accept a portfolio under him; at the same time he professed his readiness to render any other service in his power. January 29, 1855:

"The affairs of *Deus* and *Populus* are not going very smoothly. You have just escaped falling into my clutches again. Not one of the ministers was in favor of the treaty [the Crimean treaty] except Cavour. He came to me one evening and offered me the presidency of the Chamber and the Ministry of Foreign Affairs; but in the first place my health is not yet sufficiently restored to admit of my harnessing myself to such a cart. Then, all these embarrassers of my ministry and I are hardly made to pull together, so that I thanked him for the *high honor*, placing myself at the disposal of the Cabinet for anything else."

April 16, 1855: "They propose now to detail me for another duty almost as incomprehensible to me, and that is to pay you and Salvatore a visit. To what end? I don't know. . . . The idea has come into my head that the impious one [Cavour] wants, no matter how, to enroll me under his flag in a way to make the fact visible to the naked eye."

Six months later Azeglio and Cavour together escorted Victor Emmanuel to Paris and to England, and the reconciliation between them was complete. Emanuele was chagrined that his uncle did not represent his Government at the Peace Congress, as at first proposed. His reasons for declining to do so are given in his letter of May 16, 1856:

"Your lament that I did not go to the Congress does me too much honor; but all things considered I think it was better so. First of all, it is not true that I refused to go on a footing of equality with the Impious One. No such proposition was ever made to me, and I assure you that it was not a matter of *amour propre*. The fact is, that after having assured myself, as I supposed, that it was understood with France and England that we were to be admitted to take part with the rest, I discovered that I was mistaken. Now, I was not willing to wait in the anteroom, nor to be admitted on the strength of prayers and supplications. However, as the matter did not come to *buts* or *ands*, I must say that it was thought best for Cavour to go, and I was not urged to withdraw my refusal. Besides, I repeat, it was better for him to go. He is a man of finances, of stocks, of railroads—things that are at the top to-day. And, indeed, he has suddenly shown himself to be a man of capacity. He is younger, stronger, and above all, more stirring than I am, and has given things an impetus which I never could have given. He has, too, the gift of impudence, which at Paris more than anywhere else is the thing needful."

Less space is given to politics in his subsequent letters, and scarcely any reference is made to his third visit to England, whither he was sent on an important mission previous to the final struggle with Austria. Moreover, the intervals between the letters are longer, sometimes very long. Four of the great gaps were caused by visits which Emanuele made to Piedmont, but the others are probably owing to his literary activity at this period and to the comparative dulness of Italian politics for some time after the Peace of Villafranca. Garibaldi's Sicilian expedition, however, brought out his estimate of the famous Mazzinian. He cordially hated the master; what did he think of the disciple? "Garibaldi is an upright and most zealous man—more than that, he is a lucky man; but unquestionably he is a weak character, and hence is the tool of all the fomenters of discord." The enthusiastic reception accorded to Garibaldi in England four years later called forth a very bitter criticism of both Mazzini and Garibaldi, but from that and all the latest letters we forbear to quote. They show that age and ill-health had soured his gentle spirit and warped his views of men and things.

Many familiar yet less distinguished persons figure in these pages, from Ristori, who has graced the stage of every nation, to Dr. Pantaleoni, the "medico de' forestieri," as Azeglio terms him, at Rome, who is as much identified with Rome as the Colosseum or the Vatican. Like other Piedmontese, Cavour included, Azeglio wrote in French as often as in Italian, but unlike Cavour he wrote gracefully and easily in either tongue. The usefulness of this book would have been greatly enhanced by an index.

A FRENCH REACTIONARY.

L'Évolution politique et la Révolution. Par M. G. de Molinari, Membre Correspondant de l'Institut. Paris: G. Reinwald; New York: F. W. Christern. 1884.

THE great achievements of natural science have followed from experiments of the most abstract and apparently impractical and useless character. Measure the distance, for example, between Franklin's kite-string and key and the latest developments of the telephone and the electric light. So in subjects of the highest importance to man's temporal interests, the organization of government and society, there has been during this century a growing tendency to scientific investigation, carried to the most distant regions of the earth and the remotest periods of antiquity. And though the connection of theory and practice may be less obvious, and it may seem that the blindly conflicting forces are beyond conscious human control, yet if we consider (to take but one instance) how invariably every account of the French Revolution is preceded by a consideration of the writings of Jean Jacques Rousseau, any conscientious and industrious searcher may not unreasonably indulge a hope of exercising some influence upon the future of his country if not of his race.

M. de Molinari is the editor-in-chief of the Paris *Journal des Économistes*, and his studies seem to have taken the same direction as those of his professional fellow, the late Walter Bagehot, of the London *Economist*. But while Mr. Bagehot's book is the best practical text-book on the English Constitution ever written, and is indispensable to every student of politics, it discusses only British institutions, regarding others, and notably those of the United States, only as instruments of comparison; whereas M. de Molinari seeks as the basis of his discussion the fundamental principles of human nature and society. This comes in part, no doubt, from the well-known difference in French practice and modes of thought, but also from the fact that while the English Constitution exhibits a

gradual and more or less steady formation during more than five centuries, the French Revolution, notwithstanding all the efforts which have been made of late years to show that modern French institutions are a development from those of the old régime, did in fact, in a great degree, break with tradition and take its stand upon certain abstract principles of human nature on which its results still turn.

The basis of M. de Molinari's doctrine is very simple. Let nobody imagine for a moment, however, that it consists of the famous French dogma of "liberty, equality, and fraternity." Not the bitterest Tory that followed William Pitt could have held the phrase in more utter detestation. In fact, if we find ourselves wondering how a writer so intelligent and holding such a position can be animated with such reactionary fury, we may remember that during the period of civil conflict from the death of Charles the First to the battle of Culloden, a large and intelligent portion of English society believed that everything which had been done was wrong, and that the country not only ought to, but would, sooner or later, go back to the blessed time of the Stuarts. It needed a century of internal peace to form the average conservative into a being whom the Jacobite of 1745 would probably have regarded as an unprincipled and reckless radical. A half century of a peaceful republic might soften asperities, but at present a large minority, if not more, of intelligent opinion in France is bitterly hostile to everything like popular government.

Beginning with the time when the human race subsisted by hunting and fishing and upon the natural fruits of the earth, our author shows that among the first necessities was that of association in tribes for purposes of defence: externally against wild beasts and poorer and more warlike tribes, and internally against lawlessness and violence; and that every inhabitant might properly share in this, because the industry of government, like all others, had not become specialized, and the community was too poor to maintain a separate establishment. Then follows the period of what he calls the "small industry," when, through agriculture and the beginning of arts, wealth increased and the division of labor began. Occupations were specialized, and among them that of government, which fell into the hands of the strongest and most fitted to conduct it, and these were properly supported by the rest of the community. He argues that wars of conquest, like those of the Franks in Gaul and the Normans in England, were governed by the same principles as commercial enterprises; that by a process of evolution a "House," as in a monarchy, or a "society," as in an aristocracy, came to have possession of the government and ought to have it; that while both forms are liable to abuse of power, the safeguards are first in the interest of the rulers, who, being dependent upon the prosperity of their subjects, are certain to take care of it, and second (though this point is not made very clear), upon public opinion, which, as long as political power or influence was confined to the intelligent classes, was certain to bring about necessary reforms by a process of competition or evolution. This process, M. de Molinari holds, was at work under the French system of the last century, and would have succeeded as in England, if it had not been interrupted by the disastrous and wicked Revolution. There is not one word of the revocation of the edict of Nantes, or the events of the Regency and of the reign of Louis XV., as producing a sulphurous volcano, in which the least stirring of the materials must produce a violent explosion. The evil really consisted in placing power in the hands of an ignorant and vicious multitude, who could not themselves rule, and instead of being paternally protected by their natural and evolved rulers, were "exploited" by political parties and intriguers, so that their last state was worse than the first. It makes one stare to read that the French people were better off a hundred years ago than to-day, and to hear Arthur Young and Voltaire quoted in support of such a proposition. One might make a large discount from M. Taine's account of the "ancien régime"—and he is certainly no friend to popular government—without coming to any such conclusion as that.

Our writer has the courage of his opinions, and does not hesitate to condemn three other great errors of the century—the abolition of the slave trade, the abolition of serfdom in Russia, and land reform in Ireland. He thinks that the needs of modern government are more liberty for the intelligent and enlightened classes and more "tutelage" for the multitude. His ideas on the latter point are typified by his recommendation that the French Government should restore to the Catholic Church, in place of the present annual subvention, a capital sum represented by that amount of income and the real estate, "so far as possible," which it had at the Revolution. Upon the other point his ideas, though perhaps equally practical, are not so clear. He would have society, apparently, carried on by a number of corporations furnishing houses, streets, food, police, security, education, under a system of free competition, and looks with a sort of disdain even upon nationality, and would leave each individual—that is, of the requisite standing in society—free to live under whatever governing corporation suited him best.

We would not be understood as regarding this book with contempt. It may form an excellent mental exercise in connection, say, with the writings of Mr. Henry George. Only the reader of either, if he would not fall into hopeless pessimism, must have his own ideas clear upon certain points. We hear a great deal said about certain classes who, from intelligence, culture, property, birth, etc., are entitled to rule. But we do not learn from history that any such classes have made a special success of ruling: or that the rich and powerful are any less selfish, greedy of wealth and power, short-sighted, cruel, or quarrelsome than the multitude. On the other hand, we think that instances may be found in the last half-century where the national will in the United States, Great Britain, and even in France, as shown by the ballot, has manifested a spirit of the highest generosity, justice, and peace. As the tendency of the civilized world is clearly toward universal suffrage, so there is no reason to despair of the effects of this tendency. Only there is a difference between the disposition of the multitude and the means of putting that disposition into practice. In other words, it is a question of organization. Popular government is as yet but a century old. If it has made many mistakes, and is apparently working its way blindly onward, the part of wisdom is to look for the offset to those mistakes. Nor do we think that a refutation in detail of the book under review would be a matter of insuperable difficulty.

Woods and Lakes of Maine. By Lucius L. Hubbard. Boston: James R. Osgood & Co. 1884.

With the coming of the warm days of the year, certain persons, young and old, feel a turning of the fancy which is not catalogued in the Laureate's list of spring phenomena. An observer who should find one of them taking down gun and rod and examining them with fond criticism would see merely a readiness to replace the amusements of one season with the amusements of another, and might suspect nothing of the passion for the savage life which plays so large a part in the mental make-up of the devotees of the Adirondacks and the Maine woods. To such devotees, and to outsiders who wish to have a look into minds of this kind, Mr. Hubbard's 'Woods and Lakes of Maine' is much to be recommended. The book appeared at Christmas time, and is certainly handsome enough in illustration, printing, and binding for holiday reading. But by a Christmas fireside a house seems after all a better shelter than a tent, while in the new sunshine, or in leafy June, the old preference asserts itself, and the man who is waiting impatiently for the camping months has a ready welcome for such a picture of wood-life as this book affords.

Mr. Hubbard's 'Guide to Moosehead Lake and Northern Maine' (reviewed in No. 895 of the *Nation*) was written as a practical hand-book for campers, and it is very improbable that, since its publication, any man but an Indian or a guide has gone into the woods of the Moosehead region without a copy. The present book has for its purpose a faithful picture of every-day life in the woods, and is founded upon an actual trip from Moosehead to New Brunswick, by way of the Allagash and St. John Rivers, made by the author some years ago. The actors in the narrative are two well-known Indian guides (one of whom has since met a tragic death of a kind befitting a woodsman), Mr. Hubbard himself, and a friend: To this list of *dramatis personæ* one may fairly add a couple of canoes, for, in description and illustration, the canoe takes its true place in this book as a creature intermediate between the woods from which it came and the woodsmen whom it serves. This company of people, moving on from day to day, go through various adventures and various hardships and discomforts. For let it by no means be supposed by the uninitiated that life in a canoe is a luxurious thing. Lukewarm lovers of Nature had better not put themselves into a position in which they may be called upon to admire her on some autumnal morning with the thermometer in the neighborhood of freezing, a fierce sea running, and a frowning sky overhead. There is hardship enough to be faced, and, what is worse, much of it is of a dull kind That steady performance of daily work under no special excitement which life in town calls for is required in quite as high a degree in wood life. The packing up in the morning, interesting enough on the first day, has to be done many a time after it has become a mere task. Long carries and long paddles may bring one belated and weary to the camping ground chosen for the night, but the tent poles and the beds have yet to be cut and the rough ground to be made smooth. Long-drawn-out storms have to be lived through, while every shrub drips and the ground oozes beneath the feet. And, in all weathers, indigestibles have to be digested. It is fortunate that Nature thus guards herself. If she were always sunny and easy-going, her true lovers would have to leave the crowded wilderness and betake themselves to the seclusion of some depopulated Newport or Long Branch.

These harder and duller aspects of the camper's life Mr. Hubbard has interwoven with entertaining stories of adventure. And he has also been true to common experience in assigning a place in the picture to the good-natured grumbler, for there is hardly a camping party that does not contain him. But we confess to finding the real Mr. Taylor, as he betrays himself in the illustrations, a more enjoyable person than the Captain Sartor who replaces him in the

narrative. For, after all, as one looks back upon camping expeditions in after years, it is not the banter and the amusing mishaps of wood life that linger in the mind: it is the memory of the light which never was on sea or land, and yet which surely flashed across the waters as the sun came up one autumn morning, or looked calmly down upon us on some summer night lighted only by the stars and silent except for the slow lap of the water just outside the tent-door, or faced and awed us on some gray day of storm as we sat in the canoe and watched the coming of one great wave after another in which skill alone could live. Something of all this Mr. Hubbard succeeds in conveying. And if he does not wholly satisfy us, it should be said in justice that only a great poet could do so, and that, of all the poets, Emerson alone has done it, whose "Adirondacks" is likely long to remain the one record of camp life to which are added the consecration and the poet's dream. And this brings us again to Mr. Taylor. For Mr. Hubbard's little company afforded him one thing which even Emerson, in all his band of "scholars furloughed from their tasks," did not have at his service—a man who could render with the brush what he saw. Mr. Taylor's illustrations have made all lovers of canoe life his debtors. His sketches of the small typical incidents of camping are touched with a quiet humor and a keen sense of the picturesque, as, for example, "Lunch by the Way," "Bound for Mud Pond," "The Social Hour"; while the imaginative qualities of a few of the smaller pictures fairly go to the canoe-man's heart. The excellent drawing of the canoe itself, which conveys not only the obvious lines of the craft but that strange consciousness of its own physique and power which a fine specimen seems to have, is but a small part of the whole effect. In "Ready for the Start," Mr. Taylor has contrived to suggest the vague possibility of discovery which makes every new day of canoeing a voyage of adventure. "Up the Umbazookskus" has much of the dreamy desolation of the real place. "Among the Whitecaps" is full of the delight of steady pulse and strong arm in the midst of danger. And the charming thing in these sketches is that there is in no one of them any pressing of the point to be made, whether that point be the sentiment of a landscape or the humor of a situation. In "The Social Hour," for example, the rich enjoyment of the four men in their weary abandonment to the delights of rest and tobacco makes itself felt through faces of perfect gravity.

At Home in Italy. By Mrs. E. D. R. Bianciardi. Boston: Houghton, Mifflin & Co. 1884.

THE question of residence abroad, more or less permanently, becomes every day one of greater importance to Americans who are not well constituted to resist the peculiarities of our climate or social organization, and who have the means of escaping from the conditions of bread-winning on this side of the Atlantic. The refugees from the irreconcilable conditions of existence here who can adapt themselves to those of English life will always find in our mother-country a general *bien-être* which is unattainable in any other foreign land, and this not merely from the fact that the elements of material comfort are better provided, but because, except in England and Germany, no genuine hospitality toward a foreigner is to be found. "The guest is an enemy" is an adage generally true in Southern Europe. Only Italians who have lived in England have learned to look at a stranger as an object of welcome; in France there is less chronic aversion, but equally settled contempt, for all comers of alien race. Wherever, in fact, throughout all Southern Europe the foreigner does not meet with the cultivation and enlightened interest which come from intellectual sympathy, he is accepted for what can be made out of him. France is a great *auberge*, Italy a collective *locanda*; in the other countries foreigners are sent by the grace of the gods to be plundered. Occasional exceptions of hospitable, eccentric, and honest inn-keepers do not invalidate the rule.

In no country, however, speaking generally, is there so strong an antipathy to the foreigner as in Italy. The lower classes regard him as booty, as the wreckers on certain coasts do ships; the proprietary class with envy and antipathy, mitigated when they have villas to let, bric-à-brac to sell, or a hope of making money out of him in any other way; but at the bottom the typical Italian regards foreigners as people who come into the country simply to raise the prices of everything and insult the antique dignity of the heirs of the Roman civilization with suggestions of progress according to Western methods. An American resident in Florence was one day urging on an eminent Florentine, a Senator of the kingdom, the reformation of the drainage of the city, and at the end of his plea, the Senator, breaking into sudden irritation, replied, "We have been civilized twenty-five centuries, and don't need any of your Western teaching." There is no municipality in Italy which has considered it to its interest to make its regulations such as to render the residence of a foreigner more safe or more attractive. The Italian climate is one of the most salubrious in Europe. With the exception of the great marshy districts, the deserted plains of the Roman Campagna, and the Maremme and rice country of Lombardy, there is no district where the natural sanitary conditions are not more favorable than in our Hudson, Potomac, Mississippi, and other Southern valleys. The Campagna malaria, and that of the Maremme, terrible as they are in their rapidity and mortality, do not, to any extent, menace the health of the visitor, who need never enter those deadly districts; and should curiosity tempt him to go there, in certain seasons they are safe. The cities are pestilential solely from neglect of the same sanitary precautions which are required in London and New York, and they are worse than those cities only because they are more filthy. Florence, for instance, which might be made the most salubrious city in Italy, since there is absolutely no Campagna malaria in its neighborhood, has become by its wretched drainage the second in the death rate of all Italian cities, and bids fair to surpass Naples, which now heads the list. The drainage of Florence is in fact of the very worst type, and it is dangerous for a resident to denounce it on account of the personal hostility provoked by any declaration which would tend to keep away the visitors who, since the capital was removed to Rome, are the main resources of the city.

This topic Mrs. Bianciardi has not done justice to in her book. She says simply: "But without reference to the filthy condition of many of the great cities, all Italy is more or less malarious, and no motives of convenience should induce travellers to choose the lower stories of buildings for their habitation. It is better for an invalid to be always carried up and down stairs than to sleep on the lower floors. One is an inconvenience, the other a positive danger." Now this is utterly misleading. The lower stories, especially in Florence, are not more likely to produce fever than the upper, except as they are nearer the cesspools under the house, which, often leaky, rarely emptied properly, and always the source of the typhoidal and typhoid fevers, make three out of four houses in the city dangerous for people who are susceptible to malaria arising from this source. Mrs. Bianciardi, it is true, says that "the houses being mostly built around a court, it is of the utmost importance to know what are the ideas of the proprietor as to sanitary regulations; whether the drains are kept in good order, and the wells cleaned every year, and no nuisances allowed." But the drains are seldom kept in order, the wells are *never* cleaned (Mrs. Bianciardi perhaps means by wells the cesspools, which the Italians call "pozzi neri," to distinguish them from "pozzi," cisterns *or* wells), and the cesspools, although they may be cleaned once a year, are usually neglected until they become full and absolutely offensive; it must be added, too, that as the well of water for domestic purposes is generally in the court in the centre of the house, the cesspools in general drain more or less into the well. The "ideas of the proprietor as to sanitary regulations" are commonly that anything is good enough for foreigners, and that if they don't like things as they are, they may go elsewhere. Rome is improving in this respect, and is far more healthy than under the popes; but Florence has taken the place of the former as a sickly city, so that people who contract fevers in Rome or Naples and go to Florence to recuperate, often get into a house where the Florentine malaria finishes the work which the Roman fever began. The death is credited to Naples or Rome, but the chances are that the patient would have recovered in Rome, and had he gone to Albano or Ariccia, near by, would almost certainly have done so, at least if he were well enough to endure a journey as far as Florence at all. Mrs. Bianciardi, it should be said, does caution invalids against coming to Italy; but her warning is not sufficiently definite and frank.

With these qualifications, her little book will be a real help to ladies who intend spending a winter in Italy, and possibly to gentlemen also. The remarks in which she points out the folly and dangers of sending young girls to Italy alone are worth reading and pondering on; for the authoress speaks as a true matron. The chapter, "Italy as a Residence," is full of useful conclusions, the result of long experience, and that on "A Florentine Family in the Fifteenth Century" is interesting, and deals with material new to our general literature—the letters of Allessandra Macinghi, widow of Matteo and mother of Filippo Strozzi; but the chapters of travel read like compilations of a guide-book. Mrs. Bianciardi sees nothing new, and does not even describe well what is old; nor is she always accurate in her statements. She speaks of Vallombrosa as an agricultural school, although the sign on the converted convent shows it to be a *forestal* school, as the immense plantation of firs around might also have shown, and she cites Perugia as free from malarial influences, while, in fact, it is only so under certain conditions. When the wind blows from the marshy country, Perugians stay within doors if they can. There are blemishes of style, too, as when she describes the works of Perugino, Guido Reni, Alfani (*sic*), etc., as being "congregated" on the walls of San Pietro.

Account of the Operations of the Great Trigonometrical Survey of India. Volume IX. 1883.

THIS volume contains an account of the longitude operations of the Survey, carried on during the seasons of 1875–77 and 1880–81 by Captains Campbell and Heaviside, Royal Engineers. These operations were begun in 1872–73, but the work

done in those years was mostly of an experimental kind, and the results obtained were not considered satisfactory. As in the former volumes of this series, which contain the work of other branches of the Survey, all the arrangements and methods, as well as the observations, are given with a great deal of detail; and the reader will find that in the plans of operations, as well as in the methods by which they were carried out, there is much that is new and original, and many suggestions which could be adopted with advantage by the geodesian and practical astronomer. Among these may be mentioned the plan of choosing longitude stations so as to form a network of triangles, by which method an excellent check on the entire series of operations is obtained, since the longitude of any particular station may be derived, both directly and indirectly, through one or several intermediate stations.

In the operations to connect Bombay with Suez, via Aden, by means of the submarine cables, and then to refer the Indian longitudes directly to Greenwich (since the difference of longitude between Greenwich and Suez has been very carefully determined) the difficulties which arose in the way of transmitting the clock signals through the cables were successfully met and combated by means of an ingenious method devised by Captain Campbell, by which the signals could be transmitted and automatically registered without putting any more strain on the cables than was usual in the ordinary course of commercial business. Especial pains also were taken in regard to that factor which is so troublesome in longitude operations, namely, personal equation. An apparatus was constructed, called an "idiometer," by means of which each observer determined his *absolute* personal equation on every observing night. Nevertheless, the observers did not neglect the ordinary precaution of determining their *relative* personal equation.

To an American, trained in the methods of the Coast Survey and the United States engineers, the instrumental equipment and methods, both of observation and reduction, of the Indian officers seem unnecessarily cumbrous. Fixed-transit instruments of five inches aperture, clocks and chronographs of the largest and most complicated pattern, do not seem preferable to light portable instruments, chronometers, and small, easily-managed chronographs. Nor can the results of these Indian measurements be quoted to justify the establishment of a *fixed* observatory at every station. The work of the longitude campaigns is not up to the standard of the work done on the other branches of the Survey, and much of the error which manifests itself in the final results is undoubtedly due to the exceedingly cumbrous and complicated methods of making the telegraphic connections between two stations.

The method of observation which was adopted was that called in this country the method of "star signals," in which the same stars are observed at both stations and their transits over the respective meridians are recorded on the chronographs at *both* stations. From long experience, American astronomers have concluded that this method does not yield as good results as the determination of the difference of local times by means of the clock signals alone, and on our surveys it has long since fallen out of use.

The reader of the volume under discussion is forced to the conclusion that all the efforts made and pains taken by the Indian officers in regard to small sources of error, such as personal equation, retardation of signals through relays, and so forth, were unfortunately vitiated by the adoption of methods for carrying out their measurement which were not susceptible of the highest order of accuracy; for the results obtained do not compare favorably with some of the latest longitude measurements of the United States Coast and Lake Surveys. That the Indian officers themselves were not satisfied with their work may be judged from the fact that they have given no discussion of the probable errors of their results, simply contenting themselves with the remark that the mathematician who uses these will probably prefer to compute the probable errors for himself. Notwithstanding their limited accuracy, however, these arcs of the parallel will add a great deal to our knowledge of the figure of the earth.

Ralph Waldo Emerson: An Essay. By John Morley. New York: Macmillan & Co. 1884.

It is somewhat singular that the most intelligent praise of Emerson and the most just corrections of it should come from foreigners. In spite of the discontent which was vented when Mr. Arnold delivered what was thought his iconoclastic lecture, he really expressed a portion of American opinion; and now that Mr. Morley's essay is issued in this country, the same Americans who tacitly supported Arnold will find in it an echo of their own judgment. Mr. Morley, like Mr. Arnold, has felt Emerson's influence strongly, and he, too, must dissent from the inconsiderate eulogy of the true disciples; but when it is recollected that he has felt so much more keenly the influence of the French philosophers of the last century and the pessimists of the present, one can only wonder at the literary skill (far more dexterous than Mr. Arnold's) with which he has introduced his dissent, and admire the temper of it. Indeed, Mr. Morley has never done a finer piece of work in the way of mere craftsmanship than this brief essay, whether its construction or its effect on the mind be looked at. He has presented Emerson with all his attractive and regenerative qualities, and at the same time has noticed his deficiencies in one and another way so lucidly that even to the devotee they will not seem to blur his fame.

The one quality in which Emerson's excellence most resided was his sanity, and this appeals to his English critic with great force. Mr. Morley's mind has just that political character which allows one to understand the difficulty of Emerson's position as the high priest of a group of very queer people. Emerson had giddy work, he says, but he kept his head; and this wins respect from a practical man who is also zealous for reform. For the "queer people," on the contrary, Mr. Morley has slight regard. What he says of Thoreau is indicative of his attitude toward all of them:

"If he had not written some things with considerable charm of style, Thoreau might have been wisely neglected as one of the crazy. . . . The world has room for every type, so that it be not actively noxious, and this whimsical egotist may well have his place in the catalogue. He was, after all, in his life only a compendium, on a scale large enough to show their absurdity, of all those unsocial notions which Emerson in other manifestations found it needful to rebuke. Yet we may agree that many of his paradoxes strike home with Socratic force to the heart of a civilization that wise men know to be too purely material, too artificial, and too capriciously diffused."

The whole subject of the "midsummer madness" that environed Emerson is summed up, so far as this critic sees it, in the pleasantry of his remarks on the *Dial* and its editor:

"Emerson's name has reflected lustre on the *Dial*, but when his contributions are taken out, and, say half-a-dozen besides, the residuum is in the main very poor stuff, and some of it has a droll resemblance to the talk between Mrs. Hominy and the literary ladies and the Honorable Elijah Pogram. Margaret Fuller—the Miranda, Zenobia, Hypatia, Minerva of her time, and a truly remarkable figure in the gallery of wonderful women—edited it for two years, and contributed many a vivid, dashing, exuberant, ebullient page. Her criticism of Goethe, for example, contains no final or valid word, but it is fresh, cordial, and frank, and no other prose contributor, again saving the one great name, has anything to say that is so readable. Nearly all the rest is extinct, and the *Dial* now finds itself far away from the sunshine of human interest."

If we keep in mind Emerson's bearing among those who made up the constituency of the *Dial*, his insistence on the need of temperance in all opinions and of a constant reference to the actual state of established society, Mr. Morley seems only following the example of his hero even when making his sharpest deductions from the meed of praise. In the very mould of his thoughts are signs of the intimate influence arising from the recent study of Emerson; some phrases—as where he says that to Emerson books were "for spiritual use, like maps and charts of the mind of man," or remarks of the small Transcendentalist, "his landscapes are all horizons"—have the stamp royal of his master; but even when the author's criticism grows most keen and penetrating he does not seem to break his previous sympathetic relation with his subject—on the contrary, he merely affords a striking instance of that sanity or moderation which, as has been said, was Emerson's saving trait. There has been no more comprehensive criticism of Emerson's poems than this: "They are the outcome of a discontent with prose"; although it is justly added that this description does not include all the verses. The fact is that although Emerson occasionally exhibited the high qualities of pure imagination, giving to the purity of classic form the touch of modern sentiment and the glow of modern color, as for example in the often quoted lines—

> "O tenderly the haughty day
> Fills his blue urn with fire";

yet more often his most effective poetry is truth made crystalline, and this not for the sake of beauty primarily, but for its own sake. If one may say so, this is a sort of æsthetics of the intellect; it springs from a discontent with prose, it is true, and is more closely related to the literary faculty than to the purely poetic, but it also owes something to the mind's yearning for truth, as other forms of poetry have their sources in other aspirations. This phase of the matter Mr. Morley seems to have neglected. There is an inspiration of the moral sense that results in poetry as in the Scriptures, and there is, too, an enthusiasm of the intellect that can reach the same height; it is in these regions of emotion that Emerson's verse belongs. In other words, he is more prophet than poet, more Oriental than Greek, and consequently the comparison made by Mr. Morley between his work and that of modern English poets merely has too narrow a basis for just reckoning. At present Emerson's poetry is condemned beforehand in a doctrinaire way because it is at variance with ruling canons; it must wait a long while in order to be accepted under that name.

The stress of Mr. Morley's criticism, however, is not literary, but moral. At certain points of great importance no currents of sympathy can pass between his mind and Emerson's. It is with the conviction of an opponent that he points out the mysticism of his hero and its unsatisfactoriness, his predetermined optimism and its insufficiency. "The sombre melancholy, the savage moral indignation, the passionate intellectual scorn, with which life and the universe have filled strong souls, some with one emotion and some with another, were all to Emerson in his habitual thinking un-

intelligible and remote." This neglect of a large part of life, this wilful blindness to the evil, the ugly, and the cruel, is the one great limitation to the healthfulness of Emerson's influence on which Mr. Morley insists. On the other hand, Emerson was thus enabled to make himself an ideal of serenity in the midst of a fevered and anxious intellectual life. As such he is here presented with wonderful completeness, by the biographical, philosophical, and critical methods, so blended and related one to another as to give a various yet consistent impression.

Popular Songs and Legends of France. Die Französische Volksdichtung und Sage. Von Dr. W. Scheffler. Leipzig. 1884.

THE study of popular poetry, as has been well said by Schuré, is not simply the satisfaction of an idle curiosity: it is a study which enlarges the borders of one's sympathies and brings one intellectually in contact with the broad spirit of humanity. Herder, that wonderfully acute observer, was one of the first to see the importance of the study, and in his *Stimmen der Völker* he gave eloquent and comprehensive testimony to his individual beliefs and labors in this direction. The importance, indeed, of the subject is seen in the recovery and reconstitution of that amazing work, the Finnish Kalevala, one of the most remarkable monuments of the spiritual life of a whole people, snatched as by a miracle, almost within our own generation, from the lips of the people where it was perishing, and rehabilitated —reincarnated, one might say—by the efforts of a single lover of old songs. Béranger's well-known saying, *Mes chansons c'est moi*, is no less true of the individual than of a whole nation: the song is the nation, the nation is the song; each reflects and reacts on the other; the rivulet of melody that meanders slenderly through the one is the ultimate component of the complex and varied harmonies that stir in the other. In France this is particularly so; and nowhere is a study of popular life as revealed in the *chanson*, in the *poésie rustique*, more abundantly rewarded than in the rich and numerous collections which, during the last fifty years, have been made in France and Germany of these invaluable materials for the social history of old and young French life.

Herder gave the first shock to the electric chain, the first impulse to gather in this province, by the insertion of a few French songs in his collection. He was followed by that most delightful of ballad writers, Uhland, who in his turn was succeeded by a busy multitude, including Wolff, Moriz Haupt, Adolf Tobler, and Karl Bartsch, all of whom concerned themselves chiefly with the *lieder* and *pastourelles*, the ballads and compositions of the past. Paul Lindau, R. Köhler, and Charles Marelle are the scholars in Germany to whom the present age is specially indebted for its increasing interest in the many-sided modern development of French song and saga. Nobody can read the poems of Goethe without being struck by the penetrating tones, the lingering and melodious influences, the naïve and tender spirit which he has incorporated in them, in sublimated and etherealized form, from the old German ballads first taught him by his friend Herder; and in Arnim and Brentano, in Simrock, Scherer, and Heine, both as collectors and as original poets, the same far-reaching passion was kindled and perpetuated.

In France, Montaigne was specially potent in drawing attention to the deep and soulful character of the popular poetry; and every one knows what inimitable snatches of it bubble and sparkle up between the lines of Molière's comedies. Villemarqué, however, was the Brothers Grimm of France, the rescuer of innumerable songs that but for him might have perished forever. Émile Souvestre, the most graceful of Breton writers, and George Sand showed in their delineations of Brittany and Berry how intimately interwoven with the very texture of the national life was the *historiette* in verse and the *chanson;* and in 1852 Napoleon III. signed a decree directing a comprehensive collection of the poetic waifs and strays with which the empire literally swarmed. The *Knaben-Wunderhorn* was found to be as rich in good things on one side of the Rhine as on the other; and from that day to this hardly a season passes without a volume full of bright and winning and characteristic things from Gascony, Provence, the Bordelais, Normandy, or the northeast.

Doctor Scheffler, in his excellent and exhaustive book, writes in a German style that is very easy and very pleasant to read, because he writes from a full command of his subject, and knows how to leave the rubbish conscientiously to one side. His collection of French songs on all imaginable subjects might be recommended with advantage to the nerve-sick Hugoized school of Gallic poets, with their *esprit*, their declamation, their artificiality, their *angekränkelt* pulings; and contact with it, Antæus-like, might restore their vitality and give them a freshness which they have altogether lost. Under the rubrics *Liebeslust, Liebesleid, Verlöbniss, Hochzeitstag und -Brauch, Ehelieder, Kinder- und Rondellieder*, and *Das Festliche Jahr*, he gives us a world of graceful, piquant, and touching things, replete with the intimate life of contemporary France in the provinces, and abounding in vivid and diverse national traits. After reading such a collection, one can well understand how Goethe and Uhland both drank deep of the fountains of French song, and how Gretchen in her madness sings a refrain which came unmistakably from the French. The upper classes had their *poème chevaleresque*, the intermediate class had its *fabliaux*, but it was only the lower class that had the multifold and immortal *chanson* in which the throb of the universal heart was heard, in which the pleasure and the pain, the joy and the sorrow, the wooing, the wedding, the wedded life, the festal year, the chamber of death, the bier, and the grave itself were pictured, poetized, commemorated, sung.

Chapters in Popular Natural History. By Sir John Lubbock, Bart. Thomas Whittaker. 1884. Pp. 223.

ANY one already interested in the subjects of this little volume can scarcely fail to find it delightful reading, and those whose interest in these things needs to be awakened may profit by it also, though in less degree. Essentially "popular" in the simplicity of the form and character of its statements, it yet takes for granted a certain amount of information, and passes from one point to another with the utmost directness, and without thinking it necessary to indicate the path. There is little narrative, but such as there is—the occasional paragraph or page of "story," of *history* of ants, bees, or wasps—is of admirable quality, and as one reads one exclaims with La Fontaine:

> "Qu'on m'aille soutenir, après un tel récit,
> Que les bêtes n'ont point d'esprit."

These passages in themselves, in what they state and prove, are of great interest, and the interest is doubled by the illustrations they afford of Sir John Lubbock's well-known ability in experimentation. His brilliant ingenuity, his indomitable patience, and his success in this department of investigation frequently bring to mind his scientific kinship with Mr. Darwin. There is also a constant charm in the accuracy of his own observations and those which he uses of others, with regard especially to what he justly calls the "beautiful contrivances" of nature, and the evidences of the infinite interaction of all forms of life, and the "almost infinite variety of the problems they present to us."

But, as should always emphatically be the case in a work for popular use—and yet it is the very excellence in which so many of them fail—the large outlines are impressed on the reader's intelligence more than the details. But this has the air of being done almost without conscious purpose; it is only that these large outlines—the mountain ranges of *truths*—are not obscured by the mists of *facts*. The study of this volume would not go far to qualify one to become a teacher of its topics; but in treating of these topics it suggests innumerable regions for original contemplation and personal investigation.

With the first page one enters that world of sentient existence which lies in closest juxtaposition with the world of men—that visible, yet by most of us, that unobserved world of inconceivably multitudinous myriads in which each tiny organization is—can it be denied?—a *being*, an intelligence, an individual. If in certain aspects, not of this observable world of insects, but of the unknown universe, we do deny and must deny this intelligence, this individuality, in such moments of scepticism and denial it is scarcely to these, our fellow-creatures, alone that we refuse these attributes. And nowhere more than in Sir John Lubbock's pages is the conviction forced upon one that to be an ant, a bee, or a wasp is by no means, in the visible relations to the universe, a very unlike thing to being a man. With Marcus Aurelius we say: Dost thou not see the little plants, the little birds, the ants, the spiders, the bees working together to put in order their several parts of the universe?

The "little birds" have not come within the range of any observations Sir John Lubbock has communicated to the public; but the "little plants" have received for a long time attention from him; and the chapters in the present volume on flowers in relation to their fertilization by insects, and on insect-eating plants, and on the means of dispersion of seeds, are only less interesting than those on the "ways" of ants, bees, and wasps, and the colors of caterpillars and other animals.

Ueber die Musik der Nordamerikanischen Wilden. Von Theodore Baker. Leipzig: Breitkopf & Härtel. Pp. 82.

A FEW summers ago Mr. Theodore Baker made a visit to the Seneca Indians in the western part of this State for the purpo e of making scientific observations on the peculiarities of their vocal and instrumental music. The results he embodied in a dissertation which secured him the doctor's degree at the University of Leipzig. Mr. Baker is a thorough master of the intricacies of musical theory, as his pamphlet shows on every page. It is not intelligible to a wide circle of readers, and it would be useless to attempt to give a summary of its contents without a resort to musical notation. A few of the general results may be briefly mentioned. He found that in general the quality of voice of the average Indian was as agreeable as that of the average white man, while some had genuinely soft and pleasing voices. The average compass of the voices is two octaves. A high baritone prevails, and the author heard no one who was not able to easily produce the tenor *f'* For accelerando and ritardando and for dynamic *nuances* the Indians had no regard. Most of the songs are sung in unison; in exceptional cases no evidence is given of a sure harmonic feeling. The notion is refuted that our musical

notation is inadequate for an accurate reproduction of the Indian melodies, and that the scales may be compared in number and relation of intervals to the Persian and Indian, although in calling the latter "theoretisch-pedantisch" Mr. Baker does not show so liberal a sense as Helmholtz. In regard to the question whether among the Indians recitative or regular rhythmic song came first, Mr. Baker sides with those who believe the latter, one of the reasons being that recitative is not so well adapted for singing in unison, the common form. An interesting account is given of various customs of the Indians in connection with their musical performances. A paragraph is devoted to a description of the musical instruments used by the Indians, and the appendix contains a large number of illustrations in musical type.

The Disposal of Sewage in Suburban Residences.

By EDWARD S. PHILBRICK, M. Am. Soc. C. E.

This pamphlet is designed to give all the information necessary to enable the householder in rural districts, or where there are no sewers, to substitute for the foul leaching cesspool the cleanly, safe method of disposing of house wastes by distributing them through the soil, where they become an aid to vegetation and their noxious qualities are destroyed. Illustrations of tank and drain pipes are given, with full details of construction. For sale by all newsdealers. Price 30 cts. (1s. 6d.)

HERBERT SPENCER'S

Cyclopædia of Social Facts,

A System of Descriptive Sociology.

A work of great originality, enormous labor, and inestimable value, on the development of human societies. The wheat is here separated from the chaff of history. It treats of the Evolution of Forms of Government, General and Local; Industrial, Educational, and Military Institutions; Domestic Relations, and the Constitution of Families, Religious Systems, and Ecclesiastical Organizations; Ceremonial Customs; Useful Arts; Recreations and Amusements; Moral Sentiments, Ideals, and Practices; Æsthetic Cultivation; the Progress of Knowledge; and the Physical, Intellectual, and Emotional Characters of different Peoples in their varied conditions of Race, History, and Environing Circumstances. It forms a comprehensive basis for social and political science, free from all speculation, and is the most valuable work for consultation that has been published in the present century, and should be in every scholar's library, high-school, and college. It consists of eight parts, large folio, treating of the following races and communities:

I. *THE ENGLISH RACE.*
II. *THE MEXICANS, CENTRAL AMERICANS, CHIBCHAS, AND PERUVIANS.*
III. *THE LOWEST RACES, NEGRITTO RACES, AND MALAYO-POLYNESIAN RACES.*
IV. *THE AFRICAN RACES.*
V. *THE ASIATIC RACES.*
VI. *THE AMERICAN RACES.*
VII. *THE HEBREWS AND PHŒNICIANS.*
VIII. *THE FRENCH RACE.*

The price of the first seven parts is $4 each; the eighth (a double number) is $7.

TREASURE ISLAND. By R. L. Stevenson. A Piratical Tale of intense interest. $1 25.

"The Very Best."

MRS. LINCOLN'S BOSTON COOK BOOK.

With Illustrations. 600 pp. $2 00.

"Among all the cook books Mrs. D. A. Lincoln's *Boston Cook Book* will certainly take its place as one of the very best. It is published and arranged in a very convenient and attractive form, and the style in which it is written has a certain literary quality which will tempt those who are not interested in recipes and cooking to peruse its pages. The recipes are practical, and give just those facts which are generally omitted from books of this sort, to the discouragement of the housekeeper and frequently to the lamentable disaster and failure of her plans. Mrs. Lincoln has laid a large number of people under obligation, and puts into her book a large amount of general experience in the difficult and delicate art of cooking. The book is admirably arranged, and is supplied with the most perfect indexes we have ever seen in any work of the kind."—*The Christian Union.*

All booksellers have these books for sale. Mailed, postpaid, by the Publishers,

The Nation.

NEW YORK, THURSDAY, JUNE 19, 1884.

The Week.

MR. TILDEN'S letter is what everybody, who knew anything about his physical condition during the last three or four years, knew must come sooner or later. The talk of him as a candidate in which the newspapers, both Republican and Democratic, have been in the habit of indulging for some time, we have always regarded simply as a sign of a scarcity of topics. The conflicting reports about his health and strength it is difficult to account for, except by ascribing them to the ordinary play of the human fancy around an interesting subject of which but very few knew anything whatever. For several years Mr. Tilden has not been a gentleman whom any party could seriously present in the flesh to the voters of this country. It was, therefore, really in a spiritual and ideal sense that he was discussed. He has been in his own eyes and those of the Democratic rank and file, ever since 1876, a martyr to whom the party owed something by way of reparation, and the reparation has apparently consisted in discussions of his fitness. The letter in which he announces positively and definitively his retirement from the political field, is marked by great dignity and some not wholly unmerited self-praise. He did in his time a good deal for reform as Governor of this State, but he did it in his own way, and his own way of doing even good things is such as to cause those who are not familiar with it to look on his designs with great suspicion. He has always, in seeking even the noblest ends, preferred secrecy to openness, indirectness to directness, the crooked to the straight road, the whisper to the loud voice, and the result has been a reputation which is probably far below his merits as a statesman. The way in which he lost the Presidency in 1876 would doubtless have given him a strong and permanent hold on the sympathy of large numbers outside his own party but for the discovery that his friends had been fighting the devil with fire on his behalf and apparently with his connivance. The South Carolina cipher despatches and the Oregon negotiations were a dreadful episode in the history of a martyr, and must always rob Mr. Tilden's rôle in the contest of 1876 of the impressiveness and solemnity with which he not unnaturally wishes to surround it in the eyes of posterity.

His withdrawal of course leaves the field clear for the rapid development of the other booms, on which the talk about his candidacy has naturally exerted a blighting influence. The *Sun*, however, exhorts the promoters of these booms in what must be considered a dark and confusing manner. In one column the Democrats are reminded that they must "depend on themselves," inasmuch as the Republican dissatisfaction with the Blaine nomination, promising as it now seems, may die out, or lead to no practical result at the polls. In another column, however, it declares the question how the Democrats can best turn this Republican dissatisfaction with Blaine to account in making their own nomination to be "the most important question, perhaps." The Republican objection to Mr. Blaine, it says, is that he is a "corrupt politician, representative of all the political demoralization of a corrupted and debauched party," and that he "is also of a sensational and erratic turn of mind, unscrupulous as to his methods and uncertain as to his action." This is correct, and the way for the Democrats to turn it to account is to nominate a man who has given proof that he will be a pure and efficient administrator, whom the corrupt and debauched element in his party cannot influence or control, and that he will be sober-minded, scrupulous, and conscientious in his official action, and that everybody, both good and bad, will always know where to find him. But the assurances of party organs, however solemn and energetic, will not be accepted as such proof.

The Roswell Pettabone Flower boom will probably be seriously damaged by Mr. Tilden's letter. That his nomination will be demanded later in the National Democratic Convention by the loud acclaim of sovereign States as the "heir" of Mr. Tilden is improbable. He resembles that astute politician and sage in only one particular. He has a good deal of money, but even in this there is a difference, for he does not dislike spending it. He has no knowledge of the art of government, no training in law, letters, or any branch of knowledge, and his record in Congress is a complete blank. His qualifications for the Presidency are said to be that he began as a "poor boy," was then clerk in a store at $5 a month, worked in a brick yard, sawed wood, turned jeweller, and finally developed into a "financier," a broker and banker, and so became rich. This is not the kind of man for the Democrats to beat Jim Blaine with. He defeated Astor in a Republican district for Congress, because Astor had earned the ill will of the Republicans; but Jim is a harder man to beat than Astor.

The latest accounts from Saratoga confirm the view hitherto expressed in these columns that the Flower boom is made up by a union of those delegates who are in some cases Flower men in the sense of desiring the nomination of Mr. Flower for President, but who in most cases merely use his name as a cover for a fight against good government. There is probably not a jobber, nor a corruptionist, nor an office-broker, nor a dealer in votes, who is not counted as being for Flower, though some of them are, most unfortunately, masquerading as Bayard men. What Tammany Hall, and John Kelly, and all the Kellyites dread is Cleveland, as a man who does his duty and makes no deals or bargains, and it would suit their cards very well if they could divide the State between Bayard, Flower, and other candidates, so that the great enemy of their schemes might bite the dust. The plunder of New York is their business, and it would be no small aid to the party of reform and good government all over the country if the campaign should shape itself so that every vote cast for Cleveland should be a deadly stab at Kelly and his gang.

The Boston call for a meeting of Independents to protest against the Chicago nominations was all the more significant because it was couched in guarded language. It did not promise the Democrats that the signers would bolt the Republican nominees and vote the Democratic ticket; it merely called for a conference of all who think that the nominations ought not to be supported "in any contingency that now seems likely to arise." This call received at once fifteen hundred signatures, and it is these names which tell the story of the movement. In that part of the country from which the popular demand for Mr. Blaine's nomination came they are not so well known as they are in the East; in fact, it is Mr. Blaine and Mr. Blaine's friends and acquaintances at home in Maine who will probably be most struck by them. They are the names of the men who in Boston have best represented the conscience and intelligence of the Republican vote of Massachusetts for the past twenty-five years, and whose secession from the party means in that State its death. They are the names of men whose fortunes and affections have been bound up with the party for a generation; of men who would never leave it while alive except from being forced by what they believe to be their duty to do so, and who now threaten to do it unwillingly, reluctantly, and with many a pang of regret. They are the men who poured out their money and blood to save the Union; and the Republican party means to them country, honor, reputation, the sacrifice of their very flesh and blood, the glorious echo of historic victories, the tender memories of friends and kinsmen, who gave up their lives for the sake of justice and right. They are not men to whom the principles of the Democratic party have ever been attractive, and they have looked forward for a long time, with a feeling almost like dread, to the necessity that might be forced upon them of going over to it. Most of them would probably prefer to vote for a hopeless Independent ticket if such a course should become possible.

The drift of opinion at the Independent conference here on Tuesday was clearly adverse to the plan of putting a third ticket in the field, provided the Democrats make an acceptable nomination. What would be an acceptable nomination was indicated with sufficient distinctness by those who addressed the meeting, and by the favor with which their remarks were received. Governor Cleveland and Senator Bayard were the only names mentioned at the meeting, although others were included in the phrase "any unobjectionable nomination." Governor Cleveland was the preference of most of the gentle-

men present. Senator Bayard was the first choice of the minority, but either of these would be acceptable to the Independents as represented at the conference. The chance of an objectionable nomination was fully taken into account and duly provided for. In that event there was no division of sentiment as to the expediency and necessity of nominating a third ticket; and whether the Democratic nomination be acceptable or otherwise, there was entire unanimity in the opinion that an organization must be effected and a new convention or conference called after the Democrats shall have made their nominations, in order to give authoritative expression to the Independent opinion of the country, and to furnish a rallying point. The meeting was imbued with the spirit which precedes and ushers in great political changes.

The nomination of Mr. Blaine affects in more ways that one the Butler boom, and will compel the gallant old Massachusetts reformer to overhaul it carefully if he expects to be able to get it to Chicago in a marketable condition. His original intention, according to a widespread belief among conservative Democrats, was to capture the nomination for the Presidency. Going to Chicago as the favorite son of Massachusetts, and as the only man capable of pulling the party through an election in that State, and armed with the Anti-Monopoly, Greenback, and Labor Reform nominations, and threatening to set up an independent third party, if not a fourth and fifth also, for himself, he expected to be able to convince the Democrats that if they wanted a really popular candidate, he was the man. Failing that, he would make a bargain in which, in consideration of his hearty support of some one else in the national field, and especially in Massachusetts (where he would probably make everything sure by running for Governor), he would obtain "recognition" from the next administration, or or in other words a place in the Cabinet. The defection of the anti-Blaine Republicans, however, and especially their intention of supporting any respectable candidate the Democrats may nominate, but no other, upsets all these calculations, because it happens that the promised accession to the Democratic ranks is not only anti-Blaine, but is anti-Butler also. Few of those Republicans who hint that they want to vote against Blaine because he fails to represent the "reform spirit," want to vote for Butler, or to help Butler—in fact, to them Butler, though, according to his own professions, the greatest reformer of the day, is no better than an inflationist and a demagogue.

This is especially true in Massachusetts, where the old anti-Butler Republicans are just those who are now anti-Blaine Republicans. They drove Butler out of the party because they thought he failed to represent the reform spirit properly, or to come up to the standard required of our public men. This puts General Butler's position as a favorite son in some doubt. A Democratic candidate may perhaps carry Massachusetts this year; but it will be very dangerous to put up Butler, for that would disgust the anti-Blaine Independents. On the other hand, if General Butler endeavors to make a deal with his State, his carrying the State by running for Governor would be very doubtful, for many of the anti-Blaine Independents who would vote for a Democrat for President would be likely to vote against the General for Governor. His plan, therefore, of marketing his strength in the Convention is seriously embarrassed by the fact that the Independents hold the balance of power. General Butler, in order to meet the occasion, must once more reckon with the reform spirit, and he can only conciliate this by dropping many of the kind friends with whose votes he has set up shop, and a large number of his own so-called "principles." This he cannot do without losing strength to a degree which the ordinary rules of politics utterly forbid. What he will do with his boom under these circumstances remains to be seen.

General Butler arrived in town on Monday and promptly "interviewed" himself on the political questions of the day. The result appears in precisely the same language in several of the morning papers. He thinks Blaine's nomination is the strongest which could have been made; that the Independent revolt in Massachusetts is of small account; that Cleveland will be a weak candidate for the Democrats, because he vetoed the Five-Cent Fare Bill, and approved the measure which deprived the Aldermen of their confirming powers; that Blaine is a protectionist, and everybody knows that tariff defeated Hancock; finally, that it will not do for the Democrats to be defeated this year, for if they are it will be the end of them, and a new party, a "true Democracy," will arise from the débris of the old parties, and march to victory because it will form no entangling alliances with the "Mammon of unrighteousness." It will be seen that Butler stands squarely on Tammany's platform so far as New York issues are concerned. He mentions no candidate who is equal to the demands of the occasion, but there are symptoms that he would do so under pressure.

The Chicago *Tribune* and some other papers are republishing from *Harper's Weekly* of May 23, 1876, what they call a vindication of Mr. Blaine against the charges of the "syndicate of editors," who had accused him of receiving $64,000 from the Union Pacific Railroad Co. The editor of the Chicago *Tribune* having been a member of the syndicate, and having remained unconvinced of the falsity of the charge until Mr. Wm. Walter Phelps kindly explained it away a few weeks ago, naturally seizes with eagerness and without much discrimination anything which looks like a vindication. He does not observe that the so-called vindication in *Harper's Weekly* was published before the Mulligan letters came out, and that it was based for the most part upon Mr. Blaine's denial of the charge, which was subsequently shown to be at variance with the facts, at variance with Mulligan's testimony, and at variance with at least one of his own letters.

The National Bank of Commerce, of Cleveland, was found last week to be $100,000 "short." The deficiency was explained by Mr. Stanley, the paying teller, who said that he had lost the money through the decline in wheat. Whenever a bank loses money in this way there is always some strange story about the last investigation made by the Bank Examiner. In this case the story is stranger than usual. Mr. Ellis, it is said, actually found a deficiency of $15,000, and asked Stanley where the money was. "Here it is," said Stanley, "in gold, in this bag," handing Mr. Ellis a heavy bag. On what little things the fate of banks depends. If it had occurred to Mr. Ellis to count the money, or even to look into the bag, he would have discovered that it contained silver and that Mr. Stanley had told a falsehood. Investigation would have followed, his speculations in wheat stopped, and the bank would have been saved. It seems to us either that the bank examiners ought to verify statements made to them as to the contents of bags supposed to contain bank assets, or else the Government ought to make the depositors good in any case.

The fate of the Shipping Bill in Congress depends upon the disposition made of the clause relating to free ships—that is, to the admission of foreign-built steamers of a high class to American registry, and that relating to ocean mail subsidies. The free-ship clause was adopted by a very decisive majority in the House and was rejected by a very meagre majority in the Senate. It is stubbornly opposed by the protectionists, who are all the time making a great noise about the scarcity of the American flag on the high seas, but are shocked at the proposition of Mr. Austin Corbin to put the flag on half-a-dozen first-class steamers to run between Fort Pond Bay and Milford Haven in six days, if he is allowed to buy them in the cheapest market and in the only market where they can be produced.

There was a tremendous "scene" in the Senate on Monday between Mr. Ingalls, of Kansas, and Mr. Brown, of Georgia. The former charged, "in the most freezing manner possible," that the latter had interpolated in a speech which was printed in the *Record* a sentence which he had not spoken on the floor of the Senate, and proved his assertion by producing the manuscript. There were six words in the sentence, and they were simply a prediction that Mr. Ingalls, who had not made a certain statement in reply to Mr. Brown in debate, would not make it at any future time. They look very harmless in cold print, but Mr. Ingalls soon showed the Senate what a perfect arsenal of depravity they were. He could not tell whether they were "preternaturally prophetic," or whether they implied a "lack of courage or ability to reply" on his part, but he was sure they amounted to "falsifying and forgery," and that while he was "perfectly willing to submit to the daily fortunes of debate," he wished to be secure from the "Parthian arrows which a flying enemy may despatch from the safe ambush of the printing office." He closed by comparing Brown to a "Thug stabbing a sleeping enemy."

The two Senators lifted into public attention by this "scene" are entitled to dis-

tinction for other reasons. Ingalls, as the soldier's friend, has led the Senate Republican caucus into the extravagant folly of adopting his amendment to the Mexican Pension Bill. It is estimated that this bit of demagogue legislation will cost the country at least $275,000,000, but the anxiety of both parties to "catch the soldier vote" is so great that little opposition is likely to be developed in either house. Mr. Brown's strong point is opposition to anti-polygamy legislation on the ground that Massachusetts is a much more wicked community than Utah is. He delivered a scathing speech on this subject on Monday, to an empty Senate, and we are glad to notice that Senator Hoar had the good sense to attempt no reply to it.

All the more important reform measures for this city have become laws. None of the Roosevelt bills were lost, except that relating to the Bureau of Elections, and that was defeated, not by the Democratic Governor, but by a Republican Legislature, under the leadership of Johnny O'Brien. The amendment to the Civil-Service Act, making its provisions mandatory upon the mayors of all the cities in the States, was approved by the Governor. This of itself is a triumph for good government sufficiently great to make the year a memorable one. In his action upon the city bills the Governor has incurred the disapproval of partisans of both political parties. The O'Brien Republicans charge that in vetoing the Tenure of Office Bill he has acted in the interest of Commissioner Thompson. The County Democrats and anti-Blaine Republicans cannot understand why he signed the amendment to the civil-service reform act which exempted the present Bureau of Elections officers from the regulations of the law. We had hoped that he would see his way clear to vetoing this measure, but the fact that whatever partisan advantage there may be in the exemption will be directly against the Governor's political interest is good evidence that he acted in this, as he seems to have acted in all other matters, in a thoroughly impartial and judicial spirit.

The Naquet Bill to legalize divorce in France will doubtless attract a good deal of attention in Indiana and other Western States, though they have nothing to learn from "abroad" in this matter, and have, in fact, completely "swung round" the matrimonial circle, and reached the point at which they begin to look on divorce legislation with suspicion. In Evansville, Ind., a man is trying to get a divorce on the ground of cruelty, his complaint being that his wife prays daily that he may die, and he is afraid her prayer will be answered. Refined cruelty of this sort would probably be a good cause if it were practised on a woman, and if the sexes are equal, why should not a docile, timid husband be divorced for the same reason? The new school of anti-divorce reformers would probably say that a man who could not prevent his wife frightening him in this way was a poor creature; that the proper course for him would be not to take his troubles into court, but to tell his wife to "shut up" or "dry up," or give him a "rest," and if this failed, to use other means. But should the public opinion of a humane and civilized State recognize the utility of such weapons by Man against Woman? We commend the case to the attention of all thoughtful girls and timid men.

That stanch organ of orthodox religious opinion, the *Mail and Express*, takes the same view of Col. George Bliss's conversion as that expressed in these columns. It regrets that any of its contemporaries should speak "sarcastically or in a trifling way" of the event, denounces all such references as "ill-judged, unjustifiable, indecent, and anti-Christian." The official account of the conversion given in the *Sun* showed that it was, as all true conversions must be, involuntary, the Colonel having met and been fairly vanquished in "a fight of mind and argument" with Monsignor Capel, who was sent over by the Pope for the express purpose of bringing back to the Church distinguished and wealthy Protestants. He made a gallant fight, but he was beaten by the prelate's inexorable logic, and his immediate announcement of the fact is a brave and manly act, characteristic of his Stalwart principles and training. A Half-breed or "Judas" would no doubt, in his place, have made a secret "deal" with the Pope, while pretending to maintain his connection with the Protestant body.

The evidence in the Sharon-Hill blackmail case will not bear much quotation, but it has led to the publication of an interesting interview with the ex-Senator on the subject of his son-in-law, Sir Thomas Hesketh. He says that it cost him $10,000 to hunt up Sir Thomas's "record" in England, and it turned out to be that of a "thoroughbred." This is rather surprising, for usually a record that takes $10,000 to hunt up turns out pretty bad. "But," said Mr. Sharon reflectively to a by-stander, "it would have been a jolly idea if Hesketh had concluded at the same time to hunt up mine, eh?" There is a hint in this for an international study by the novelist of the future. A novel with the English lover hunting up the record of his intended American father-in-law, while the latter is doing the same for his, followed by negotiations, with a view to a matrimonial alliance, in which the demands of either side are abated by threats of unpleasant disclosures on the other, would be a taking tale.

Leon Dishowan and Pete Lewis, at Hot Springs, Arkansas, last Sunday had a misunderstanding over the right claimed by both to escort the minister's daughter home after church. This is a matter which often causes trouble between young men, but in the North it is usually settled out of church. In the more impulsive South, however, it is hard to wait for the benediction. While the sermon was in progress of delivery Lewis went quietly into the young lady's pew, whereupon Dishowan, who was there already, pulled out a revolver and opened fire. Lewis was ready with his pistol, and at once replied. The firing alarmed the congregation, which dispersed hurriedly through the doors and windows. The young men were disarmed, probably by the clergyman, who, as parent of the young lady, had to remain and see that the fighting for her was fair, and they agreed to have it out with fists. The clergyman's daughter, however, in a moment's private conversation with Lewis, quietly but firmly placed a derringer in his boot-leg. A moment later Dishowan lay stretched on the floor of the sanctuary shot though the lungs.

The development of coliseums has now been for many years an important feature of the national life, and there is probably no large city, East or West, which has not at one time or another had one—for the modern coliseum, unlike that of the ancient work, is as often as not a temporary structure, erected under a lease, "with privilege of removal." A wooden coliseum, holding from five to ten thousand persons, is just the place for a panic and a frightful loss of life; but we believe the precautions usually taken against this danger are very great. The Minneapolis coliseum, on Thursday, at any rate stood the test very well. It was struck by lightning and took fire while six hundred children were on the stage and the house was crowded. There was a terrible panic and a stampede; but the fire was put out, after half an hour quiet was restored, and it was then discovered that, except for a few bruises, no one had been hurt. It is only fair to say that a heavy storm of rain helped the firemen to extinguish the flames. National Conventions are held in buildings which resemble coliseums, but their proceedings are so often such as to invite the wrath of heaven, that we believe they are now always provided with lightning rods as well as a carefully drilled fire-service.

The Parliamentary elections in Belgium have resulted in a signal triumph for the Ultramontane party. Although the Chamber of Deputies consists only of 132 members, elected for four years, and only half the number of seats is subject to a change in the biennial elections, the Liberals have lost upward of twenty seats. They have besides been beaten in their main stronghold, the capital. The Cabinet of Frère-Orban, which has governed the country since 1878, and has almost constantly been engaged in an envenomed struggle with the Clericals, will now probably make room for an ultra-Catholic Ministry, and the first change in the policy of the kingdom will be the restoration of diplomatic relations with the Vatican, whence the Belgian legation was withdrawn in 1880. To this effect Pope Leo XIII. has already made the first advance by instructions to his representative in Brussels to open friendly negotiations. The most important object, however, before the new Government will be a complete reversal of the anti-clerical educational policy which has prevailed for years. The question of secular or clerical education has been the chief issue between the two great parties in Belgium almost since the creation of the Kingdom, and never has the contention between them risen to a more intense degree of passion and hostility than during the administration of Frère-Orban, nor have the mutual provocations been more galling.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 11, to TUESDAY, June 17, 1884, inclusive.]

DOMESTIC.

A LETTER from Samuel J. Tilden to Daniel Manning, Chairman of the Democratic State Committee of New York, dated June 10, 1884, was published on Thursday, in which he absolutely refused to be a candidate for President. In the course of his letter he says: "I ought not to assume a task which I have not the physical strength to carry through. To reform the administration of the Federal Government; to realize my own ideal, and to fulfil the just expectations of the people, would indeed warrant, as they could alone compensate, the sacrifices which the undertaking would involve. But, in my condition of advancing years and declining strength, I feel no assurance of my ability to accomplish those objects. I am, therefore, constrained to say, definitely, that I cannot now assume the labors of an administration or of a canvass."

In the Texas Democratic State Convention on Wednesday, resolutions were passed declaring that a tariff for protection is unconstitutional and unjust, and conflicts with the genius and spirit of a free government. The present tariff is denounced as a scheme for the protection of monopolies, and a masterpiece of injustice and false pretence. The Convention was in favor of the old ticket, and much disappointment was caused by the receipt of Mr. Tilden's letter.

At a meeting of the Connecticut delegates to the Chicago National Democratic Convention held on Friday in Bridgeport, the general expression as to the choice of a Presidential candidate was for Cleveland.

On Tuesday the delegates to the State Democratic Convention were gathering at Saratoga. The sentiment seemed to be in favor of Governor Cleveland as a Presidential candidate, but Mr. R. P. Flower has a number of enthusiastic supporters. The Convention meets on Wednesday.

At Saratoga on Tuesday night, at the meeting of the Democratic State Committee, Tammany made their demand for equal representation with the County Democracy and were refused, 15 to 19. They will go into the Convention the same as last year, with 24 votes, the County Democracy being allowed 38 votes, and Irving Hall 10. The fight will be renewed before the Committee on Credentials, when appointed, and Tammany threatens to send a bolting delegation to Chicago if their request is finally denied.

About 1,500 names of Republicans and Independents were signed to a call which appeared in Boston on Friday morning for a meeting in the afternoon to protest against the nomination of Blaine and Logan. Among the signers were many of the most prominent and influential men in that city.

When the hour arrived for the meeting, the original place chosen, the dining-room of Young's Hotel, was too small, and an adjournment was taken to a neighboring hall which was crowded to the doors with representatives of the best men in Boston, in all walks of life. Henry L. Pierce called the meeting to order, and stated clearly its object, committing it fully to a bolt against the Republican ticket. Colonel Charles R. Codman was elected Chairman, and in his speech said that "the meeting had been called by practical men for the practical purpose of preventing the Republican party from being historically responsible for the record that is written against the candidate of the Chicago Convention." Speeches were made by the Rev. James Freeman Clarke, Thomas Wentworth Higginson, President Eliot, of Harvard, and others. Resolutions were adopted setting forth that Blaine and Logan had been nominated in absolute disregard of the reform sentiment of the nation; that the country will be better served by opposing than supporting them; that the coming nominations by the Democratic party are looked to with solicitude, in the hope that the proper candidates will be named; that an Executive Committee of 100 should be appointed with full power to act; and that they be directed, whatever action is taken by the Democratic party, to call a convention before August 1st to take further action. There was a slight opposition to the mention of the Democratic party in the resolutions. A delegation of twenty-five was named to attend the conference of Independents in New York on June 17th.

Mr. Theodore Roosevelt, the young Republican reformer of this city, has been represented in a St. Paul despatch as saying that the Republican platform is admirable; that he would not bolt the ticket; that he has no personal objections to Mr. Blaine; that Mr. Blaine will sweep the West and Ohio, carry all New England, and not impossibly carry New York. He is now in Dakota. In reply to an inquiry, on Thursday, he sent the following despatch: "To my knowledge had no interview for publication; never said anything like what you report. May have said I opposed Blaine for public reasons not personal to myself." On Monday he telegraphed a more emphatic denial.

The Senate was in secret session on Wednesday over a mysterious addition of $230,000 to the Consular and Diplomatic Appropriation Bill, to be expended by the President, at his discretion, in maintaining the neutrality laws. Just what this meant was not known until, when the Senators came out of secret session, Mr. Van Wyck, who was opposed to the secret proceedings, moved an amendment providing that no part of the $230,000 shall be used, directly or indirectly, for the purchase of concessions for a canal in Nicaragua. The secret session was then hastily resumed. On Thursday the bill was passed with the appropriation included. The whole appropriation is $8,000,000 greater than in the bill reported to the House.

The treaty which has for some weeks been under consideration in the Senate Committee on Foreign Relations providing for an international copyright and patent system, and which has already been ratified and promulgated by twenty-four governments, was on Thursday night reported adversely by the Committee to the Senate, and after a brief discussion in executive session, was rejected. The position was taken that its ratification would involve radical changes in the American system of patent and copyright laws, while the benefits to result would be very small.

In the Senate on Monday the Army Appropriation Bill was reported. It appropriates $24,539,450, being an increase over the House bill of $295,000 and a decrease from the estimates of $2,350,653.

During the proceedings of Monday Mr. Ingalls (Rep., Kan.) called Mr. Brown (Dem., Ga.) to account for having interpolated certain words in a speech of his (Brown's) in the *Record* which were not spoken, "thereby," said Mr. Ingalls, "falsifying the *Record* and committing a forgery upon the records of the Senate." Mr. Ingalls's remarks were so pointed that he was called to order. The dispute was continued on Tuesday, when Senator Brown rose to a question of privilege, and proceeded to excuse himself for the interpolations complained of, and assured the Senate that he had spoken the words alleged to have been interpolated, but that they had been left out of the official report, because, as he supposed, the stenographers had been unable to hear him. Senator Ingalls reiterated his charges with considerable warmth, and said he would not confine his critical remarks to the Senate. A motion to expunge the interpolated words of Senator Brown from the record was finally laid upon the table.

The Senate Appropriations Committee has agreed to recommend a final adjournment on July 3.

The Republican Senators held a caucus on Monday upon the Mexican Pension Bill. The Ingalls amendment proposing to remove the limitations of the Arrears of Pensions Act was so modified as to extend the provisions of the Arrears Act only to cases filed before the 1st of next January, and in this shape it was approved by a majority of the caucus.

The House of Representatives on Thursday struck out the clause in the River and Harbor Bill which appropriates $300,000 to begin the Hennepin Canal.

The House Commerce Committee on Friday decided to report favorably the bill to authorize the American Express Steamship Company to purchase steamers abroad for carrying passengers between Montauk Point, on Long Island, and Great Britain. The bill provides that not less than five steamships shall be constructed at a cost of $1,250,000 each, and of 7,000 horse-power, and capable of making at least eighteen knots per hour, and that the American register shall be granted to them.

The House on Saturday agreed to an amendment to the Post-office Appropriation Bill increasing the Senate amendment of $185,000 for special mail facilities on trunk lines, to $250,000.

In the House on Tuesday Mr. Slocum presented the conference report on the Fitz-John Porter Bill. The effect of it is to insert the words, "Provided that said Fitz-John Porter shall receive no pay, compensation, or allowance whatsoever prior to his appointment under this act." The report was agreed to—yeas 158, nays 61.

The House Committee on Appropriations offered as an amendment to the General Deficiency Bill a clause providing that no official, employee, or person receiving money from the Government for any service, shall contribute any money to any person or party for political purposes. Any person violating this clause shall be deemed guilty of a misdemeanor, and subject to a fine of $5,000, or imprisonment for three years, or both.

The House Ways and Means Committee on Tuesday agreed to report favorably on Mr. Hewitt's resolution to ratify the reciprocity treaty with Mexico.

Richard T. Merrick, one of the Star-route counsel, was before the Springer Investigating Committee, at Washington, on Friday and Saturday. He said in the course of his testimony: "On one or two occasions Mr. Bliss said if we had Dorsey out of the case we could easily convict the rest. I had my own opinions and impressions. I knew Colonel Bliss bore close political relations—and thought, personal relations — with Dorsey. While I did not believe Colonel Bliss would be delinquent in his duty, in his heart he did desire that Dorsey should not be convicted. I know of nothing that Bliss did in the trial to protect Dorsey. He made no proposition to me that Dorsey should be allowed to escape."

John W. Foster, Minister to Spain, who has been on a visit to this country and who returned on Saturday under sealed orders, denies that his mission here was to consult with our Government as to the purchase of Cuba. He says Spain would not dispose of Cuba at any price.

Governor Cleveland left unsigned on Saturday night 140 bills passed by the recent Legislature. The thirty-day limit having expired, these measures are dead. Two important New York city reform bills were left unsigned on account of their faulty construction—the Park Department Bill and the Tenure of Office Bill.

Isaac A. Stanley, paying teller of the National Bank of Commerce of Cleveland, O., was arrested on Wednesday evening for embezzling $100,000 of the bank's funds. He confessed the deed.

Commencement exercises were held at Columbia College and Vassar on Wednesday, and at West Point on Saturday. Baccalau-

reate sermons were preached at Princeton, Harvard, Brown, and Cornell on Sunday.

Eight men were killed and a great many injured by a collision on the Camden and Atlantic Railway, near Ashland, N.J., on Saturday morning, between accommodation and excursion trains.

Hiester Clymer committed suicide at Reading, Pa., on Thursday, aged fifty-seven years. He was a lawyer by profession. He served in the State Senate six years, was Democratic candidate for Governor against Geary in 1866; and served in Congress from the Berks district from 1873 to 1881.

Col. Edward R. Pratt, Adjutant-General of the Department of the Missouri, died at Leavenworth, Kansas, on Tuesday. His record during the war was notable, and he was promoted rapidly for bravery at Bull Run, Fort Pickens, and Fredericksburg. He was Judge-Advocate of the Army of the Potomac from 1863 to 1865.

FOREIGN.

In the House of Commons on Wednesday Lord Edmund Fitzmaurice, Under Foreign Secretary, said that the report which reached London of an extensive massacre at Berber on June 1 was difficult to believe. His reason for this attitude was the fact that a messenger who left Berber on June 3 reported that just before his departure he had seen Hussein Pasha Khalifa, the Governor, who was among those alleged to have been slain.

Lord Edmund Fitzmaurice stated in the House of Commons on Monday evening that the Government had received a despatch from Cairo, from which there is reason to believe that the messengers who reported the fall of Berber were unreliable. He added, however, that General Stephenson, commander of the English forces in Egypt, and General Sir E. Wood, now believe that Berber has fallen.

The London *Times* on Wednesday night received a despatch from its correspondent at Wady-Halfa. According to this, Berber surrendered twelve days ago, and the reports of the massacre that had already been received in London were true. The correspondent had been informed that the rebel General Abaul has collected 100,000 men around Berber. After the fall of Berber 30,000 Arabs were sent to invest Dongola. The Governor of Dongola was ignorant of the surrender of Berber, and telegraphed to Wady-Halfa that no news had come down the river.

Egyptian advices on Saturday stated that an Arab had arrived at Korosko who claimed to be the sole survivor of the Berber garrison. He says he was present when the rebels attacked Berber on May 23. The garrison defended the town for two hours of severe fighting, but the rebels were too strong for them, and forced their way into the city, where they immediately massacred the 1,500 men of the garrison and 2,000 of the male population. The women and children were spared.

Advices from Berber, received on Monday, reported that Hussein Pasha Khalifa, although seriously wounded, had been saved from death.

The reported fall of Berber has caused great excitement at Assuan, but the patrolling of gunboats tends to reassure the natives. It is believed in official circles at Cairo that Khartum is safe.

The Governor of Dongola on Thursday telegraphed to Cairo that El Mahdi had been crushingly defeated by the Takalla tribe.

El Mahdi was reported on Saturday to be marching toward Dongola with 35,000 troops. He hopes to capture that town before the feast of Ramadan, which occurs June 25.

The English sergeants in the Egyptian army at Suakim tendered their resignations on Wednesday, owing to the cowardice of the Egyptian officers and men during the recent rebel attacks.

Admiral Hewett has reached the coast of the Red Sea, ready to embark for home, after successfully concluding a treaty with King John of Abyssinia, securing free transit from the Sudan through Abyssinia to Massowah.

The Porte declines to appoint a delegate to the approaching Egyptian Conference, unless the whole Egyptian question shall be submitted to the Conference or shall have been previously settled between England and Turkey. England has informed Turkey that, if she does not accept the invitation to the Conference as sent, it will be held without her.

Earl Granville, in his note to the Powers giving the programme of the Egyptian Conference, entirely ignores the agreement with France. The note is limited to a general statement of the financial condition of Egypt. It requires a revision of the law of liquidation, and reiterates the desire of England to withdraw her troops from Egypt when order has been restored. The note avoids making definite proposals to the Powers. The Conference will meet in London on July 10.

England and France agreed on Monday upon a verbal form of settlement of the preliminary meeting of the Egyptian Conference.

The Caisse de la Dette Publique, which is to be the foundation of the multiple control over Egypt, and which is to cease to be a mere bank and is to have new and extended authority, will be composed of six members—two English, two French, one Austrian, and one Italian. Germany and Russia will demand membership, on the ground of the extension of the functions of the Caisse.

A party of engineers at Chatham, Eng., was ordered on Monday to proceed to Egypt at once to survey the desert between Suakim and Berber with the view of constructing a railway between those towns.

Sir Charles Dilke's paper, the London *Weekly Dispatch*, says that Mr. Gladstone, in frankly conversing with one of his warmest supporters, declared that he expected to be out of office in a few weeks. The *Dispatch* urges Mr. Gladstone, if defeated on the Egyptian policy, not to resign, but to carry the Franchise Bill to the House of Lords, and then dissolve Parliament and appeal to the country on the general policy of the Government. It is said that electoral agents throughout the country are preparing for an electoral contest.

The Conservative agents in London have instructed local electoral agents in the provinces to prepare for a general election, which they say is imminent.

In the House of Commons on Thursday evening Mr. Woodall's amendment to the Franchise Bill in favor of female suffrage was rejected by a vote of 271 to 135. Mr. Gladstone stated that if the amendment was adopted the Government would not be answerable for the passage of the bill.

A meeting of the Irish Land League was held in Dublin on Wednesday. Donations to the amount of £1,000 were received from America.

Mr. Parnell is preparing a general appeal for a national fund to be used to pay Irish members of Parliament.

A monster meeting of Orangemen was held at Belfast on Saturday. Threatening resolutions were adopted against Earl Spencer, Lord Lieutenant of Ireland, should he carry out his intention to visit Belfast.

In consequence of the threats of dynamiters a cordon of armed watchmen has been established around Eaton Hall, the Duke of Westminster's residence in Chester, England.

The Court of Appeals in London has dissolved the injunction to restrain the telephone company from erecting overhead wires. The Court holds that inasmuch as the space to be occupied by the wires is above the area in ordinary use for street purposes, the street authorities have no right to interfere.

The American Lacrosse team on Friday, at Belfast, Ireland, defeated a team representing the five clubs of the Irish Lacrosse Union by a score of three goals to two. The team defeated is considered the strongest in the United Kingdom. The Americans were defeated on Saturday by the United Kingdom team, 3 goals to 5.

The election held in Belgium on June 10th, to elect one-half of the Chamber of Deputies, resulted in serious defeat for the Liberals. Riots ensued in Brussels and Antwerp by which much property was damaged and many persons were injured. A new Ministry was formed on Thursday under Jules Malou as Minister of Foreign Affairs.

The French Minister to Morocco has presented to the Sultan of that country a treaty for his signature rectifying the frontier in accordance with the demands of France. The Ministers of Spain and Italy will advise him not to sign.

It is stated in Madrid that France has assured Spain that there is no intention on her part to disturb the integrity of the Sultan of Morocco's dominions.

The French Minister at Lima, Peru, has recognized the Government of Iglesias.

Italy has sent an identical note to London and Berlin on the French policy in Morocco.

The negotiations initiated by Signor Mancini, of Italy, for a European concord to guarantee free trade at all the ports in Asia and Africa held by the European Governments have received the assent, in principle, of England, Germany, and Portugal. No response has been received from France or Russia.

Prince Bismarck has proposed that the difficulty between Servia and Bulgaria be referred to the mediation of Austria and Russia. Servia has accepted the proposal. The Porte will join the other Powers in endeavoring to settle the difficulty.

The International African Association, which has formally placed itself at the disposal of the German Government, has received the following reply from Prince Bismarck: "The German Government is by no means disinclined to enter into permanent treaty relations with the Association, but must first be exactly informed concerning the legal and financial status of the Association."

A man has been arrested in Berlin who is identified by his photograph as Degayeff, the assassin of Colonel Sudeikin. He will be surrendered to Russia.

Prince Krapotkin, the Nihilist, will be released from Clairvaux Prison, France, on July 14th.

The French squadron, consisting of eight men-of-war and two large torpedo boats, arrived on Saturday at Tangier, Morocco. This produced great consternation among the Moors.

The Pope has instructed Monsignor Rinaldini, at Brussels, to undertake negotiations for the restoration of diplomatic relations between the Vatican and the Belgian Government.

The Attorney-General of the Province of Quebec received a telegram on Monday from the British Minister at Washington, ordering that Eno, the late President of the Second National Bank, this city, be held for extradition. The Court, on Monday, decided that he should be held at Quebec for further examination, instead of being sent to Montreal.

The discovery of petroleum at Sibi, near Quetta, in Beloochistan, will have an important bearing, it is thought, on the industrial development of India and the solution of the Central Asian question.

Count Toreno, President of the Spanish Chamber of Deputies, resigned on Monday. He withdrew his resignation on Tuesday, and a political crisis was averted.

King John of Abyssinia has undertaken to relieve Kassala, as a result of Admiral Hewett's mission.

SENATOR BAYARD'S DOVER SPEECH.

THE speech delivered by Mr. Thomas F. Bayard at Dover, Del., on the 9th July, 1861, he being at that time a young man and his father being a Senator of the United States, and both being natives of a slave-holding State, has become a subject of much interest since the withdrawal of Mr. Tilden's name from the list of candidates for the Chicago Democratic nomination. Mr. Tilden's letter opens the field to all comers, and in any such field Mr. Bayard is sure to hold one of the leading positions. His course during the whole period of his service in the Senate has been so high-minded, conservative, and temperate, so free from the arts of the demagogue, so penetrated with the spirit of justice, and so sound in all matters relating to the currency and finance, that he, more than any other statesman of Southern origin, has won the confidence and esteem of a large body of opinion in the North, which is not confined to his own political party. His abilities are not of the showy sort. His character is of the solid kind, best described by the phrase that "you always know where to find him." Once only, so far as we now recall, did he disappoint our expectations. We did not suppose that he would favor so extreme a measure as that which passed Congress against the Chinese. But since this brutal enactment has been endorsed by the National Republican Convention, and the promise has been given that the party will support "further legislation" in the same line, which can only mean something more brutal still, it is not likely that any supporter of Mr. Blaine will throw stones at Mr. Bayard on that account if he should be the Democratic nominee.

Mr. Bayard's Dover speech was delivered three months after the bombardment of Fort Sumter and twelve days before the battle of Bull Run. The tone of the speech was distinctly in favor of peace through an amicable separation of the States, the hope of reunion being held out as the result of reflection on the part of the seceders. We republish three paragraphs which embrace all that would probably be quoted against Mr. Bayard if he were nominated for the office of President of the United States :

"Eleven States have withdrawn from the Federal Union with solemn and deliberate action, and have united under a new Government. They have made their declaration of independence of the Government under which we live, and express their determination to maintain it at every cost. With this secession, or revolution, or rebellion, or by whatever name it may be called, the State of Delaware has had naught to do. To our constitutional duties toward each and every member of the Union we have been faithful in all times. Never, never has a thought, a word, an act of ours been unfaithful to the Union of our fathers — in letter and in spirit it has been faithfully kept by us. But the stern fact is still before us, and but two alternatives present themselves. Shall we make war upon and subjugate this new confederacy, or shall we peacefully treat with them and consent to their self-government, trusting to time, which is the great healer of all wrongs and passions, to bring them again voluntarily into a common government with us ?

"Take the proposition of war—of horrid civil war, my countrymen! Grant to the Northern arms complete success. Suppose that every Southern city be reduced to ghastly ruin, every peaceful Southern home desolated, and every Southern man slain or made captive. This is the evident completest realization of that dream of conquest so horribly satisfactory to those minds who control the Northern press. But what then ? Will a Union with slaves and the possession of a desert satisfy you? You do not and cannot expect love and aid in times of your necessity from those States you have so cruelly subdued. It is too plain, therefore, that your success in such a war would be the most fatal injury to yourselves.

"I believe solemnly that the war inaugurated by Abraham Lincoln and his Cabinet is worse than fruitless—that it will prove more disastrous to the North than to the South, and never will accomplish its professed objects. Already it has driven out of our Union four States, while others stand in doubt. When I take up the public papers and see the markets of the world disordered and depressed by the mere apprehension of this war ; when I turn to our own business circles and see men of wealth reduced to poverty, our merchants bankrupted, our mechanics and laboring men threatened with absolute starvaton, I would fain hide my face in grief. But confronting this wide scene of human distress, I sadly seek to find relief from it. If war, or the mere prospect of it, has in three short months worked all this distress, what an increase of trouble are we to anticipate should it proceed in all its detail of oppressive taxation, destruction, demoralization, and sorrow ! Human governments were ordained for the happiness and protection of society. If peace will restore and secure these blessings to the people of the United States, even though a number of their former associates have gone off under a new and independent organization, in the name of heaven, let us raise our voice for it. Shall this earnest cry for peace be stifled at the bidding of a host of fanatical and cowardly editors, aided by an army of greedy contractors and public leeches, stimulating an ignorant mob to denounce and attack us as traitors and secessionists? We know it shall not, and this day do we proclaim our duty to our country and our intention to perform it."

These sentiments will be judged from several different standpoints. From the standpoint of a Southern Democrat, reared in the unwholesome atmosphere of slavery, the opinion will be commonly entertained that there is nothing in them which ought to surprise us unless it be the moderation of tone as contrasted with that of ninety-nine per cent. of all the Southern Democrats of the period. Nor is there anything for the Northern Democrat to object to, seeing that three years later the party, in its National Convention, demanded that "immediate efforts be made for a cessation of hostilities." This is all that Mr. Bayard had demanded in the beginning.

The third standpoint is that of the Republican party, and here we are bound to say that some parts of the Dover speech are likely to repel many voters who would be glad to cast their ballots in the most effective way against Mr. Blaine. It is not that Mr. Bayard favored peace after war had actually begun. It would not be difficult to show that both Greeley and Seward were in favor of peace at that time, and that while there were shades of difference between them as to the ends to be reached through peace, the views of both would be found as obnoxious to the public opinion of the North to-day as most of the utterances of Mr. Bayard. Mr. Seward, for instance, addressed an official note to our foreign ministers, saying in substance that the only obstacles to a restoration of peace were the extremists of both sections—the Southern secessionists and the Northern abolitionists—classing the two together as alike culpable in bringing the misery of war upon the country. Mr. Greeley's efforts for peace were protracted to a much later period, and finally came to a ridiculous climax. The spirit which prompted them was, however, not essentially different from that which moved Mr. Bayard in 1861. Gerrit Smith was in favor of peace at all times, and other names might be mentioned, within the circle of anti-slavery renown, which were identified with the same views.

The most obnoxious thought which occurs in Mr. Bayard's speech is that which speaks of the war as the aggressive and voluntary act of Lincoln and his Cabinet. This was perhaps a slip of the tongue. It was what might have been said in the heat of debate, when the passions of a whole nation were aroused, without any express intention of charging that hostilities were begun by Mr. Lincoln—as though he had any choice between war and peace. Nevertheless this is what the Dover speech says, and it is what we apprehend will prove a mischievous element in the campaign if Mr. Bayard should be nominated.

MR. CURTIS AND GENERAL McCOOK.

THE *Tribune* publishes an interview with General Anson G. McCook, in which the latter expresses surprise, not unmingled with censure, that Mr. George William Curtis should oppose the election of Mr. Blaine after sitting as a delegate in the Convention where he was nominated. "There was no complaint," says General McCook, "of the absolute fairness of the whole transaction. I recognize," he continues, "the right of a Republican to bolt a nomination when it has been secured by dishonest or disreputable methods, or when he is denied a right to participate in the primary meetings of his party. But when a man has taken part in the proceedings of a convention; when he neither complains of its methods nor enters a protest against the result, I confess that a refusal to support the nominees strikes me as not only wrong in itself, but destructive of party discipline and party organization."

Mr. Curtis will undoubtedly take care of his own reputation in the premises. As his case is not singular, but is akin to that of many other delegates in this and other conventions, General McCook's criticism calls for general attention. It should be observed that the doctrine held by General McCook that a delegate is bound to support the nominee under any and all circumstances, was sought to be put in force by the Convention itself, or a portion of it, and also by the Convention of 1880, and that the attempt failed in both cases, because it had no logical outcome. Such resolutions are never proposed, except where some particular candidate is so objectionable to a portion of the Convention that there is reason to anticipate a bolt if he is nominated. In such cases the endeavor is made to secure a pledge beforehand that everybody will support the nominee, whoever he may be.

In the Convention of 1880, before the Committee on Credentials had made their report,

Mr. Conkling offered a resolution in these words:

"*Resolved*, As the sense of this Convention, that every member of it is bound in honor to support its nominee, whoever that nominee may be; and that no man should hold a seat here who is not ready to so agree."

Three delegates from West Virginia voted against the resolution. Mr. Conkling thereupon moved that they be expelled from the Convention. There was a great uproar over this motion, which was finally withdrawn after Mr. Conkling had vainly endeavored to obtain from the three dissentients an unequivocal statement that they would support the nominee. It was withdrawn for the obvious reason that the Convention had no power to expel a member regularly elected and whose name had been properly placed upon the list of delegates. If the three members from West Virginia could be expelled for voting against a resolution which they did not approve, they could be expelled for any other difference of opinion with the majority, and in fact a majority could always expel a minority for any reason satisfactory to itself.

When the same question came up in the recent Convention Mr. Curtis said that he expected to support the nominee of the Convention because he expected that the nominee would be a person worthy of support. Here is the kernel of the whole controversy. Is a delegate in a Republican Convention bound to support, for instance, a Democrat if a Democrat should chance to be nominated? Is such a thing impossible? Not at all. When General Grant was nominated in 1868 nobody knew whether he was a Republican or a Democrat. The only thing really known was that he had never up to that time voted a Republican ticket in his life. The argument most strongly advanced for his nomination was that if the Republicans did not nominate him the Democrats would. So it appears that it is not outside the bounds of possibility for a Republican Convention to nominate a Democrat for the office of President of the United States. It is allowable for a Republican Convention to nominate a Democrat for any inferior office, and many such have been nominated at various times as judges, mayors of cities, and occasionally as Congressmen.

The question recurs, is a delegate in a Republican Convention bound to vote for a Democrat if regularly and fairly nominated by the Convention? If not, why not? Evidently because, in the judgment of the delegate, this would not be a fit nomination. In such a case the delegate would oppose his judgment to that of the majority of his fellow-delegates. This is all that Mr. Curtis has done in the present case. If a delegate may exercise his judgment in one case, he may do so in another. Suppose the Convention had nominated General Mahone for President. He was deemed a good enough Republican to sit in the Convention—therefore he was good enough in a party sense to have a place on the ticket. If Mahone had been nominated, the larger half of the Northern delegates would have bolted, and there would have been a new convention held and a new ticket nominated. But such a proceeding could be based only upon the right of the individual delegates to exercise their own judgment as to what is a fit nomination and what is not.

It may be true, as General McCook says, that a refusal to support the nominees is "destructive of party discipline and party organization," but there is one thing that is still more destructive, and that is the nomination of candidates who cannot be supported. Mr. Blaine was the only candidate at Chicago whose nomination was held by a considerable body, or by anybody, to be insupportable on moral grounds. This was known to his friends and to all of them, including General McCook. They were amply warned beforehand. There was the whole country to choose from. They chose the only candidate whose name was sure to cause a revolt. Therefore upon them rests the responsibility for the bolt, and it would be far better for General McCook, and all like-minded delegates, to retire into a closet and devote an hour to earnest self-examination than to cavil at Mr. Curtis for doing what they had every reason to suppose he would do if Mr. Blaine were nominated. Mr. Curtis evidently believes that parties and party machinery are a means to an end—the end being good government—and that when the means are not adapted to the end, but the contrary, the paramount duty of the citizen is still to promote good government. If this were his duty before he became a delegate, it is none the less so now.

TRUTH ABOUT THE CONGO.

THE interesting interview with Captain Braconnier, published in the *Herald* on Monday, while it does not throw any absolutely new light on the purposes of the African International Association, brings out one or two points which are of considerable interest to all Americans who are thinking of the possibility of our "taking a hand" in the development of the "dark Continent." Braconnier is a Belgian officer who was selected by King Leopold to assist Stanley on the Congo, and has spent three years and a half in the country.

He reports, first, that no European can live in the country, on account of the fevers. The climate is fatal to most strangers who remain there for more than two years. This does not prevent the establishment of trading posts, but makes it very doubtful whether any permanent European occupation like that of India is possible. As to commerce, he declares that Stanley, in his account of the river, has drawn upon his imagination for some of his facts. The river can be ascended no further than Nokki or Mokki, about eighty-five miles from its mouth; beyond this rapids spoil everything. In this part of the river the travellers are obliged constantly to leave it for the land.

"Steam launches drawing barely two and a half feet of water have had to be dragged along by our men. A whaleboat, the *Eclaireur*, about one and a half feet under water, often grazed the bottom. From Kuamoth (the new station at the junction of the Congo and Kuango) north to Bólóbó and Equator Station, the river seems a hopeless confusion of sand banks, rocks, islands, and rapids. But perhaps when soundings have been made more thoroughly a better channel may be found than we have yet discovered."

Then, as to the crops, the truthful Captain says: "We have been disappointed, too, in the native products." There is ivory, but not so much as was expected.

"We have not yet discovered the great ivory-producing country. Even the natives we have met don't seem to know it. India-rubber is much scarcer in the interior than we thought. Peanuts are also scarce, but might easily be grown, as the soil all along the river is wonderfully rich. I don't see why three crops of not only peanuts, but maize, millet, or wheat should not some day be raised every year. Attempts to introduce European grains have been made at all the International Association stations. At the outset all failed, the stations standing on virgin soil, overrun with thick, rank grass and all but impenetrable bush and swarming with insects of every kind, which will have to be burned out or otherwise utterly destroyed. I should say if this were done, after two or three years' clearing, all African or European grains, as well as potatoes, would thrive. Great care, by the by, must be taken to protect the European seeds and grain from the sun, while allowing them plenty of air. This is done on the Congo by putting them into osier stands raised about two yards above the ground on trestles. We have found plenty of maize, manioca, millet, sago, bananas, pineapples, and lemons. Of gold and silver we have seen no trace. But there is some copper and probably a good deal of iron, for the ground is ferruginous. All the ivory is brought down the Congo from the far interior, passing through a great many hands on the way."

As to territorial rights and international law, there is the same trouble in finding them on the Congo that Artemus Ward had in getting any "monicky" in Canada. There are none there. Captain Braconnier gives the following admirable account of the condition of the native mind as to all such matters. It strongly recalls the state of things on this continent at the time of its first settlement:

"They think there is one great country all the whites come from, called 'Umputu,' and that it is ruled by one great King, 'Fumokoubamoundela,' the King of the Belgians. As to territorial rights they neither understand nor have the faintest intention of admitting such a thing as a 'cession of territory.' If you speak of such a thing they take up a handful of earth and say 'God gave it to our chief. Our chief has given it to us.' Any one can settle on a patch of ground, however, not already occupied, and cultivate it. We of the International Association have never bought ground of the natives. We have invariably rented it—for an indefinite time. This kind of contract they understand perfectly. They admit that, in return for a periodic payment of stuffs, copper, guns, sham pearls, and so on, strangers have the right to settle on a tract of country. Stanley has explained the idea to them a score of times, and I twice as often at least."

Any savage can understand this; what he does not understand is that after a time the period of payment will cease, while the occupation will continue. The fact, however, shows how ridiculous "treaties" in such a country must be.

Another point not to be overlooked is that, like the Sudan, the Congo country is a great slave country. When we hear of great "trade routes" in the interior of Africa, what is meant most often is slave-trade routes. Captain Braconnier says that not only is the slave trade flourishing in great vigor on the upper Congo, but the condition of slavery is

regarded by the slaves themselves as natural and proper; they do not want to be liberated, for they get in return for their involuntary labor protection in life and limb; their master does for them what the police do for us.

If there is any lesson or conclusion to be drawn from all this for Americans, it is how fortunate is that country which has least to do with the "dark Continent." The work that Braconnier, De Brazza, and Stanley are carrying on is not so much one of settlement as of exploration and adventure. It is as yet by no means certain how far the possession of the interior of Africa would be a boon to any civilized government, and in the rivalry for its possession by England, Portugal, Belgium, and France, it is obvious that the old game that was played with the red man by our ancestors, and by Clive and Hastings with the East Indians will be played over again—the game of treaties, war, and mock philanthropy as a cover for treachery, stratagems, and systematic spoiling of the easily deceived natives. The matter will be complicated by the slavery question, as the position of England in the Sudan has been. It is a very awkward thing when an anti-slavery country goes colonizing in a slave country. How fortunate for us that we have no stake in Africa, and that so far as we are concerned it can only be regarded as a promising field for innocent journalistic enterprise.

A QUESTION AS TO SPELLING REFORM.

THE spelling reformers are to have their regular annual meeting at Dartmouth College next month, and have issued the following announcement:

"NEW YORK, June 6, 1883.

"The ninth annual meeting of the Spelling Reform Association wil be held at Hanover, New Hampshire (Dartmouth College), Thursday, July 10, 1884, beginning at 3 o'clock P. M. (shortly after the ajurnment of the Philological Association, which meets at the same place, July 8–10).

"The members of the Association, and all other persons interested in Spelling Reform, ar urgently requested to be prezent. Thoze intending to read papers wil pleaz giv erly notice. All members ar requested to send word whether or not they can atend the meeting. A local committee wil see to the accommodation of vizitors. Adress all communications to the Corresponding Secretary, C. P. G. Scott, 3 Elizabeth Street, Auburn, New York (from July 5 to July 10, Dartmouth College, Hanover, N, H.).

"F. A. MARCH, President.
"MELVIL DEWEY, Secretary."

This card, it will be admitted, even by the most conservative speller, shows rather the moderation than the zeal of the Association. Very few words in it differ from the ordinary form. "Ajurnment" is rather an innovation, and "vizitors" has an odd look, but most of the changes consist merely in dropping silent letters, which but for one thing we should hardly miss. But why is it impossible to avoid smiling at the phrase "wil pleaz giv erly notice"? Probably because it is amusing to find linguistic reformers urging us to spell so much in the way that ignorant and uneducated people spell. There is no getting over the fact that spelling reform once successful, a great deal of the point would be taken out of the humor of A. Ward and even Thackeray. We laugh at what we in our carnal and unregenerate minds call bad spelling, chiefly because it is so laboriously and ingeniously spelt by ear; but the object of spelling reform is to make written spelling conform to spelling by ear. To the spelling reformer "wil pleaze giv erly notice" is no more funny than a tariff for revenue is to an economical reformer. The fact that spelling reform, though advocated for a hundred years, has made little progress thus far suggests one side of the difficulty with which it is struggling. Since spelling became uniform throughout the English-speaking world, the written form of words is a more potent agency in determining the spelling than the sound. The original written spelling may have been frequently accidental, but once adopted, it has remained substantially unchanged. Every educated person being now a constant reader is more familiar, through the eye, with the form of words than through the ear. When we *think* the word "oats," for instance, we immediately have a picture of it in our minds spelled in the usual way. The sound of the word affects our imagination of it but slightly, because no picture or image is produced through hearing. This is easily seen in the case of very common words containing vowel sounds. The word "boat" is written in the same way wherever the English language is spoken; it is pronounced with slight differences in different localities and by different individuals. Another case is so familiar that it furnished *Puck* with the standing joke that "mamma" and "papa" are in nine-tenths of American families wrongly accented "mommer" and "popper," while this corruption has made little headway in England. Every one has heard Worcester and Greenwich pronounced as they are spelled. Few American readers, unless they are very familiar with Pope, have any idea how the name St. John is pronounced in England. But however variously pronounced or mispronounced, they are written in the same way all over the world. The uniformity is that of the visible, not of the spoken or heard language.

It is, in other words, the written form that determines the identity of the word, and not the sound; and, if this is true, it would seem to be almost easier for the reformers to reform pronunciation so as to make it accord with spelling than to accomplish what they have actually undertaken. A glance at the very few changes which have been brought about in the last hundred years will, we believe, confirm this view. The educated world in America has got so far as to drop a silent vowel from such words as honor, labor; but wild horses will not yet induce the educated world at laige to write ax, or theater, or even program. It is done here and there, by a newspaper or by a publishing-house, but these changes are not adopted by general consent.

The fact that the educated man remembers and identifies words chiefly by the eye, or the image presented to the mind through the eye, while it is the uneducated and ignorant who remember and identify them by ear, is what still makes spelling reform food for mirth with the very class to which the spelling reformer must appeal, and makes his work doubly difficult. Spelling reformers themselves now admit that the work must be very slow. They get most help from the press, especially in the West, where tradition in language as in most other things counts for less than in older communities.

AN EDUCATIONAL NEED.

THERE are several distinct types of academic teachers. First, there are professors who do little but keep order, give marks, set and hear recitations from a text-book, and guard their own dignity. Some of them have taught ever since their graduation with little interval for further special study, are saturated with the traditions, petty provincial reverences, and prejudices of their own college, and know very little of sister colleges. They are content to repeat their courses year after year with very slight variations, without having penetrated deeply enough into their specialty to get a broad view of it or to feel the need of one. They may have compiled a text-book, or edited a classic author from German sources, but they have added nothing to the sum of the world's knowledge. They do not believe in elective nor in post-graduate courses, nor in the least approach to intimacy between student and professor, such as seminaries and laboratories necessitate. Some of them get the name of good teachers when they are merely good disciplinarians, with no conception of what good teaching means or can do for bright young men who are far more likely to be crippled by them than dull ones. A promising young scholar lately said of his Alma Mater, where such influences were dominant a few years ago, that it was impossible to get a really good education there, and that a student who wished to do really hard work must do it on the sly, as girls sometimes study Greek, or quite lose popularity in his class. In some faculties this class of instructors is a standing obstacle to every academic reform. It would be hard to find all these characteristics in any one man, but they are far too common and by no means confined to older professors.

Another class, mostly younger specialists, are enthusiastic, capable of original work, with extended courses of study behind them, and could lead but cannot drive students to work. They attempt too much, and assume too much interest in their work, and fail in the arts of adapting the matter they teach to the actual needs and capacities of young men. A class bolts, sends committees to protest against long lessons, becomes disorderly, or, as in a recent case, signs a secret petition to the president and trustees that the young instructor be removed. Thus young professors lose a few years in getting their trade, or perhaps fail of a career for which they are otherwise eminently fitted. These two classes of teachers have a keen sense of each other's failings, and sometimes constitute two parties in the faculty; but in fact both are largely responsible, and perhaps equally so, for the frequency of college bolts, rebellions, and outrages generally. A class really interested in the curriculum has neither the disposition nor the large amount of superfluous time and energy needful to organize any serious insubordination.

Thirdly, there are in most faculties a few born teachers who are not defective in scholarship, who love their work as such, and who often have sympathy and tact to inspire students to do work quite beyond their ken. When such a teacher is also a savant—a combination as rare as it is beneficent—he is sometimes able to raise

the whole educational level of a large college, even unbeknown to those about him. Instances might readily be named and will occur to academic readers. Happy is that college where such a man is the president, or where the balance of power is in such hands. This class of teachers is unfortunately extremely small in most colleges as in our schools. They are as rare as great genius always is, so that art has to come in to do the work of instinct as best it may, here as in every other department of life. It is because these gifts are so rare that the need of some special training for teachers of all grades has always been felt—most deeply in periods of educational interest and advance like the present—from the time of the Alexandria catechists down. "Normal" work has thus been well called the chief function and the main condition of all sound educational organization. All educational laws, all curricula-programmes, etc., without trained agents to carry them out to reality, are merely ideal possibilities, and it is the second class of instructors whom such work can help most.

With some exceptions, schools in this country which train teachers of the lower grades for their work are not, on the whole, now fulfilling the demands of the new education as a new profession; while in our colleges and universities, where a rapidly increasing number of teachers is being trained, nothing whatever is done to aid them. The title of "doctor" is given to men who have not the least knowledge, theoretical or practical, of the art which for centuries gave its meaning to that venerable title. It is far otherwise in the most educationally-enlightened parts of Europe. For nearly fifty years Professor August Boeckh conducted a pedagogical society, founded by Gedike in 1787, the object of which was to fit young men for the function of teaching in the university or gymnasium. To this institution ten students are attached by stipends. These must, and other members may, attend gymnasial faculty meetings, visit the school-rooms, teach an hour or two per week, and make reports and criticisms. Institutions of a similar nature for students of philology and theology, in connection with the Universities of Königsberg and Göttingen, are not less than half a century old, and many younger ones exist elsewhere. In some of these chief, and in others little, attention is given to the arts and methods of instruction, according to the disposition of the director. Herbart, early in the present century, was the first to introduce "pedagogy" into the philosophical department as an independent branch of university study, treating it now for special students of philosophy, now for practical teachers, now for historians, etc., and even establishing a practice school for teaching Homer, the calculus, etc., to boys, under criticism. Each member looked after, and was in a sense responsible for, the progress of one boy in character and conduct as well as in learning. Stoy and Ziller, Professors of "Pedagogy" in the Universities of Jena and Leipzig respectively, who are both in a sense pupils of Herbart, opened some of their courses to those intending to teach in or superintend schools of a lower grade. These have no stipends, and Ziller's seminary is a private establishment, aided by the Government and its own alumni, whose devotion to it is very great. The chief courses are in ethics, psychology, the history of educational ideas and organizations. The seminary of Professor Kleinmann, in Buda-Pesth, has the entire direction of an Untergymnasium committed to it by the Government. Professor Strümpel, of Leipzig, publishes the best essays of his seminarists in a pedagogical journal now eight years old. Professor Willmann, of Prague, and Professor Vogt, of Vienna, admit no university students who have not heard lectures in the philosophical faculty for two semesters; and they have travelling scholarships, the incumbents of which must report in detail on educational institutions in other countries from personal inspection.

It would take far greater space than a single article here even to enumerate all that is now done by the German universities alone to protect the higher institutions of that land from the two great evils of instruction illustrated in this country by the two first classes of teachers characterized above. In the comprehensive University of France, the École Normale (second to none in rank), where Pasteur taught and worked, has produced great teachers and great savants, while in Italy, and even in the slow-paced universities of England and Scotland, chairs of lectureships on education are now being provided in response to a strong demand. The weightiest objection ever urged against this department of academic work is that it interferes with the ideal nature of study, and prevents entire abandonment to the charm of study and investigation for its own sake, or that pedagogic work is professional, and should come after the termination of a course of liberal studies, an objection which concedes its value and questions only its place. Would it detract from the charm of Homer for a classical scholar if he were to take time to study or even write on the value of his poetry as reading for boys, or on grammatical instruction with reference to the different stages of the mental development of boys? Would it injure a student of the Romance languages to discuss French reading with reference to current French text-books? Might not a student of science enumerate and attempt to criticise the best charts, demonstrative and illustrative material, apparatus, etc., in his department? But there is a still greater need. Specialists know what learning is, but not always what culture is. They often need to reflect that they are dealing with whole, many-sided men, and must coördinate and subordinate, and never lose sight of the educational value of other departments. The more connections he can make with these latter, the more he can teach and the more he can ease the strain of learning in these days when brain-work must be hard; for a score of things, if organically connected, are learned more easily than five that are discrete. Professor Willmann, who has very clearly brought out some of these points, believes that a vast amount of labor-saving in the work of both teaching and learning in universities can be accomplished by "considerable multiplication of these chairs of mental economy." During the last few years a new spirit has come over the work in this department. Its scope has been enlarged, its methods improved, its utility recognized, and its adoption in most of our higher institutions of learning is now only a question of time and availability of teachers. The old routine professor is already hard bestead, and the young specialist who has forgotten all the approaches to his department, and cannot teach, must devote himself to the work of increasing, and not that of diffusing, knowledge.

On the other hand, the great educational awakening on which the country now seems to be entering, and which is likely, if it continues to deepen, to reach ere long our professional schools, in some of which the worst teaching that can be found is done, seems to be opening a new profession for young men interested in philosophy or in history. Superintendents, heads of large academies and high schools, and college professors, educational editors, and clergymen, who are preëminently teachers, can and must make their work more strictly professional. As the great body of human knowledge increases and develops, it grows, of course, more difficult, complex, and technical, and more and more art is required to lead the average youthful mind over all the rapidly multiplying *pontes asinorum* to the frontier whence wise men look out over the unknown, that, like the Homeric ocean, flows round all; and in a republic, whose very existence may depend on a struggle against ignorance and its attendant evils, good teachers of high and low degree become a most vital need. Do we or our statesmen or our universities realize this as well in our day of greater need as did the framers of our Constitution or the founders of our colleges?

BISMARCK AND THE REICHSTAG.

BERLIN, May 30.

WHEN this letter reaches you the corner-stone of the new Reichstag building will have been laid. It is proposed to make the ceremony a great festival. The old Emperor himself will open the proceedings with a speech, and not only the deputies but also all the highest state dignitaries, ministers, generals, and princes have been invited. The new palace will be erected to the right of the Brandenburg gate, on the same spot where the Raczynski Art Gallery stood, just opposite the monument erected in honor of the victories of 1870. The cost will be covered by those 30,000,000 of francs specially included in the war damages imposed on the French. The building is planned in Renaissance style and will require five or six years for completion.

The Reichstag will reassemble a day after this festival. In the meantime new bills are daily pouring in. If only one-half of the business prepared for it were finished by the Reichstag, it would be obliged to sit through the whole summer. In my opinion, however, it is impossible to keep the members together beyond the beginning of July. Bismarck knows that as well as any other man. Having been baffled in his schemes to dissolve the Reichstag under a popular pretext, he now lays another set of meshes for the purpose of catching the popular vote in the approaching elections. Thus, for instance, a new bill trebling the duty on several articles of luxury has quite unexpectedly been published, but only for electioneering purposes. Champagne, brandy, and liquors of all kinds, as well as silk, ladies' dresses, laces, embroideries, and watches form the chief items on this list. As there is no time left for discussing this bill at so late an hour, the Chancellor is sure of its rejection, but he wishes to arraign the Reichstag before the people. A better means of agitation among the masses can scarcely be found than the reproach that the deputies have no heart for the poor classes, that they look to their own interests only, and make the poor bleed. At the same time it is intimated in the memorial accompanying the bill that this improvement on the present tariff is only a forerunner of a more thorough reform, provided, of course, that the Reichstag will not interfere. It will be remembered that in 1879, when the new tariff was adopted, the Government promised it a fair trial; now, scarcely four years after it has taken effect, the consequences of the protective system begin to be noticeably felt. All classes of manufacturers are giving the alarm; they fill the lobbies of the Reichstag and the offices of the secretaries, petitioning the authorities to better their situation. The agrarians, north and south, cry loudest for the granting of a higher tariff on rye and wheat. Their interest stands in the first line.

Connected with the tariff reform, and inspired by the same sentiment, is the new bill which, in the words of the Government, taxes the transactions of the Stock Exchange, but in

fact submits all kinds of business to the arbitrary control and intermeddling of the officers of the internal revenue. Out of spite at their defeat of last year, the Government has now brought in a new bill which makes no distinctions in the character of the business, but taxes all transactions in checks and bills exceeding the amount of 300 marks, and in merchandise exceeding 1,000 marks—as, for instance, goods and wares which are sold by weight, measure, or number, such as breadstuffs, fruits, lumber, coal, or metals. The Stock Exchange, of course, which our agrarians hate as the Indians hate civilization, will receive the first stroke, but all other trades and industries will suffer proportionally. This result the Prussian Secretary of the Treasury, the father of the bill, has entirely overlooked; and instead of earning the thanks of the middle classes, he is censured like a schoolboy and contemned by everybody. The Chambers of Commerce all over the country loudly protest against this measure, to which, moreover, a number of exasperating bureaucratic requirements are attached. Thus, for instance, every trader and business man has to keep a book in which he must enter all his transactions, and in which he must specify the nature, amount, and time of each of them. At the end of the month he is obliged to deliver it up to the Internal-Revenue Office, which examines it for the purpose of finding out whether the other parties had not omitted the corresponding entries. The fine imposed on the trespasser is, at its highest limit, five-hundred-fold the amount of the tax. The officers are at liberty, also, to demand the correspondence and books of each business man, and to examine all of them at their pleasure. There is not the least chance that the bill will pass. Even the Government itself does not expect it will; but the cry for the approaching elections is given out, and the so-called social reform of the Chancellor will be the *mot-d'ordre* for all stumping demagogues. In this way we are drifting into all sorts of socialistic illusions. The wilder a scheme is, the more adherents it finds; and the young ambitious clerks would go to even greater lengths than their master, Bismarck.

On the other hand, prudent and sober business men no longer know how to manage their affairs. The coalition of the Conservatives with the Ultramontane Centre annihilates all hopes of repose and steadiness. Every day produces a new adventurous plan. The establishment of a colonial bank; colonization schemes in Africa, where Angra Pequeña, a barren desert north of the Orange River, has been placed under the protection of the German flag; the new line of steamships to eastern Asia and Australia, dependent on the support of the Government; the rights of labor and the new coöperative institutions for the benefit of the working classes—all these and other measures are proclaimed as Bismarck's social and economical policy, which finds its most ardent admirers among the middle classes. Even their representatives in the Reichstag, the National Liberals, do not hesitate to follow their master in his most erratic excursions. This state of things is aggravated by the new coalition of the National Liberals with the Right. "As free and independent men," they lately offered their gratuitous services to the Chancellor. Thereupon the reactionary parties above named became uneasy, and offered a compromise to the Government for the purpose of carrying through the bill for insurance against accidents and the new law against shareholders. In their turn, again, the National Liberals did not like to be left behind, and immediately followed the lead of their former opponents. Now Bismarck has finally brought about what for more than ten years he longed for in vain. He matches the two parties, and by their rivalry forces each to the highest bid for his own favor and protection. I believe that the next elections will sweep the demoralized National Liberals from the field; but in the mean time they may do a great deal of harm, and during the rest of the present session they will at least pass such bad laws as those named above, in regard to the shareholders and accident insurance. The first result of the latter will be the ruin of the private insurance companies.

In other respects our home policy has not changed. The Emperor has, of course, refused Bismarck's wish for a partial retirement from his office as Prussian Prime Minister. This matter has a long history of its own and finds its explanation in the efforts of the Chancellor to revivify the old State Council, which for years has been inactive but still exists by virtue of the Statute Book. Bismarck, by carrying out this plan, aimed to kill two birds with one stone. First, he would by law have become what he is in fact, the omnipotent ruler of the empire, to whose will every one would be bound to bow; next he intended to bind the hands of the Crown Prince and make him responsible for, if not identical with, his own policy. With this in view Bismarck offered him the presidency of the State Council; but the Crown Prince has thus far rejected all offers of that kind and seems to have shown the cold shoulder to the tempter. It is for his own interest that he sticks to his resolution. In my opinion he will do so, for he has and will have a policy of his own. † † †

Correspondence.

THE HURRAH IN THE CONVENTION.

To the Editor of The Nation:

Sir: Attendance at the proceedings of the recent Republican Convention has indelibly stamped upon my mind the certain conviction that the present mode of selecting the Presidential candidate is not the best.

Aside from party feeling, aside from personal preferences, and aside from all issues tending to limit the breadth and fairness of argument, can it be that a single eye-witness will deny that the popular enthusiasm and demonstration at the recent Convention affected the decision of that body? Admitted, as I think it must be, that the audience did influence the decision of the delegates, the next question arises, Was this proper? was it right? The delegates, the voters in that Convention, were not there to express individual and personal preferences, which they were at liberty to shift and change at pleasure. They were there *as representatives;* they were there to deliberate, and by the application of cool reasoning to select the man best qualified in all respects to satisfy the majority of those conferring the honor and placing the trust. *Perhaps* that choice was made. I shall at any rate avoid discussion of that particular point. But will any one say, does any thinking man maintain for one moment, that the constituents standing behind five hundred and forty four of those delegates favored the nomination of James G. Blaine as leader of the Republican party and President of the United States? Did his most sanguine leader ever for a moment entertain an idea of his receiving more than 450 votes? If not, the question arises, Where did the remainder come from? And I answer, *entirely* from the enthusiastic demonstration of five or six thousand men, women, and boys, who were stimulated to excitement by every cheap device which the fertile brains of party leaders could suggest.

Would it be reasonable for a jury, holding a man's life in their hands, to be surrounded by the court-room crowd during their final decision on a verdict? Would any one expect a just trial if all the prisoner's friends were allowed to attend the deliberation, and cheer and howl at every favorable suggestion? Would such verdicts be reasonable? would they be fair to the public? The same principle should apply at our national conventions. Why should the local enthusiasm of one city, or one State, or one section of the country be thrown into the balance to the prejudice of any other? Why should that instrument of war be put within the power of the candidates, and be made sharpest and most effective in the most unscrupulous hands?

Does not the introduction of plumes and placards and roosters on such an occasion bear on its face a weak and utterly unworthy stamp? and would not our deliberative assemblies and their decisions command more respect if they freed themselves from such mistaken influences?

Very respectfully, Felix Rackemann.

Chicago, Ill., June 9, 1884.

A REPRESENTATIVE CASE.

To the Editor of The Nation:

Sir: I have three brothers living in three States who have always voted the Republican ticket. We will next fall cast four votes for the Democratic candidate, if he is a man of, say, Governor Cleveland's stamp.

There seems good reason to believe that the woods are full of Republicans who are so ill satisfied with Mr. Blaine that they are prepared for this once to vote with the other side if given decent encouragement—they are certainly not prepared to vote for some old Bourbon with a bar'l.

Please give us your powerful assistance in scaring the Democrats into doing the right thing. J. D. R.

Riverside, Ill., June 9, 1884.

A VERY GLOOMY VIEW.

To the Editor of The Nation:

Sir: The nomination at Chicago has carried consternation to the hearts of a good many stanch Republicans. To none has it caused greater surprise and grief than to myself, and yet there is a melancholy satisfaction in seeing one's theories worked out even if more rapidly than is welcome. Often during the last winter, in maintaining that Butler's campaign was not a mere result of popular wickedness, I have said to friends that it was lucky for Massachusetts that it was Butler, and not a man like Blaine, that they had to deal with. Little did I think that within the year the same problem which had been placed before Massachusetts would be presented to the nation by the hands of that very man. In order to show that the same principle is involved, I must ask leave to repeat a more than thrice-told tale. From the beginning of this Government a conflict for power has been going on, not only in the nation but in the States and the cities, between the legislative and executive branches. If it was true that the facility of usurpation was much greater on the side of the legislature, as holding the money power, it was true also that the danger in their case was much less obvious because it was impersonal. The result has been that the legislatures have usurped all power and that the executive has been reduced to a figure-head. General Sherman, though a soldier, has shown more political insight than any public man in the United States, when he said that he did not want to be President because Congress was the only power in this Gov-

ernment. Now, if there is one thing that not only our own but all history demonstrates, it is that a legislature cannot govern. It has not the necessary unity of purpose or action, or continuity of existence. Therefore it is that there is not a single social problem which Congress since the war or any State government ever has been able successfully to deal with. The country has not been governed, it has *drifted*. Not only so, but government by legislature has killed all individuality, and the character of our public men has been steadily sinking into insignificance, not because we had not great men, but because there was no field for them. In like manner the executive chair, being a position of no meaning, has been filled by a succession of nobodies, that is, as far as public action is concerned.

The people have become thoroughly tired of anarchical and helpless legislatures and dummy executives. That transparent fallacy, "a government of laws and not of men," is contrary to the first principles of human nature. The world always has been and apparently always will be governed by men. The people will have a leader: good if they can get one, bad if they cannot. One thing the Chicago Convention has probably settled, that the "dark-horse" period has gone by. The Blaine men were distinctly defeated in the matter of temporary Chairman. He had but 332 votes on the first ballot, and if there had been any other name strong enough to unite the opposition he might have been defeated. But there was not, and henceforward both Butler and Blaine have pointed out that the most available way to get a nomination is to cut a figure in the eyes of the nation. Does anybody believe that if James G. Blaine enters the White House next March (which I sincerely hope he will not) he will subside into the obedient servant of Congress? As the boys say, "Not much!" We may as well be prepared in that event for fireworks and sensation. But inasmuch as, in the way our Government is now conducted, he has no legitimate power, he will be forced to use illegitimate. Nor will it be very safe to rely on constitutional checks. In the temper of the people at present, checking the Executive, if he plays his cards well—and he is a very different man from Butler—will be a dangerous game. It was with the tacit consent of the nation that Cromwell turned out the Long Parliament. Napoleon would have been crushed in his conflict with the Directory if France had not been wearied out with a long period of no government. Of course it is ridiculous to talk of anything like that in this country, but there are a great many intermediate stages. Four years under Mr. Blaine would form the longest step that the United States has yet taken towards irresponsible despotism.

What course is the average voter to pursue? I have steadily voted the Republican ticket for thirty years, but I ask now, what is the Republican side? If it means the string of platitudes called a platform issued at Chicago, I can see nothing to bind allegiance. If it means the followers of James G. Blaine, I am distinctly not one. If the Democrats could ever get a ray of common sense and nominate a Bayard or a Cleveland, I should be tempted for the first time. In fact, they could hardly name a worse candidate than Blaine unless it was Butler, and would not that be a curious campaign?

There must be thousands, if not hundreds of thousands, in the country sighing for an available third party. It seems, no doubt, Utopian to talk of a National party, which should take for its principle the giving to the President, the only representative of the nation, a position of proper dignity and influence, enabling him, through his Cabinet, to have a due share in the policy and conduct of the Government, awakening by this means interest and enthusiasm in the people, and giving able and honorable men an opportunity of appealing to popular support, instead of leaving the field to charlatans and demagogues. And yet I believe that such an issue might be presented in a way, if not to win this campaign, at least to lay a foundation for the future as did the Free-Soil party thirty years ago. Of one thing I am sure, that nothing else will save the United States from ultimately landing in irresponsible despotism. G. B.

BOSTON, June 7, 1884.

A JAPANESE WORD.

TO THE EDITOR OF THE NATION:

SIR: The Japanese language has enriched the English by the addition of one word that has come to stay—namely, *hara-kiri*. The dictionaries and newspapers, in adopting it, wrote it *hari-kari*. But now that the dictionaries have corrected themselves, will not your paper lend its influence in favor of the proper spelling of this word that has had untold influence in Japan, and that has become so well known in America? Any one who has read the intensely-interesting 'Tales of Old Japan,' by Mitford, or 'The Loyal Ronins,' by Greey, will never go astray on this word. *Hari-kari* may mean either *hunting for thorns* or *borrowing a needle;* but *hara kiri, stomach-cutting*, is *the* word that for centuries ruled the code of honor in Old Japan.

All this, because the *Nation*, March 27, says: "If the practice of the *hari-kari* were in vogue, Mr. Ochiltree might well avail himself of its privileges."—Yours truly, J. H. DEFOREST.

OSAKA, JAPAN, May 7, 1884.

KEMEYS AND BARYE.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly allow me space for a few remarks on some of the excellences and defects of the animal sculptors Kemeys and Baryé? While the article in the *Century* may have had too much the air of a Kemeys "boom," there are others besides Mr. Hawthorne who think that were Kemeys as well and widely known as is the French sculptor, he would be ranked as the equal at least of Baryé, possibly as his superior. Baryé's numerous small bronzes are scattered far and wide, while most of Kemeys's work has not been duplicated, and exists only in plaster models which, until recently, have been inaccessible to the public. This in itself is sufficient to create a prejudice in favor of Baryé, since work that is well known is usually *supposed* to be superior to that which is comparatively unknown. This prejudice can be removed by time alone, and I sincerely trust that Kemeys's merit may not be recognized too late. If I understand the matter rightly, art in animal sculpture consists not so much in rendering the *form* of any given animal as in catching the *spirit* of that animal and infusing it into the "enduring stone" or "lasting bronze." This Kemeys certainly does, and in this respect he is assuredly the superior of Baryé, whose pieces are too often mere anatomical studies, the purpose of which seems to be to display the sculptor's myological knowledge. The correct modelling of external anatomy surely is not in itself art, or else the manikins of Auzoux would be artistic in the extreme. Yet this is the chief excellence of Baryé's walking lion and tiger, and here the effect is marred by the greatly exaggerated size of the muscles. Baryé's fondness for anatomical detail is shown by the fact that the muscles show plainly in his wolves and other fur-clad animals, in which there is really only an indication of the more prominent ones. In the "Jaguar and Hare" the great cat is exerting force enough not only to bite through a poor little hare but to crush a mud-turtle. Again, in the "Puma and Deer" the puma is fully twice the size of his prey in order that the muscles may show to good advantage. Really, the puma should be about half as large as a male Virginia deer, which is the species here represented, and while from an artistic standpoint it *may* be allowable to exaggerate muscles, it certainly is inartistic to completely reverse the size of the two animals. Moreover, Baryé is guilty of placing some of his animals in wholly unnatural attitudes. His lion, tiger, leopard, jaguar, and wolf are all represented as pacing, *i. e.*, as moving both legs of a side together, a gait, so far as I am aware, confined to half-a-dozen mammals. The giraffe and llama walk in this manner, and the camel, if you will pardon the Hibernicism, paces when it trots, but these are merely the exceptions to the rule that the right fore and left hind foot move together. It would be easy to point out other and similar defects in the work of the great French sculptor, but I will merely add that the standing greyhound is an abnormality, possessing an extra pair of ribs. None of the above-mentioned defects are observable in the sculptures of Kemeys, for his anatomy is kept under control and his animals do not offend the eye by parading in impossible attitudes. The greater number of Kemeys's pieces represent animals in action, but in those which have animals in repose for their subject the lax muscles and air of ease show that the animals are resting and not posing for their pictures. The "Panther and Young" and "After the Feast" are good examples of animals in repose, the gaunt, flat-sided form of the panther being imbued with all the looseness of joint and laxness of muscle so characteristic of the cats when at rest. In the "Deer and Panther" fighting we have, on the other hand, animals in violent action, and here the panther's form is highly suggestive of strength and suppleness. The fierce intensity of purpose of both animals is admirably expressed, and while the tense muscles indicate strength, they are not so overdrawn as to become caricatures. The panther is represented as a female weakened by the care of her young, and the deer as a full-grown, powerful male; thus, the observer's appreciation of the combat is not marred by sympathy for either combatant. It is to be hoped that some day this fine group may be cast in bronze and of life size. Various little details show the care with which Kemeys has studied animals and their expressions, and how well he understands the significance of each movement of the ears or peculiar contraction of the lip. In short, faithfulness of attitude and correctness of anatomy are points wherein Kemeys is true to nature, while in selection of pose, in the grouping of his figures, and in expression of emotions he is true to art.—Very respectfully,

FREDERIC A. LUCAS.

UNITED STATES NATIONAL MUSEUM,
WASHINGTON, D. C., June 3, 1884.

[Mr. Lucas misapprehends the question at issue. We have studied Mr. Kemeys's works, and without any prejudice whatever, on grounds of purely artistic quality, do not accept them as equal to those of Baryé. We know nothing of any "spirit" of an animal except as we see it in the "form," and such a distinction as Mr. Lucas would make is irrelative; the only distinction admissible is between a type of form that conveys the idea of motion or action and one which shows merely the inert body. Anatomy, as science,

has nothing to do with art, and it is from the artistic, not the scientific point of view that we object to the comparative rank which Mr. Lucas contends for between the two sculptors. Without Baryé's works before us it is of course impossible to reply to Mr. Lucas's strictures on them.—Ed. Nation.]

HASTY NAVAL LEGISLATION.

To the Editor of The Nation:

Sir: Had I seen the article entitled "Hasty Naval Legislation," published in your issue of May 31, in a periodical of less standing than the *Nation*, I should have deemed it unworthy of attention; but the high character and general reputation for fairness of your paper lead me to believe that you have been entirely misinformed, and I therefore beg to call your attention to what I consider to be grave errors in the aforesaid article.

The foundation upon which it was based was that the report of the Naval Committee in favor of the bill to abolish the grade of junior ensign was made *solely* upon the ground that the officers of that grade receive less pay than their co-graduates of the engineer and marine corps. A perusal of the report will, I believe, satisfy an unprejudiced mind that it was the question of an equalization of *rank* which induced the Committee to decide as it did. Although in the report of the Superintendent of the Naval Academy (quoted at length by the Committee) the question of pay was introduced, yet no attention whatever was paid to it by the Committee.

While I honor the men who hold commissions as engineers, and especially those who entered the corps in its infancy and who have helped to raise it to its present position, yet to assume that they "constituted the picked technical corps of the navy proper" is not, I submit, borne out by the facts in the case. Those gentlemen who entered the service prior to 1866 were (with but few exceptions) warranted as third assistant engineers; they were considered as being under instruction, and were assigned to duty as *water-tenders* in the fire-room, a duty now performed by enlisted men. The requirements for entrance were of the simplest possible kind, as may be seen from the following extract from the Navy Regulations of 1865, the italics being my own:

"A candidate for appointment as third assistant engineer must be not less than nineteen nor more than twenty-six years of age; he must be of moral character and correct habits; he must have worked not less than eighteen months in a steam-engine manufactory, or else have served not less than that period as an engineer on board a steamer provided with a condensing engine, and have secured a favorable impression of the director or head engineer as to his ability; he must be able to describe and sketch all the different parts of the marine steam-engine and boilers, and to explain their uses and mechanical operation, the manner of putting them in operation, regulating their action, and guarding against danger. He must be well acquainted with *arithmetic, rudimentary mechanics, mensuration of surfaces and solids;* write a fair, legible hand, and have some knowledge of the chemistry of combustion and corrosion."

After two years of sea service came the examination for second assistant; this was but a trifle more difficult, as may be seen by referring to the same regulations—the mathematical portion embracing in addition only "a knowledge of *rudimentary mechanics* and the *elements of geometry, including descriptive,*" and the practical part being only what a man with average common sense could readily acquire in two years.

Although the requirements for first assistant were higher, both practically and theoretically, yet the mathematical part included only "*fundamental mechanics, theory of the steam engine, use of logarithms, solution of simple algebraical equations, a competent knowledge of the first six books of Euclid, plane trigonometry, descriptive geometry, and conic sections.*" When we examine the requirements for chief engineer, we find that, while the practical examination was much more extended, yet theoretically there was no great advance upon those just enumerated, "*applied mechanics*" being the chief into which the higher mathematics enter. In other words, so far as *mathematics* were concerned, the amount of knowledge *required* was *less* than that demanded of a midshipman at the Naval Academy after his four years' course. That many of the chief engineers exceeded these requirements is undoubtedly true, but upon how many of them "has devolved the important duty of planning and designing the engines of our ships of war"? Does it really require the large number of seventy chief engineers for this purpose?

In your enumeration of the duties of the engineer corps, only an incidental mention was made of that which must ever be the business of the majority, viz., "the running and repairing of the engines designed by their superiors." For this duty no higher science is necessary than is found on board the passenger steamers of the day; there is no mystery about this part of the work, and for this we need only a "body of skilled mechanics." But for the higher work of designing the engines of our vessels of war, and for the designing of the *vessels themselves*, we do most emphatically need a "scientifically educated corps of naval engineers." It is obvious, however, that this corps must be small in numbers, and it should be the highest prize in the naval service—a position reached only after thorough training, strict examination, and ruthless weeding out of all who do not reach the high standard that should be set.

As to the cadet-engineer system, now extinct, it is to be observed that while the examination for entrance was more searching (as asserted by you) than that of the cadet midshipmen, yet for the first two years of the course their studies were precisely the same. A consultation of the merit rolls of the third and fourth classes for the years that they were thus together shows that the great mental superiority of the engineers, so largely claimed by you, has but little foundation in fact; and a comparison of the records for the entire course shows that the percentage graduating with credit is practically the same.

During the seven years from 1876 to 1882 inclusive, there were in the fourth classes of

	Cadet Mid'n.	Cadet Eng'rs.
	469	190
Number receiving 75 per cent. of maximum.....	137	92
Percentage.....	27	48

Not a very great disparity, when the standards of the entering examinations are considered, and when account is taken of the fact that the engineers were the picked 190 of more than six times as many applicants.

During the same seven years there completed the four years' course:

	Cadet Mid'n.	Cadet Eng'rs.
	339	106
Number receiving 75 per cent. of maximum.....	131	42
Percentage	38+	39

The cadet-engineer system broke down from its own weight, as must have been foreseen by any unprejudiced mind. Under its operation we were adding to the list over twenty graduates annually, for whom the outlook was quite as bad as was that of the junior line officers; and it was only a question of time as to when the number of graduates of both kinds should be reduced.

Some six or seven years ago a bill passed the Senate reducing the number of cadet engineers to twenty-five, a number quite sufficient to repair the waste of the corps; but through the influence of the engineers it was defeated in the House Committee. Had the bill become a law, you would have had no cause to write as you did.

There are many points involved in the discussion of your article, to touch upon which I will not trespass further upon you, save to state that the condition of the senior passed assistant engineers is at present an anomalous one, owing to the operation of peculiar causes; their status is no worse than that of the lieutenants will soon be; seventy-five of whom have now held their commission fourteen years, and when the seventy-fifth one is promoted he will have been not less than twenty years in his grade.

I trust that you will give to this the same publicity as was given to your own assertions, and beg leave to subscribe myself,

Very respectfully,

A Line Officer.

[Our correspondent's letter scarcely touches upon the main points of the *Nation's* argument. When we spoke of the engineers as the picked *technical* corps of the navy we had this in view: The work of designing a modern marine engine, of calculating its economy and efficiency, and of judging in advance how any engine, especially one of a new type, is going to perform, requires a higher and rarer grade of natural mathematical ability and special training than any other naval duty. In every school there are plenty of bright boys who can be trained into capable surgeons, paymasters, or commanding officers, but only here and there is one found who can be trained into a thorough mastery of all the principles of thermodynamics. Now, it was officially stated, as one of the reasons for the legislation referred to, that the best trained graduates of the Naval School were, or might be, assigned to the line, and our correspondent not only does not deny this, but bases his argument upon it. In maintaining that "we do most emphatically need a scientifically educated corps of engineers, which should be the highest prize in the naval service," he takes the same ground as the *Nation*. This ground is opposed to the policy of the last two years, which has tended the other way, first, by abolishing the separate special course for engineers, and now by seeking to attract the best trained graduates from the engineer corps into the line. The *Nation* will heartily support any measure for the formation of a special highly educated corps of constructing engineers.—Ed. Nation.]

Notes.

A German translation of Appleton Morgan's 'Shaksperian Myth,' by Dr. Karl Müller, of Stuttgart, is in hand, and will be issued, with an introduction by the translator, from the Tauchnitz press early in the fall.

Jas. R. Osgood & Co. are the American publishers of Austin Dobson's 'Thomas Bewick and His Pupils,' which will soon be put to press.

'The Fallacies in "Progress and Poverty,"' a criticism of Henry George and Dunning McLeod from a social reformer's point of view, is in the press of the Fowler & Wells Co.

Fords, Howard & Hulbert announce 'Black and White,' an economical discussion of the

social status of the negro race, by T. Thomas Fortune.

A new edition of Rimmer's valuable 'Art Anatomy,' which has long been out of print, is in preparation by Houghton, Mifflin & Co.

We have received from the Right Rev. Monsignor Capel a thick pamphlet entitled "'Catholic': an Essential and Exclusive Attribute of the True Church." It is an attempt to show that the Roman Church alone possesses the right to this appellation, which was decreed by the early fathers in general council to be a necessary mark of the Christian Church. To his treatise are appended several writings of the third and fourth centuries in support of the view taken.

The sixth number of Charles Scribner's Sons' "Philosophic Series" is Dr. McCosh's 'Agnosticism of Hume and Huxley with a notice of the Scottish School.' Its character is sufficiently indicated by its authorship.

'The Government of England' (Rivingtons) is the first of a series called "Highways of History." It is after the style of the primers now in vogue upon nearly all subjects. This series will be confined to English history, each number being devoted to some leading topic. In the present volume, which is by the editor, Louise Creighton, an historical view is given, briefly and clearly, of the successive changes in the Constitution and mode of government of England from the earliest time to 1867. It is thus a very handy book for reference on simple points, and will prove of great convenience to the student who has only mastered general outlines and has yet to learn how to fill them in at once with comprehensiveness and accuracy.

Charles Scribner's Sons offer for sale a limited number of folio India-proof impressions of Burt's engraving of William Cullen Bryant. These were taken from the plate made for Bryant and Gay's 'History of the United States,' before all letters, and are signed by the poet.

'The Papers and Biography of Lion Gardiner' is a semi-historical, semi-genealogical work relating to the early colonial period of Connecticut, just issued in St. Louis. It contains some hitherto unpublished documents, contemporary notices of the Pequot wars, letters to John Winthrop, jr., an account of the settlement of Gardiner's Island, etc, etc. Only fifty copies are for public sale.

'Lady Blake's Love Letters,' translated from the French by Page McCarty, just published by Carleton & Co., of this city, is a translation of George Sand's 'Lavinia.' It is not easy to understand why the name of the author is not given in the book. One would suppose that any work of George Sand's would sell better with her name on the title-page than without it. An attempt to create an interest in the book is made by stating on the title-page that it is "the theme from which Owen Meredith took his famous poem of 'Lucile.'"

'Rambles in Old Boston, New England,' announced for publication by Messrs. Cupples, Upham & Co., is a work of some importance in both an historic and artistic sense. The text is by the Rev. E. G. Porter, whose studies have been for several years directed especially to our Revolutionary history, and the illustrations, some eighty in number, are from drawings by Mr. G. R. Tolman. It is designed principally, if we are not mistaken, to give some account, for the purpose of preservation, of noted buildings, both public and private, which are of any historical or antiquarian interest. To detailed descriptions will be added the quaint legends and stories which still linger about many of these old structures. The work, which is to be issued in ten numbers, is very appropriately dedicated to the Bostonian Society.

Little, Brown & Co. publish an 'Historical Summary of Metallic Money,' by Mr. Robert Noxon Toppan. The author has succeeded remarkably well in compressing a large quantity of facts and figures within the compass of eighty pages, and yet in making quite a readable narrative of it. The general effect of the essay, as the author doubtless intended, is to illustrate the irresistible force of popular determination as to the value of money when opposed by legislative fiat. It is somewhat discouraging to observe that the policy of some of the ancient states of Greece and Asia in regard to bi-metallism was more enlightened than that of the American Congress; but as the platform of the Republican party promises us the best possible money, and that of the Democrats is not likely to promise anything inferior, our future is evidently brightening. The danger to society arising from large fortunes is not a very modern one, judging from the story told by Herodotus of a certain Lydian who had in his house 3,993,000 gold darics, which Xerxes in a generous mood rounded up to 4,000,000. At $5 the daric, this would amount to $20,000,000, a fund which, if exhibited to the Lydian "street" during a period of depression, might well have had as great an influence as the display of $20,000,000 of Wabash and Texas Pacific stock nowadays.

Among the interesting discoveries of old papers that have recently been made are two of considerable importance. Doctor Stern has found in the town library of Breslau, among the correspondence of Ch. Garve, several letters by Kant that throw light on the history of his works; and in the Royal Library at Windsor Mr. Holmes has come upon the drawings of the Elgin marbles, made in Greece, by J. P. Gandy-Deering before they were removed from their place, which were executed for the Dilettante Society, and have been lost sight of since 1813, when they were sent to the Prince Regent. Another find is a boxful of letters, two hundred in all, from Jane Austen to her niece Lady Knatchbull. These will be published by Lord Brabourne's direction in the fall.

The Oriental exploring expedition referred to last week, which will be known as "The Wolfe Exploring Expedition to Babylonia," from the name of the donor of the funds, is to start next autumn under the auspices of the Archæological Institute. Dr. Ward, who will head the expedition, will be accompanied by some of the members of the late expedition to Assos. The work of this expedition will be tentative and preliminary.

The Vicomte H. de Bozemont has contributed to the geographical and ethnological series in 18mo, now being edited for popular use by M. Richard Cortambert, a volume on 'L'Indo-Chine Française.' It describes Annam, Tonquin, Cambodia, the Land of the Laos, and, more fully, Cochin-China, stating natural features, resources, ethnography, political divisions, etc. It also contains brief historical narratives, particularly illustrative of the complications which have led to French intervention and annexation. A handsomely executed and comprehensive but somewhat obscure map is added.

Under the title of 'An Eastern Journey' (*Eine Orientreise*), the state printing establishment of Vienna puts out the prospectus of Crown Prince Rudolf's Eastern travels in a large folio of 180 pages, two parts. The sample of text and illustrations which we receive from F. W. Christern gives promise of a fine work, the woodcuts being particularly spirited. There will be 37 etchings and 100 woodcuts.

The completion of Victor Hugo's 'Légende des Siècles' has been celebrated by Mr. Swinburne in a poem of some 400 lines, in the intricate and characteristic metre and versification of "The Eve of Revolution" in 'Songs Before Sunrise.' The chief feature of the new poem is its descriptions of the extraordinary sunsets which occurred in England last winter. It is based upon the analogy between the close of the year and the close of the poet's life, the former going out in its most splendid colors, the latter giving to the world his greatest work in the winter of his old age. The poem will not be printed (except in a few copies privately, that it may be presented to its illustrious subject) until its author has written sufficient new matter to form a volume, Mr. Swinburne's custom being to give his readers liberal measure in this respect.

The *Art Union* for May comes late, but in good form. The history of the old Art Union, which is concluded, and a very thorough and kindly criticism of the exhibition of the Society of American Artists, are the principal literary features, and several spirited reproductions of drawings, the artistic. We learn from it that "the Trustees of the Hallgarten prize fund of $5,000, for the benefit of deserving students in the National Academy Schools, have held a joint meeting with the Trustees of the Harper competition prize fund," and have resolved:

"That the Trustees of the Harper and of the Hallgarten funds agree to combine the interest accruing from their respective funds for two years, the same to be applied to the sending of a deserving art student abroad, and, . . . furthermore, that the method of choosing the jury to select the holder of the scholarship shall be by artists' suffrage."

The first scholarship will be competed for next December upon terms to be published hereafter.

The *Fortnightly Review* is returning to its former custom of publishing a serial story among its weightier articles. In the June number appear the first chapters of a novel called "Diana of the Crossways," by George Meredith, whose 'Tragic Comedians' was first published in its pages several years ago. Mr. Meredith, by the way, was included by Mr. Walter Besant, in his recent lecture, among the novelists whose names will live because of a single work—in this case, 'The Ordeal of Richard Feverel.' Under its new editor the *Fortnightly* is becoming the most popular magazine of its class, its circulation having largely increased since Mr. Escott took charge of it.

—Few people are acquainted with the curious circumstances under which the novel of 'Called Back' has advanced from obscurity to its present extraordinary notoriety. The name on its title page, "Hugh Conway," is the *nom de guerre* of Mr. F. J. Fargus, a member of a firm of auctioneers in Bristol, Eng. It has been known hitherto only as that of a writer of graceful songs, among them being the authorized transposition of the broadly-humorous "Silver'd is the raven hair," from "Patience," into the serious drawing-room form of "In the twilight of our love." 'Called Back' appeared originally in a Bristol publication of local repute only, named *Arrowsmith's Almanac*. Somewhat to the publisher's surprise, calls for this began to come from many quarters, and several editions proved inadequate to supply the growing demand. As soon as it became clear that 'Called Back' was the attraction in the number, a separate edition of it was issued at the low price of a shilling. This came to the notice of Mr. Comyns Carr, the editor of the *English Illustrated Magazine*, who saw the dramatic possibilities in it, and soon afterward a highly eulogistic review in Mr. Labouchere's newspaper, *Truth*, brought the book prominently before the public. Edition after edition has been issued, until now the circulation has reached its eightieth thousand. An admirable

dramatization of it, by Mr. Comyns Carr and the author, has just been produced with great success at the Prince's Theatre, and it bids fair to enjoy a long run of popularity there also.

—An example of the minute textual criticism to which the English classics are subjected in Germany may be seen in K. Borchard's essay on Thomson's 'Seasons' in a recent *Anglia*. All the editions of the poem beginning with the first English edition of 1726, and ending with the best German (Tauchnitz) edition of 1853, are scrupulously compared, with a result both curious and entertaining to those who like to study the internal economy of a poet's mind. Each poem of the four constituting the 'Seasons' is found to grow in length if not in grace from the important year 1730. Thus Spring, the initial eclogue, begins at that date with 1,082 lines and ends with 1,176 lines in 1746 (the year of the last edition before the poet's death). The Summer increases during the same period from 1 206 to 1,805 lines. Autumn gains 104 lines during the like sixteen years of interval, and Winter runs from 781 to 1,069 lines. The concluding Hymn diminishes from 121 to 118 lines. These results are patiently tabulated by the essayist, and are accompanied by a vast quantity of grammatical, stylistic, and metrical criticism; innumerable verbal deviations among the various ever-growing editions are noted; and, in fact, one grows almost chill at the cold-blooded method and completeness with which the poetic laboratory is laid bare.

—Almost equally remarkable, though in a different direction, are the methods used and the conclusions reached by Mr. J. L. Cheney in his essay on "The Sources of Tindale's New Testament," in the same number of *Anglia*. He shows exhaustively that Tindale's Testaments exhibit traces of the four versions found in Wiclif, Luther, Erasmus, and the Vulgate edition; that these traces of agreement, quite inconsiderable as regards Wiclif and the Vulgate, show the influence of Erasmus far more than of Luther; and that of the versions by Erasmus, the Latin version, as well as the Greek edition, was followed and the Latin was at times preferred. Mr. Cheney's general conclusion is that Tindale's Testament was substantially an independent translation from the original; in which he is supported by the fact that the Authorized Version very fully retains the substance of his translation. The best scholarship of later generations, too, retains his renderings. The Revised Version of 1881 returns in several cases to the translation made by Tindale, somewhat altered by later revisions. But for the diligence, accuracy, and independent scholarship exhibited by the poor fugitive, convict, and martyr, his name and his writings would long since have sunk into oblivion. As it is, both receive an imperishable monument in the English Bible.

—German unity has not put an end to the bewildering multiplicity of occasional dissertations. At one time it seemed as if it might be possible to do something in the way of concentration. Here and there a university like Leipzig, Strassburg, Erlangen, would gather up its best dissertations in volumes; but with so many centres of philological activity, with so many ambitious scholars desirous of a vent for their learning, the "programmes" swarm as distressingly as ever. One has not the time to read them as they come out, and after a few weeks many of them disappear and hide in corners, whither even the wonderful system of the German book trade cannot follow them. A few years pass, and American scholars, infected by the German mania for completeness, are left to pine for some minuscule dissertation printed in some out-of-the-way village of the German empire. To be sure, when the game is captured, it is too likely to be hardly worth the quest; and when it does turn out to be worth having, the sympathetic soul is too often tortured by the knowledge that the copy secured is a present made by the author to some unsympathetic friend. A doctor's dissertation in fine binding is a sad commentary on youthful aspirations. But we must not quarrel with good work, no matter in what form it comes, and the annual reports of the famous Joachimsthal Gymnasium of Berlin are apt to bring good work. The last one for 1884 contains an account of Dr. Georg Schneider's explorations in the MSS. of Diodorus Siculus, an author whose importance does not diminish as the years go by. The only result of Dr. Schneider's researches that can be mentioned here is the special stress laid on Vindobonensis D, which, together with Clæsomontanus F and Vaticanus C, constitute the basis for the text of the first five books.

—In the *Preussische Jahrbücher* for May will be found a curious article by the well-known professor, historian, and political orator, H. von Treitschke, on the Berlin Royal Library. It appears that, apropos of the new building for which the Prussian Parliament recently made a large appropriation, two propositions have been made which excite Professor von Treitschke's disapproval, and to combat which he publishes his article. The first of these is that the building shall include a reading-room, like that of the British Museum and the Bibliothèque Nationale, in which all books belonging to the library could be consulted; *i. e.*, that circulation should be permitted only in the case of duplicates. The second suggestion is that the library be made an imperial instead of a royal institution, by which means it would not only have larger pecuniary means at its disposal, but, like the national libraries of other countries, would have the so-called copyright "privilege." To the first, Professor von Treitschke objects that it would abolish the one feature in which German libraries are superior to all others, viz., the generosity with which books are lent; and, with true German complacency, he regards the experience of Great Britain, France, and Italy as of no account. The advantages of their system, he thinks, are not the convenience of the public, but only that of the library servants, together with the better preservation of the copies, though he admits that it would be a good thing always to be able to find a given book. In Germany, he remarks, "it has long been the rule that the rich are seldom cultivated, and the cultivated seldom rich," a state of things, he adds, not changed by the great progress in material prosperity; for, though more money is spent for books, it is not for serious works, but for picture-books, encyclopædias, and trashy periodicals. But one great improvement the professor regards as feasible, viz., the preparation for the Berlin library of a universal catalogue of all books contained in other Prussian libraries—an arrangement which, as he truly observes, would enormously facilitate the labor of scholars. As to the new building, it will, he thinks, be a great step in advance, but the additional room will suffice only for twenty years or so, and meanwhile the library suffers greatly from insufficient funds for books and labor. It appears that every fourth book asked for is "out," and every seventh "not in the library."

—The number of text-books for the study of the German classics has been increased by the addition of two volumes of selections from Heine: 'Selections from the Reisebilder and Other Prose Works,' edited with notes and introduction by C. Colbeck, M.A. (Macmillan's "Foreign Classics"), and the 'Harzreise und das Buch Le Grand,' edited for students by Prof. James A. Harrison (Henry Holt & Co.). The former is made up of selections from the 'Harzreise,' 'Das Buch Le Grand,' 'Norderney,' and the various prose writings. The introduction contains a brief but clearly-written and very satisfactory life of the poet. The notes are an admirable commentary upon the language, being especially felicitous in illustrations and explanations drawn from the storehouse of idiomatic and literary use. The literary references are full and in the main exact. An occasional slip appears, as when Duke Ernst, the hero of the popular legend, who died about 1186, is said to have lived from 1551 to 1567, and to have been the friend of John Frederic, Elector of Saxony. Bramarbas (p. 13, l. 25) was a character in one of Holberg's dramas; and the statement that "Prosit" is used most commonly in "Prosit Neujahr," could only have been written by one who had forgotten for the moment its varied and almost universal use. The American volume contains the 'Harzreise' and 'Das Buch Le Grand,' with few omissions, and though more extensive is less satisfactory and less correct. Thus we find on a single page, *Konsiliirt*—that is, the *consilium abeundi*, or rustication—translated 'summoned'; *Schnurren*, watchmen, rendered 'beggars'; *Promotionskutschen*, in the English university sense of "coach," rendered 'tutor,' *Profaxen*, 'profooleries.' Some of the notes are misleading, as those upon *Thran* (p. 13), *lösch-papierig* (p. 15), *Steiger* (p. 17), *Glück auf* (p. 19). But in spite of these errors and others which might be noted, this edition will be found a useful addition to the ordinary school texts for the study of German literature.

—There is much pleasant descriptive and historically-retrospective talk, on countries generally very little known, in a small volume recently published by the Vicomte de Caix de Saint-Aymour, and entitled 'Les Pays Sud-Slaves de l'Austro-Hongrie' (Paris, 1883). The Vicomte, being seized one day in the spring of 1879 with "that thirst for locomotion and adventure which renders civilized life burdensome," suddenly bade adieu to his family and pleasant home, and departed for the land of the Bosniaks, recently occupied by the Austro-Hungarian armies. M. Jules Ferry, then Minister of Public Instruction, was kind enough to bestow upon the excursion the semi-official dignity of an archæological mission, which secured some advantages. The traveller visited Croatia, Slavonia, Bosnia, Herzegovina, and Dalmatia, returning after two months with notes, fragments, copies of letters, sketches—and a fever. The latter and various occupations prevented an immediate publication of the book of travels now presented to us. The chief attraction of the volume lies, perhaps, in its illustrations of an ethnographic character, which are, however, in great part borrowed from Evans's 'Through Bosnia and Herzegovina during the Insurrection.' The author started with the intention of seeing first and forming his ethnological conclusions afterwards, but he never forgot for a moment that he was wandering among peoples hostile to the domination and influence of the German nation, the inveterate enemy of his country. He is an ardent advocate of South-Slavic independence and federation, and anxious to see Austria-Hungary transformed into a loose union of various nationalities, among which the Slavs are to predominate, instead of the Germans and Magyars, whose present lead in the empire of the Hapsburgs he finds dreadfully oppressive. The great advance in autonomy and general influence which the Czechs, Poles, and other Slavs of that dual empire have

made since 1879, under the new direction imparted to its affairs by the *entente cordiale* which Bismarck and Andrássy brought about between it and the German Empire, seems to have escaped the Frenchman's attention. It is curious to see how he depicts to himself the master-hand of European politics pulling the diplomatic wires in Berlin so as to insure, first, Austria's complete veering around toward the East; next, the Germanization of all her tribes; and, finally, the falling of herself and of the entire Balkan Peninsula, "as a ripe fruit, into the hands of the northern Gargantua, who would then be able to leave the sad banks of the Spree, and transfer his capital to the fertile shores of the beautiful Danube, if not to those of the blue Ægean."

—The papers just published by the English Government as a Parliamentary Blue Book on the departments of agriculture in foreign countries contain a vast amount of information that may be of service to all who are interested in what governments do, or ought to do, in behalf of agriculture. The valuable information here brought together is the result of inquiries prosecuted by British representatives in the countries concerning which the reports are made. The departments described in the volume are those of France, Germany, Austria, Italy, Denmark, Sweden and Norway, Belgium, Holland, Switzerland, and the United States. In the language of the report, the object has been to show "the staff employed, the total amounts provided annually by the several states, the various objects on which the expenditure is incurred in each country, with a general review of the results obtained." Of these reports by far the most important are those relating to France and Prussia, each of these nations having peculiarities that are especially worthy of study. In France, even under the Republic, there has been a strong tendency towards the concentration of all agricultural supervision in the hands of a central department. Accordingly, in 1881 a distinct Ministry of Agriculture was provided for, and was given control of the several departments of agriculture, woods and forests, and roads and bridges. What may be called the constitution of this ministry is too elaborate to be described in any brief account. Besides four principal bureaus, there are divisions and subdivisions in confusing number, each devoted to some particular branch of the service. For example, one of the subdivisions has charge of veterinary interests; another, of agricultural societies; another, of advancement in farm practices; another, of silk culture; another, of vine culture; another, of agricultural statistics, etc. For woods and forests there is a separate department of the ministry, also one for agricultural schools. For matters of education there is the same elaborate provision. Besides the National Agronomic Institute at Paris, with twenty professors and twenty-four other teachers, there are four "national" schools, six "practical" schools, and twenty-four "school farms." It is also required that classes for agriculture shall be established in all the normal primary schools. Four chairs of agricultural chemistry and three "nomadic" professorships of arboriculture and horticulture, as well as three veterinary schools, have been provided for by the Government. The school of forestry at Nancy has eleven professors; and there are thirteen agronomic stations in the different parts of the country. Of the 48,000,000 francs required for the administration of the interests of agriculture, 38,500,000 are provided by the income from the state forests, leaving only 6,500,000 to be provided for by direct appropriation. The Ministry of Agriculture in Prussia has been developed by a steady process of evolution since 1848. The organization is very complicated, and but for the admirable results obtained, one would be led to suppose that all vitality would be smothered by officialism. Besides the great agricultural schools, there are sixteen schools of comparatively elementary character for boys, and there are seventeen agricultural stations. The experiments conducted at these stations are of the greatest importance, a large proportion of the knowledge recently gained by agricultural chemists having originated with them. It is evident that an organization like that of France or like that of Prussia would be possible only under an efficient civil service.

—For the fourth time, M. Jules Claretie has gathered together into a stout volume the *chroniques* he contributes weekly to the *Temps*, under the alluring title of 'La Vie à Paris, 1883' (Paris: Havard; New York: F. W. Christern); and this time he has prefixed a little essay on "Politeness in Literature," which is pleasantly written and to the point, like most of this author's writing. But it is to be regretted that M. Claretie cannot extend to a whole people the politeness he is careful to extend to individuals. Throughout these lively pages we seem to detect an increasing acerbity toward the American abroad. Moreover, it is clear that his dislike extends to the American at home, who never did any harm to Paris at large or to M. Claretie personally. This being he terms a Yankee, and he quotes with fear and trembling, and yet with a certain ill-defined acceptance of the prophecy, a definition of "Yankee" which declares him to be the "Parisian of the future." M. Claretie says ditto to M. Renan, when pronouncing Americanism the lion in the path of Parisian progress. For the rest, we find in his volume the usual pertinent anecdotes and interesting autograph letters which distinguish the series. As instructive in a way as anything in the book is his description of one of the play-books of Rachel, from which she studied her lines: the pages of her part worn, marked, soiled, but the rest of the book as clean as though it had never been read.

—The death of Alphonse Lavallée at the early age of forty-nine is announced. M. Lavallée was the most famous of modern European collectors and students of trees, and his arboretum at Segré near Paris, where during the last twenty-five years he has assiduously brought from all parts of the world every tree and shrub he could procure which could be induced to withstand the somewhat trying climate of Central France, was the richest in species and varieties and the most complete in existence. M. Lavallée studied his collection critically and thoroughly. The published catalogue of his arboretum is a model in its way. Later he commenced the publication of the 'Arboretum Segrezianum,' a superbly and accurately illustrated work; in this he described some of the most interesting plants of his collection. Five parts, or about one-quarter of this work, only have appeared. M. Lavallée's latest publication is an illustrated monograph of the large flowering *Clematis*; although at the time of his death he had almost ready for the press a new and enlarged edition of the catalogue of his arboretum and an illustrated monograph of the difficult genus *Cratægas*. His early and entirely unexpected death is a serious loss to his numerous correspondents, the learned societies with which he was actively associated, and to all students and lovers of trees.

—The question of a change in the location of the National Observatory, agitated with somewhat of vigor at Washington a few years ago in relation to our own Naval Observatory, has lately assumed a definite form at Paris, in the proposal of Admiral Mouchez, the Superintendent of the National Observatory of France, that the grounds surrounding the present establishment, and which are only useful astronomically to isolate the building, be for the most part sold, and that the funds derived from the sale be employed in the construction of a new and first-class observatory near Paris, which shall be furnished with all the improvements and accessories suggested by the state of modern astronomical science. Admiral Mouchez indicated in his memoir to the Academy of Sciences that while other national observatories are located outside of cities and towns, the Observatory of Paris was situate in a part of the city becoming more and more populous. He would propose, however, to retain at the present building the museum of general astronomy, an office for computations, and three or four instruments for the purpose of instructing pupils. The Committee of the Academy to whom the question was referred exhibited a strong feeling that no portion of the grounds of the present observatory should be disposed of, and that, if a new observatory or branch of the present establishment were to be founded, it would be preferable to grant anew the appropriations necessary for its organization. When it is recalled that Congress, acting doubtless under the best advice, has so far refused or neglected to proceed with the long-expected removal of our own observatory until it shall be fully apparent that great and sufficient advantages will accrue from the new situation, it will excite no surprise that only two members of the Committee of the French Academy supported Admiral Mouchez's motion with regard to the Paris Observatory, and that the proposal was finally negatived by a large majority.

MARCUS AURELIUS.

Marcus Aurelius Antoninus. By Paul Barron Watson. New York: Harper & Brothers. 1884. 8vo, pp. 338.

MR. WATSON'S 'Marcus Aurelius' is in every way a creditable piece of work, marked by thorough scholarship, industry, and a clear judgment of historical relations, and by an excellent English style; and if here and there the writer has been led to expand and illustrate more than the jejune text of his authorities would warrant, he has at any rate made a readable book. We must take some exception to his arrangement, which is neither purely chronological nor purely topical. Thus the "Thoughts" are brought into the chapter on the Third Marcomannian War, while the general subject of "Legislation," which deserved to be made a chapter by itself, is sandwiched in the middle of an account of the Parthian War. This discussion seems to us, on the whole, the most satisfactory part of the book. The author has taken up in succession the several departments of legislation —changes in procedure, laws regulating personal status and family relations, laws of inheritance, as well as those of a more public character—and has shown by abundant citations from the Digest and other sources the specific reforms attributed to the enlightened legislation of Marcus, in connection with the evils which they were intended to remedy.

In this difficult and skilfully conducted inquiry, it would not be strange if some oversights or errors had been made, and we find, on page 123, a translation and explanation with which we cannot agree. It is upon the subject of the *annona*, or public administration of the corn supplies. Mr. Watson, like many writers, appears to confound this with the public *distribution* of corn, which at any rate made only a part of it; and it is not even certain that this fell to the

duty of the *præfectus annonæ* at all. Writers on political economy sometimes comment upon the certainty and regularity with which food is supplied to a great city through a multitude of independent dealers and marketmen, as being much greater than would be possible under any single or public administration. However this may be at the present day, it was by the opposite method that the enormous population of Rome was fed. And, indeed, it appears to have been only by this public administration that terrible famines were prevented. It is not private enterprise but universal rapid transportation that has put an end to famines in the civilized world. Under the Roman Empire the Government undertook the function of seeing that the markets of the capital were regularly supplied with corn, and, as a result, there appears to have been no serious famine in Rome after that of A. D. 5, which occasioned the public organization of the *annona*. The corn provided by the *præfectus annonæ* was, for the most part, obtained by the regular contributions in kind of the provinces, especially of Africa and Egypt, and was levied through the intervention of the municipalities, which, being territorial divisions of the provinces, had in charge certain parts of the regular administrative machinery of the provinces; when it arrived at Rome it was sold at the market price—a part only being employed in the distributions, whether gratuitous or at a reduced rate. Now the rescript of Marcus Aurelius, *minime æquum est decuriones civibus suis frumentum vilius quam annona exigit vendere*, evidently has reference to this function of the municipalities, and forbids the municipalities to sell *to their own citizens* at less than the market rate fixed by the *præfectus annonæ*. Mr. Watson, in speaking of it, takes no notice of the words *civibus suis*, and, moreover, gives *vilius* the meaning of the modern word *vile*, "of an inferior quality," which is not, we think, warranted either by usage or by the context. Similarly, upon page 98 we find the assertion that a father "possessed the right of having his child divorced after the marriage had taken place." This is of course true of a son *in potestate*; it cannot, however, be true of a daughter, for the daughter passed by marriage out of the control of her father into that of her husband. In relation to the judicial authority of the Emperor (p. 69), it is stated that this was delegated to various officers in different parts of his dominions, but that "all such officers, be they consuls, prætors, ædiles, or tribunes, possessed that authority only by virtue of the *imperium* with which they were clothed." The four classes of officers here mentioned were found only in the city of Rome, the provinces being governed by others; moreover, neither ædiles nor tribunes ever had the *imperium*, nor did they continue, under the empire, to exercise judicial authority.

This brings us to what we must consider the principal defect of the book, which is an inadequate treatment of the condition of society and institutions at this period. We would not have a treatise upon antiquities, but more of the fruits of antiquarian study would have added to the intelligibility and instructiveness of the work. The author does not seem thoroughly acquainted with the outlying knowledge relating to his subject. For example, on page 126, the provision "that every man chosen a member of a colonial senate was bound to accept the duties to which he was elected," is made to seem a slight and unimportant matter; and there is no indication that it marked an important phase of a fundamental revolution, accomplished at this epoch, not merely in the constitution of the municipalities, but in the whole structure of society. The account of the Marcomannian wars is excellent. We wish it could have been introduced by a study of the condition of Germany at this epoch—nearly a century after Tacitus—as thorough and exhaustive as that which is bestowed upon the legislative activity of Marcus Aurelius. The materials are no doubt deficient; still, enough exists to make possible a sketch which would add much to the interest of the military history.

The chapter upon "The attitude of Marcus Aurelius toward Christianity" is an able presentation of the thesis that the main cause of the persecutions under this Emperor was that the Christianity with which he came in contact "was heresy, and he rejected it" (p. 308). This is an interesting point of view, and no doubt brings into prominence a set of facts which is usually overlooked; we cannot but think, however, that its importance is exaggerated. As is shown in the narrative, there were three distinct acts in these persecutions, associated with the names respectively of Justin at Rome, Polycarp at Smyrna, and Blandina at Lyons. Now, at Lyons no doubt the Montanist heresy was rampant, although it does not appear that Blandina was a follower of it; and certainly no heresy is to be ascribed to Justin or Polycarp. Of course his meaning is that the numerous heresies, or diverse schools of thought among the Christians, had prejudiced the popular mind and the mind of the Emperor against the entire body: just as "the variations of Protestantism" have been a chief ground of accusation against the Protestant body. And it may well be that this had some influence. But we must remember that the pagan world cared nothing for dogma, and that the dissensions among the Christians cannot have affected their minds as Protestant sectarianism scandalizes devout believers in the Catholic doctrines. What the Roman people and magistrates saw first of all was a body of persons holding an exclusive faith which made them disloyal to the primary idea of the empire, the cult of the Emperor: and this made them bad citizens. At the same time, Mr. Watson appears to have proved that these persecutions under Marcus Aurelius did not emanate from the Emperor himself, and that we cannot therefore ascribe to him any deep hostility to Christianity or any settled policy of persecution. He points (p. 301) to the significant fact that this Emperor was held in high esteem by Christian writers, such as the composers of the Sibyllic oracles and Zonaras.

The philosophy of Marcus Aurelius, however, by far the most vital part of his memory, demands a different and fuller treatment from that which has here been given to it. Mr. Matthew Arnold has compared Emerson to him, as being "the friend of those who live in the spirit," and at the same time he (followed by Mr. Morley) denies Emerson the title of *philosopher*. In truth, this title belongs rightfully almost as little to the wise Roman Emperor as to the wise American citizen. There were as large *lacunæ* and as numerous illogical associations of ideas in one mind as in the other. Nevertheless, we talk with reason of the philosophy of Marcus Aurelius; for, so far as the word is used to indicate a scheme of personal life founded upon noble endeavor, so far is it peculiarly applicable to his thoughts. But if it were held to imply a well-considered system of unquestionable truths, we should lose sight, in attributing such a system to him, of an essential quality of the Emperor's mind, and of the inconsistency of some of his admonitions with some of the fundamental facts of humanity; facts not unrecognized by himself. The quality of mind we ignore is the habit so seduously cultivated by him of viewing all things from a height; the facts which oppose his wisdom are those which result from each man being one of a crowd.

In one of the most inspiring passages of his writing, he defines his own philosophy thus:

"What, then, is that which is able to conduct a man? One thing and only one—philosophy. And this consists in keeping the dæmon within a man pure from all stain, superior to pains and pleasures, doing nothing without a purpose, nor yet falsely and with hypocrisy, not feeling the need of another man's doing or not doing anything; and, besides, accepting all that happens and all that is allotted as coming from thence, wherever it is, from whence he himself came; and, finally, waiting for death with a cheerful mind."

But how can this "philosophy" be brought into accord with those facts of mutual dependence and interaction among men, on the force of which no one has insisted with more earnestness than Marcus Aurelius? "The man who is such as no longer to delay being among the number of the best," he says, "remembers that every rational animal is his kinsman, and that to care for all men is according to man's nature." And again: "We are made for coöperation," he says, "like feet, like hands, like eyelids, like the rows of the upper and lower teeth." How, then, his listeners ask, can we ever be removed from "feeling the need of another man's doing or not doing anything"? or, as he says elsewhere, "that a man's wrongful act is nothing to thee"? "Thou existest as a part," is his constant refrain; ". . . for of this common nature every particular nature is a part, as the nature of the leaf is a part of the nature of the plant." But he immediately adds: "The nature of the leaf is part of a nature which . . . is subject to be impeded; but the nature of man is part of a nature which is not subject to impediments."

In what sense are we "not subject to impediments"? In one sense, he says, because "all is opinion"; and "Take away thy opinion and then there is taken away the complaint 'I have been harmed.' Take away the complaint 'I have been harmed,' and the harm is taken away." And he adds, "I can have that opinion about anything which I ought to have." "In a manner," to use his own phrase, this is true; but it is a truth of which the exact opposite is no less true. This opposite truth—that some influences are essentially harmful to man's nature and some essentially beneficial—is by us in these days unquestionable. The only question for us—a question so intricate as to be eternally unanswerable—is *what* is harmful, what is beneficial to us. In another sense—shall we call it a more practical sense?—we are, according to Marcus Aurelius, "not subject to impediments," because

"that which rules within, when it is according to nature, is so affected with respect to the events which happen that it always easily adapts itself to that which is possible and is presented to it. . . . So far as some men make themselves obstacles to my proper acts, man becomes to me one of the things which are indifferent, no less than the sun or wind or a wild beast. Now it is true that these may affect my action, but they are no impediments to my affects and disposition, which have the power of acting conditionally and changing. . . . For the mind requires no definite material, . . . and it makes a material for itself out of that which opposes it as fire lays hold of what falls into it; . . . when the fire is strong it soon appropriates to itself the matter which is heaped on it, . . . and rises higher by means of this very material."

Nothing can be more admirable than these beliefs, nothing can be more true; but their light is useless and their strength is idle in those dark hours of "mortal moral strife," when truths even are slaughtered by the power of Truth itself—that supreme Truth whose mysteriousness encircles and enclasps all the mysteries of our existence, the mysteries of pains and pleasures, of serenity and agitation. In these personal conflicts with Truth, when, like Jacob, we cry,

"I will not let Thee go except Thou bless me," it surely is made clear to us that pain—pain of body or pain of soul—man does not truly conquer by asserting its powerlessness. And not less that the power of pleasure to nourish, to inspire, and to humanize the soul is felt by the noblest natures.

Calmness is well, but calmness is not the best that life can give us. Rather it is indeed only what life can *give* us: it is not life itself. It is not that Life, victor over Death, which lies in *living*, in the responsive vibrations of the whole nature to all the inseparable causes of enjoyment and suffering. That the anguish of imaginative sympathy with universal sorrows—the "majestic pain" of humanity—was as little known as the agonies of personal despair to the imperial wisdom of Marcus Aurelius, has countless proofs. "When thou art troubled about anything," he says, "thou hast forgotten this"—this, the very *remembrance* of which is to the souls of to-day the cause of deepest trouble—"everything which happens, always happened so, and will happen so, and now happens so everywhere." From all that perturbs the soul he took refuge in lofty isolation; all that crushes it he lifted with supreme strength and gave in keeping to that Nature, the sum of Being, whose enduring might encompasses and receives our transient existences. The outcry against the incomprehensibleness of the Almighty which found voice in the Book of Job would have seemed to him irrational rebelliousness.

In a moment when his eyes were fixed exclusively on one aspect of things, he writes: "Nothing happens to any man which he is not formed by nature to bear." But at another time he says with more justness, though still without the reasonableness of complete knowledge: "Everything which happens . . . thou art formed by nature to bear it, or thou art not formed by nature to bear it": if the first, "do not complain, but bear it"; if the second, still "do not complain, for it will perish after it has consumed thee." He was under a delusion—must we not think?—who supposed that in that "for" lies any availing aid to endurance. And that "it" covers but a small number of the various forms of human suffering arising from what "happens": no deep griefs, in truth, but those which death causes. Such words, whatever power they may have had for him, are meaningless to the great multitude of those who are "consumed" by woe, even the very woes he personally knew or others as bitter—the fathers and mothers disgraced by their children, as he by Commodus; the husbands of women like Faustina; or unloved wives, or forsaken friends, or those bereft of their beloved by insanity; or the lovers of men embruted by drinking, degraded by women, led astray by money, weakened by the world; or those "consumed" in fighting for the poor and oppressed the endless battle against injustice. The innumerable army of martyrs was unseen by the noble spirit of the Emperor.

Neither did his mind feel or perceive those unanswerable questionings which are the martyrdom of the intelligence. Contrast the thoughts of Pascal with the thoughts of Marcus Aurelius: if these are loftier, those are the more profound. And the difference is not due so much to the direct influences upon the two men, as to the eternal individualities of personal nature. It is not merely ancient and modern conceptions which they represent. Plato, better than Marcus Aurelius, would have understood Pascal. Marcus Aurelius says, "All that is from the gods is full of providence; . . . nor is it possible that it [the nature of the universe] has made so great a mistake, either through want of power or want of skill, that good and evil should happen indiscriminately to the good and the bad. . . . Therefore they [death and life, honor and dishonor, pain and pleasure] are neither good nor evil"; but, when we read this, we remember that Plato believed, "God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men; for few are the goods of human life, and many are the evils; and the good only is to be attributed to him: of the evil other causes have to be discovered." We must not seek direct aid from Marcus Aurelius in the search which the human mind has entered upon in these days for the "other causes" of the evils of human life. But no voice has uttered with more authority than his, words which, even while we walk in paths unknown to him, may guide us on our way. And no intelligence has seen more clearly the highest aims of human life. "The prime principle in man's constitution is the social," he says, and adds: "Take pleasure and rest in this, in passing from one social act to another social act, thinking of God."

Phœbe. By the author of 'Rutledge.' Boston: Houghton, Mifflin & Co.

In some recent French memoirs, the author bewails the fate of a friend whose book, one in every way worthy of success, passed by unhonored, unknown, because it had the ill-fortune to appear just upon the eve of the *Coup d'État*. The author of 'An Average Man' would certainly have preferred that New York and Wall Street should not have offered so signal an illustration of the temptations and dangers of an ambitious career at the very moment that his story reached its catastrophe. A work of great genius would only have been illuminated, heightened in effect by the intense light of reality, but Mr. Grant's is but a puppet-show, in drapery and setting that look faded and distorted when thrown into such imperative comparison with things as they are. The story is of the oldest: it is the theme of the model Sunday-school book. The two young men—one always doing good, the other always evil—have walked side by side in fiction these many years. It is all the worse, then, that they should have been taken in hand by a writer so devoid of imagination as Mr. Grant. Even hackneyed incidents can be helped by variety, but the tintype is bestowed on both heroines, the same roses appear again and again, while lunch and tea, Bar Harbor and Newport, differ only in name. Worse than this, all the people talk alike. It would be something if they were clever, but the author throughout is in the same strait as his own good hero: "The wished-for epigram failed to respond to his need." The difference in tone between the best and the worst is scarcely perceptible. The sentences of the circus-rider's daughter and of the child of generations of culture could be interchanged without detection. The whole object is to show the villany of which a refined nature, carefully educated, is capable. The difficulty is, that in Mr. Grant's portraiture the refinement is entirely wanting. He makes the further mistake of suiting his own style to the low plane of his characters. He need not go further back than Thackeray to learn that the satirist, of all others, must stand plainly apart from his work. By no possibility should his voice be confused with the voices of those he condemns. We object always to the "purple patch," whether in stuff or style; but to have religion or religious feeling pieced upon a story as in this is to the last degree reprehensible. The scene with the crucifix in Ethel Fielding's boudoir is sacrilege—nothing less. As to the general argument that the average is an average of badness, the mere fact of the existence of civilized society is proof to the contrary.

'The San Rosario Ranch' is a beautiful survival of the old romantic school. The hero comes riding in on a gray mustang with a dead stag lying on the saddle before him. "Taking her outstretched hand (the châtelaine's) in his own, he dropped upon one knee and kissed it respectfully. 'My dear lady, I have come to wish you the happiest New Year and to join in your loving cup,'" etc. Even Siegfried fought with but one *Wurm*, but this knight kills two, and rattlesnakes at that. He is an artist too grand to paint for money, and nurses a solitary grief in the old tower of the mission church. The lady is a fitting companion, in sea-green cashmere, with "manifold strings of tiny seed-pearls." "She has a strange, white, luminous face, . . . strange hands, that made her cheek look brown by comparison. The fingers were long and taper, at the tip of each a drop as of water ready to fall from the pink digits." She has had the great London world at her feet, and has broken her heart in the woes of a secret marriage to a man who already had an insane wife; but she has regained calm and peace of mind in an æsthetic home at Venice, where she has made herself the centre of a group of admiring and sympathetic friends. Grieved at the third marriage of her father, she accepts the invitation of a half-brother and travels "from the coast of the Adriatic Sea to the shores of the Pacific Ocean, with no companion save her maid and her own painful thoughts." All this has happened before she is twenty-one. She has had time withal to provide herself with a miscellaneous philosophy. On her arrival, when asked to join in family prayers, she replies: "Being an agnostic, I should hardly be in sympathy with your service." Next morning she unpacks her sixteen boxes and sets up "a little majolica shrine with a figure of San Antonio" and lays before it "a parchment missal of the fifteenth century, with beautiful illuminations," a mouse-gnawed Dante, and "Lear's Nonsense Book." Alas! that modern realism demands in this romantic picture such prosaic details as "a dressing-bag filled with ivory brushes and silver-topped bottles engraven with M. A." We spare our readers the story—escapes from drowning and from abduction, imprisonment and trial for life, in which the *beau rôle* is always the heroine's. The hero's rôle is to be always too late. The novel is an echo of echoes, reproduced in high-sounding platitudes or in a gushing naïveté. Memorable for its nonsense it may be, but few persons would covet such distinction.

We fully agree with the general opinion that 'A Roman Singer' is far better than either of the author's earlier novels. The story itself is of that simple type which no amount of repetition makes quite stale. A fair lady, a tyrannical

father, a rich wooer, and an impassioned and at last successful lover, make a group always sure to attract sympathy. Into all his tales Mr. Crawford puts movement, and much of their vogue is due to the fondness of people for what they call "go." In the garrulous talk of a fond old man there is a good deal to increase this effect, and so far the choice of that form for the story was well-advised; but in every other aspect it is a mistake which betrays the 'prentice hand. There is no older canon for guidance in narrative composition than that the soliloquy can be used in a narrative only when the speaker is the central figure. If any other personage attempts it, a great deal can be given only at second-hand, much must be dragged in, and some things cannot decently be told at all. Mr. Crawford proved at the outset that any such trifles as literary rules would be no hindrance to him; so he manages his queerly constructed tale to suit himself, letting the old Grandi describe in full detail the most intimate scenes, and then pulling him up with an apology or an explanation. "You cannot suppose that I know exactly what was in the letter." Grandi, when he is Grandi, is a delightful old man, but his voice is lost very often in Mr. Crawford's own, especially when one comes to the moral reflections. These might easily be interpolated in any of the previous books, and no one be the wiser. We had supposed Mr. Crawford's resources wider, but there are the same "waves of hair like spun silver," the same parade of trite catchwords, the same grandiloquent enumeration of nothings. "She rose and swept her silken morning gown between the chairs and tables, till she reached a deep divan on the other side of the room. Then she sat down." Was she likely to sweep the dress *over* the tables? What was fantastic in "Mr. Isaacs" becomes broadly grotesque in "Baron Ahasuerus Benoni." Grotesqueness in a modern novel is out of place, and here it is exaggerated to repulsiveness. Nino and Hedwig are undeniably charming in the grace of their youth, and there are more and better glimpses of Italy than in 'To Leeward'; but when all is said Mr. Crawford has only the cleverness, and, we fear, the trickiness of the scene-painter. Effective, brilliant for a moment, upon study it shows itself staring and gaudy. When Millets are exchanged for the "flats" and "sets" of a theatre Mr. Crawford's productions will find a permanent place in literature.

A solid, well-built story never shows to better advantage than by the side of the work of the tyro or of the adventurer. The common reading world is too willing to accept the theory that there is no art of fiction—that to write a successful novel is only a lucky accident. A lucky accident it may be that makes a book talked of by everybody for a day, but all the literature of fiction fails to supply an instance where permanent success has followed anything but actual hard work. There are numerous instances where a first novel has found instant and permanent favor, but it was from a hand that had been carefully trained in some not alien task. Mr. Clark Russell and Mr. Blackmore are always sure of a reading. The former proves that his resources for a sea-story are not yet exhausted, though he finds it well to vary his subject by interweaving an Enoch Arden incident, and by making his plot turn upon that alleged fact of mental constitution—the possibility of the total loss of memory while all other faculties remain unimpaired.

Mr. Blackmore's 'Tommy Upmore' might bear for a second title "A Tale of the Real and the Unreal," though his deft and facile pen contrives to make the supernatural traits of his hero as solidly material as the whimsical oddities of his parents, who are homely folk of the soap-boiling interest. No living writer has tried so successfully such different themes in fiction as Mr. Blackmore, and no one can maintain better than he a style devised for a special book. Some of this story shows him at his happiest. It does not pretend to the romantic interest of 'Alice Lorraine,' nor has it anything to compare with the archaic style of 'The Maid of Sker'; but every page is amusing, and it is almost wonderful that, pure "skit" as it is, it should strike with such true aim so many ways at once.

The original design of 'There was Once a Man' appears to have been to do honor to that noble Englishman, "the last Crusader," Sir James Brooke, Rajah of Sarahwak, in Borneo. The author has frustrated himself by his own capacity for story-telling. An heroic figure like the Rajah, or a promising monkey, furnish themes equally pleasing to him. The Rajah's deeds are nearly buried beneath the adventures of an American family, the craze of a naturalist over "the missing link," and the tracking of a will lost for forty years in the wilds of Borneo. Any one interested in his career will learn ten times as much of him from the sketch published under the editorship or direction of Miss Yonge than from the five hundred pages here printed. They have no literary characteristic whatever, unless an indefinite continuance of commonplace improbabilities (the phrase is not a paradox) be one. Still, while Mayne Reid is read and 'Kaloolah' is remembered, it cannot be said that nobody will care for such a book.

'Rutledge,' we have heard, still survives in successive small circles that have more youth than literary experience. For their sakes, 'Phœbe' should be distinctly condemned. The early incidents are wantonly shocking, and all the rest would be possible only in a world where neither logic nor morals exist.

Property and Progress: or, A Brief Inquiry into Contemporary Social Agitation in England. By W. H. Mallock. New York: G. P. Putnam's Sons.

It is safe to say that those who are acquainted with the writings of Mr. Henry George, or of Mr. H. M. Hyndman, will take up this book with very agreeable anticipations. Every one that has the spirit of a man loves to see a good stand-up fight, where everything is fairly conducted and no one cries quarter. It is true that not many men can safely measure swords with Mr. Mallock when he is upon his own ground. There are passages in some of his critical writings that are of almost incomparable brilliancy. Mr. George, however, is entirely capable of taking care of himself. He needs no sympathy even if he deserved it. Yet in spite of these favoring circumstances, we must confess that our expectation of enjoyment has not been completely fulfilled. Bayle tells of a certain Turkish Ambassador who said, after being taken to a tournament: "If it is for sport, it is too much; if for earnest, it is not enough," and we are tempted to make a similar comment upon this performance. Its title is a happy inspiration. It is almost too good for the book, which is not a connected treatise, but a reprint of three articles from the *Quarterly Review*. They are in the traditional *Quarterly* style, and Mr. Mallock, when he chooses, is master of a better style than that. There is a little too much of the elaborate preliminary announcement of the total overthrow that the reviewer is about to bring upon his adversary, and of the triumphant flourish that calls attention to the thoroughness with which the bloody work has been completed. Such sentences as these are hardly worthy of Mr. Mallock: "Mr. George delights in illustrations, and with illustrations we have answered him. His are exceptional, and do not prove his point; ours are normal and homely, and altogether disprove it." Surely readers might be allowed to judge for themselves in such matters.

We should be giving an altogether wrong impression, however, if we led any one to suppose that Mr. Mallock did not most completely refute his antagonists. He has not replied to them as a trained economist would have done, but their arguments were not addressed to economists. He has replied to them in a way that is most effective, for his purpose at least, by showing the absurdities in which they have involved themselves. He shows that they are wrong, but we do not think that he is equally successful in showing why they are wrong. Nothing could be better than his refutation of Mr. George's theory of wages up to a certain point, but when he comes to state the conditions that actually determine the rate of wages, he makes some statements that Mr. George would be likely to use against him with effect. His reply to Mr. George's views on the population theory hardly goes to the root of the matter, but is perhaps more effective as a reply on account of its moderation. We cannot resist quoting a portion of it. Mr. George having remarked that a country like Pitcairn's Island offered an exceptional case, Mr. Mallock continues:

"However true may be his own theory generally, it is, at all events, false there. He has driven Malthus ignominiously out of Europe and America; but the dishonored philosopher has found refuge at any rate, where to this day he reigns like a fallen angel, and Mr. George descries him in the remote Southern seas, still sitting on his dolorous throne, and watching one wretched population pressing against the limits of subsistence. In Pitcairn's Island, as Mr. George admits, Mr. George is wrong, and Mr. Malthus is right. Now what is the reason of this? The reason, says Mr. George, is that the island is 'cut off from communication with the rest of the world.' Plainly, however, he cannot mean this statement absolutely. Pitcairn's Island is not in the moon. It is washed by a terrestrial sea. Ships have touched at it, and ships do touch at it. All, then, that Mr. George can possibly mean, is not that it is cut off from communication with the rest of the world, but that it cannot communicate with it without a certain effort and difficulty. But Pitcairn's Island is not peculiar in this. The condition is essentially that of every other country and the difference between it and them is one of degree only."

It requires but a moderate amount of philosophy to view with calmness the sweeping attacks made by communists upon private property as an institution. However specious a case they may make out—and no one that ever owned so much as a sheep would be convinced by their arguments—the matter is to be settled by force, not by reason, and the holders of property have, and always will have, sufficient force to protect themselves against robbery. Particular forms of property, however, may be imperilled by being attacked separately, and this is why Mr. George's proposals have excited so much attention. Mr. Hyndman, therefore, who is the foe not only of landlords, but also of capitalists, is much less dangerous than Mr. George, who is the foe of landlords alone. He does not on that account fare any better at Mr. Mallock's hands. Mr. Mallock has done something as a prophet himself, and there is no more important prophetic function than that of exposing false prophets. Mr. Hyndman's statistics are very easily shown to be a tissue of impudent falsehoods, and his reasoning from them is refuted with more pains than it deserves. No intelligent person needs to be told that such a statement as this is a lie: "The average age of the well-to-do has now reached fifty-five; the average age of the workers is twenty-nine."

Mr. Mallock furnishes some calculations of his own, which, not having his statistics to examine for ourselves, we cannot vouch for, but which are enough at any rate to silence a good deal of idle clamor. Taking the gross annual income of England as estimated by four very good authorities, Giffen, Baxter, Mulhall, and Levi, it appears that during the last forty years the richer classes—those having incomes of more than £150—have increased in numbers 200 per cent., while the poorer classes have increased by but 20 per cent. Moreover, upon the average, every family among the poorer classes had in 1843 about £40 of income, while it has now between £95 and £100. So much for the cry that the poor are growing poorer; as to the cry that the rich are growing richer, it appears that "the class with incomes between £150 and £300 has increased during the past thirty years by 148 per cent.; the class with incomes between £300 and £600 by 130 per cent.; the class with incomes between £600 and £1,000 by 77 per cent; and the class with incomes above £1,000, by 76 per cent." But we ought not to mar the argument by taking extracts from it. Of course every one reads what Mr. Mallock writes for the sake of the style; and, apart from that consideration, those who are interested in social questions will be very well repaid for whatever time they may spend upon this book.

Vacation Cruising in Chesapeake and Delaware Bays. By J. T. Rothrock, M.D. Illustrated. Philadelphia: J. B. Lippincott & Co. 1884. 12mo, pp. 262.

YACHTING in Chesapeake Bay, if we may judge from the experience of Professor Rothrock, is attended with more than ordinary difficulties. The seeker after pleasure or rest must expect the constant recurrence of baffling winds, sudden storms, rough seas, and harbors though numerous yet often hard to find and dangerous to enter. Notwithstanding all these obstacles to perfect enjoyment, a vacation could be well spent in a month's cruise along the shores of the bay from Elk River to Fortress Monroe. Though our author gives us but few descriptions, except when upon the James River which he ascended to City Point, yet it is evident that both the country and the people present peculiar points of interest to a visitor from the North. It is to be regretted that Professor Rothrock has not given more local color to his book. It would have added not only to its interest, but also to its value. Had he introduced, for instance, some more detailed account of the James River region, the quality of the land, its price, the crops, the market, and the feelings of the people toward Yankees, he might have done a real service to young men who are seeking Southern homes. As it is, there is little more than the names of the different headlands and harbors, interspersed with newspaper scraps, quotations, and many excessively commonplace reflections on a great variety of subjects utterly unconnected with the subject of his book. Even in treating of the natural history of the regions through which he passes, the Professor fails to interest, less, we are inclined to think, from lack of ability than from want of painstaking. The following fact, however, is new to us:

"Squids' eggs are those half-jelly-like, olive-shaped bodies which one finds so often in September adhering to the shells of the living oyster. Some people call them sea-grapes, but the oyster-men have fearful names for them. They are little, if any, heavier than water, and hence, when agitated by a heavy storm, the water sweeps over the cove bottom, and the light bunches of sea-grapes float away bodily along with the oysters, which they help to buoy up. The oyster-farmer may thus find his whole crop carried away by the wind and waves."

Of the people whom he saw, both white and black, he speaks favorably. But he is at his best when he confines himself to yachts and the theory and practice of yachting. His advice to amateurs seems very sensible and worthy the attention of all who intend to cruise in those waters. He insists upon the absolute necessity of a careful and constant watch of the barometer, and lays an especial emphasis on the fact, often overlooked, that a sudden rise is as surely indicative of wind as a sudden fall. With what he says in regard to the advantages of yachting, in giving entire rest to the wearied body and over-taxed brain, we thoroughly agree, and can commend his book to all needing such relief after a peculiarly trying winter and spring. As to the expense we will let him speak for himself: "A party of, say, four congenial companions could make such or more distant [trips], in a larger boat, spending a month in doing so, and, after paying for the vessel, hiring a captain and a cook, purchasing the provisions, still find that the expense for each man did not exceed $50 for the whole trip"

Haushalt der arbeitenden Klassen. Von Paul Ballin. Berlin: F. Luckhardt.

THIS is a careful study of the economical literature on the subject of the earnings and expenses of representative German workmen. The wage-earning classes are estimated at 38 per cent. of the total population, and nine-tenths of these follow agricultural pursuits, and about 60 per cent. of these again are day laborers. Land-holders, mainly owners of only a house without ground enough to support a family, vary from 23 per cent. in East Prussia to 68 per cent. in the Rhine Provinces, marking distinctly the difference between the poverty of the region of great land-owners and the comparative comfort of the district where men own their own homes. The average wages of the workingmen are about $180 a year, as against about four times that amount in this country. Analysis shows that workingmen spend nearly 70 per cent. of their earnings in the purchase of the necessaries of life. The revolution of 1848 was more successful socially than politically, and ever since it has been a serious problem with all European governments, how to bring wages up to the requirements of living. Berlin and Frankfort and other German towns, large and small, have set on foot inquiries as to the daily earnings and expenses of types of different classes of their population, and from these returns Ballin has chosen examples showing how closely the balance is struck, and exactly what must be the wages which will feed and clothe and house and nurse and bury a German household.

The compulsory economy enforced by the high cost of living and the low wages in Germany, is manifested by the small proportion of meat in the food of the working classes, although there are some curious local habits that must puzzle an American with his few but hearty meals. In Berlin a first breakfast, a second breakfast, dinner, a vesper meal, supper, beer, brandy, and tobacco are all set down as among the necessaries of life. On the other hand, the universal custom of membership in beneficent societies, for aid in sickness and death, might well be adopted here. The ownership of most of the mines in Germany by the Government has the advantage of compensating for low wages, by free medical attendance and medicine and funeral expenses, as well as by pensions for disabled workmen and provision for their widows and orphans, a custom dating back at least as far as the fourteenth century, and enforced by the Mining Laws of the country as late as 1854. The recent gradual reforms in Germany as to legal restriction on the employment of women and children, are described by the author at length, but it is evident that a long time will elapse before there is any such exemption from hard labor as makes this country the paradise of women. Altogether the book might well be translated as material for study, by Congressional committees in search of information.

The Story of the Coup d'État. By M. de Maupas (former Minister). Freely translated, with notes, by Albert D. Vandam. New York: D. Appleton & Co.

IT is difficult to conceive what benefit the American reader will derive from the perusal of an apology of the indefensible *Coup d'État* through which Louis Napoleon Bonaparte became Emperor of the French thirty-two years ago, unless it be that he may learn from it how the President of a Republic may trample upon the Constitution, and, by trickery and violence, deprive the people of their legal means of redress. That such was not the object of the translator is apparent from his notes. Evidently, he believes in M. de Maupas, and it is unwittingly that he has illustrated the Italian proverb: *Traduttore, traditore.*

The ex-Prefect of Police seems to have had in view his own glorification as much as the justification of his Imperial master. The naïveté with which he describes the progress of the liberticide plot, while trying to show that the "Prince-President," in self-defence and from a laudable desire to "save" France, was compelled to violate his sacred oath and oft-repeated pledges, is equalled only by the complacency with which he dwells on the important rôle that he, the Prefect, played in the conspiracy. Saint-Arnaud and Morny are thrown entirely into the shade. Maupas is the *Deus ex machina* who pulled the wires and secured the happy result. The testimony offered by M. de Maupas makes up a strong case against his client. The situation was this: The Legislative Assembly suspected the Prince-President's motives. Their suspicions received sufficient confirmation to justify his impeachment before the High Court of Justice. This was the legal means provided by the Constitution, and the leaders of the Opposition were preparing to resort to it. Now, were those suspicions well founded? Speaking of the services rendered by Colonel Fleury, M. de Maupas says:

"In fact, for more than a year, since it had become patent that the conflict between the two great powers [the President and the Legislative Assembly] could only be solved by an appeal to force, the Prince had been compelled to gather around him an army devoted to his cause. Colonel Fleury had served in Africa; the fame of his bravery as much as the charm of his intellect had created a good many affectionate and intimate relations between himself and the generals and superior officers of the army. Endowed with rare penetration, he knew every one's weak and strong side. He knew to what degree such and such an officer, such and such a regiment could be relied upon; one might say that, thanks to his recollections of Africa, he had chosen one by one almost the whole of the generals of the Army of Paris. The most important of his selections was assuredly that of General de Saint-Arnaud. It was, in fact, the young Colonel who, at his own suggestion, had been charged by the Prince to go and seek General de Saint-Arnaud in Africa, and to ascertain his feelings with regard to the great events that might eventually take place, and to finally prevail upon him to promise his coöperation. It was also Colonel Fleury who had designated the regiments that garrisoned Paris on the second December; and his choice had been a good one."

The wonder is that the Prince's adversaries allowed so carefully prepared a plot to mature. They were divided; they hesitated, and were lost. But we cannot follow M. de Maupas any further; we have given his book already more attention than it is worth.

On the Nature of Light. By Professor G. G. Stokes, M.A., F.R.S. London: Macmillan & Co. 1884.

THIS little book is one of a class quite numerous in England, but not often produced in any other country, of which the object is to make known the methods and results of scientific investigation to those who are not professionally educated in the subject. In the case of natural science, where no knowledge of mathematics is necessary to understand the reasoning, such attempts have a high educational value; but where all the explanations and results depend upon the interpretation of mathematical formula, the possibility of giving the non-mathematical reader a really clear idea of the method of investigation may be doubted. We must, however, concede to the work before us the merit of going as far as it is possible to go in the attainment of this object. It comprises a course of four lectures delivered at Aberdeen, under a very old foundation, the income of which was applied to this purpose. The lecturer is one of the few greatest physicists not only of England but of the world, who unites with scientific ability an unusual power of clear and concise statement. We may describe the result as an exposition in non-mathematical language of the most remarkable phenomena of light and of the explanation of these phenomena by the hypothesis that light is an undulatory motion in a universal ether. Just how far down in the scale of education and intellect this exposition can be mastered it is difficult to say; but we know of no better manual for the study of one who has had some elementary training in physics and desires to learn the subject without going through any difficult mathematical process. The professional student would be better pleased with the work if it went a good deal further in the discussion and explanation of recent theories respecting the luminiferous ether. Indeed, it seems surprising that Professor Stokes, who has devoted so much attention to the subject, should have passed over the difficulties associated with it, and the methods of explaining them. For example, the electro-magnetic theory of light, which is suggested by the singular agreement between the velocity of light and the velocity of propagation of an electro-magnetic disturbance, is not alluded to. The various discussions which have arisen about the combined results of aberration and diffraction and the velocities of different colored rays in passing through a transparent medium are also passed over in silence. The course is to be continued during the next two years, and it is to be hoped that the author will avail himself of that opportunity to complete his work in these respects.

Cicero de Senectute (on Old Age). Translated with an Introduction and Notes. By Andrew P. Peabody. Boston: Little, Brown & Co. 1884.

DR. PEABODY here gives us the second instalment of his translation of Cicero, of which we noticed the *De Officiis* some months ago. He prefaces it with a judicious and appreciative introduction, including short accounts of Cato, Atticus, and Scipio. Some useful notes are appended to the text. There are many translations in English of this fascinating treatise of Cicero; two of them famous for bibliographical rather than literary interest, printed as they respectively were by William Caxton and Benjamin Franklin. It is not probable, however, that any translator has ever felt the meaning and beauty of the *De Senectute* more thoroughly than Dr. Peabody. He recognizes very thoroughly what a romance it all is: that Cicero's Cato is as little like the red-haired, green-eyed old Censor, whom Proserpine was loth to admit into Hades, as Cicero himself tells us Xenophon's Cyrus is to the fierce and crafty founder of the Persian Empire. It may be questioned if the translator's own innate refinement can accept the coarseness which was ingrained in even the most spiritual of the Romans. In the 11th section he would have done better, we think, to keep up the athletic metaphor by literally translating *desudans atque elaborans* "while I sweat down and work off"; and these compound verbs suggest another place where it seems to us no authority has hit the force of the compound *depugno*. In the 10th section Cato, speaking of his last military service, says, *depugnavi apud Thermopylas, i. e.*, "fought it out," "finished my fighting," like *deprœliantes* (Horace, Carm., I. ix. 11). In the first section Dr. Peabody appears to have overlooked the view that *Ille vir* is not Ennius himself, but an Epirote guide of Flamininus. One has to look closely to find anything to criticise in this pretty book.

BOOKS OF THE WEEK.

Advantages and Necessity of Frequent Communion, Asserted and Proved. By A. C. Detroit: L. F. Kilroy. $1.
Anderson, D. "Scenes" in the Commons. Scribner & Welford.
Barnard, F. A. P. The Imaginary Metrological System of the Great Pyramid of Gizeh. John Wiley & Sons. $1.50.
Batterson, Rev. Dr. H. G. A Sketch-Book of the American Episcopate during 100 Years. Philadelphia: J. B. Lippincott & Co. $1.
Blake, H. G. O. Summer: from the Journal of Henry D. Thoreau. Boston: Houghton, Mifflin & Co. $1.50.
Bose, Ram C. Brahmoism; or, History of Reformed Hinduism, from its Origin in 1830 to the Present Time. Funk & Wagnalls. $1.25.
Brackenbury, Col. C. B. Frederick the Great. G. P Putnam's Sons.
Bradley, Dean. Aids to Writing Latin Prose. London: Rivingtons.
Brooks, N. Our Baseball Club, and How It Won the Championship. E. P. Dutton & Co.
Brownell, Brig.-Gen. W. H. Formations for Street Riot Duty. Army and Navy Journal.
Byrne, E. F. A Fair Country Maid. A Novel. Harper's Franklin Square Library, 20 cents.
Carpenter, H. The Mother's and Kindergartner's Friend. Boston: Cupples, Upham & Co.
Cholmondely-Pennell. From Grave to Gay. Selections from the Author's Poems. George J. Coombes. $2.
Coleridge, S. T. Aids to Reflection and Confessions of an Inquiring Spirit. Scribner & Welford.
Coues, Elliott, Ph.D. Key to North American Birds. Second Edition, Revised to Date. With which are included General Ornithology and Field Ornithology. Profusely Illustrated. Boston: Estes & Lauriat.
Creighton, L. The Government of England. London: Rivingtons.
Daudet, Alphonse. Sapho. Mœurs Parisiennes. Paris: G. Charpentier et Cie. 1884. New York: Westermann.
Davin, N. F. Eos: a Prairie Dream, and Other Poems. Ottawa: Citizen Printing and Publishing Company.
Dole, C. F. The Citizen and the Neighbor; or, Men's Rights and Duties as They Live Together in the State and in Society. Boston: Unitarian Sunday School Society. 25 cents.
Domett, H. W. A History of the Bank of New York, 1784–1884. G. P. Putnam's Sons.
Falkner, W. C. Rapid Ramblings in Europe. Philadelphia. J. B. Lippincott & Co. $2.
Forbes, Archibald. Chinese Gordon: a Succinct Record of his Life. Funk & Wagnalls. 75 cents.
Gautier, Judith. The Usurper. An Episode in Japanese History. Boston: Roberts Brothers. $1.50.
Goethe, J. W. Early and Miscellaneous Letters including Letters to his Mother. Scribner & Welford.
Harris, Joel Chandler. Mingo, and Other Sketches in Black and White. Boston: J. R. Osgood & Co.
Hopkins, Ellice. Work amongst Workingmen. Fifth Edition. Thomas Whittaker. $1.
Howe, Maud. The San Rosario Ranch. Boston: Roberts Brothers. $1.25.
Hughes, T. G. T. T.: Gone to Texas. Letters from Our Boys. Macmillan & Co.
Jewett, Sarah Orne. A Country Doctor. Boston: Houghton, Mifflin & Co.
Johnston, H. H. The River Congo, from its Mouth to Bólóbó; with a General Description of the Natural History and Anthropology of its Western Basin. Scribner & Welford.
J. S. of Dale. The Crime of Henry Vane. A Study with a Moral. Charles Scribner's Sons. $1.

THE MISTRESS OF IBICHstein. By Fr. Henkel. Translated by S. E. Boggs. 16mo, Leisure Hour Series, $1.00; Leisure Moment Series, 30 cents.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

THE BUREAU OF REVISION PREpares authors' and publishers' MSS. for the press.
TITUS M. COAN, 110 East 59th St., N. Y. City.

The Co-operative Commonwealth. An Exposition of Modern Socialism. By Laurence Gronlund. Price, $1.

The theory of this book is, that political systems in all progressive societies tend toward socialistic democracy, and on this conviction the various changes spoken of in the volume are rung. The author concludes his book with a chapter on the means whereby the "coming revolution" is to be effected in this country and in England.

"The quotations and assertions of the book offer texts for endless discourses on moral and political economy."—*Philadelphia Times.*

"The author is a vigorous thinker and a master of strong and comprehensive language, and he uses all in *Modern Socialism.*"—*Chronicle-Herald, Philadelphia.*

"His book deserves attention because he more or less reflects the opinions of the socialistic theorists."—*Boston Advertiser.*

BLAINE Agents wanted, for authentic edition of his life. Published at Augusta, his home. Largest, handsomest, cheapest, best. By the renowned historian and biographer, Colonel Conwell, whose life of Garfield, published by us, outsold the twenty others by 60,000. Outsells every book ever published in this world; many agents are selling fifty daily. Agents are making fortunes. All new beginners successful; grand chance for them: $43.50 made by a lady agent the first day. Terms most liberal. Particulars free. Better send 25 cents for postage, etc., on free outfit, now ready, including large prospectus book, and save valuable time.
ALLEN & CO., Augusta, Maine.

The Nation.

NEW YORK, THURSDAY, JUNE 26, 1884.

The Week.

THE outcome of the Saratoga Convention is regarded as a practical victory for the friends of Governor Cleveland. He is believed to have a clear majority of the seventy-two delegates, and as they are instructed to vote as a unit, the expectation now is that he will be presented to the Chicago Convention as the unanimous choice of the Democrats of New York for President. The lowest estimate of the number of delegates for him now is forty-one, and the highest is fifty-two. He is likely to gain the support of many of those who are now either uncommitted or are put down as for Flower. The Flower boom went out of existence during the sessions of the Convention, and will probably not be heard of again. Mr. Cleveland had the united support of all the respectable elements in his party, and his friends conducted their campaign with such moderation and good judgment that there is not a sign of a break in the party in any portion of the State. In 1876, when the delegation was instructed to vote as a unit for Tilden, there was a bolt by the anti-Tammany faction, at that time under the leadership of John Morrissey and Senator Bixby. This year there will be no bolt. The party is not only harmonious, but it is committed solidly to the support of a man "whose character and public reputation," according to the platform, "shall give to the whole people assurance of an honest, impartial, and efficient administration of the laws without suspicion of personal ends or private interests."

The admission of the Tammany delegation to the Democratic Convention on an equal basis of representation with the County Democracy was not only a just recognition of Tammany's numerical strength, but it was also a direct blow at trickery in our local politics. John Kelly is in politics mainly as a trader, but in order to be a successful trader he must maintain his reputation as a loyal Democrat. In other words, he cannot "go back" on the regular party ticket, unless he has a grievance which will permit him to bolt and still retain his character as a Democratic leader. Every time that his claims for recognition have been denied by a Democratic Convention he has returned home and opened negotiations with Johnny O'Brien, the final result of which has been the election to local offices of some of the worst men who have ever disgraced the city. Whenever the Democrats have tried to reform him out of their party the Republican managers here have received him with open arms, and have greatly increased his power for evil. This year there will be no excuse for a Tammany bolt, and whatever may be the result so far as the city is concerned, we shall have a clear issue between the two parties and shall be able to hold somebody to account for it.

John Kelly is one of the delegates to Chicago, and there is no doubt that he will go to the Convention and do his utmost to secure the nomination of "any good man." It is noticeable that he does not talk much about his candidate, who is variously alleged to be Mr. Flower, Mr. Bayard, and Mr. Cleveland. He will probably play a strong silent part in the "supreme councils" of the party, and we must say that we rather regret this. If he would go in his true colors, with all his war-paint and feathers, and do his utmost to explain to his fellow-delegates exactly why he detests Governor Cleveland, and the grounds on which he thinks his feelings ought to be respected, he would make the situation in New York clearer than ever. Southern politicians of position and character, like Messrs. Bayard, Garland, Gibson, Hampton, Lamar, Morgan, Carlisle, and Tucker, will have a great deal to say as to the candidate, and they would probably be impressed by the Tammany arguments on the subject of Governor Cleveland's "misuse of the veto power," his attitude toward the freedom-of-worship job and the Five-Cent-Fare Bill, in a way that John himself might not anticipate. What a pity it is that Johnny O'Brien is not Kelly's alternate! He is such everywhere except at conventions.

Official notification of his nomination was given to Mr. Blaine, at his home in Augusta, on Friday, by the committee appointed for the purpose. An elaborate address was made by the Chairman, Mr. Henderson, and we do not see how it could have failed to have a depressing effect upon the persons who heard it. We doubt if a similar address was ever made to a Presidential candidate. It began with a statement that Mr. Blaine, though not nominated without opposition, was really the first choice of the Republican States, and was finally named because of an "irresistible popular demand," and not because of any "ambitious desire" of his own or "any organized work" of his friends. After this surprising information, Mr. Henderson went on to say that it was not to be expected that every member of the party would be satisfied with any nomination; that there were many Republicans who were disappointed when Lincoln was nominated; that there was pronounced discontent in 1872, and that for many weeks after General Garfield's nomination defeat seemed inevitable; but that sober second thought saved the party in each instance. This was equivalent to saying to Mr. Blaine: "Don't be worried by the Republican revolt which has carried with it a large portion of the influential press of your party, and is consolidating into an organized protest of the intelligent sentiment of the country against your candidacy. It really does not amount to anything, and will all blow over presently. I would not speak of it at all only I am afraid you may think it is more serious than it is."

The meeting of anti-Blaine Republicans in New Haven will give the Blaine managers food for serious reflection. Like all previous demonstrations of the kind, its success was far in advance of the expectations of its promoters. The number of Republicans who attended not only filled the hall to overflowing, but was great enough to have more than filled the largest hall in the city. The character of the attendance was as remarkable as its size. It was a genuine "dude-and-pharisee" gathering, in the Blaine sense of that term. A college professor presided, and the foremost citizens of New Haven, representing all professions and occupations, took part in the proceedings. We commend the plain words of the speeches and resolutions to the sanguine Blaine workers who are cherishing the belief that the revolt is going to blow over presently. They will find in them the spirit of the independent voters everywhere, stated in terms of great plainness and accuracy. There is no doubt in their minds why they are opposed to Blaine. The speakers were very emphatic in their language, and the meeting put its approval of what they said into formal utterance by adopting a set of resolutions which declare that the Chicago platform departed from the principles on which the party was founded, and from the purposes for which the party exists; that the Convention disappointed those who desire a pure administration and an advance in the standard of political action by the nomination of Blaine and Logan; and that those candidates are unworthy of Republican support. To carry these declarations into organized action a committee of twenty-five was appointed to correspond with Independent Republicans elsewhere and to attend any general conference which may be called. The Committee is composed of six large manufacturers, six prominent merchants, five leading lawyers, three Yale professors, one capitalist, two mechanics, one real-estate dealer, and one physician. There is one free-trader among them, but he is so greatly outnumbered by the manufacturers that it will be difficult to dispose of the revolt as a mere free-trade demonstration. The significance of a movement of these formidable proportions in a State which is so close that the change of 1,500 votes turns it from Republican to Democratic, need not be pointed out.

The Independent Republican Committee of New York has appointed a Finance Committee, and taken another important step toward organized opposition to Blaine and Logan by the adoption of the following declaration, which will be circulated for signatures:

The undersigned, protesting against the nomination of Mr. Blaine and Mr. Logan, propose to join their fellow-Republicans and the Independent voters in sending representatives to a general conference, to be held immediately after the Democratic National Convention, which shall consider, in case the Democratic nominations do not justify the support of the protesting Republicans, what further action may be necessary to secure candidates who will appeal, in the interest of clean and honest politics, to the sober moral sense of the American people.

All those desiring to sign this are requested

to send their names to Mr. George W. Green, No. 11 Pine Street. The declaration puts the point at issue plainly and accurately. With every day's developments the Blaine canvass becomes a more open defiance of the "sober moral sense of the American people," and no Republican who believes that there should be morality and intelligence in the administration of our public affairs can sustain such a canvass. Many Republicans who are accepting Blaine under protest say that they do so because they hope that he and his managers are merely trying to "catch votes" now, and that after he is elected he will behave all right. This is the weakest of all delusions. There is no concealment about the Blaine plan. He is running on the supposition that the ignorant vote of his party is vastly greater than the intelligent vote. If he were to be elected, he and his supporters would regard the result as a vindication of that view, and his administration would be conducted on the basis of his canvass.

The fact is not generally known that there was an animated discussion in the Committee on Resolutions of the Chicago Convention, on the tariff plank of the platform. A representative of the New York Free-Trade Club attended the Convention, and presented to the Committee a petition in favor of tariff reform. He found an earnest friend and advocate in the person of Mr. N. S. Harwood, the member from Nebraska. Mr. Harwood, in a very forcible speech to the full Committee, approved of the petition, and stated that he should insist upon having full discussion of it unless something satisfactory was reported by the sub-committee. When the sub-committee reported to the full Committee its proposed platform, Mr. Harwood objected to the tariff plank and offered a substitute. He was seconded in speeches by the delegates from Minnesota and Oregon. On the vote Mr. Harwood's amendment was supported by the members from Colorado, Illinois, Iowa, Michigan, Texas, and by each member from the eight Territories. Although the amendment failed, it is believed that the decided stand taken by the sixteen members who were in favor of tariff reform had the effect of modifying the tone of the resolutions considerably and of preventing the Committee from yielding to the demands of the wool-growers, who insisted upon a specific pledge in favor of the restoration of the duties as they existed prior to the year 1882. Instead of this, they only secured a promise of "a readjustment of the duty on foreign wool in order that that industry shall have full and adequate protection"—which may mean anything or nothing.

The Blaine and Logan combination is beautifully balanced in many ways, but a mark of homogeneity which has not been noticed heretofore is pointed out by the *Sun*, and is likely to hold a prominent place in the public attention during the canvass. In printing the Mulligan letters, in response to a request from a correspondent, the *Sun* is struck with the fact that it was Logan to whom Blaine, as Speaker, sent his page with a request to make the point which saved the Land Grant Bill of the Little Rock Road from destruction. Logan made the point, and the bill was saved, and Blaine detailed the circumstances of the affair, with handsome credit to Logan, in one of his letters to Fisher, in which he showed so much anxiety to be rewarded for the service rendered. The *Sun* rather unkindly remarks that it has "not heard, however, that Blaine ever applied to Fisher and Caldwell for an interest in the road for Logan, on the ground of *his* services." It is to be said in Logan's favor that he never applied on his own account.

An unexpected development of good sense in the Senate has resulted in the defeat of the most obnoxious amendment to the Pension Bill, that proposed by Mr. Ingalls, and in the adoption of others which so much improve the measure that it is doubtful if the pension-raiders will take sufficient interest in it hereafter to press it to a final passage. The defeat of the Ingalls amendment was due primarily to some very sound remarks by Senator Sherman, who not only said that the measure was so extravagant that it ought to be defeated for public reasons, but declared boldly that the plank which had been inserted in its favor in the Chicago platform was no argument in favor of its passage, since it would be foolish to try to guide the Senate's action by a party platform. He went so far as to speak slightingly of the Chicago platform as a whole, saying that it was the work of forty-two men who had been reeking in sweltering heat for hours, and that to call such a document a guide for the Senate was extraordinary. We are afraid that this will raise suspicions in the minds of the Blaine devotees concerning the heartiness of the Senator's support. There was no such faltering on Senator Logan's part. He voted in favor of retaining the Ingalls amendment, and will probably point to his act with pride on the stump as one more reason why the soldier vote should be cast for Blaine and Logan.

The House bill to prohibit the importation of "contract labor," passed on Thursday, makes it unlawful to enter into an agreement or contract with any foreigner or alien to perform labor or service of any kind in the United States, or to prepay the transportation or in any way assist or encourage the importation or migration of any alien or foreigner under any contract or agreement, special, express, or implied. It declares all such contracts void, and makes it a crime, punishable with fine and imprisonment, for any master of a ship to land such aliens or foreigners in any United States port. The act is not to apply to contracts for skilled workmen in any new industry not at present established here, provided that skilled labor for that purpose cannot be otherwise obtained, nor to professional actors, lecturers, or singers. This bill does not seem to go far enough. If it is to be made a crime to land a man who has made a contract for a day's labor, we cannot see why the landing of actors, lecturers, or singers should be treated as an indifferent matter. They compete with native laborers in their own field, just as the "cheap Italian brigand" competes with the domestic Irishman. Every time that Henry Irving acted in New York he simply got so much money to take out of the country, which perhaps might otherwise have gone into the pockets of enterprising native Shaksperian actors with less capital and plant. We demand that this measure be made thoroughgoing. Its principle is just as applicable to intellectual and artistic labor as any other. Make it a capital offence to land anybody except Cook's tourists and visiting noblemen, and give the new system a fair trial.

The new Utah bill repeals all territorial laws incorporating, continuing, or providing for the corporation known as the Church of Jesus Christ of Latter-Day Saints, and also the incorporating ordinances, so far as these may preclude the appointment of trustees by the United States. It also provides that the President of the United States, with the advice of the Senate, shall appoint fourteen trustees of the corporation, who shall have the powers of trustees and assistant trustees provided for in the act creating it, shall hold office two years, and shall each give bond in an amount to be fixed by the Secretary of the Interior. They are to make an annual report to that Secretary of all the property, business affairs, and operations of the said corporation; and the General Assembly of Utah is not to have power to change the laws respecting the corporation without the approval of Congress. The law, if signed, will of course be contested in the courts, and it is difficult to see how, under the Dartmouth College case, these sections can stand. Is it worth while to embarrass anti-polygamy legislation with such very doubtful provisions?

The remarkable testimony which the Government counsel in the Star-route cases are giving against one another is likely to make a very effective Democratic campaign document. A more disgraceful exhibition of mismanagement it would be difficult to conceive. Instead of selecting as prosecuting counsel men who could work together honestly and harmoniously, the Government hit upon the novel plan of intrusting the cases to two Democrats and one Republican, for the alleged purpose of keeping politics out of the litigation. The immediate result was to introduce politics in a most aggravated form, as almost any one at all familiar with the peculiarities of Colonel George Bliss would have foreseen would be the effect of putting him in as the personal and particular friend of the Administration. Whatever his understanding of his duty may have been, there is no longer much doubt that he devoted himself mainly to getting all the big rascals clear. That they were rascals there has never been any doubt, and that they have all been allowed to escape punishment, and that some of them are now acting as leaders in the Republican campaign, are facts which will not be without influence during the next few months.

The futility of stock-watering receives a fresh illustration in the fate which has overtaken Union Pacific. In the year 1879, while the stock of this road was selling at or above par, Mr. Jay Gould conceived the idea of buying up the stock of the Kansas Pacific, the

Denver Pacific, and a lot of tributary roads not worth one cent per ream in any market in the world, and consolidating the whole with Union Pacific, issuing the stock of the latter company for that of the worthless concerns, share for share. He bought the Kansas Pacific stock (some $10,000,000) from parties in St. Louis at twelve and one-half cents on the dollar. He gathered in the Denver Pacific and other rubbish at a trifling cost. He then made a "deal" with the other large holders of Union Pacific, "letting them in" for their share of the profits in order to get their consent to the consolidation. The necessary consent was obtained, and Union Pacific stock was issued in exchange for the collection of rubbish. Strangely enough this enormous addition to the capital of the Union Pacific led to no immediate decline in the quotations of the property. It lifted the stock and bonds of the worthless roads up to the level of Union Pacific, and everything went swimmingly for a few years, until the law of competition fixed its glittering eye on the joint concern. Capitalists said to themselves, "If this property can earn dividends on fifty millions of *water*, the country and the traffic which yield such vast returns can easily support another road built for cash." They accordingly put up the cash and paralleled the Union Pacific the whole distance from Omaha to Salt Lake by way of Denver. The water commenced leaking out of Union Pacific as from a sieve. The stock, which was once quoted above par, is now down to 35. The property, which was selling at the rate of more than $50,000,000, is now worth, in the estimation of the public, only $17,500,000. Even this shrinkage represents only a part of the loss, since the multifarious bond issues of the joint concern have declined heavily at the same time. The moral of the story is that stock-watering carries its own punishment, and that no possible legislative remedy could be half so severe or half so certain of execution as the natural remedy.

The change of management by which the control of the Union Pacific Railway passes into the hands of Mr. C. F. Adams, jr., is an event of much interest in the development of the railroad system of the country. Mr. Adams has spent a large part of his life in doing what he could to call attention to the necessity of reform in railroad management. The attention which he gave to the subject led him to undertake a thorough investigation of the railroad system, and to the establishment of the Railroad Commission of Massachusetts. At the head of this he for several years issued reports upon the railroads of that State, which were really an exhaustive and interesting review of the whole railroad "problem." In these reports his principal aim has been to show that the key to proper railroad management is publicity, accountability, and honesty; that the natural product of secrecy in railroad accounts and railroad management is intrigue, fraud, and disaster. Acquiring through his supervision of the railroad system of Massachusetts a very minute knowledge of this subject, he has lately been occupied in the active management of railroad property, and has forced his way to recognition as a practical railroad man, an expert, whose experience, knowledge, and integrity are relied on by the owners of the trunk lines in the settlement of their never-ending disputes over the division of their business. The task of bringing order out of the chaos of Union Pacific which he has undertaken is a gigantic one, and his efforts will be watched with interest not only by the stockholders, but the public at large.

As the annual hot-weather article and the article on New York as a summer resort still fail to appear, the hot-weather editors being probably afraid of being accused of overproduction, we venture to suggest yet a new branch of the discussion—the effect of Anglomania on the native straw hat. The Anglomaniac, it is well known, affects a black hat, not because it is well adapted to our summer climate, but because light-colored hats are not worn by gentlemen in England. By a misapplication of this principle it has been extended to straw hats. The hat, however, which it is "caddish" to wear is a white "plug" or tile; but cads in England do not wear straw hats, and therefore it is erroneous to apply the rule against the white plug to the straw. The trouble with the Anglomaniac is that, like all zealots, he goes to irrational lengths.

The latest religious sensation is the development of a sect called the "Hallelujah Lassies," the lassie at the head of it being known to the faithful as "Happy Josephine." The object of the movement is to get the poor to attach themselves to Christian churches of any denomination. This is a very good object. Many of the Christian sects carry on missionary work among the poor already, but then it is partly in their own interest; while the lassies make their appeals without bias or self-interest of any kind. Should they have any marked success, it will be one more proof of the weakening of the force of modern dogmatic belief; for it is obvious that missionaries who convert the heathen at home, professing utter indifference as to whether they become Episcopalians, Unitarians, Baptists, Methodists, or Calvinists, care far less for dogma than any regular proselyting body that has done much work in recent times.

The "exhaustion" of Cuba by the Spaniards is an old story; the process has been going on for a generation. The Spanish official in Cuba is a plunderer by profession, and with all the better will because he is a foreigner. Whether there is anything in the rumor that a failure of crops is really driving the sugar planters away, we are not likely to know for a long time; but if it is true, it shows all the more clearly what a worthless possession the island would be to the United States. If we wanted to buy territory anywhere, it would probably be far better to make an offer for Mexico. That people should be discussing such a silly thing as the purchase of Cuba is one of the natural results of the nomination of Mr. Blaine.

The preparations for the conference as to Egypt are badly hampered so far as England is concerned by the condition of her domestic politics. Mr. Gladstone, with his Irish problem, and his Egyptian problem, and his extension of the suffrage problem, and with his diminished majority in Parliament, is struggling with heavy odds; and when we consider his age, and the fact that parliamentary government affords the worst possible machinery (except when the Government is in complete control of the Legislature) for a vigorous foreign policy, his success in retaining his hold thus far is marvellous, and a striking indication of the general confidence in the sincerity of his intentions, and of the popular distrust of the Tories.

According to the new agreement between England and France, England undertakes to withdraw her troops from Egypt at the beginning of the year 1888 in case the Powers shall consider such withdrawal possible without endangering public order. The Caisse de la Dette Publique after 1885 will have a consultative voice in regard to the budget, and will have the right to veto any increase of expenses on the part of the Government. It is to continue to exercise the right of financial inspection after the evacuation of the country by the English in order to insure the complete and regular collection of the revenue. England also undertakes during her occupation to propound schemes to the Porte and the Powers for the neutralization of Egypt, like Belgium, and for the neutralization of the Suez Canal. Mr. Gladstone, in making the announcement of this understanding in Parliament yesterday, reminded the House of Commons that the Conference of the Powers was to meet on Saturday, and that its province would be to decide with regard to Egyptian finances; but that no decision would be of any force without the assent of Parliament.

At the same time M. Ferry, in the French Chambers, reviewed the Egyptian question as follows:

Since 1883 France has been quite inactive so far as Egypt is concerned, inasmuch as she declined to take part in the British expedition. It is too late now to think of reviving the scheme of condominium. It is altogether impossible. Egypt is neither French nor English. Her fate is a matter of concern to all Europe, and what it is to be will always be a European question. Mr. Gladstone's Government recognized this fact and was the first to propose the neutralization of Egypt. France has the last chance possible to settle the question with the Gladstone Cabinet. It is necessary that harmony be maintained between the two nations whose accord is so important to the peace and liberty of the world. It is necessary, also, to limit the English occupation of Egypt, but France has no intention of substituting French occupation therefor."

There seems to be nothing final in this understanding, which, it should be observed, is thus far only an agreement between the two Cabinets. It gives England four years more in Egypt, but at the end of that time her withdrawal will depend upon whether the Powers consider it possible "without endangering the public order," a stipulation of the vaguest description. In case of a disagreement among the Powers as to the necessity of England's presence to maintain the public order, a new agreement on the subject would apparently be necessary.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 18, to TUESDAY, June 24, 1884, inclusive.]

DOMESTIC.

THE New York Democratic State Convention met in Saratoga on Wednesday. In the morning a conference was held between the Chairmen of Tammany, Irving Hall, and the County Democracy, at which it was agreed that the representation of New York County should be as follows: New York County Democracy, 31 delegates, Tammany 31, and Irving Hall 10. This compromise was accepted by the State Committee in the interest of harmony. The Convention was called to order at 1 P. M., and William E. Smith was unanimously elected temporary Chairman. A resolution was passed that of the New York representation the County Democracy have 4 Presidential electors and 7 national delegates, Tammany 3 electors and 7 delegates, and Irving Hall 1 elector and 2 delegates. The Convention at 2:15 adjourned until 7 P. M.

At the evening session a platform was adopted reaffirming the State platforms of 1874-76-82, recognizing the duty of the Legislature to respect the popular vote of 1883 for the abolition of the contract-labor system in prisons, commending the administration of Governor Cleveland, and instructing the delegates to Chicago to vote as a unit in accordance with the will of the majority. Daniel Manning, Edward Cooper, Lester B. Faulkner, and John C. Jacobs were elected delegates-at-large. Sixty-eight district delegates were also elected and Presidential electors named. Judges Andrews (Rep.) and Rapallo (Dem.) were nominated by acclamation for the Court of Appeals. Two of the delegates-at-large are anti-Cleveland men.

The Indiana Republicans on Thursday nominated Col. W. H. Calkins, at present a member of Congress, for Governor. The platform makes no mention of the prohibition question, and there is some opposition among the temperance people.

The Tennessee Democrats on Thursday adopted a platform denouncing the present tariff as a masterpiece of injustice, inequality, and false pretence. The minority platform, virtually endorsing the Ohio platform, was tabled by a majority of 300.

Mr. Blaine, on Saturday, was officially notified by the National Convention Committee of his nomination. General Henderson presented the address of the Committee.

Senator Logan was on Tuesday notified of his nomination for Vice-President by the same committee. In his reply to the address General Logan signified his hearty approval of the platform. The ceremony took place at the Washington residence of General Logan.

A call was printed on Friday in New Haven for an anti-Blaine Republican meeting on Monday night. The call was signed by over 150 of the most conspicuous residents of the city, who declared that they "have always been in sympathy with the principles on which the Republican party was founded." The meeting was held on Monday night and filled the hall to overflowing. The audience comprised representatives of the Yale Faculty, the professional men of the city, and its business interests. Resolutions were passed condemning both the platform and candidates of the Chicago Convention, and appointing a standing committee of twenty-five to correspond with other Independent organizations and to represent the sentiments of the meeting at any general conference which may be called.

There is another Presidential ticket in the field. The American Prohibition party at Chicago on Friday nominated ex-Senator Pomeroy for President, and J. A. Conant, of Connecticut, for Vice-President.

The Senate on Wednesday passed the Utah Bill by a vote of 33 to 15. It provides that a lawful husband or wife may be compelled to testify in prosecutions for bigamy, polygamy, or unlawful cohabitation; that prosecutions may be commenced within five years of the commission of the offence; that women shall not vote in the Territory; that every marriage ceremony in any Territory shall be certified in writing, which shall state the full names of all persons taking part in the ceremony, and shall be signed by them, and shall, by the officer or priest solemnizing the marriage, be filed with and recorded in the Probate Court; such certificate shall be prima-facie evidence of the facts stated in it. All laws of Utah relating to the Perpetual Emigrating Fund Company are annulled.

The Senate on Friday debated the Pension Arrears Bill. Mr. Van Wyck favored wiping out the limitation clause altogether. Mr. Voorhees's amendment removing all limit of time for filing petitions for arrears was lost—12 to 34.

The Senate on Monday, by a vote of 39 to 26, defeated Mr. Ingalls's amendment to the Mexican Pension Bill striking out all restrictions to the Arrears of Pensions Bill. Logan voted with the minority. Mr. Harrison offered an important amendment, which was adopted, limiting the provisions of the bill to veterans who served at least fourteen days in Mexico or on the coast or frontier of that country, or en route thereto. The bill was passed on Tuesday, the majority consisting of Republican votes with three Democrats.

The House of Representatives on Thursday passed the Pacific Railroad Bill, extending the Thurman Act to the Kansas Pacific, Sioux City and Pacific, and central branch of the Union Pacific Companies. It also passed the bill to prohibit the importation and migration of foreigners and aliens under contract to perform labor.

The House on Monday passed the Sundry Civil Appropriation Bill under a suspension of the rules. The provision that no speech shall be printed in the *Record* which has not been spoken was stricken out. It contains a provision that no bills or resolutions of a private nature shall be printed except after a favorable report from a committee.

The House Committee on Ways and Means on Tuesday by a party vote of 7 to 2 agreed to report favorably on the administrative portion of the Hewitt Tariff Bill so far as relates to customs duties.

Before the House Committee investigating charges of lobbying by ex-members in the Peelle-English contested-election case, on Wednesday, Mr. W. H. English, of Indiana, testified that he had been frequently on the floor of the House, and had there presented the rights of his son to a seat in Congress to various members; that it did not occur to him that he was violating a rule of the House, and that if he had done or said anything in violation of the rules he was frank to say he regretted it. He denied having had a talk with Mr. Weller in the cloak-room, and said any statement that he had influenced that gentleman was absolutely false.

Before the Springer Committee in Washington on Wednesday, Mr. George Bliss, Government counsel in the Star-route cases, denied the insinuations of Mr. Ker that he wanted to procure the immunity of Dorsey. During Mr. Bliss's testimony on Wednesday, when asked whether he ever received advices or solicitations that favor should be extended to any one of the defendants, he said: "I have not conversed with Mr. Blaine since I went into the Star-route cases; I have not communicated with him directly or indirectly, and neither he nor anybody else ever approached me on that subject." On Thursday he denied the charges of Walsh and Ker as to his sympathy with Dorsey and Kellogg. Mr. Ker took the stand on Friday and emphatically denied many of Mr. Bliss's assertions. He alleged that the latter, though a shrewd lawyer, frequently injured the case for the prosecution by offending important witnesses on his own side.

J. B. Colgrove, a Government contractor, who was before the Springer Committee on Saturday, testified that Judge Key, his counsel, told him that Mr. Ker, Government counsel, told him that for $5,000 the Star-route charges against him (Colgrove) would be dropped. Mr. Ker emphatically denies this assertion, and on Monday, after consultation with Judge Key, Mr. Colgrove admitted to the Committee that he had been mistaken.

Commodore C. K. Garrison, who was supposed to be worth twenty million dollars, made an assignment on Friday. His friends say that after all his creditors are satisfied he will have a surplus of several million dollars, and that the assignment was made because age and trouble have incapacitated him for dealing with the present financial depression. It is said that several hundred thousand dollars in cash would have averted the catastrophe.

Great surprise was created in Wall Street on Tuesday morning by the announcement that the banking-house of M. Morgan's Sons, No. 39 William Street, had suspended. The house is one of the oldest banking firms in the city, having been founded by the late Matthew Morgan some fifty years ago. It was rated as being worth $1,000,000, and has been considered by bankers to be worth, really, nearer two and one-half millions. It is supposed that the failure resulted in part from the unwillingness of a member of the firm to ask aid from any one.

Commencement exercises were held on Wednesday at Princeton, Rutgers, and Brown. Princeton conferred the degree of LL.D. upon President Arthur, Gov. Abbett, of New Jersey, and Justice Harlan, of the United States Supreme Court.

Harvard won the four-mile eight-oar straight-away race over Columbia at New London on Wednesday evening. The contest was very close, Harvard winning in 24.31 by eight seconds.

The inter-collegiate four-oared boat race for the Childs Challenge Cup took place on the Schuylkill River at Philadelphia on Thursday. The course was one and a half miles straight-away. The University of Pennsylvania won by half a boat's length over Cornell in 9.06¼. Princeton was third.

Bishop Matthew Simpson, of the Methodist Episcopal Church, died in Philadelphia on Wednesday, at the age of seventy-three. He was ordained a Bishop in 1852, and has been considered the most noted orator in his denomination.

FOREIGN.

It was officially announced in London on Monday that, under date of June 16, Earl Granville, Foreign Secretary of State, addressed a note to M. Waddington, the French Minister, the substance of which was as follows: England undertakes to withdraw her troops from Egypt at the beginning of the year 1888 in case the Powers shall consider such withdrawal possible without endangering the public order. The Caisse de la Dette Publique after 1885 shall have a consultative voice in regard to the budget, and the right to veto any increase of expenses on the part of the Government. It shall continue to exercise the right of financial inspection after the evacuation of the country by the English, in order to insure the complete and regular collection of the revenue. In his reply M. Waddington gave assurances of the satisfaction with which France noted the points suggested by Earl Granville.

The following named statesmen will probably compose the Egyptian Conference: Earl Granville, Lord Fitz-Maurice, M. Waddington, M. Barrère, French Diplomatic Agent at Cairo, the Earl of Munster, Herbert Bismarck, Count Károlyi, Count Nigra, of Italy, Musurus Pasha, and Herr Mohrenheim.

Earl Granville's note to the Powers in relation to the Egyptian Conference, after stating

that an *entente cordiale* has been established with France on the questions of the Reform Commission and the Egyptian debt, declares that the whole financial question will be left to the discussion of the Conference. The question of the English occupation of Egypt is left undefined.

The French Ambassador at Constantinople has informed the Grand Vizier that Turkish intervention in Egypt or the Sudan is excluded under the terms of the agreement between England and France.

The Porte does not feel altogether reconciled to the condition and outlook of affairs in Egypt. It has addressed a circular note to the various Powers, in which it insists that "England's self-imposed task of restoring order in Egypt is so far completed that the army of occupation ought at once to be withdrawn." "The moral authority and prestige of the Sultan are amply sufficient," it says further, "to assure the internal tranquillity of Egypt."

It is believed now that the Governor of Berber escaped unharmed with $400,000 of Government money in his possession. On Thursday it was reported that the rebels had captured Ghia, a town near the Abyssinian frontier.

The report that Kassala has fallen is not believed in military circles at Cairo. Colonel Wood has been ordered to echelon with the whole Egyptian army between Assuan and Wady Halfa by the end of the present month.

Twenty-one pilgrims arrived at Suakim on Friday from Khartum, and that place was safe when they left it on May 25.

It was rumored in Cairo on Sunday that the rebels were advancing on Korosko.

It is asserted that the Porte has 15,000 men ready to send to Upper Egypt. This sudden change of front is due to news that there is imminent danger that El Mahdi's movement is spreading into Hedjaz.

In the House of Commons on Monday Mr. Gladstone made a statement concerning the Egyptian question which fully confirmed the official report of the substance of the recent correspondence between Earl Granville, Foreign Secretary of State, and M. Waddington, the French Ambassador in London. The neutralization of Egypt, the Prime Minister said, is to be deferred until England withdraws from the country. Prime Minister Ferry also made a statement, which was received with great favor, in the French Chamber of Deputies. Intense discontent with Mr. Gladstone's statement prevails among the group of Independent Liberals. A coalition of this group and the Parnellites with the Conservatives against the Government is probable.

The Conservative leaders held a conference at the house of Sir Stafford Northcote, on Tuesday, on the question whether a new motion of censure against the Government should be made. No decision was reached. The proposed arrangements for the future of Egypt have created a most favorable impression in Cairo.

Earl Spencer, Lord Lieutenant of Ireland, performed the ceremony of unveiling the Queen's portrait at Belfast on Wednesday. On reaching the Town Hall the Lord Lieutenant was greeted with mingled cheers and groans. In his speech he referred to the troubles of Ireland, and dwelt upon the reviving prospects of the country.

The Paris correspondent of the London *Times* on Friday telegraphed: "James Stephens, the ex-Fenian Head Centre, has forwarded to an active member of the brotherhood at Chicago a manuscript circular summoning an early meeting at Chicago of prominent Irish-Americans, who are willing to join a new movement in favor of a military organization on the lines proposed by the late John O'Mahoney. Mr. Stephens declares that the services of several distinguished European officers have already been placed at his disposal. No definite plan of action will be proposed until the convention of Irish patriots, which it is proposed to hold soon in Paris. To this convention the Chicago conference is invited to elect delegates. Among the plans of operation mooted is the scheme to despatch balloons manned with desperadoes over England to drop explosives upon the cities and towns below." Chicago Fenians ridicule the plan.

The Court of Queen's Bench, Dublin, on Wednesday fined Mr. William O'Brien, M. P., editor of the *United Ireland*, £500 for contempt of court. This happened in connection with the action for libel brought against Mr. O'Brien by Mr. Bolton, Prosecutor for the Crown.

Patrick Joyce, an Irish-American, was arrested at Queenstown on Saturday on the steamer *Illinois*. A mysterious wooden tube was found in his baggage, and it was thought to be an infernal machine. On investigation it proved to contain nothing but oil, and on Monday he was discharged.

The third General Council of the Reformed Churches throughout the world, known in ecclesiastical circles as the Presbyterian Alliance or Pan-Presbyterian Council, convened at eleven o'clock on Tuesday morning in Belfast, Ireland, in St. Enoch's Church. The church was thronged with a vast assembly of people, and delegates were present from every quarter of the globe. The opening sermon was preached by the Rev. Dr. Watts, Chairman of the General Committee.

A jubilee in honor of the fiftieth birthday of the Rev. Charles H. Spurgeon was held at the Holborn Tabernacle, London, on Wednesday and Thursday, more than 5,000 people being present. Speeches were made by Mr. Spurgeon and Mr. Moody on Wednesday evening. Speeches were made on Thursday by the Earl of Shaftesbury, Canon Wilberforce, the Rev. C. P. Gifford, an American, Newman Hall, and others. A check for £4,500 was handed to Mr. Spurgeon.

The sale of the Fountaine collection of art treasures in London realized £91,112.

The Paris *Matin* on Wednesday published an interview with the Portuguese Minister at Paris. He says that Portugal is disposed to make important concessions in regard to the Congo. She is willing to include representatives from all nations interested in Central and South Africa as a Congo Commission modelled after the International Danube Commission. Portugal has no desire to extend her territory. She wishes merely to preserve her rights.

The latest news concerning the movements of the French in Tonquin is to the effect that after the occupation of Lang-son and Caobang shall have been effected, a part of the French forces will return to France.

The French Senate on Friday adopted, by a vote of 87 to 82, an amendment to the bill re-establishing divorce, permitting a wife to demand a divorce on proof of adultery by her husband, even if the act is not committed under the conjugal roof, and rejected an amendment, by a vote of 136 to 131, demanding that cruelty constitute a cause for separation only, not for divorce.

A French committee has decided that it is more advisable to widen the Suez Canal than to build a second parallel to it.

The French Imperial Committees have re-elected M. de Cassagnac President, and have approved Prince Victor's resolve to obtain his independence, and declared him the representative of religious liberty and order in the democracy. Prince Victor said that the principles expressed were his own.

Toulon, France, is in a state of panic, owing to a number of deaths from cholera. Eight thousand people left the city on Monday. The Minister of Commerce has issued a notice that it is sporadic, and not Asiatic cholera. The first death occurred on June 4, but was kept secret. Eighteen deaths occurred on Monday The unclean condition of the city is said to be a sufficient cause for the disease. The French Board of Health was convoked on Tuesday to take measures to suppress the plague.

The Paris *Figaro's* correspondent at Rome says that President Arthur has instructed the American Minister there to act in concert with the Ministers of England, Austria, and Spain in an effort to obtain from Signor Mancini, Italian Minister of Foreign Affairs, a mitigation of the decision of the Court of Cassation in regard to the properties of the Propaganda. Signor Mancini, it is said, has promised to regulate the matter in a manner satisfactory to the Vatican. This report has been contradicted in Washington.

The programme of the new Belgian Ministry includes a revision of the School Law of 1879, which deprived primary public schools of the supervision of the clergy, and reforms aiming at an increase of the electoral power of the rural communes.

The Prince of Orange, heir apparent to the throne of Holland, died on Saturday, at the age of thirty-three. The King of Holland has returned from Carlsbad, and has held a conference with the Cabinet. The Cabinet has decided to resort to the provisions of the law of November 3, 1848, and will convene the Chambers forming the States-General in a plenary Congress of 78 Senators instead of 39, and 172 Deputies instead of 86. This Congress will proclaim Princess Wilhelmina successor, under a Council of Regency, with Queen Emma as Regent, and the President of the Council as Chancellor. The Cabinet has determined to refuse to share tutelage with any German branch of the royal family.

Semi-official advices from Berlin are to the effect that assurances have been given to the Dutch that they need not fear aggression on the part of Germany, whose territorial ambition only extends to uncivilized countries beyond the seas.

Bismarck made some remarks on Monday before the German Budget Committee, in the course of which he said he had hopes to arrange with Portugal for free commercial traffic on the Congo. He had obtained Emperor William's sanction for pursuing a colonial policy. This was not modelled after the French system, but was directed to the protection of German commerce.

Several important arrests were made in Berlin on Thursday in connection with an incendiary conspiracy. This conspiracy, it is asserted, has ramifications in America. Should inquiry prove that the German conspirators have received funds from America, immediate diplomatic action will be taken by the German representative at Washington.

The Bulgarian elections have resulted largely in the success of the Liberals and Radicals.

Portuguese advices state that the situation in Guinea is critical. The revolt of the blacks continues.

One of the five Spanish Commissioners now in Cuba will soon be sent to New York and Washington to inquire into the sentiment of the United States in regard to the purchase of Cuba. The nomination of Mr. Blaine and the report that he said Cuba was worth $500,000,000 to the United States has led to this action. The Commissioner will confer with the Spanish Minister in this country respecting the future neutrality of the American Government, and the chances of obtaining for the island the $500,000,000 of Mr. Blaine's alleged valuation. He will then return to Cuba, and with his four colleagues prepare a report to send to Madrid. The Spanish representatives in this country profess to be ignorant of any such proposal.

Madame Patti will sing in America next season under the management of Colonel Mapleson.

COMMUNISTIC FEATURES OF THE CHICAGO PLATFORM.

"My opposition to the Chicago ticket," said one of the speakers at the Tuesday evening conference (a life-long working Republican), "is quite as much against the rotten platform adopted as against the candidates nominated." He proceeded to denounce the unrepublican features of the platform, showing that it is essentially a departure from the old teachings of the party and a violation of some of its most cherished principles. The speaker was Mr. Jackson S. Schultz, whose name has been associated with the Republican party from its birth and whose labors in its behalf are second in importance to those of no man in the city of New York.

A close examination of the platform shows a plain streak of communism running through it. We have already adverted to the clause which "denounces the importation of contract labor whether from Europe or Asia as an offence against the spirit of American institutions." This is as much as to say that foreign immigration should be prohibited or restricted, whether from China, or Ireland, or Germany, or Norway, if it can be shown that the immigrant has come to this country under an agreement to work for his living. If he has come as a pauper, without any idea of what he is to do, the platform has no objection to him, but if he has made an agreement to work on somebody's farm or in somebody's mill he ought to be met at Castle Garden and hustled on board the next outgoing steamer. It makes no difference whether he has money in his pocket or not. If he has postponed his coming until he knew that somebody would pay him a fair day's wages for a fair day's work he ought not to be allowed to land. This is what the platform means if it means anything. The Know-Nothing party of 1854–6 never said anything more contemptible.

The spirit of the resolution, however, is something different from that of the Know-Nothings. The latter aimed to curtail the influence of persons of foreign birth in our political affairs. It did not seek to put restrictions on immigration, but upon the right of immigrants to vote and hold office. The most characteristic plank in its platform was that which demanded a residence of twenty-one years in this country as a condition of naturalization. The party went before the people on this issue in 1856 and was crumbled to powder. It never held another National Convention. The Chicago platform, in its avowed hostility to foreigners, proceeds upon the theory that wages can be and ought to be made artificially high by limiting the number of laborers. It has no objection to foreigners as foreigners, but only as workers. The purpose is essentially communistic, and the resolution which declares that immigration of the kind described is "against the spirit of American institutions" is a barefaced lie.

A few years ago a gentleman of Northern birth conceived the idea of cultivating oranges on a large scale in Florida, using for this purpose lands which until then had been absolutely worthless. He embarked a large amount of capital in the enterprise, but soon found that the supply of labor in Florida was deficient. He sent an agent to Sweden to hire two hundred men with families to come to this country to settle, and become American citizens, and work on his orange plantation. The men came. They came under contract. They settled in Florida. Some of them kept their contract and some did not. Many of them found that they could do better for themselves than by working for Mr. Sanford, and they repudiated their bargain. There was no means of enforcing it even if there had been any desire to do so on Mr. Sanford's part. Some of them went into the business of orange-growing in competition with Mr. Sanford, and are in that occupation now. The net result is that Florida has secured a colony of industrious, enterprising, sober, wealth-producing men and women, and has turned a large belt of wilderness into a blooming garden, by a process which the Chicago platform says is "against the spirit of American institutions." If the platform had been in force it would have been the duty of some officer, clothed with the authority of the Republic, to meet these Swedish immigrants at the steamer, and say to them: "The spirit of American institutions forbids your landing here. You have come hither under an agreement to work. Your labor is *servile*. We have abolished all servile labor. You must go back to your own country and cancel your badge of servitude. When you come again, if we have not meanwhile gone a step further and resolved against all immigration, we will let you land on the soil of the free and home of the brave."

On all fours with this rotten plank in the platform is the one which calls for "the enforcement of the eight-hour law." Labor is to be made artificially scarcer in two ways: first, by excluding foreign laborers, and second, by forbidding anybody to work more than eight hours. If the enforcement of the eight-hour law does not mean this, it is a sham. Probably the framers of the resolution considered it a sham and adopted it knowing that it could not be enforced, knowing that the question how many hours a man shall labor cannot be regulated by government, but only by the needs and inclinations of the laborers themselves. None the less have they committed the party to one of the most arrant communistic delusions of the day.

A third resolution declares that "we are opposed to the acquisition of large tracts of lands by corporations or individuals, especially where such holdings are in the hands of non-resident aliens, and we will endeavor to obtain such legislation as will correct this evil." This is a declaration against free trade in land, and consequently against land ownership; because, if a man is not allowed to sell his land for the best price offered, whether by a corporation or an individual, by a citizen or a foreigner, he is deprived of what is, in the eyes of most American land-owners, his most valuable possession. A law which prohibits the buying of land by certain persons and in certain amounts necessarily prohibits the selling. What is a "large tract of land"? Upon this point there is every diversity of opinion. According to Henry George, any tract is too large to be owned in fee simple by anybody, whether a native or a foreigner. The idea embodied in the platform is evidently borrowed from Mr. George. It will be pretended, perhaps, that it applies only to the public lands, but land ceases to be public as soon as anybody acquires a private claim to it, and unless restrictions are imposed to prevent the sale of lands the resolution becomes nugatory and worthless. We note its introduction and adoption as another sign of the low demagogism which prevailed on the Platform Committee, and which sought to gather in a few votes by catering to the tastes and dogmas of the communists.

THE DUDE-AND-PHARISEE ARGUMENT.

THE dude-and-pharisee who edits *Harper's Weekly* gently but firmly insists that the Blaine men who are so precise in their description of their opponents shall be equally so in answering one question, viz.: Did Abraham Lincoln, or George Washington, or any other occupant of the Presidential chair ever use his official position as a means of private gain? Is it fitting that persons holding official position should make use of it for purposes of private gain? Did not Mr. Blaine make use of his official position for that purpose? Did he not acknowledge that he had done so in his letters to Warren Fisher, jr., dated June 29, July 2, and October 4, 1869? If so, what have his supporters to say for him or for themselves after they have finished their remarks on the important subject of the dude-and-pharisee? Obviously there is only one thing to say, and that is that they approve of the practice of public men using their official position for purposes of private gain. It is important to know how far they would go in this direction—where they would draw the line; and also what kind of a republic we would have if each man in official position should be left free to decide for himself how much and how often he should use his position for purposes of private gain. The Republican platform makers were singularly remiss in not putting in a plank defining the reasonable limits of such practices. They ought to have reported a resolution something like this:

Resolved, That it is allowable in any man holding official position to use the same for the purpose of making money for himself, provided the bargain is made after he gives his vote and not before.

All this, be it observed, is beyond the region of dispute. Nobody denies the authenticity or the purport of the letters to Warren Fisher, jr. The $64,000 obtained from the Union Pacific treasury does furnish ground for a dispute; for, while the evidence points strongly to the conclusion that Mr. Blaine got the money from that quarter, and paid it over "within forty-eight hours" to his friends in Maine, after the Little Rock and Fort Smith speculation had turned out badly, nevertheless he always denied it, and his denial is accepted by his friends. The Northern Pacific "block" which he was peddling about the same time he said he was peddling for "a friend" and not for himself. He acknowledged that it would have been grossly improper for him, while Speaker of the House, and while

the Northern Pacific Company was seeking legislation, to handle this kind of property on his own account, but he could see no impropriety in handling it for a friend. (The name of the friend was never mentioned, but it was supposed to be "Bill" King, who was popularly known as the "King of the Lobby" at that time.) As Mr. Blaine was by his own statement acting as a broker, with or without commission, and not as a principal, his friends allege that no fault can be found with him except by superfine casuists and by the dude-and-pharisee. But as to the letters to Warren Fisher, jr., in which he makes an official act the reason for his applying for a pecuniary emolument, there is no dispute or difference of opinion as to the fact.

This matter has not been much discussed thus far in the campaign. But it was well known to the Chicago Convention which nominated Mr. Blaine, and this fact enables us to estimate the value of one of the arguments now advanced in support of the Republican ticket, viz., that the preservation of the party is of much more importance to a patriotic citizen than the fortunes of any individual; that Mr. Blaine will have to go with his party and be governed by it, and that he can do no great harm without the party's consent and coöperation. This argument would have some force if Mr. Blaine's nomination had come about by accident, or if the facts had been discovered only after the nomination, when the party might be considered powerless to find a remedy for hasty and ill-considered action. But the facts are totally different. Mr. Blaine's railroad career was carefully considered and emphatically endorsed by the party as represented in National Convention. It was endorsed by a very large section of the party in two previous conventions. No step was ever taken with more deliberation. The question whether the party is strong enough and virtuous enough to keep Mr. Blaine in order after the election, has already been decided in the negative. To make the argument complete it must be assumed that there is a force in the background, which never gets represented in National Conventions—a veiled and unseen moral power—which will hold Blaine and his kind in subjection after they are clothed with actual power, and that this unseen power will make itself felt not by voting against Blaine, but by voting for him! The truth is that there is no such thing as a power in politics which never asserts itself. Such a power is non-existent. It is a myth, a delusion, or at most only a remembrance.

THE SUCCESSION IN HOLLAND AND LUXEMBURG.

The long-expected death of Alexander, Prince of Orange, Crown Prince of the Netherlands, has finally taken place. It is an interesting and perhaps serious event in the dynastic history of Europe. The Prince was the younger of the two sons of King William III., by his first consort, a daughter of William I., of Würtemberg. The elder son, Prince William, died in Paris in 1879, after years of low life in that city which made his name a by-word even among the most degraded of debauchees. Some months before, their father, then sixty-two years of age, married his second wife, Emma, a beautiful German Princess of the House of Waldeck, thirty-one years his junior. The only offspring of this marriage, and now the only child of King William, is the Princess Wilhelmina, not fully four years old. The old monarch, whose career, remarkable neither for virtue nor wisdom, is believed to be rapidly drawing to a close, has neither a brother, nor a nephew, nor a cousin. In the absence of such male relatives, the infant Wilhelmina is, by the provisions of the Dutch Constitution, prospective successor to the throne, though not to the grand-ducal crown of Luxemburg, a personal inheritance of her father, forming no integral part of the Netherlands, in which the Salic law prevails. Princess Sophia, the King's sister, a lady of sixty, married to the Grand Duke of Saxe-Weimar, is the next in the line of presumptive succession, and after her follow her son, grandsons, and daughters, and other German members of the House of Orange-Nassau, male and female.

Summoned home from Carlsbad shortly before his son expired, King William held a conference with his Cabinet, and the resolution was adopted, in agreement with the fundamental laws passed in 1848, to convene the two Chambers of the States-General in a plenary Congress of 78 Senators instead of 39, and 172 Deputies instead of 86. This Congress is to proclaim Princess Wilhelmina successor, under a Council, with Queen Emma as Regent, and the President of the Council as Chancellor. The German branches of the royal family are to be refused any share in the tutelage. Queen Emma as Regent will probably be as jealous of the independence of the kingdom as her husband has always shown himself to be, who, in his aversion to the thought of a German succession, is said even to have secretly affianced his infant daughter to Prince Baldwin, the nephew of King Leopold II., of Belgium, who, on the death of his uncle and father, is thus to reunite the crowns of the two kingdoms separated by the revolution of 1830. But if Emma's child should not long survive her royal father, a German subject of the Imperial throne of the Hohenzollerns would become King of the Netherlands. This idea is abhorrent not only to the rulers and diplomats of all non-German countries, but most intensely so to the Dutch themselves, who have long been tormented by the thought that it is the ambitious design, if not the manifest destiny, of the new German Empire to absorb all its weaker Teutonic neighbors, and first of all Holland, whose coasts, and navy, and colonies would render Germany at once a first-class maritime Power. Be that as it may, Bismarck has not only betrayed his deep concern in Dutch affairs by suddenly appointing his own son, Count Herbert, Ambassador to the Hague, but, according to the latest reports, he has also, "during the illness of the Prince of Orange, caused the German representatives at the various European courts to declare that any attempt to make the succession or regency in Holland a European question would find instant opposition from Germany."

It is widely believed that it is the wish of Bismarck, if circumstances favor, to raise to the throne of the Netherlands a member of the German or ducal branch of the House of Nassau, which Prussia dispossessed of its duchy after the war of 1866, but subsequently conciliated by a treaty of compensation. Princess Wilhelmina stands in the way of this transaction. But, as we have said, she is not in the way of a German claimant to the succession in Luxemburg. This German Grand Duchy was given to the House of Orange, as a family possession but as a member of the Germanic Confederation, by the treaties of 1815, and was severed from Germany on the dissolution of the Confederation in 1866. King William III., who was deep in debts and a Prussophobist, in 1867 entered into a negotiation with Napoleon III. for the sale of it to France. The bargain was secretly concluded, but before its consummation the King, fearful of the victors of Sadowa, communicated the secret to the Prussian Ambassador, and Bismarck's decided and threatening declaration concerning the affair, in the North German Reichstag, forced Napoleon to allow William III. to abandon the business. A complete retreat was, however, impossible to the French Emperor, whose prestige had already suffered too much by the recent victories of Prussia, and he thus peremptorily demanded the withdrawal of the Prussian troops from the fortress of Luxemburg, which the Government of Berlin claimed to have an international right of garrisoning even after the dissolution of the former Germanic Confederation. Moltke was for answering Napoleon's demands with the sword, but Bismarck, satisfied with having baffled the French attempt at annexation, accepted the decision of a Conference of the Powers at London, neutralizing the territory of Luxemburg, and stipulating the razing of its fortress. And thus, in order to avert a war with France immediately after the war with Austria, the German troops were withdrawn from a German land, famous in the mediæval history of the Empire, and often fought for against France. The moment to reoccupy it for Germany will come when William III. dies—and his days are said to be numbered. Whether the rulers of Germany will then be content with this gain, is a graver and obscurer question.

SPANISH AFFAIRS.

There is a lull in the internal politics of Spain. The Conservative Cabinet of Cánovas del Castillo is in almost undisturbed possession of power, the election of two months ago having given it an overwhelming majority in the Cortes. Even Sagasta's Fusionists, but recently a powerful body, have dwindled to a faction. The Dynastic Left, Marshal Serrano's great party amalgam, is more insignificant still. Castelar's Posibilistas and Salmeron's more irreconcilable Republicans number together half-a-dozen. The Carlists are nowhere, and the Ultramontanes support the Government. The fugitive Zorilla's emissaries have egregiously failed in their late attempts to incite rebellion against the throne. The Black-Hand Anarchists of Andalusia have been mercilessly chastised for their murders, and are apparently crushed.

Aguero's insurrectionary movement in Cuba has ceased to be alarming. The financial troubles, the dislike of King Alfonso, the annoying press persecutions, the dissatisfaction among the many scores of unemployed generals, and similar evils, are not new, and thus cause but light ripples on the surface of the political current of the day. In almost any other constitutional country a government thus situated would consider itself happy and destined for long life; in Spain, where nothing is more stable than political instability, a lull like this is, perhaps, less enjoyed by the rulers than dreaded as a presage of an approaching violent commotion of some kind or other.

There is, however, a little cloud on the horizon of Spanish foreign affairs, which diverts the attention of parties, factions, leaders, and intriguers from the scenes and memories of parliamentary contests and excitements, and seems to presage an outburst of patriotic feeling which may unite all shades of political opinion. The wounds inflicted last year on the honor of Spain by the insolence of Parisian mobs, on the occasion of Alfonso's visit to the French capital, have scarcely been healed by the placating action of the President of the Republic, when a new provocation from beyond the Pyrenees threatens to cause a general recrudescence of anti-French sentiment. That France is anxious to extend her Algerian possessions westward, across the Moroccan border, as she lately extended them eastward by the virtual annexation of Tunis, has never been a secret. This desire of France is as offensive to the Spaniards as the aggression upon Tunis has been to the Italians. But the clashing of national interests and rivalries over the inheritance of the decaying Moroccan empire was, a short while ago, hardly deemed imminent, and, in fact, the first direct provocation was expected to come from Spanish rather than French encroachments upon the rights and territories of the Moorish Sultan. France, however, humbled and hemmed in in Europe by a foe she does not yet dare to challenge anew, is now actuated by an irresistible desire of expansion and conquest on other continents. Not satisfied with "glorious" achievements and other gains in Tunis, Madagascar, on the Congo, in Anam and Tonquin, and unmindful of the alienating influence which her ambitious African schemes have already exercised upon two friendly and kindred nations, Italy and Spain, driving them into the net of Bismarck's great coalition, she has almost openly turned her diplomatic engines, apparently precursors of military intervention, in the direction of Morocco, profiting by the present embarrassments of England, whose opposition to a further extension of French power and influence in Northern Africa might otherwise be dreaded.

All Spain is alarmed and excited in consequence. The general belief is that the present object of French ambition is the acquisition of territory adjoining both the northern and central portions of Algeria, including the town of Figig, and that, to achieve that end, M. Ordega, the Minister of the Republic at Tangier, has been using intrigues of all kinds, in that diplomatic capital of Morocco as well as in the interior—intrigues finally backed by threats and warlike demonstrations. Within the last month or two M. Ordega has been particularly active and demonstrative. The Sultan's Foreign Chancellor, residing in Tangier, is said to have been ensnared in the French interest, and the Sherif of Wazan placed in defiant antagonism to the Court of Fez. A rising of tribes in the interior and the arrival of a strong French squadron in the harbor of Tangier are reported, and, according to news from that place, M. Ordega has presented to the Moroccan authorities, for the Sultan's signature, a treaty "rectifying" the frontier of Morocco and Algeria. There may, however, be some exaggeration in all this, and perhaps France will not be too hasty in throwing down the gauntlet to the Spanish nation, which since last year's exchange of royal and princely visits has become a close ally of Germany.

THE LIBERAL EDUCATION OF THE FUTURE.

THE magazines and newspapers have lately contained some discussions of the nature and value of a liberal education; but no abstract discussion could present the position of this question in so strong a light as does the little announcement sent out by Harvard College, containing a list of the Freshman studies at Cambridge for the coming year. The prescribed studies are the following: Rhetoric and English composition, German or French, Physics, and Chemistry. Twenty years ago, the bulk of these (if not all of them) were not studied at Harvard in the first year of the course. In the list of electives, on the other hand, the three first studies are Latin, Greek, and mathematics. It appears, therefore, that the studies which formed the corner-stone of the Harvard education of twenty years since have become optional, and the circular appears to bear no other interpretation than that hereafter the Harvard diploma will not imply the possession of any more Latin, Greek, or mathematics than is now required for entrance to the Freshman class. They are still required studies for admission; but after admission they need not be pursued at all. This is the most momentous change in education which has taken place in recent years and marks the formal and final abandonment by one of the leading American universities of traditions handed down from father to son for four hundred years. President Eliot has recently contributed an article to the *Century* on the subject of liberal education, in which he shows how the standard has changed from period to period; but none of the changes in standards which he mentions are so serious as that which he himself has introduced; for ever since the revival of learning in Western Europe, and in this country since its settlement, the hall-mark of a liberal education has been in one sense the same; it has always implied a certain familiarity with the same branches of learning. A man graduated at Harvard or Yale or Oxford or Cambridge in the latter half of this century, would undoubtedly, as President Eliot says, study many things that Erasmus and Bacon, or even Milton and Gibbon would not have studied, and would follow new methods of study in the old branches of learning; but could he meet Erasmus, or Bacon, or Milton, or Gibbon, he would meet them, in a certain sense, on common ground. He might know vastly more about the universe than they did; his whole conception of life and philosophy might be clearer, but he would be able to bear with them, and endure and even enjoy their society, because the basis of his training would have been the same. He would have conned the very same propositions in some American Euclid which they had bothered over in the original; he would have the same familiarity with Cæsar's bridge-building on the Rhone—and, we may add, the same want of familiarity with the great engineering feats of modern times; he would know the same old stories of Plutarch's men, and how the geese saved the Capitol, and the opinion of Pythagoras about wild fowl, and the fall of Troy, and the wanderings of Ulysses, and the whole story of Greece and Rome, and the mighty lessons which they taught the world; and much more useful and also useless knowledge. He would up to a certain point have spoken the same language with them, had the same thoughts, looked at the world through the same eyes.

Now, if the changes adopted at Harvard are to become general, it looks as if the traditional freemasonry of a liberal education would soon be a thing of the past. Under this new system the diploma granted by a college will not enable us to know what learning a man possesses. A Harvard graduate may have devoted himself to Greek, Latin, and mathematics during most of his course, or he may have devoted his time mainly to the natural sciences, or to a *mélange* of learning consisting simply of the optional studies known among undergraduates as "soft," *i. e.*, those in which examinations from one cause or another can be passed most easily. The grant of the diploma by the college will signify not the possession by all its holders of a common fund of knowledge which is recognized by the educated world as constituting a liberal education, but the possession by each man of something which the college warrants as a liberal education, the nature of which, however, is left indeterminate and fluctuating. It is easy to see that the new system will be likely to produce consequences shocking to conservatives. Mr. C. F. Adams, jr., in his address on Greek, seemed to think that he disposed of the whole matter by inquiring of what "use" Greek was to anybody. But this, if we are not mistaken, is rather an appeal to the prejudices of a very practical-minded country than an argument properly speaking. A liberal education has never been limited to studies which can be shown to be of direct utility to the wants of mankind. In fact, the object of a liberal education is something different from this. A man may go through life perfectly well, and even make a large fortune in dry goods or stocks, without knowing what an isosceles triangle is, or who Plato was; and it would be very difficult to show the "use" of a knowledge of Plato's dogmas as you can show the use of Kent's Commentaries to a lawyer, or a knowledge of mechanics or chemistry to an inventor. It has always been assumed that knowledge is, like virtue, an end in itself, which proves its

value to its possessor. If every branch of learning were to be made to prove its utility by an appeal to what it "does for a man" in practical life, we fear that little would be left of liberal education. Mr. Adams may be quite right in his hostility to Greek; but it is only fair to point out that the experiment which Harvard has entered upon is a momentous one, and involves the consequence which we have endeavored to suggest here, but which seems to have escaped attention elsewhere—that in future the degree of the college which adopts the new system to its full extent will indicate nothing very definite as to what its possessor knows. It marks and signalizes the termination of an ancient bond of union among liberally educated men. Hereafter a liberally educated man may know who Solon was, and never have heard of Turgot or Ricardo; or he may be deeply versed in economical lore, but stare if you allude to Alcibiades or the Sicilian Expedition.

THE METHODS OF ENGLISH PLAYWRIGHTS.

AN enterprising London editor, following the example of M. Dreyfus, of whose symposium of French dramatists we gave an account recently, has succeeded in inducing a number of leading English playwrights to describe their individual methods of composition. Their communications are not quite so entertaining as those of their French confreres, but they are more serious, and in several cases they give really helpful advice and suggestions about the technical side of their art. Of course, however, like the Frenchmen, they profess themselves entirely unable to communicate the real secret, and their answers to the question how to write a play are still like that of the boy who said that the way to find the centre of a circle was to make a hole in the middle of it. But they all agree in pointing out the stumbling-blocks in the playwright's path—the peculiarities and capabilities of the actors for whom he is writing, the character of the theatre, the fashion of the day, the obtuseness of the licensing censor; and one of them has a prompt and, if true, a satisfactory explanation of the alleged scarcity of good English plays—that, except at the one house where they do appear, the Princess's, the money for them is not forthcoming.

The first thing Mr. G. R. Sims does when he gets a commission to write a play—and the last, too, we suppose—is to decline it, because it means months of mental misery and a long period of physical prostration to follow. Six commissions has he thus declined within the last few months. In the apparently rare cases when he determines to desert the "Dagonet Ballads" and "Horrible London" to try for another "Romany Rye," or the 250 nights of "The Lights o' London," he proceeds as follows: The story is first planned, and built up scene by scene. This he writes in a book and alters and alters until he has a clear story which he can tell, act by act, to a friend, taking care that at the end of each act there shall be an effective situation. As soon as the story is thus clear he begins to look at the motives which actuate the villain and hero, and if they are weak he casts about for stronger ones. When they will account reasonably for all that happens he completes the piece, that is, he writes the dialogue act by act. If a scene that is necessary does not come at once, he leaves a space for it, thus:

Scene.—Martin and Henry, leading up to the quarrel and blow.

Playwriting is both an art and a trick, and the great secret is to know what not to write. It is very satisfactory to find that Mr. Sims, whose cleverness has become a byword, resembles Turner in knowing no genius but the genius of hard work. His method of writing plays, he says, is to take infinite pains—it is the method which is the surest road to success, and it is because it is so seldom employed that the "dramatic ring" remains still so small a circle.

Mr. A. W. Pinero begins by conceiving a story. Mr. Thomas Hardy is probably of opinion that Mr. Pinero sometimes begins by conceiving other people's stories—"The Squire" and 'Far from the Madding Crowd,' for instance. This done, he settles upon the necessary number of people, endows them with such distinctive and peculiar qualities as memory and invention suggest, and christens them. Then he walks about with them for a week or a year, as the case may be. Next, by means of sketches, photographs, and plans, he gives them local habitations; then he splits the dialogue into acts, and arranges entrances and exits. The dialogue he writes as Weston walks, leaving the track only for slumber and refreshment. Result: "The Money Spinner" in eight days, "The Squire" in three weeks.

The forty plays which bear the name of Mr. Palgrave Simpson have been produced in much the same way: first, subject; second, plot; third, *scenario* (*charpente détaillée*, the French call it); fourth, dialogue; fifth and most important of all, cutting out—especially cutting out anything supposed to be exceptionally fine. Mr. H. A. Jones, the author of "An Old Master," "A Bed of Roses," "A Clerical Error," and the joint author with Mr. Herman of the immensely successful "Silver King" and the new play of "Chatterton," writes strongly in favor of moral purpose. Three kinds of knowledge are indispensable to the playwright, he says, besides the natural, inborn dramatic instinct: first, a thorough knowledge of the laws and conditions of the stage to-day, as of a trade to be learned like a carpenter's; second, a knowledge of life and men; third, some knowledge of the best literature. But more than all this, he well says, a play should mean and teach something, and have a definite aim—though not an obtrusive one—beyond stopping a gap in the foolish leisure of foolish people. Shakspere must be the playwright's eternal model in this respect, and his whole work leave a final impression of sane, joyous, well-ordered human life in a sane, joyous, well-ordered world. Mr. Jones's individual method is similar to those already described: first, abundant excogitation; then each scene planned in detail, with entrances, exits, business, etc. He differs from Sims, Pinero, and Simpson in writing the dialogue of each scene as soon as it is constructed, the passionate parts composed at a dash and left, the comedy introduced at any time and frequently polished. In all the papers there is nothing better than Mr. Jones's simile to explain his statement that a play must be of such a nature that you are always forced to think of it as one thing: "It is a great thing to find a story, a theme, a mustard-seed that will grow and expand, and throw skywards one great broad trunk of interest with an infinity of living branches of character and incident. A play should have the unity of a tree, the vital, organic connectedness—a grand simplicity of outline and action, with endless variety of circumstance and character." Mr. Henry Herman, one of the authors of "Claudian," so brilliantly successful, and the collaborator of Mr. Jones in several plays, writes in an equally lofty and cheerful tone about his art. He has no fixed way of working, he says; all that the playwright can do is to be a careful gardener. His best work is done in the early light of summer evenings. He can write fluently on fine summer and autumn mornings, but his best ideas come in the calm and quiet of a fading summer day. He would have the stage hold up the mirror to the best traits of human nature, and prove that there is truth in man and love in woman, reverence in youth and honor in old age. "I delight in my work," he adds, "and it gives me strength and health far beyond what I have the right to expect after more than fifty years of varied fortunes." Such views go far to explain the success of Messrs. Jones and Herman's plays, and justify the hope of still better work to come.

"Mr. Punch's" contribution to the symposium is, as usual, chiefly an advertisement of its editor, Mr. F. C. Burnand. To make a play, he adds, let the audience and the press be unanimously enthusiastic about it. Then that play is made. Mr. Punch further advises a Zola-like study of locality. For instance, "Messrs. Augustus Harris and Pettitt, who are engaged on a drama for Drury Lane next season, which is to be all about General Gordon, have already started for Khartum, and will be soon riding toward that place to the inspiring air of 'The Camels are Coming.'" As regards the disputed question of when the dialogue is best written, Mr. Punch says at rehearsal. "Give the actors the situations and let them say what naturally occurs to them. You, as author, will note it down on the spot and crystallize it. Then it will sparkle."

Mr. Sidney Grundy's contribution is amusing enough to be quoted in full if space permitted, but there are no new suggestions in it. Close adaptation is, from start to finish, collar-work. Original writing is a luxury, but one which only rich men can afford. There was more time, he says, spent over the studio scene in "The Glass of Fashion" than over the three acts of "La Cosaque"—now having a successful run at the Royalty Theatre in London—twice told. But the game was not worth the candle, he thinks. No doubt he speaks for a good many of his fellow-playwrights when he says he cannot tell "how he makes a play," for the simple reason that he never makes one. If he wrote what he considers a play, it would not be accepted. If it were accepted it would not be licensed. If it were produced it would be damned. And very likely he couldn't write one if he tried. Therefore he doesn't try.

All the English playwrights who have thus described their methods agree that the practice of their art, however fixed and clear the theory of it may be, is little better than a lottery. As the ancients would not venture to pronounce a man happy till death had rendered change impossible, so no play can be pronounced a success until the curtain has fallen before a satisfied audience, and to bring this about or to prevent it there are countless considerations apart from its intrinsic merit. Given an author with genius, a happily-found plot, a play constructed with infinite pains, and in the present condition of the theatre the only way to escape disappointment is to be resigned to failure. And if there are any would-be dramatists to whom this profusion of gratuitous advice seems to point the way to managers with open arms and crowded theatres resounding with the cry of "Author!" let them ponder the statement of Mr. James Albery, whose "Two Roses" introduced Henry Irving to a London audience, that during the fourteen years he has worked for the stage he has had only one play accepted that was not written to order—and then it was not produced. It is the old story—*rien ne réussit que le succès*: there is no secret of dramatic success, and if there were,

the playwrights would not fill the columns of a newspaper with discussions of it. As one of them frankly says, whoever found it out first would patent it.

PARTY ORGANIZATION IN ENGLAND.

LONDON, June 2.

THE growth of population in England seems slow when compared with that of the United States or the Australian colonies. But it is rapid when compared with that of any part of Continental Europe, or of England herself during the centuries that preceded the nineteenth. As the population has grown, so has the country become also smaller by the extension of railways and telegraphs through every corner of it. The people are better educated, more intelligent, more interested in public affairs. Newspapers are more than twice as cheap and as numerous as they were twenty-five years ago. The consequence of all these changes has been to bring political questions within the knowledge of a far larger part of the nation, and to make their details more familiar to the humbler classes now than they were to the middle class at the time of the great Reform Act. The constituencies also have been so much enlarged, first by that act in 1832, then by the Act of 1867, that far more effort is needed to know and get at the voters than was formerly required. All these causes working together naturally tended to promote political organization and to place it on a popular basis. Yet for some time the progress was slow. Association and discussion, although perfectly free, have no great inherent charm for an Englishman. He forms a society or a committee, he makes or listens to speeches, if there is some practical object in view. But he does not enjoy the process for its own sake so much as many of his neighbors. Up till 1870, although there were Liberal Associations and Conservative (or Constitutional) Clubs in most large towns, they had no very active life, and did not sensibly tell upon our politics. They consisted of any members of the party who liked to join and pay a small subscription; they held meetings now and then to listen to addresses or pass resolutions—that was all. About ten or twelve years ago, however, there grew up in Birmingham and some of the other West Midland towns, a new kind of party organization. It was based on the representation of local areas. Each ward held a meeting of Liberals, and sent from this meeting delegates to a central council, which, taking its name from the number of delegates, was called the Three Hundred, or Six Hundred, or Nine Hundred, as the case might be. This body was held entitled to represent and act for the whole party in the constituency, especially in selecting the persons who were to be candidates at the next Parliamentary election. The disasters which the Liberal party experienced at the general election of 1874 were largely due to the fact that in many constituencies Liberal candidates ran in opposition to one another, thus letting the Conservative candidates in. As the new representative organization promised a means of preventing these divisions because it enabled the party to decide which candidate or candidates they adopted, and so to discourage any others, it began to be talked about, and was widely adopted by the Liberals in the greater towns. It is now known to its friends as the Birmingham system, and to its enemies as the Birmingham caucus, that word being deemed to have an odor of corruption and trickery. The results have been encouraging. In 1874 the Conservatives were relatively better organized than the Liberals. They had the liquor-sellers on their side, so that nearly every public house was a centre of Conservative activity. In some districts, and particularly in Lancashire, they had also the clergy of the Established Church on their side, so that the schools attached to the churches were usually Conservative committee rooms. At the election of 1880, however, the Liberals were better organized than the Conservatives. Much was due to the zeal of the nonconformist ministers. But much was also due to the local party associations, some formed on, others stimulated by, the Birmingham model.

Another cause came in to intensify local political life. After the Bulgarian massacres of 1876, a vehement agitation, led by Mr. Gladstone, was raised against the foreign policy of Lord Beaconsfield's Ministry. As there was a strong and united Tory majority in the House of Commons, the Liberal Opposition was obliged to agitate in the country; and for three years every platform resounded with denunciations of the conduct of the Beaconsfield Cabinet in Turkey, in Afghanistan, in South Africa. These harangues excited the rank and file of the Liberal party in the towns; and while they promoted the growth of party organizations, they accustomed the people to feel a more constant and lively interest in current politics than had existed before. The Conservative defeat which followed, in 1880, was attributed by the Conservatives partly to the "Birmingham caucus," partly to the incessant and impassioned declamation of Mr. Gladstone and his coadjutors. Ever since, therefore, they have set themselves to learn and practise the same arts, just as in ancient Greece a city whose militia was defeated by the superior discipline of the Spartans used to train a special band till, like the Argives, or like the Thebans under Epaminondas, it was to face or overcome those redoubtable warriors. How to organize your party, how by the stimulus of frequent stump speeches to keep it in fighting humor, is the problem of the hour in England for a large section of politicians. The Tories, although they deplore the un-English character and demoralizing tendency of the Birmingham caucus, asserting that it enslaves both the mass of the constituency and their member of Parliament to a small gang of wire-pullers, have felt it necessary to have something of a similar kind. As the associations founded on the Birmingham plan are gathered into a Federation of Liberal Associations, whose standing committee makes suggestions for joint action (it has, I believe, no title to do more than suggest) to the local bodies, so the Conservatives have formed a National Union of Conservative Associations, which is intended to secure similar joint action. And out of this has grown the pretty little quarrel and reconciliation which amused England so much a month ago.

The chairman of this National Union of Constitutional Associations was Lord Randolph Churchill, an active young man, restless, clever, ambitious, and above all audacious. One of the vice-presidents was Mr. Gorst, member for Chatham, a man quite equal in ability to Lord Randolph, older and more experienced, and drawing an unusually large knowledge of the constituencies from the office, which he held for some years before 1874, of General Central Agent of the Tory party. He and Lord Randolph have been close political friends since the beginning of this Parliament, and it is commonly believed that he sketches out the lines of Lord Randolph's action. Now, there is an older authority in the Tory party, called the Central Committee, and managed by a knot of the recognized Parliamentary chiefs. This Committee, disliking the insubordinate ways of Lord Randolph and his friends, and feeling jealous of the Union of Constitutional Associations, frowned upon it, and gave it notice to quit the rooms which it occupied in London as tenant of the Central Committee. Moved by a natural resentment, Lord Randolph wrote a biting and in part somewhat insolent letter to Lord Salisbury as the head of the Central Committee, reproaching him and his coadjutors with ignorance both of the necessity for reorganization and of the new democratic spirit which is stirring in the Tory party, and in fact renouncing allegiance to him and them. The leading Conservative organs reprimanded Lord Randolph, and preached the duty of union under Lord Salisbury and Sir Stafford Northcote; but the Liberals were childishly gleeful, and applauded the rebel who seemed likely to divide the enemy's force. In Lord Beaconsfield's later days no such revolt would have taken place, or it at least would have been quickly suppressed; but now the generals cannot afford to ignore the sentiment of the inferior officers. Lord Randolph is popular with the locally active Tories through the country on account of his bold skirmishing and warm invectives against Mr. Gladstone. Mr. Gorst retains much influence among the Conservative clubs and associations, especially in the northwest of England. And the power of these two proved so great that after a few days it was announced that by the mediation of Alderman Arthur B. Forwood, of Liverpool, one of the ablest of the local Tory leaders, the schism had been healed. Lord Randolph and Mr. Gorst returned into the party fold, and resumed their places in the direction of the National Union of Constitutional Associations which they had resigned when the breach took place. Considering the terms of Lord Randolph's letter, this was practically a victory for him, and he has since emphasized it by twice refusing to follow the nominal leaders of his party in the House of Commons. Such an incident is the best proof of the importance which the local organizations have gained, for the Conservatives have hitherto been much more docile and united than the Liberals, and more disposed to adopt and applaud whatever course such an aristocratic chief as Lord Salisbury might adopt.

It is also an evidence of the desire among the Tories of the great towns to have some positive popular programme to offer. The nobility and landed gentry have hitherto dictated the policy of the Tories, and have, of course, been chiefly concerned to resist the rising tide of democratic change, to safeguard the rights of property, to defend the Established Church and the House of Lords. This is all very well, but it is too negative. It has given the Radicals the advantage of being able to represent their antagonists as obstructives, concerned to protect their own interests, but jealous of popular power, and indifferent to the bettering of the condition of the people. Disraeli, who had to the last a spice of his old democratic leanings, was never satisfied with the policy of mere resistance, and tried to pose as the friend of the town populace, as well as of the agricultural peasantry. Several times in his later years he descanted on social reforms, insisting that it was from the upper classes that the masses had most to expect. Even Lord Salisbury has once or twice tried to use similar phrases, but they slip less easily from his tongue. At present the leading apostles of Tory democracy are Lord R. Churchill in Parliament and Mr. Forwood out of it. There are no signs, so far, that it will draw off a large section of the workingmen from their allegiance to the Radical leaders. But it puts heart into the rank and file of the Tories—for in Lancashire, at least, there are plenty of workingmen Tories—and it may accelerate the passage of democratic measures by dividing the sympathies of Tories themselves. Already it is their unwillingness to seem to dread the people that keeps the Conserv-

ative leaders from openly opposing the Franchise Bill. And when questions come up, as they are more and more beginning to do, in which the interests of land-owners stand in the way of popular demands, there will be a pressure from their own side which the Tory land-owners will find it hard to withstand. It is, therefore, not the Radicals only that are leading England to democracy; it is the Tories also, not to speak of Mr. Parnell and the revolutionaries of Ireland.

Meanwhile the Liberals are chuckling over the dissensions in the Tory camp, and find in them some consolation for their own mishaps abroad. It is a delusive consolation, for no faults, or follies, or quarrels of their antagonists will save them from defeat if things turn out worse in Egypt. Although the reasonable course would be for those who think the Opposition still worse, to go on supporting the Government, men think more of the present than the future, and are apt to gratify their anger even when the gratification involves greater evils. Y.

GUIZOT'S CORRESPONDENCE.—II.

PARIS, June 5.

M. GUIZOT was Ambassador in London in 1840, and he learned in England, after his arrival, of the formation of the Cabinet of M. Thiers. He did not much like the political ideas of M. Thiers, especially in foreign affairs, but he would not resign at once. He wrote to the Duc de Broglie, who always remained his most intimate friend: "There is danger that this Cabinet will go too much to the Left. The mere appearance of this movement is a great evil, for there will result a new progress in the moral weakness of power. But we can struggle against this danger. I will do it here, you will do it in Paris; and when the deviation shall become real, I will at once resign. No more here than in Paris will I be associated with a bad policy—with a policy which will give way before the evil passions, instead of resisting them." Guizot, in his new position, had to see Lord Palmerston every day; he was already intimate with Lord Holland, Lord Clarendon, and Lord Lansdowne. Lord Melbourne seemed to him a curious mixture "of *insouciance* and authority, of *bonhomie* and command." Guizot became a lion in English society, but he wrote to his old mother: "I see much company, and people are very polite; but their habits are always a little *tendus*, and they have neither in their mind nor in their character the *laisser-aller*, the wealth, the movement, the prompt and sweet kindness which gives charm to the social relations." Guizot, however, was, and became even more in England, what the French call an *Anglomane*; few Frenchmen have understood so well the English language and the English character.

He did not at first understand Lord Palmerston very well, and he allowed the shrewd statesman to deceive him completely in the Eastern question, which had become the great question in 1840. M. Guizot was ignorant to the last that on the 14th of July Lord Palmerston had succeeded in uniting the four great European Powers, to the exclusion of France, in a treaty of alliance. "This is grave," he writes to his mother on the 31st of July, "and might become even more so. I do not doubt that some persons will throw the responsibility for it on me. . . . In the end, I think there will be in all this more noise than evil. England really does not wish a war, nor a rupture with France. The English public is cold and divided on the Eastern question. Lord Palmerston has committed his country to a bad course, but I am inclined to think that his country will stop when danger becomes imminent. France, notwithstanding the present agitation, will not make war without an evident and pressing necessity. . . . Pray God, you and my children, to give me light and courage." The King, Louis Philippe, was determined not to go to war in the face of this most formidable coalition; he saved France from the ambition, the restlessness, and the imprudence of M. Thiers. He had seen France twice invaded; he knew the miseries of war and of revolution, and he felt that his mission was to keep France intact. Lord Palmerston took his opportunity. He had deceived M. Guizot; M. Guizot left London, but he returned to France only to take the place of M. Thiers and to form a new Cabinet. France had been humbled, but peace had been preserved. "We shall see," wrote M. Guizot to his friend M. de Barante; "we will not long remain out of the general affairs of Europe. It is well for all that we should be in Europe. France is too great a country for the void of her absence not to be soon felt. We shall wait till it is felt, and till we are told that it is felt. I am excessively disgusted with *fanfaronnade*, but we can wait tranquilly and keep the liberty of choice." This terrible Eastern question, which agitated Europe in 1840, is always open; and in 1884, as in 1840, France has the liberty of choice.

The opposition of M. Thiers became formidable in 1840, and M. Guizot, with the King, had to struggle not only against the coldness, the ill-will of Europe, but against unscrupulous enemies in the interior. The death of the Duke of Orleans was a terrible blow to the King and to the country. "Since three years ago," wrote Guizot to General Bugeaud when he sent him the staff of a Marshal, "you and I have carried on a terrible war. We have both had some successes. But I feel that I am even more than you far from the end of the war; and I have more battles to fight than you in the future. It will be as it pleases God. I am not accessible to discouragement." In 1844 Guizot accompanied the King to Windsor, on a visit to Queen Victoria; the journey was very successful. The Government felt very strong, as the country felt much satisfaction from the continuation of peace, and from what was then called the *entente cordiale* with England. The King was determined to rise always above the small questions, the small incidents, and, with the help of England, to maintain peace in Europe. M. Guizot had become very intimate with Lord Aberdeen and wrote to him confidential letters. Some of these letters are very characteristic: fancy in 1845, M. Guizot, Prime Minister, explaining to Lord Aberdeen, almost in an apologizing spirit, in the most minute details, the preparations of the French navy and of the French ports, sending to him notes on the port of Calais, etc. It was, to be sure, the time when M. Thiers, in a conversation of eight hours, explained the new fortifications of Paris to Lord Palmerston, who had come on a visit to Paris.

The Spanish marriages interrupted the famous "cordial alliance." This time Lord Palmerston was as completely defeated as the French Government in 1840. In a letter to Mme. de Gasparin (November, 1846), M. Guizot says: "Lord Palmerston counted on four things: first, on our drawing back; second, on a strong opposition in the Cortes; third, on insurrection; fourth, on the adhesion of the Continental courts to his policy. Four mistakes. The last one is very bitter to him. In 1840, on the miserable question of Egypt, England had the victory in Europe. In 1846, on the great question of Spain, she is beaten, and she is alone. It is not only because we have played our game well: it is the result of six years of good government. This is why our success is pardoned even by the courts which do not like us." The Queen of Spain offered to make M. Guizot a duke. "I will be neither duke nor prince," he writes. "I have refused it to the Queen of Spain, and I have told my King that if ever I had the fancy of being a duke I would be one of his making, but that this fancy would not take me." To M. Bresson, the Ambassador of France in Spain, who offered him officially the duchy and the *grandeza* of Spain: "No, I am not a puritan, nor a democrat. I have no more contempt for titles than for all the other exterior signs of greatness—neither contempt nor appetite. I only care for two things: in my lifetime, for my political strength; afterward, for the honor of my name. If I thought that the *grandeza* and the duchy could add something to-day to my strength, and later to my name, I would accept them with pleasure. I believe the contrary. I think there is more strength for me now, and that there will be more honor later, in my remaining M. Guizot, *tout court*. If our House of Peers was hereditary—if I could leave to my descendants, to sustain them in their mediocrity of merit or of fortune, my titles and my honors—I should perhaps act differently."

Lord Palmerston had fought in Spain against M. Guizot a battle in which he had been defeated. From that moment he became bitterly hostile not only to M. Guizot, but to King Louis Philippe. The revolution of February was almost hailed by him with joy. The monarchy of July fell when it seemed completely assured of the sympathies of Europe and of the world, and of the fidelity of France. A handful of Anarchists upset a King who had become old and who was unwilling to shed the blood of the people. Louis Philippe had been led to the Hôtel de Ville and to the Tuileries by the National Guard of Paris: he was the King of the "bourgeoisie." When the National Guard joined the opposition in the cry for electoral reform he abdicated, and the abdication was the signal of one of those revolutionary storms which from time to time go over Paris and France, and change the face of all things for a whole generation. M. Guizot fled to England; and took a small house near Broughton. He lost there his old mother, who had joined him. He spent most of his time with his children, and began quietly some literary and historical works. He wrote to his friend M. Vitet: "We have spent in seventeen years all the capital of good sense and of political courage which the country had saved since 1789. In 1848 the country could no more honor our drafts. It has failed. How much time will be necessary to form a new capital? I do not know." To the same friend he says: "My greatest trouble in all this is the wound given to my national pride. I cannot console myself for paying so dearly for such a spectacle offered to Europe."

M. Guizot returned to France in 1849; he was not molested on his return, and was even politely received in Normandy. The Revolution of 1848 had deranged nothing at the Val-Richer, an ancient abbey which M. Guizot had bought, and which was his summer resort. He lived there most quietly, calm, in a certain sense detached from everything; he was not dissatisfied with himself, though he did not feel exactly as Metternich, whom he once had met in London, while they were both exiled. "I have one consolation," said Metternich: "I am conscious that I have not committed a mistake." "I am happier than you," answered Guizot, "for I have made some and I have perceived it." In his retreat, M. Guizot felt that France would not long remain under the rule of the men who were called the Republicans of 1848—men, by their education, by their low instincts, and their ignorance, unfit for the higher parts of politics. A reaction had taken place almost immediately

after the Revolution; a strong government was desired. Some looked upon Louis Napoleon, some upon the Comte de Chambord. France had the choice between two dynasties—the new dynasty that had issued from the Revolution, and the old and traditional dynasty. Louis Philippe, in his exile at Claremont, advised himself a return to the legitimate and traditional monarchy. Guizot had the same feelings. They both felt that the years passed between 1830 and 1848 had been a sort of interregnum; that the principle of legitimacy was necessary to a dynasty; that heredity was the only solid basis of monarchy. There are, in the volume now published by Mme. de Witt, some most curious letters of Guizot on this question of the fusion. In a letter dated the 9th of July, 1850, he gives an account of a visit made to the King, Louis Philippe. The King told him: "It is a great misfortune, this want of union in the House of Bourbon. I will not add to it the disunion of the House of Orleans." There is a very interesting note on the fusion of November, 1850, which was placed by the Duc de Noailles in the hands of the Comte de Chambord. In this note M. Guizot declares himself for the union of the two branches of the royal family, and shows what concessions ought to be made by the Orleanists to the legitimists and by the legitimists to the Orleanists. I should not wonder if the new book had had for one of its principal objects the publication of documents which, in the present circumstances of France, have a new interest. Death has brutally done what the statesmen could never do; but many of the considerations into which M. Guizot enters have lost none of their value.

Correspondence.

MORE WESTERN LOCUTIONS.

To the Editor of The Nation:

Sir: As to the use of *right smart*, not long since, in examining a native Indianian who was testifying as to the value of a certain small tract of land, he was asked how many potatoes he had raised that season on the ground, to which he replied, "I raised a heap, for I sold a pile and had right smart left." That sentence is in the pure vernacular of Southern Indiana and Illinois. T. K.

Cincinnati, June 13.

To the Editor of The Nation:

Sir: Referring to the use of the expression "I allow," I would say that I have travelled extensively in Missouri and the Southwest, and have heard the expression used many times in both senses mentioned by previous correspondents, viz.: as "I intend" and as "I said." And I have often heard two other words used in a sense that may be new to you, viz: "fault" as a verb, meaning "to find a particular fault or imperfection." For instance, a farmer boasting of the excellence of his horse will say: "There he is, *fault* him if you can." The other word is "batted," meaning "closed one's eyes in sleep," as, "My child has been so sick for a week that I have not *batted* my eyes once."—Respectfully, Chas. L. Case.

St. Louis, June 16, 1884.

Notes.

The Index which usually accompanies the closing number of the *Nation*'s volumes, is unavoidably postponed till a later issue.

Mr. W. J. Linton's 'Wood Engraving: A Manual of Instruction,' a text-book for young engravers, will be issued at once by Scribner & Welford.

'A Trip to Alaska,' by George Wardman, the Revenue Inspector at the Seal Islands, is announced by Lee & Shepard.

J. R. Osgood & Co. have in press two summer novels, 'Miss Luddington's Sister,' by Edward Bellamy, and 'Where the Battle was Fought,' by Charles Egbert Craddock.

'Elizabeth Fry,' by Mrs. E. R. Pitman, will form the next volume in Roberts Brothers' "Famous Women" series.

McPherson's 'Handbook of Politics for 1884' is announced for publication in August by James J. Chapman. It will cover the period from August 9, 1882, to the adjournment of Congress, and in it particular attention will be given to the history of the tariff enactments.

Lyon G. Tyler, Esq., of the Richmond bar, the son of President Tyler, has ready and will publish at once by subscription 'Letters and Times of the Tylers,' in two octavo volumes. The work includes the biographies of Governor Tyler, of Virginia, and his son the President, and will contain many unpublished letters from eminent men, as well as speeches, etc., etc. It will be an interesting contribution to American history.

Porter & Coates authoritatively contradict the rumor that the Comte de Paris has suspended work upon his 'History of the Civil War in America' to undertake a history of the reign of Louis Philippe. He has completed the seventh and will soon finish the eighth volume of the French edition, both of which will be published here together as the fourth volume of the American edition.

Westermann & Co. send us the prospectus of the 'Collezione Fiorentina di Facsimili Paleografici Greci e Latini illustrati da Girolamo Vitelli e Cesare Paoli (Successori Le Monnier, Firenze).' The aim of this collection is to make accessible to scholars interested in paleography reproductions from Codices and documents belonging to the great Florentine libraries. When complete it will include about three hundred plates, published in twelve parts. The specimen page which accompanies the prospectus is admirably executed. The price is 50 lire for each part.

From the same source we have received three specimen plates of Julius von Pflugk-Harttung's 'Chartarum Pontificum Romanorum Specimina Selecta' (Stuttgart: W. Kohlhammer). This work will consist of about one hundred facsimile reproductions of Papal papers, both genuine and forged, up to the middle of the twelfth century. In some cases fragments only of the documents are given, but sufficient to serve as illustrations. The first half of the series is nearly ready, and the price of the entire work is not to exceed 100 marks. The Berlin Academy of Sciences supports the undertaking.

The *Studio* will begin a new series on August 2, under the editorship of Mr. Clarence Cook, under whose charge it may be confidently expected that this art journal will increase in utility and interest.

The *Educational Courant* is a new monthly published at Louisville, Ky., and devoted to the educational interests of the State. The principal topic in its first number is the propriety and need of national aid to the South for the purpose of education. The increase of such publications is in itself a promising sign.

The last number of *Science* is of very varied interest and shows new strength. Its most curious article is one on the position of science in the Russian universities, translated from the *Viestnik Evropy* for November, 1883.

Outing for July is practically a midsummer number, and perhaps one would naturally expect a magazine of this title to do its best in the warm season. Several articles are sketches of travel, that on the Catskills, with its modest illustrations, being particularly entertaining.

As the warm season has come, and minds devoted to serious studies in winter may be unable to do more than divert themselves with trifles, we may be pardoned for recording some more instances of the havoc which types can make with the titles of books. A single catalogue gives us 'Clara Reeve's Old English Barn,' 'Swinburne's Century of Scoundrels,' and 'Una and Her Papuse.' But this is outdone by the bookseller in this city who offers for sale 'Blavatzky. Mrs. Izis Unveilled.'

'The Tourist's Hand-book to Switzerland' (T. Nelson & Sons, London), by Robert Albert, member of the Italian Alpine Club, is a very convenient guide to the mountain routes, and contains much varied and minute miscellaneous information. In particular it is plentifully provided with maps (twenty-four), plans, etc.

A similar work, 'The Isle of Wight,' comes to us from the same publishers. It is by the inexhaustibly fertile author, Mr. W. H. Davenport Adams, and besides being a guide-book is a compendium of the history, antiquities, science, etc., of that most delightful island. It is amply furnished with maps, distance tables, statistics, and the usual properties of such a work.

A novelty in Sunday-school literature has been put forth by Mr. Charles F. Dole, under the title, 'The Citizen and the Neighbor' (Boston: Unitarian Sunday-School Association). It is a pamphlet-like little book, full of questions and answers in regard to government, socialism, the relation of buyers and sellers, employers and employed, and similar topics of political economy, and concludes with a chapter on our international duties. It is distinguished from secular every-day primers only by a very frequent and almost humorous use of the words, "the Golden Rule," which are meant perhaps to give that suggestion of the odor of sanctity which cannot be altogether dispensed with, even by those who are willing to substitute Mill and Cairnes, or possibly Kelley and Mr. George, for the Pentateuch and the Gospels as Sunday study for infant minds.

"The Twenty-fifth Annual Report of the Trustees of the Cooper Union" exhibits the work of that institution in the past in a very strong light, and pleads, with all the force derived from this simple presentation of what has been actually done, for an endowment from its friends. The limit of its usefulness with its present resources is declared to be reached; and it is said that its proper development requires an addition of a million dollars to the funds, besides the one hundred thousand given by the will of Peter Cooper. The trustees, therefore, while acknowledging the gift of another hundred thousand from Mr. Cooper's heirs, inform the public that that philanthropist never expected to be able to endow the Union wholly from his own means, but hoped that others would join with him or follow his example. The trustees now urge that the change brought about in the circumstances of the institution by its founder's death offers a proper opportunity for such benevolence.

Volume iii. of John J. Lalor's 'Cyclopædia of Political Science, Political Economy, and United States History,' Oat-Zol (Chicago: Melbert B. Cary & Co., 1884), with the general merits of which our readers have been made familiar by notices of volumes i. and ii. as they came from the press, is the largest in quantity and the best in quality of the series. The list of American writers embraces several names not included among the earlier contributors. Mr. Alexander Johnston furnishes, as in the preceding volumes, the articles on American His-

tory, the more important being those on the Ordinance of '87, Rebellion, Reconstruction, Returning Boards, Revolution, and Slavery. Mr. A. R. Spofford writes the articles on Parliament, Parliamentary Law, and States. Mr. Dorman B. Eaton gives his views on the subjects of Patronage, Primary Meetings, Removals, and the Spoils System—all of excellent quality and of immediate public interest. In the department of Political Economy Mr. Francis A. Walker contributes an article on Public Revenue, Mr. David A. Wells one on Taxation, Mr. Worthington C. Ford articles on Prices, on Refunding, and on Tariffs. Mr. Horace White furnishes a synoptical review of the Paris Monetary Conferences of 1867, 1878, and 1881. Mr. Simon Sterne writes with his customary vigor on the subject of Railways. Literary Property is treated by George Haven Putnam, Pauperism by F. B. Sanborn, Patents by F. W. Whitridge, Repudiation by George Walton Greene, Office-holders by E. L. Godkin, Tammany Hall by Talcott Williams, Prisons and Prison Discipline by F. H. Wines, Proportional Representation by Alfred B. Mason. These articles and names will serve to indicate the scope and character of the work to those who are not already familiar with it.

Two recently-completed works of local history and antiquities will be found to have a more than local interest. The first of these comprises the 'Proceedings at the Centennial Celebration of the Incorporation of the Town of Longmeadow' (Mass.), last October. Out of its more than 400 pages, nearly one-half are occupied with various historical appendices. The names of Storrs, Williams, Ely, Stebbins, and Wolcott are honorably associated with this attractive old town in the Connecticut valley. The book has seventeen admirable illustrations; and among the portraits will be recognized the strong face of the first Dr. Richard S. Storrs. The other volume is the 'Celebration of the Two Hundredth Anniversary of the Organization of the Congregational Church and Parish in Essex, Mass.,' which occurred in August last. Essex was originally the Second Parish in Ipswich, and it was before the separation from the parent town took place that Rev. John Wise became its minister. Naturally, that part of the volume which possesses the most general interest is the careful and thorough historical address on John Wise, by Rev. Dr. Henry M. Dexter. Very clearly he points out wherein consisted the essential influence of John Wise on his own time, and on the Americans of the Revolutionary period. Prof. Moses Coit Tyler, it will be remembered, had already, in his 'History of American Literature,' said of Wise that, "Upon the whole, no other American author of the colonial time is the equal of John Wise in the union of great breadth and power of thought with great splendor of style." Dr. Dexter's address, amply fortified with references to authorities, places John Wise in his proper relation to the movements of his time.

The issuing of old books with new titles must be a profitable business if we can judge of the matter by the frequency with which one firm of publishers resort to the practice. G. W. Carleton & Co., of this city, have just issued four anonymous novels which they advertise as "New Summer Novels." To all appearances they are new, having copyright notices and dates of 1884, and with no intimation on the title-pages that they are old books. The names of the four are: 'A Faithful Lover'; 'Fettered, yet Free'; 'Love's Warfare'; and 'Rival Charms.' The first is a reissue of 'The Rangers and Regulators of the Tanaha,' by A. W. Arrington, published in 1856; the second is 'Undercurrents of Wall Street,' by R. B. Kimball, 1862; the third is 'Twixt Hammer and Anvil,' by Frank Lee Benedict,' 1876; and the fourth consists of two stories by Annie Edwardes, called 'A Blue Stocking,' 1877, and 'A Vagabond Heroine,' 1873. The author of a work, in publishing a new edition, may change the title to one more suitable to the book, if the change is not concealed, but here there is no question of this kind. The titles have been altered, and all evidence removed of the original names, evidently for the purpose of palming off on the unsuspecting purchaser books which he may have bought and read years ago. The only method, apparently, to protect the book-buyer from such practices is to give such publicity to these publishing methods as will stop the sale of the books, and so render the practice unprofitable.

At the tercentenary celebration of the founding of Emmanuel College at Oxford, last week, the degree of LL.D. was conferred on Professor Charles Eliot Norton, of Harvard College, who was present on the part of the University, John Harvard having been a graduate of Emmanuel. The honor could not have been more fitly conferred whether regard be had to Professor Norton's personal worthiness or to his character as representative of the best culture of America.

We learn on excellent authority that "Frederic Daly," the name on the title-page of the new biography of Irving, 'Henry Irving in England and America, 1838–1884,' is the *nom de guerre* of a Mr. Austin, who is Mr. Irving's private secretary. Under the circumstances, the unvarying eulogy of the biography is not surprising.

The statement which has been made in several quarters that the late Mr. Sam Ward left behind him in letters and notes sufficient manuscript material to form an autobiography is incorrect. During his last year in England Mr. Ward wrote the first part of the memoirs which he had long projected, and this was privately printed in a small volume and given to a few friends. As it deals, however, only with his life as a very young man, up to the close of his first visit to Europe, it is of no general interest and will not be published. Beyond this, Mr. Ward has left almost nothing of biographical interest. He had intended to live in London in retirement on his return from Italy until he had completed his memoirs, and indeed had engaged rooms for the purpose before he was taken ill. His reminiscences could hardly have failed to be among the most entertaining that have appeared for many years, since he had a thorough knowledge of men, and a very wide circle of acquaintances among the most interesting people of the last fifty years.

The *Academy* reports that an interesting point has been made bearing upon the identity of William Herbert with the W. H. of Shakspere's Sonnets, in rebuttal of the objection that Shakspere would not have urged a youth of eighteen to immediate marriage. Rev. W. A. Harrison has found in the Calendar of State Papers that "when William Herbert was only seventeen his parents had negotiated a marriage for him with Bridget de Vere, of the Cecil family; and that Herbert's mother, the Countess of Pembroke, Sir Philip Sidney's sister, was specially anxious for the match. Moreover, the confidential agent and servant of the Earl of Pembroke in the matter was Arthur Massinger, the father of Philip Massinger the dramatist; and thus a link between the Massingers and Shakspere is probably supplied, for that in 1598 Shakspere knew the Countess of Pembroke no reader of the Sonnets can doubt who remembers the lines—

"'Thou art thy mothers glasse; and she in thee
Calls backe the louely Aprill of her prime.'"

Another matter of interest to Shaksperian scholars is the translation of "The Merchant of Venice" into modern Greek by Mr. Bikélas—Ὁ ἔμπορος τῆς Βενετίας. This task offered exceptional difficulties, but it will be very novel and entertaining for an Englishman to read *Gobbo's* fun in the language of Aristophanes. The *Academy* praises the translator's work.

The Slavs of Lusatia, popularly known as the Wends, are, if we may believe Traugott Pech, one of their distinguished scholars, experiencing a revival of national feeling and taste for literature. This little people, he says, composed largely of those engaged in manual labor, read the journals and books published in their own language, even the works of a high order of literature. Herr Pech has just brought out a translation of the section of Pypin and Spasowicz's great history of the Slav literatures, devoted to the literature of the Wends, under the title 'Das serbischwendische Schriftthum in der Ober- und Niederlausitz,' Leipzig, Brockhaus, with notes and complementary matter.

The course of Sunday talks on the Pentateuch, begun last winter by Dr. Heber Newton, Rector of All Souls' Church, in this city, was discontinued at the not very judicious request of his Bishop; the substance of them now appears in book form under the title: 'The Book of the Beginnings. A Study of Genesis, with an Introduction to the Pentateuch' (New York and London: G. P. Putnam's Sons, 1884). "Neither deference to my Bishop," says the author, "nor the sincerest desire for peace can make it right that I, and the people who have so loyally upheld me in good report and in evil report, should rest under the misconstructions which have been placed upon the teachings of All Souls' pulpit." Dr. Newton writes not as an original critic, but simply with the purpose of popularizing some of the most valuable conclusions of modern Biblical criticism, and thus helping thoughtful students of the Bible to a better understanding of the Pentateuch. And he has performed this task in a very creditable manner. He has read the best books intelligently, and stated their results clearly, in a not unattractive style and in a reverent spirit. These "talks" will be acceptable to the general public who wish to see on what grounds the critics base their conclusions respecting the Pentateuch.

A very different "book of the beginnings" is that to which Mr. Gerald Massey has been devoting his time for the past twelve years, of which the conclusion is now given us in two quarto volumes containing over a thousand pages. The nature of the work may be judged from the title: 'The Natural Genesis, or Second Part of a Book of the Beginnings, containing an attempt to recover and reconstitute the lost origines of the Myths and Mysteries, Types and Symbols, Religion and Language, with Egypt for the Mouthpiece, and Africa as the Birthplace' (New York: Scribner & Welford). It is an enormous conglomeration of facts set down with entire indifference to scientific principles of comparison—not without utility as a bare collection of things (though the statements cannot always be relied on as correct), but, as far as the author's aim is concerned, absolutely worthless.

The first part of the long-expected *Prolegomena* to Tischendorf's eighth critical edition of the New Testament has appeared under the editorship of two Americans, C. R. Gregory, of Leipzig, and the late Ezra Abbot, of Cambridge (Leipzig: J. C. Hinrichs; New York: B. Westermann & Co.). Very little of the matter is Tischendorf's. This first part contains the apparatus criticus, canons of textual criticism, grammatical forms, the form of the text, the history of the text, and the uncial manuscripts; the cursives, versions, and ecclesiastical writers are reserved for the second part. This is by far the most complete and accurate treatise on the points discussed that has yet appeared, and, together with Westcott and Hort's second volume (which gives the historical, scientific New Testament text-

criticism), will be a thesaurus for students of the text. In so large a mass of details the editors will hardly hope entirely to have escaped errors, but from these the book seems to be singularly free. Like Tischendorf's own *Prolegomena*, this is written in Latin.

The *Bulletin Critique* has made the latest contribution to the literature of plagiarism. M. Merlet, it appears, in the second and third parts of his 'Tableau de la Littérature Française, 1800-1815,' just issued, has been guided in his judgments to a very remarkable extent by Sainte-Beuve, and not merely in his judgments, but in his very sentences, his comparisons, his metaphors, his commencements, and his conclusions. He has read and reread Sainte-Beuve so many times, and his memory is so good, that he retains everything, often in its proper order, not mixing up the various articles in the least, and never saying of one great man what Sainte-Beuve had said of another. And yet, after all, the result is not Sainte-Beuve, but Merlet, for one can take a writer's ideas and figures and words even, and yet not catch his style. Here, at least, M. Merlet is original. For instance, it would be difficult to find in Sainte-Beuve a metaphor like this: "Mingling like horse-flies, their busy buzzing with innocent plots which were spoiled in the egg, and in which there were more sharp phrases than poignards," nor does he weary his readers with ambitious but vague clauses like "the furtive gleams of an indistinct dawn," or "the equivocal emphasis of an evasive and ambiguous style." Where Sainte-Beuve is easy, natural, vivid, M. Merlet is pretentious, artificial, periphrastic. He develops Sainte-Beuve, and on the whole it would be shorter and more satisfactory to read that critic in his own essays. The sole advantage of seeking to make his acquaintance in the arrangement of M. Merlet seems to be that he is not the only author who has been read and used; one gets his observations mingled with those of many others, Montégut's, for instance, and this may be a treat for those who like pot-pourris.

—*Harper's* for July is the first to arrive of the hot-weather magazines, and, perhaps with unpremeditated fitness, its three travel sketches, with their profuse illustrations, bring suggestions of coolness from the mere fact that they concern great bodies of water. "The Nile," being a principal topic in the public mind, leads off the number, and it contains several pleasant bits of Oriental myth and festival, given with picturesqueness and bright local coloring; of the articles on the St. Lawrence and the approaches to New York not so much can be said. These are all very light reading, and in fact there is little in the whole number to detain attention with any second thought. The appreciative notice of the deaf and dumb schools of Kendall Green at Washington affords a fine, though slight, instance of the curious modifications which the ideas of the blind or deaf suffer, and which in their thoroughness must be practically inconceivable to persons who are whole. The anecdote is characteristic of a child's mind, but is the more touchingly illustrative on that very account. The pupil was telling the familiar story of George Washington and the cherry tree, and wrote out the conclusion on the blackboard thus: "'He took his hatchet in his left hand, and told his father he did it.' 'Why did he take his hatchet in his left hand?' asked the teacher, surprised at the expression; and the answer came promptly, 'Because he had to use his right hand to tell his father.'" Anthropomorphism in a form at once so simple and so transparent, is seldom met with in persons of sound senses. This article, in fact, is the most suggestive of all; but some of the sex to which it would naturally appeal most directly will find more entertainment in the learned gossip of Miss Alice Comyns Carr about the professional beauties of the last century, and in particular the Gunnings, whose triumphs will rouse the envy of generations of fashionable women yet to be. Mr. Joseph Hatton's account of Harrow is valuable mainly for its illustrations of the school and its neighborhood. In the "Easy Chair," Mr. Curtis has a characteristic memorial note on "Tom Appleton." Harper's best illustrations are those to "Approaches to New York."

—The *Atlantic* has not reached its summering period. Mr. Torrey's "Bird-Gazing in the White Mountains," which is a charming nature-piece, belongs to late spring and the time of lingering snow-drifts, and "The Underworld in Homer, Virgil, and Dante" is suggestive of anything but the cheerful June weather. The most interesting article is really of a depressing kind; its very title is "The Gospel of Defeat." The mood it presents, however, is rather the languor than the sorrow of the soul, and its "defeat" is of the sort that can be enjoyed only in the quiet and uncultivated beauty of a remote country seat. It is made up of a discussion of the thoughts of Senancour, as set forth in 'Obermann,' and of Maine de Biran and Henri-Frédéric Amiel, as set forth in their private journals; but the discussion is remarkably ineffective. What "gospel" there is either in these writers, or in the critic's reflections we entirely fail to discover. All of these three Frenchmen had singularly beautiful detached thoughts—one should rather call them sentiments; but if they were kindred to the great spiritualistic writers, to St. Francis, Thomas à Kempis, Pascal, they were so only in their susceptibilities, not in their activities, and if they "remind us of David and Job," it is by contrast surely. These three sentimentalists (we do not use the word disparagingly), who made self-confession their serious intellectual business, lacked power; and in the spiritual life, as in all life, power is the only sign of the real presence, if we may use a mystic word to express a psychologic fact. The praise of weakness, or, to adopt the phrase given, "the gospel of defeat," is, in fact, a sort of coddling of the religious instinct, and the effort made at the conclusion of this article to identify the career of these three high-bred recluses with that of Him who bade his disciples go forth into all the world and preach to all men, is just one of those errors of Christian rhetoric which only go to discredit the Christian ideal in the most practical minds. Of the other articles, "The Haunts of Galileo" is excellent both in interest and style, and "Beaten by a Giaour," a short story, is fresh and entertaining. Mr. Aldrich's "Five Quatrains" make the fine thing of the number, the third, in particular, being equal in immediacy, impressiveness, and a certain high simplicity of style to any work of this kind.

—Mr. J. Morrison Davidson, a well-known London journalist and barrister, who will be remembered here as the author of a volume of clever sketches of "Eminent Liberals," has just issued, under the title of "The New Book of Kings," a series of articles on the English monarchs, contributed to *Reynolds's Weekly News*, an English Radical and popular paper of enormous circulation.

"It is the unspeakable misfortune of Englishmen that the true history of their monarchy has never yet been written by a competent hand. The Humes, Freemans, Froudes, Macaulays, and Greens are scholars and polished writers, but 'the root of the matter is not in them.' . . . Wanted—A competent English historian. None but Republicans and Democrats need apply."

This passage, with the motto on the title-page, "Put not your trust in Princes," sufficiently indicates Mr. Davidson's point of view. From William to Victoria—including Cromwell—is, according to him, one long series of outrages upon the rights and patience of the English people, and against most of the monarchs he brings charges of various vices and crimes—often, it must be said, with too much truth, although with indiscriminate invective, which defeats its own scathing purpose. William I., in this new history, is a "monster"; William Rufus "a greater villain even than his father, if his more limited opportunities are taken into account"; Henry I. "a miracle of treachery, vindictiveness, and avarice"; Stephen "a mere swashbuckler"; John "an incomparable scoundrel, whose character is summed up in one sentence of contemporary hate, 'Foul as it is, hell itself is defiled by the fouler presence of John.'" As these essays, in their original form, have possibly passed under the eyes of a million readers, whatever may be their faults of historical perspective, they can hardly have failed to accomplish their author's purpose—to call attention, namely, to the inductive basis of the divine right of kings.

—Mr. David Gill, her Majesty's astronomer at the Cape, continues with unabated zeal his career of exceptional activity. He became well known years ago as the astronomer in charge of the observatory of Lord Lindsay (now the Earl of Crawford and Balcarres), the two coöperating with enthusiasm in astronomical investigations of a high order. In 1877, under the auspices of the Royal Astronomical Society, he made a series of parallactic observations of Mars at the island of Ascension, his reduction of which has given us without much doubt the most accurate individual determination of the sun's distance ever made. On his return to England, early in the present year, the secretaries of the Royal Astronomical Society invited him to address that body relative to the work upon which he had been engaged for the past five years at the Cape—work which has been of two kinds: new investigations, and the clearing up of arrears of old observations; for his predecessor in office, although he had done much of this latter sort, had still left unpublished materials for valuable catalogues of stellar positions (which Mr. Gill has now completed and put to press), and in addition a large mass of occultations of stars by the moon, which Mr. Gill has now rendered available for the purposes of astronomical research, through the coöperation of Professor Newcomb. But the present and projected labors of Mr. Gill are in a still more interesting direction. Not only have the meridional observations been kept up at the rate of five thousand per annum, numerous observations of occultations and cometary positions made, the longitude of Cape Town determined telegraphically for the first time, the survey of the Cape organized and set on foot, and a regular series of tidal observations instituted at four stations (with the prospect of the corresponding harmonic reductions), but Mr. Gill has also devoted himself assiduously to heliometer observations of a few stars in the Southern hemisphere, for the purpose of ascertaining their annual parallax and distance from the solar system. In these researches he has had the collaboration of Mr. Elkin, now of the Yale College observatory, and their methods of procedure in this work have led to results of unusual precision. These two astronomers have presented to the Society a detailed plan for future observations of stellar parallax which they hope to execute during the next ten years, the conclusion of which may be expected to mark a great advance in our knowledge of the laws governing the distribution of the stars in space.

—Paris has a new school of painting, or at least a new word to express a style of painting. A young painter, M. Jean François Raffaëlli, has invented the term *la beauté caractériste* for portraits that are not beautiful, handsome, nor pretty, but have character. The thing is certainly nothing new, either in life or in painting. There have always been men who very much preferred *la beauté caractériste* to statuesque beauty or to doll prettiness. Pre-Raphaelitism was in some sort an analogous feeling; but the character heads of M. Raffaëlli are by no means pre-Raphaelite. They are decidedly of to-day and of Paris. The word suits the prevailing Parisian style of face exactly, and the journals seize upon it with eagerness, contrasting their countrywomen's vivacity with the coldness which they love to attribute to the English *mees*, and the placidity which they maliciously assert is the only characteristic of the German beauty. M. Raffaëlli is called the Meissonier of poverty. He has exhibited some 150 pieces this spring —paintings, drawings, etchings (for he has a diversity of talents)—and even one realistic statue of an old poor man, bowed down with the weight of years and of endurance. He evidently has made an impression. Perhaps, one of these days, like the painter after whom he is nicknamed, he may attain the glory of having one of his pictures burned by a rich American.

— One of the most entertaining features of the London picture season is the regular exhibition of the works of Mr. J. McNeill Whistler, with its strange mixture of wisdom and folly. This year it is called "A Harmony in Flesh-Color and Gray," and consists of the familiar "Notes," "Harmonies," and "Nocturnes," about seventy in number. It is held in a small room in Bond Street, hung with flesh-colored serge, carpeted with gray, and presided over by an elegant attendant in evening dress of the same colors. The pictures themselves are the same as usual—Piccadilly in a fog, bits of sea views, mist always predominating; reclining maidens whose anatomy can be discerned only by the eye of faith; sketches on Dutch and Venetian canals which occasionally raise a doubt whether they have not been inadvertently hung upside down. Half-a-dozen of the seventy are charming, violating none of the laws by which other painters consider themselves bound, and possessing in addition the touch and color peculiar to Mr. Whistler. Before the others, the unenlightened outsider can only stand in the attitude of the man to whom a mystery is shown. Every one will admit, however, that they all come up to the artist's own standard in suggesting no effort, and in not "reeking of the sweat of the brow." With one enormous exception, the largest picture in the exhibition does not measure much more than eighteen inches by a foot, and a good many valuable hints may be got from the manner in which they are framed. The frames are flat wood, without mounts, with one or two plain bevels running round, and they are colored with metal leaf or metallic paints to harmonize with the picture. The favorite tint is Dutch gilt—a kind of buff silver—and after that various tones of copper. A particularly pleasing effect is produced by a delicate little sketch of an old shop in Chelsea, in which there is a good deal of pink, with the paper left white in the background and foreground, and a broad, flat frame of buff silver. Mr. Whistler's harmonies of color are, perhaps, rather more audacious than usual—violet and amber, red and pink, pink and opal—and his cherished "accidents of alliteration," "variations in violet," "a bravura in brown," equally amusing.

— But the apologetico-philosophical introduction prefixed to the dainty catalogue is the most characteristic part of this year's exhibition. It is called "L'Envoie," and is signed with Mr. Whistler's private mark, a nondescript insect-looking thing, resembling the familiar black-beetle which represents the Sergeant-at-Arms in *Punch's* Parliamentary sketches. "A picture is finished," Mr. Whistler pronounces, "when all trace of the means used to bring about the end has disappeared. To say of a picture, as is often said in its praise, that it shows great and earnest labor, is to say that it is incomplete and unfit for view. Industry in art is a necessity, not a virtue; and any evidence of the same, in the production, is a blemish, not a quality; a proof, not of achievement, but of absolutely insufficient work, for work alone will efface the footsteps of work. The work of the master reeks not of the sweat of the brow, suggests no effort, and is finished from its beginning. The completed task of perseverance only has never been begun, and will remain unfinished to eternity, a monument of good will and foolishness. 'There is one that laboreth, and taketh pains, and maketh haste, and is so much the more behind.' The masterpiece should appear as the flower to the painter, perfect in its bud as in its bloom, with no reason to explain its presence, no mission to fulfil, a joy to the artist, a delusion to the philanthropist, a puzzle to the botanist, an accident of sentiment and alliteration to the literary man."

RECENT POETRY.

We are drawing near to those dog-days during which, as Christopher North maintained, no poet has a right to expect praise from a critic. Yet they are also days when a new volume of poems fits well into pocket or portmanteau; and the selection should be made with care and not without duly meditated advice. It is a significant fact that, with due reference to the season, the poets have taken to singing of Arcadia, two recent volumes, at least, being express tidings from that enchanted land, although their messages differ widely. In Mr. H. C. Bunner's 'Airs from Arcady' (New York: Scribners) we have, in what may be called the title-poem, a conceit so pretty and graceful as to float, in the mercantile sense, all the rest of a rather commonplace volume. Miss A. Mary F. Robinson's 'The New Arcadia and other Poems' (Boston: Roberts Brothers) is a very grim antidote to the cheery levity of our New York bard; her Arcadia is about as attractive as Schopenhauer's view of human life or Mrs. Rebecca Harding Davis's novels. She finds in all the picturesqueness of rural England only brutal men and wretched, outcast women; her realism in this direction is more merciless than the roughest of Browning's recent poems; it is "The Bitter Cry of Outcast London" carried into Kent and Devonshire, and utterly drowning the voices of nightingale and skylark. There is something fearful in the transition from the "Handful of Honeysuckle" with which Miss Robinson crowned herself when first entering literature to such a prologue as this:

> "Oh, help! help! it is Murder that I cry,
> And not a song to sell. Now if you smile
> And hear me you are mad; you are mad, or I.
> For I do not sing to enchant you or beguile;
> I sing to make you think enchantment vile,
> I sing to wring your hearts and make you know
> What shame there is in the world, what wrongs, what woe;
>
> . . . . . .
>
> "Then let me sing, and listen to my song,
> Though it is rough with sobs and harsh and wild,
> And often wanders, and is often long,
> As mothers tell the death bed of their child.
> My child was gentle visions, and all were wrong,
> And false, and cruel; and I bury it here:
> Lend me your spades—I do not ask a tear."
> (Pp. 10-11.)

There is certainly something strong and heroic in a woman who, while still under thirty, turns by preference to strains like this; and yet there is an impression left behind which, like the over-vehemence of Ruskin, tends to defeat itself.

'The Happy Isles, and Other Poems,' by S. H. M. Byers (Boston: Cupples, Upham & Co.), might seem by its name to keep us also near Arcadia; and here, too, as in Mr. Bunner's book, the title-poem is the best. There are, moreover, some verses of parental sorrow that would be sweet and plaintive but for the flavor of something approaching affectation that appears—as in so many American poems—in the foreign name given to the child. "Baby Heléne" (p. 21) means nothing in any known language: if the name is plain English, it should be Helen; if it is French, it should be Hélène. To translate a child's name into a foreign language, and then print it eleven times over with the wrong accents, is really something that paralyzes all human sympathy.

Akin to these Arcadian verses is the dainty volume in which Mr. Andrew Lang, author of 'Helen of Troy,' has collected what he calls, after Spenser, 'Ballades and Verses Vain' (New York: Scribner). It must be confessed that the various archaic forms of verse now in fashion are already promising to become as tiresome as Queen Anne architecture. Mr. Lang and his tuneful kindred occupy the place filled in the last generation by Leigh Hunt and Barry Cornwall: they are purveyors of daintinesses flavored by a little humor and a very little sentiment, though we may look through all their volumes in vain for anything likely to last so long as Hunt's trifle, "Jenny kissed me." It is one peculiarity of those engaged in this pretty manufacture of literary confectionery, that they seem to form a kind of joint-stock company and write preludes to each other's volumes; in this case it is Mr. Dobson who supplies the two preliminary verses. It is also a peculiarity that in looking at their volumes we instinctively turn to the department of translations for material of rather more solid quality than is offered in the main book. Mr. Lang gives us an appendix of good translations, one especially from Victor Hugo's pretty verses on "The Birth of Butterflies" (p. 149), in which he attributes the origin of these airy things to the floating fragments of torn love-letters.

To the same class of butterfly-and-thistledown literature belongs Mr. Cholmondeley-Pennell's 'From Grave to Gay' (London: Longmans; New York: Coombes). It is announced as "a volume of selections from the complete poems" of the author, and there seems no reason why it should not furnish an adequate substitute for the *opera omnia*. Mr. Cholmondeley-Pennell has published three previous volumes, of which 'Puck on Pegasus' passed through several editions; and he is dear enough to his readers, apparently, to make them desire his portrait on the first page of 'From Grave to Gay.' It must be said of this pretty little volume that its title well describes it, only that the grave is not very grave nor the gay of the gayest. He, too, belongs to the recognized fraternity of modern *jongleurs*, and the hero whom he recognizes as leader in the craft is Mr. Locker, to whom he inscribes a poem. His volume, like Mr. Locker's, would probably be regarded as good summer reading, and the rather monotonous facetiousness of either might admirably promote slumber, if combined with a hammock.

Gayety, stretching even to the verge of the grave itself and beyond it into the realm of the ghosts, may be found in 'Rhyme? and Reason?' by Lewis Carroll (New York: Macmillan). Mr. Carroll, alias Mr. Dodgson, has had thousands of American readers, old and young, through his 'Alice in Wonderland' with its companion volume; and the "Hunting of the Snark," which this present work contains, has also given plea-

sure to a smaller audience. Apart from that, this volume can hardly be regarded as enjoyable; either the author has found artists less sympathetic than before, or his theme is more difficult, so that the ghosts portrayed are too coarse and carnal to be impressive, and the vanishing grin of the Cheshire cat in "Alice" is worth them all. Nevertheless, there is much in the book that is wildly funny, both to eye and ear—for instance, "The Three Voices"; and there are some graceful things like the following, although it would be well if this stopped where our extract closes, and with the accompanying design of the perplexed papa:

"A GAME OF FIVES.

"Five little girls of Five, Four, Three, Two, One,
Rolling on the hearth-rug, full of tricks and fun.

"Five rosy girls, in years from Ten to Six;
Sitting down to lessons—no more time for tricks.

"Five growing girls, from Fifteen to Eleven;
Music, Drawing, Languages, and food enough for seven!

"Five winsome girls, from Twenty to Sixteen;
Each young man that calls, I say 'Now tell me which you *mean*?'"

(P. 120.)

Dr. Frederick Peterson's 'Poems and Swedish Translations' (Buffalo: Paul) has a really charming flavor of the North of Europe; the translations are not placed by themselves, but are intermingled with the original contributions; and so completely has the author caught the trick of the literature with which he deals that many of his own poems—the best of them, indeed—might as well be Swedish folk-songs also. The principal translation is that of Tegnér's "Axel," which hardly fulfils the promise of "Frithiof's Saga," by the same author. The following is a good specimen of the shorter versions:

"NECKROSEN.

[From the Swedish of C. W. Böttiger.]

"A lad leaping down to the ocean strand,
There after a lily extended his hand;
But God will add unto his angels!

"Meanwhile as he stood, from the breakers there,
A mermaid arose green-mantled and fair:
But God will add unto his angels!

"'Oh bring me the lily which near to thee stands,
I cannot quite reach it, so little my hands!'
But God will add unto his angels!

"The maid plucked the lily for him as he smiled,
But lured him into the waters wild,
For God would add unto his angels!"

(P. 103.)

The Marquis of Lorne's 'Memories of Canada and Scotland' (Montreal: Dawson Bros.) have a retrospective flavor, as it is right they should, and though both verses and speeches are in themselves a little tame, they have the merit of local coloring and of really referring to the places they attempt to describe. All the addresses and half the poems are Canadian, the rest of the verse being Scottish; and many a picturesque rock and Indian tradition here gets its first simple rendering into verse. There is something odd, for the ears of us readers in "the States" when we come to such a mingling of the bird of Freedom with the Lion and the Unicorn as this:

"Away to the West! Westward ho! Westward ho!
God's hand is our guide, 'tis His will that we go!
To lands yet more happy than Europe's, for here
We would the young nation for Freedom to rear.
Full strongly we build and have nought to pull down,
For true to ourselves, we are true to the Crown;
The will of the people its honor shows forth,
As pole-star, whose radiance points steadfastly north."

(P. 39.)

But the Crown has certainly done handsomely by the Marquis of Lorne, and none can grudge him his little burst of loyalty.

It is very difficult to take seriously a drama so wildly melodramatic as 'How Much I Loved Thee' (Washington, D. C.: Raymond Eshobel). The scene is laid during the Civil War, and some of the incidents are said in the preface to have really happened at Richmond; but we should doubt if this soliloquy of a Union soldier was ever paralleled anywhere:

"O boy, you have medicined my life! Courage, come back! Liberty, I can shake thy hand again! My prison's burst and I am out, naked, free as air. O to be a slave to others' knowledge, to be a top for any man to spin, is to be worse than to be damned! Now have I this Ricardo's head in a vice; and, O Satan, but I'll wrench it! I'll make it so hot he shall wish to cool his feet on coals. To his gaping grave I'll harry him. But slow! Let me go slow! Let me creep to it, and when his time comes, jump on him" (p. 96).

It is possible, however, that this simple utterance of spontaneous emotion might be received with thunders of applause at the Bowery Theatre.

'Ten Years: an Old-World Story,' by Henry Rose (London: James Nisbet; New York: Putnams), is the legend of a wanderer long banished from his home, the story being told on the scale of some of Mr. William Morris's legends, but more languidly. It is rather hard to find in it salient points, or much that is interesting, and it might be another of the books well suited to summer hammocks. Mr. H. T. Mackenzie Bell's 'Old-Year Leaves' (London: Stock) merits a higher position, especially for his poems of travel and for the modest tone of his preface. Mr. John Gosse—whose name is possibly only a pseudonym for that of John Gosse Frieze, in whose name the copyright is taken out—has been less fortunate in his themes. To begin with a dramatization of Solomon's Song, under the name of 'The Royal Pastoral' (New York: Youngs), and to end by a versification of the Book of Ecclesiastes, is surely a tempting of Providence, so far as the critical reader is concerned; and though the interior pages of the book contain some pleasing verses, it is weighed down, as a whole, by this mistaken selection. Mr. Calvert's 'The Nazarene' (Boston: Lee & Shepard) has also a Scriptural theme, but is much briefer, and is marked by some boldness as well as tenderness.

An exceedingly curious book is 'Cyril and Lionel, and Other Poems: a Volume of Sentimental Studies,' by Mark André Raffalovich (London: Kegan Paul). The author deals in a variety of languages worthy of his cosmopolitan combination of names; he composes in French and German as easily as in English, wielding all three languages with a certain grace and tenderness. On the other hand, he remorselessly gives us, in his "Song Out of Season," such rhymes as "hopeless" and "hope less," "love town" and "of town," "Paris" the shepherd and "Paris" the city. The title of the book, too, is perplexing—"Cyril" consisting of forty-five detached poems, short and long, having no apparent connection with Cyril; and "Lionel" of a single short poem, equally disconnected from Lionel. The most pleasing of all these, to our taste, are the two sonnets on pp. 42–3, in the Shaksperian sonnet measure, of late rather avoided by English sonneteers, who now adhere to the Italian model.

'Plantation Lays,' by Belton O'Neall Townsend (Columbia, S. C.: Calvo), has a subject just now attractive: it being a curious fact that, while the social prejudice against the negro is greater than against the Indian, the literary interest is in inverse ratio, so that 'Uncle Remus' is popular while the aboriginal legends fall dead. A circular accompanying the book gives an ample biography of the author, perhaps a little anticipating the march of fame. Mr. Townsend has, we believe, done some good work in prose, but we cannot find his verse to be very far above mediocrity, though his themes are sometimes fresh and his moral often good, at least in the following lines:

"Oh, Northern people, watch it!
The coming Southern race,
In arts and money-making,
Are going to give you chase!
'Twas sternest of necessity
That forced them to the plow,
But of himself each Southerner
Can take the best care now.
Some of the olden manners
Could not sustain the fight,
And, moping, brooding, drinking,
Soon sank from public sight.
But now no work's degrading:
Too many of the *ton*
Are plowing, clerking, teaching—
All sneer at idle Don.
I now think slavery error:
Although the North must own
'Tis hardly found entitled
First at us to 've thrown the stone."

(P. 41.)

The book is dedicated to Mr. Howells, some of whose complimentary epithets the author quotes in his preface.

We are constantly beseeching from our American poets more of Americanism, both in feeling and in local color; yet when it comes to the handling of native names some discretion must be observed. The late Edward Everett thought our Indian names hopeless in verse, yet they have proved to be music on the lips of Longfellow, when rightly selected. Most of Mr. Augustin L. Taveau's volume, 'Poems, Vol. I.' (New York: Putnams), is devoted to a long poem on Montezuma; and when he give us such craggy lines as:

"When good Quetzalcol o'er Anahuac reigned,"

or

"Huitzilpo came—Tezcatli's Son-of-War"

(p. 21),

he certainly disregards the proposition with which he begins, that the Muses should sing in tuneful numbers. In the rest of the volume, what with "Songs of Anteros" and "Cantileras," the author has an easier vocabulary to manage. Another volume which has some good local coloring is 'Legends, Lyrics, and Sonnets,' by Frances L. Mace (Boston: Cupples, Upham & Co.), who writes of Kineo and Norembega and other picturesque points, real or traditional, in her native State of Maine. She is best known, however, by her religious poem, "Only Waiting," which has attained a wide popularity and is included in this modest volume. Héloïse Durant, also, in her 'Pine Needles, or Sonnets and Songs' (New York: Putnams), gives us a spirited poem on Raquette River, in the Adirondack region. Her work is printed with much generosity as to type and paper, but with a singular dinginess of illustration. Local coloring comes again, at least in the form of dialect, when we open the little book called 'Rustic Rhymes and Ballads,' by Mrs. E. T. Corbett (New York: Gillies Brothers); nor do we see why these rural idyls are not quite as good as those of Mr. Carleton, which have been so very popular. But by far the best contribution to literature on the part of new American poets is the very pleasing and promising 'Songs at the Start' (Boston: Cupples, Upham & Co.), by Louise Imogen Guiney. This young lady—whom we judge from internal evidence to be the daughter of a brave soldier, Colonel Guiney, of the Ninth Massachusetts—has put into her verses a grace, flow, and simplicity that deserved a less abrupt and ungraceful title.

No poet of wide English fame is so little known in America as Lewis Morris, and his American publishers wisely append to his 'Songs Unsung' (Boston: Roberts Brothers) many pages of those flattering newspaper notices which are, for some reason, much more profusely displayed between the covers in England than here. We regret to say that we never have been convinced that Mr. Morris's wine would bear exportation very well, and yet we must confess to liking 'Songs Unsung' better than 'The Epic of Hades.' The name of the new volume is well chosen, to begin with; the songs are certainly unsung, for the author's genius, whatever it may be, is as far as possible from the lyrical. His lays never really sing themselves; he is at his best advantage in narrative or didactic poetry, or in such brief sketches on the thumb-nail as this—a style to which he is much given—under the general designation of "Pictures":

"A flare of lamp-light in a shameful place,
Full of wild revel and unchecked offence,
And in the midst, one fresh, scarce-sullied face,
Within her eyes, a dreadful innocence."
(P. 4.)

Mr. Morris's classical and mediæval studies are not to be compared with those of Browning, for instance; and, after all, the part of the volume which has most staying power consists of the three Breton poems at the end—taken from the "Barzaz Breiz"—which are rendered with great vigor and condensation.

American eyes must be forgiven if they rest rather impatiently on the first appearance of "Alfred Lord Tennyson," on a title-page; it affects us a little as if we opened upon his portrait in cap-and-bells. Passing by this, however, one may find some real power, and a tragedy only too unrelenting and unbroken, in the first drama of "The Cup and the Falcon" (New York: Macmillan), while there is only a "most lamentable comedy" in the second drama, where the rather trite story of the knight who slew his falcon for his lady's dinner is served up with such ineffectual garnishing as to make us ask whether Lord Tennyson himself is sacrificing his high-soaring aspirations to his sovereign Lady. In both plays, however, there are lines and interludes that are essentially Tennysonian.

With the new volumes there arrive some reissues and new combinations of the old. Mrs. Oliphant gives us an admirable edition of Cowper (London: Macmillan), with a very fresh and discriminating analysis of what she well calls "the gentle originality" of Cowper; she also has done a good work in arranging many of the shorter poems so as to form a sort of autobiography. 'English Lyrics' (New York: Appleton) is a delicious little volume, parchment bound, and small enough for even a small pocket, yet clearly printed and admirably edited. A strict judgment must always question the propriety of including in lyric poetry any composition which does not sing itself or lend itself to song; yet where the result is so delightful, none can complain. A great contrast in external execution is to be found in the American reprint of 'With the Poets' (New York: Funk & Wagnalls). This book has a dingy look at best, and is frankly intended for a cheap issue; but the more crowded pages of the latter half of the volume are very unsightly. The collection is made by Canon Farrar, and is well enough—for why should not every man of taste, or of no taste, make and print his own *florilegium*? But in this case the editor wantonly invites comparison with the taste, or distaste, of others, when he comes to classify part of his bards as "Minor Poets," and puts them in a manner below the salt. To open a book which includes among the major poets Addison and Dr. Johnson, Collins and Hogg, while Herbert, Sir Philip Sidney, Ben Jonson, Landor, and Blake are assigned to the humbler class—this is something which, as Pet Marjorie says, "human nature's self can't endure." Yet this is what Canon Farrar has done, and he has, moreover, clipped his poets of their full number of verses—see, for instance, "The Sands of Dee," p. 264—as ruthlessly as if he were editing a hymnal.

This offence cannot be charged upon Mr. N. Clemmons Hunt, whose 'Poetry of Other Lands' (Philadelphia: Porter & Coates) does full justice to all the polyglot poets whom it represents—justice perhaps too ample, indeed, for it strikes us that the book would be helped by pruning. Mr. Hunt has brought together translations from the classical and Oriental languages, with those of modern Europe, and though it may be a question whether he has always hit upon the best translators, he has certainly given us great wealth and some new items of literary information. He states, for instance, and we suppose upon some definite authority, that the late Mrs. Sarah Austin was the author of that exquisite paraphrase of Uhland's ballad, beginning:

"Many a year is in its grave
Since I crossed this restless wave."

This poem first became famous through its introduction into Longfellow's "Hyperion," where, in answer to Mary Ashburton's question as to the author, Paul Flemming answers, "I do not know; I wish I could find him out." Mr. Hunt, it appears, has succeeded; and certainly Mrs. Austin's prose translations from the German were always so admirable that no one can grudge her the poem.

Of all the poetic volumes that lie before us, that which has given us most pleasure is the volume called 'Wind Voices,' by Philip Bourke Marston (Boston: Roberts Brothers). If it does not place its author among poets of the first class, it certainly ranks him high in the second. Mr. Marston is a young Englishman, blind from early childhood, and the son of Dr. J. Westland Marston, himself a poet and a correspondent forty years ago of the American Transcendentalists. The son is understood to have been greatly aided in writing out his verses and in preparing them for the press by an American lady, well known and esteemed among us, Mrs. Louise Chandler Moulton. To her the volume is dedicated as "true poet and true friend." It seems wonderful that one without sight can have written such graceful delineations of natural beauty, such striking representations of human loveliness. There are passages that powerfully analyze some of the deepest emotions, as in "The Temptress" (p. 153); and fine pieces of sheer imagination, such as "Caught in the Nets" (p. 48), founded on the old tradition in Sir Richard Baker's chronicle of a merman, thus captured and compelled to live on shore. Most charming of all is a series of poems in which he seems to throw himself into the very souls of the flowers, and live with them in fancy through their brief existence. We may well close with this, the first act of a little drama of the life of violets, entitled "Before and After Flowering":

"BEFORE.

FIRST VIOLET.

"Lo, here! How warm and dark and still it is!
Sister, lean close to me, that we may kiss.
Here we go, rising, rising, but to where?

SECOND VIOLET.

"Indeed, I cannot tell, nor do I care,
It is so warm and pleasant here. But hark!
What strangest sound was that came through the dark?

FIRST VIOLET.

"As if our sisters all together sang—
Seemed it not so?

SECOND VIOLET.

"More loud than that it rang;
And louder still it rings and seems more near,
O, I am shaken through and through with fear—
Now in some deadly grip I seem confined!
Farewell, my sister! Rise and follow and find.

FIRST VIOLET.

"From how far off those last words seemed to fall!
Gone where she will not answer when I call.
How lost? How gone? Alas, this sound above me—
'Poor little violet, left with none to love thee!'
And now, it seems, I break against that sound.
What bitter pain is this that binds me round?
This pain I press into? Where have I come?

A CROCUS.

"Welcome, dear sisters, to our fairy home!
They call this—Garden, and the time is Spring."
(P. 103-4.)

On the whole, it is Mr. Marston's 'Wind Voices' that we recommend for summer reading.

THE EGYPTIAN CAMPAIGN OF 1882.

Report upon the British Naval and Military Operations in Egypt in 1882. By Lieut.-Com. Caspar F. Goodrich, U. S. Navy. 2 vols. Washington: Government Printing Office. 1883.

THE report of Lieutenant-Commander Goodrich is the first complete account which has appeared in this country concerning the British operations in Egypt in 1882. Mr. Goodrich was attached to the United States squadron at Alexandria at the time of the bombardment, and he accompanied the British headquarters in the subsequent campaign from Ismaïlia to Cairo. He was thus an eye-witness of the operations which he describes. His report is terse, concise, filled with technical details on just those subjects upon which a professional reader seeks information; it is profusely illustrated with diagrams and heliotype reproductions of photographs, and in every way is an admirable and valuable document. It is issued as No. 3 of the series of publications of the Office of Naval Intelligence, recently established in the Navy Department; and it may well serve as a model for future reports to the same office.

The work is divided into three parts: first, the bombardment of Alexandria; second, the campaign ending at Tel-el-Kebir; and third, the miscellaneous technical details relating to the organization, equipment, armament, and transportation of the troops. The bombardment of Alexandria was the first instance in which modern great guns and modern armored ships were brought into action, and much was expected of it at the time in the way of practical experience in regard to the changed conditions of naval warfare. But the contest was so unequal that little or nothing new was really developed. The eight ironclads that made the attack constituted the most powerful fleet afloat. The forts were of old-fashioned masonry, supplemented by barbette batteries of sand and earth. The fleet had thirty-nine large guns (from nine to eighty-one tons); the forts had but twenty-seven modern guns, the largest of which was but eighteen tons. And the fleet had the choice of position, so that the odds against any one fort were about five to one. Under these circumstances, the ships knocked down the masonry forts, ploughed up the sand batteries, dismounted a large number of the shore guns, and inflicted a loss of about five hundred upon the defenders; while the British loss was only six killed and twenty-seven wounded, and "not a gun was really disabled, nor the fighting qualities of a single ship affected." The Egyptians made no use of torpedoes, although they had abundant material: hence no light was shed upon the practical value of this most important and most uncertain factor of modern naval engagements; and as their defence was thoroughly passive, it was naturally to be expected that the forts would be battered down. The only feature of note is that the ammunition of several of the ships was so reduced that they could not have continued the engagement an hour longer. The author draws two broad inferences from this engagement, the justice of which is at once apparent: first, "that vessels are not yet and never will be able to fight on even terms with forts"; but, second, this does not "touch the question of the ability of forts to stop the progress of modern ships: in this respect, and unaided by other means of defence, by obstructions, etc., the works at Alexandria would have been utterly powerless against the British fleet, which need hardly have paid them the compliment of a passing shot."

The flank attack made by General Wolseley's army from Ismaïlia, which terminated the land campaign in so short and brilliant a manner, was made possible by the stupidity of the Egyptians in not blockading the canal; and the author makes the very pertinent remark that the neutrality of any great canal will depend simply upon the amount of naval force with which the neutrality is supported. This campaign was carefully planned and successfully executed in less than a month, with only one serious engage-

ment and a few skirmishes, and at a loss of but little over 400 men to the assailants, although the defenders lost as many thousands. The British Expeditionary force, including the Indian Contingent, numbered about 35,000 men; although General Wolseley reported that at Tel-el-Kebir he could only "place in line about 11,000 bayonets, 2,000 sabres, and 60 field guns." The Egyptians had on the theatre of war about 94,000 men, of whom 60,000 were regulars; but at Tel-el-Kebir they had only one-third of their whole force. This, however, outnumbered the British by more than two to one, and it occupied a strongly fortified position. In everything else except numbers the advantages were enormously on the side of the British. In *morale*, in organization, in equipment, in armament, in all that distinguishes an army from a mob, the superiority of the British was so great that the campaign conveys no lessons, except for situations of the same character should they ever occur again—which is not unlikely in view of the small wars in which England is constantly engaged with semi-civilized people in all quarters of the world. Considering the circumstances it cannot be denied that the campaign was admirably planned and admirably executed. The Commissariat and Transport Service broke down completely, but everything else worked as smoothly as on a field day. And the principal cause of success was the fact that the Commanding General based all his plans upon a careful, not a rash, consideration of the enemy's inferiority. It was this which led him to select for a landing place a miserable harbor where the canal authorities had stated that there was not room for more than two ships; to push out his pickets and hold advanced stations with a mere handful of men which an enterprising enemy would have destroyed at once; to leave his communications unguarded, feeling sure that the Egyptians would not molest them; and finally to risk the whole campaign—and completely gain it—on a night attack across an open plain. With a civilized enemy such things cannot be done in these days, but with an enemy who, in addition to a thousand other faults, "keeps a very bad lookout," such things are not only justifiable but necessary, in order that the work in hand may be accomplished with the least possible expenditure of blood and treasure. It was precisely in attempting these usually impossible feats, and in carefully weighing how far it was safe to be audacious in disregard of ordinary rules, that the merit of the Egyptian campaign consists. And that it was most meritorious, whether judged by the criterion of complete success, or examined step by step in the events which led to that success, cannot be doubted.

We have left no space to comment on the more strictly professional part of this work, the part which relates to military and naval details, and which occupies fully half of the book. This portion describes everything connected with the expeditionary force on land and sea, from the dimensions of a haversack or canteen up to the great troop ships that England alone possesses. All of these descriptions are most clear, and, being accompanied with a profusion of elaborate drawings, they are of the highest professional interest.

A Catholic Dictionary, containing some account of the Doctrine, Discipline, Rites, Ceremonies, Councils, and Religious Orders of the Catholic Church. By William E. Addis and Thomas Arnold. New York: The Catholic Publication Society Co. 1884.

A BOOK like this is almost a necessity to the reader of European history who desires to form a clear and intelligent conception of the influences which have governed the development of civilization and of many events which have affected the destiny of the modern world. Even the man of more limited interests will find in it much that will elucidate movements still in progress, and customs and beliefs which are in full activity around us. The theology of Catholicism has become so exceedingly complicated, and the evolution of its ritual has created such a multitude of observances, that no one who has not made a special study of the subject can have more than the faintest acquaintance with its technology; while the relations of the Church to the state and to the body of the faithful are such that some knowledge of the peculiarities of the ecclesiastical vocabulary is necessary to a comprehension of the present as well as of the past. To the student of sacred art, also, a volume such as this is almost indispensable.

The authors have done their work fairly well, and we can recommend the volume as a convenient book of reference for all who desire to see the Catholic view of history and the presentation of Catholic dogma and practice in their moderate and least aggressive aspect. Of course, impartial accuracy in historical matters is out of the question. A believer in a divinely appointed infallible Church must of necessity reject all evidence of its fallibility. It would be useless to quarrel with him for so doing, for he cannot help himself—if history will not accord with infallibility, so much the worse for history. Besides, in a book of this kind, original research is for the most part impossible. It covers too much ground for any one lifetime to suffice for the requisite collection, sifting, and comparison of original material, and its authors must perforce rely almost wholly on the second-hand authorities which are regarded in the Church as trustworthy. It is not their fault if the Catholic history which they conscientiously present is so often a distortion of facts, accomplished by the *suppressio veri* and the *suggestio falsi*. With the most evident disposition toward fairness, it would not be easy to find a more violent *petitio principii* than in the paragraphs devoted to proving the papal supremacy over general councils (pp. 228–30). In fact, the frame of mind of an honest, well-meaning, but devout Catholic historian is a marvel of human intelligence not easy to fathom. For instance, in the article on the "Scapular" our authors resolutely detail and expose the Carmelite fraud through which the devotion of this curious fetish originated; yet they evidently have no sense of the absurd contradiction involved when, under "Indulgence," they allude to the special remission of sins granted by Pius IX., in 1854, to the wearers of the magic blue Scapular of the Immaculate Conception. Both articles, we may remark, would have been more complete had the authors related the origin of the modern revival of the Scapular worship (bearing so close a resemblance to the Carmelite fraud), when a sister of charity, in 1846, had some visions of Jesus Christ holding a Scapular in his right hand, and Pius IX. made haste, in June, 1847, to accord special indulgences to the wearers of the Scapular of the Passion of Christ, giving rise to a very profitable trade on the part of the Congregation of Missions, which has the monopoly of their manufacture.

Of course it is impossible that such a work should be without omissions, and in turning it over we have noted a few, such as "Diocesans" and "Oblations," of which the technical meanings might well have been given. We also observe that nothing is said about the Vision of God which the saints are to enjoy in Paradise, the exact nature of which is a point of sufficient importance to have required contradictory decisions by the infallibility of successive popes. In 1333, John XXII. decided that the saints have no distinct vision of the Divine Essence and will not have till the Day of Judgment and Resurrection, and he proceeded to persecute the wretches who held the contrary opinion. Yet only two years later, his immediate successor, Benedict XII., proclaimed that the saints do enjoy a distinct vision of the Divine Face, and in 1336, in full consistory, he decreed that all who thought otherwise should be punished as heretics. The production of a recantation and submission to the decision of the Church, purporting to have been signed by John the day before his death, saved the Pope from the scandal of digging up his predecessor's bones and burning them, which would have been a necessity under the canon law of the period. We can hardly expect to meet with incidents such as this in an orthodox work of reference intended for the faithful, but it is perhaps worth mention as an illustration of some of the difficulties under which orthodox students and writers labor.

The Temple of the Andes. By Richard Inwards, F.R.A.S. London: Printed for the author by Vincent Brooks, Day & Son. 1884. 4to, pp. 32, pls. 19.

IT is difficult to find any *raison d'être* for this elaborate production, since it adds nothing of importance to our previous knowledge concerning the antiquities of the basin of Lake Titicaca. The writer's sketches, made during a visit to Tiahuanaco, are, indeed, somewhat more numerous than those of Orbigny, Squier, and others. But except the more accurate details in the monolithic doorway of Tiahuanaco, so often represented by visitors to the place, they possess little value and give but a very imperfect idea of the mass of material available for study in the village of Tiahuanaco.

In connection with these sketches much is said of the great antiquity of the buildings, the remarkable size of some of the monoliths used in their construction, and the comparatively high state of civilization which, according to the author, must have existed in Tiahuanaco at the time of their erection. As matter of fact, nothing has yet been found in the ruins of Peru or of Central America, either as regards the style and finish of the buildings or the beauty of ornamentation, to denote anything beyond a simple type of architecture. Neither do the tools and utensils, the garments, or the gold, silver, and other ornaments, dug up about these ruins, indicate that the native of those primitive times was more civilized than his successor of to-day. Huge buildings made of gigantic stones, or the cutting of great monoliths, imply only a numerous population under absolute control, ready to do the bidding of a dominant caste or an all-powerful chief.

In Plate VI. the author attempts a reconstruction of the buildings at Tiahuanaco. A careful comparative study of the remains of the Temple of the Nuns on the Island of Coati, or of the Palace of the Incas on the Island of Titicaca, would have given him radically different ideas of the probable shape of the original structures. His restoration reminds us forcibly of some of the ruined temples of Yucatan and of Mitla. In the light of our knowledge derived from the ruins of Yucatan, it seems unnecessary to discuss the author's statement that these buildings were roofless. He will also find it difficult to convince his geological readers that the trachitic rocks used at Tiahuanaco were moulded rather than carved, because he could see no mark of the chisel on any of the stones. The reasons which have induced the author to lead a canal up to the steps of his restored palace are not apparent. If he has taken as his guide in this supposition the raised terraces indicating the ancient level of Lake Titicaca, he has placed

the antiquity of the temple far beyond that of historic times. It is much to be regretted that a field for archæological study so interesting as that of Lake Titicaca should still remain practically unexplored, and that the most recent publication on the ruins of Tiahuanaco should be so unsatisfactory.

Lotze's System of Philosophy: Logic, pp. 538; Metaphysics, pp. 539. Translated from the German by Bernard Bosanquet, M.A. Oxford: Clarendon Press series.

It was Lotze's intention to revise and greatly amplify the third or psychological part of his metaphysics, and to add a third ethical volume to his "system." After his death, no materials for the latter were found sufficiently advanced to be printed. His general views, however, may be found in an article on the principles of ethics (in *Nord und Süd*, June, 1882), and may also be gathered from his earlier and best work, 'Mikrokosmus,' a translation of which is promised soon. The translations now published were begun under the direction of the author by the late Professor Green, who executed a part of it himself and commissioned others to undertake other chapters, so that the two volumes present considerable diversity in style, as well as in the rendering of many of the less important technical words. These are sometimes pointed out, and occasional notes and references to related or explanatory passages in other parts of the author's works are given, which add somewhat to the value of the book. The work is heavy reading—heavier even than in the original; for the metaphysics, at least, most students will content themselves with the more concise dicta recently printed from his lectures in the same field.

None of the mental sciences are in greater confusion now than logic, not only with reference to the opinions advocated by eminent experts, but with regard even to its proper scope and range. On opening a new logical treatise we may find it devoted to the consideration of being, substance, reality, etc., and hardly distinguishable from metaphysics; or, again, it may be occupied with the syllogism, or, like Wundt's, with practical methods of the special sciences *seriatim*, with a logic for each; or, it may be a logic of algebra and chiefly mathematical, as in the case of the Boolists, etc. According to Lotze, logic comprises first the doctrine of thought, or pure logic, treating of the concept and its formation, of the theory of judgment and its forms, and of inference. The second part treats of investigation or applied logic, comprising the forms of definition and proof, fallacies, derivations of numerical propositions, the discovery of laws, and the calculus of chances. The third book treats of knowledge or methodology, involving scepticism, the world of ideas, the *a priori* and the empirical methods, the real and formal significance of logical acts, and *a priori* truths. This selection and order of topics is, in the present condition of logical studies, like everything coming from Lotze's hand, eminently sensible, but not particularly novel or epoch-making. The earlier parts of the book were obviously written for the sake of the latter, for in the third part all the freshness and interest of the book are found. Thought, whose function is to add the notion of coherence to connected ideas, may lead us to scepticism if accidental is mistaken for real coherence. It, however, presupposes truth and knowledge, but doubts their identity. Delusions can only be detected by fresh knowledge, and the general doubt that things are as they seem is self-contradictory. The validity of our ideas is a very difficult notion, and should not be confused, as is so often done, with their existence. Neither must we judge of knowledge by our notion of its origin, so that psychology cannot help logic much. Proof is far different from the reason of the law by which proof is made. The work concludes with the argument that a synthetic and at the same time necessary development is the supreme goal of science. Despite, too, the author's disclaimer, his logic is essentially psychological, and would more correctly have been termed the psychology of logic. It is this that constitutes its chief charm, and gives point to his happy characterization of Hegel's method and of Boole's attempts.

Metaphysics is characterized as the final elaboration of facts and as giving a basis to psychology, and not as accepting one from it. The new philosophy, it is said, regards the philosophic lucubrations of recent scientific men with the same kind of pitying complacency as that with which they regard the moribund philosophic systems of half a century ago, and especially the so-called natural philosophy of Germany. With commendable grandmotherly care, metaphysics takes the sciences under its protection, and even gives them a basis as logic does a method. Here again the charm of the author, which consists chiefly in the fact that to him everything takes on a psychological aspect, has made even this most arid of topics interesting as well as simple. The first book, on the connection of things, treats of their being, quality, reality, and unity, and also of becoming and change. The second part, on cosmology, discusses time, space, matter, motions, and the forms of the course of nature. The third part is devoted to psychology, and treats of the metaphysical conception of the soul, sensations, and the course of ideas, the mental act of "relation," the formation of our ideas of space, and the physical basis of mental activity. To those familiar with Lotze's previous writings, the most interesting and novel chapter is probably that on the mental act of "relation," which is referred to attention and interest.

The Elements of Botany: Embracing Organography, Histology, Vegetable Physiology, Systematic Botany, and Economic Botany, arranged for School Use or for Independent Study. By W. A. Kellerman, Ph.D., Professor of Botany and Zoölogy in the Kansas State Agricultural College. Philadelphia: John E. Potter & Co. Pp. 358, 12mo.

Plant Analysis: A Classified List of the Wild Flowers of the Northern United States, with Keys for Analysis and Identification. Same author and publisher. Pp. 253.

After a modern fashion for school books, these volumes bear no date on the title-page, but in a preface we find the date 1883. "For independent study" we should say that the 'Elements' traversed much too wide a field in a merely touch-and-go way. For "school use" the same objection applies, except in the case—we fear rather rare—in which an extended course of botanical instruction is given by a really competent teacher, who uses this volume as a text-book. For that it seems fairly well adapted.

The second work, which supplements the first but is more elementary than the 'Elements,' consists of a simple introduction to the structure and conformation of phænogamous plants, of less than twenty pages, two upon classification and three or four of practical directions, a glossary and index, while all the rest is analytical tables and lists of names, the former leading to the latter. It has an arid look. But nothing better can be expected when the botany of a great country has to be compressed into a couple of hundred small pages. Some of the figures are good, some are bad. In the letter-press, where all generally reads very well, one is horrified by the statement that "very often the petals are inserted immediately before the sepals," etc. "But the petals may alternate with the sepals also," etc. "May," indeed! This is in the 'Plant Analysis.' Turning to the 'Elements' (p. 44), we find essentially the same statement.

Molière's 'Les Précieuses Ridicules,' edited by Andrew Lang, M. A.—*Beaumarchais's 'Le Barbier de Séville,'* edited by Austin Dobson. Oxford: Clarendon Press; New York: Macmillan & Co.

These two neat little volumes are on the plan of the edition of Horace published by Mr. George Saintsbury, and each of them contains among the prolegomena an "Essay on the Progress of French Comedy," by that competent writer on French literature. A careful perusal of the twenty pages devoted to this essay will richly repay the student. They present a brief but very interesting and complete history of French comedy, which, Mr. Saintsbury justly holds, "From Adam de la Halle [in the 13th century] to Sardou, is as continuous as the history of the English Parliament from Simon de Montfort to Lord Beaconsfield." As true, again, is his assertion that "of modern nations France is the special home of comedy." Nor have the respective editors of the two plays confined themselves to the usual explanatory notes. Mr. Lang gives us a very good "Life of Molière," a brief sketch of "The Comic Stage in the Age of Molière," and an "Introduction to the 'Précieuses Ridicules,'" which are well worthy of attention. The euphuism of language and affectation of manners which Molière laughed out of existence seem to revive occasionally, and even in our day, an American Molière might find Cathoses and Magdelons to hold up to deserved ridicule, without crossing the ocean.

The "Life and Writings of Beaumarchais" will be read with interest. His active participation in the cause of the American Revolution is but briefly alluded to, but his literary and political career is well depicted, and Mr. Dobson's opinion of his singularly contradictory traits of character is probably correct. "The Stage in the Time of Beaumarchais" and the "Introduction to 'Le Barbier de Séville'" explain the furore created by this witty production, Beaumarchais's best title to fame, although his "Mariage de Figaro," given nine years later, produced a still greater sensation and (some French critics claim) inaugurated the Revolution.

The plan adopted for this series of French plays, in course of publication by the Clarendon Press, is excellent. The care and research shown in the prolegomena and notes give them especial value.

Philosophy of the Unconscious. By Edouard von Hartmann. Authorized translation, by William Chatterton Coupland, M.A., B.Sc. In three volumes. New York: Macmillan & Co. 1884.

This long promised, long-delayed translation is made from the ninth German edition. Since the work was first stereotyped, in the fifth edition, in 1873, no changes of any moment have been made, except the addition of an appendix on the physiology of the nerve centres, and miscellaneous addenda, altogether making about one hundred and fifty pages of the English work. The body of the present treatise has been so fully reviewed in several previous numbers of the *Nation*, that little remains to be said save that the translator's task, which was a very easy one, seems to be creditably done. The shallowness and uncritical quality of the author's work are equally shown in the dull résumé of psycho-physic explanations appended. This work constitutes the

first part of Hartmann's system; the second is the well-known 'Phenomenology of the Moral Consciousness,' and the third and most recent part is devoted to a psychological analysis of the religious consciousness, its metaphysical postulates and ethical consequences, and also to a critical history of religion in the past, as a basis from which its future development is predicted.

Unser Elternhaus. Von Paul Hertz. Als Manuscript gedruckt. Hamburg: 1883. Pp. 141. [Our Old Home. Privately printed.]

HAMBURG is one of the brightest, busiest cities of Germany. It is now about to be united in the Customs Union, and this change from its old position as one of the free cities of the empire is marked by some great improvements in its harbor. In making these many of its old houses and canals will disappear. In view of this a German merchant has printed a little book, giving in a very attractive way the story of the home and home life of his family for half a century and more. The story of the old house is well worth telling in brief, as characteristic of the life of a German town and its progress. Built in 1626, the house still stands in stately dignity on a canal that dates from 1327, while behind it runs another water course laid out in 1469. Near it are the gardens that mark fortifications built in 1531. The ground on which the house stands was in 1559 part of a large property, which was subdivided in 1587, and finally improved by the house built by a purchaser of 1618. He was one of the Netherlands Protestants who fled from Holland when it was ravaged by the Spaniards under Alva, and who contributed by their industry and enterprise to build up Hamburg, and have left their mark there as they have wherever they found refuge and protection. The changes of ownership are easily followed in Hamburg, where, in spite of fire, old records are well preserved, and the successive occupants are enumerated. The house changed hands in 1645, and again in 1654, and then in 1680, remaining in one family for 107 years, in another for forty years, and since 1833 in still another.

This last, living in the good old patriarchal fashion, three generations under the same roof, together with the counting-house in which a great shipping business was carried on with the remotest parts of the globe, offers annals of the purest domestic felicity, of the happiest youth, manhood, and old age, and of commercial success, civic honors, and reverent love for the once Free and Imperial City of Hamburg. From the harbor in front of the old house went and came a fleet of vessels far and wide, carrying and fetching great cargoes, and making the name of the Hamburg firm familiar abroad and at home. Factories in Africa, agencies in Asia, correspondents in America, North and South, and branches in England and the British Colonies were all directed from the modest counting-house, while ship captains, merchants, geographers, and representatives of foreign governments were heartily welcomed and hospitably entertained in the living rooms of the home of the old merchant. Two generations celebrated their golden weddings within its walls, and sons grew to manhood, went forth to learn the lessons of business and other pursuits, and returned to carry them on in and near the old home. Daughters married and went to found new families in other cities and countries, and then, returning to their native city, made pious pilgrimages to the old home. Every room is full of the recollections of childhood, lovingly told for the rising generation which will look in vain for the old house, when the improvements already in progress that are to give Hamburg its much-needed commercial facilities, have forever changed the outlook of the old quarter of the town in which this homestead was a landmark.

The simple life, the careful training, the wise education, the love of music, the culture of all intellectual resources, the close intimacy between parents and children, the lively interest in common affairs and in the various pursuits of the growing members of the family, furnish a beautiful picture of the German interior, which we may hope will long survive its change of habitation, and those greater transformations which make the Hamburg of to-day so unlike the city of half a century ago.

Broken English. A Frenchman's struggle with the English language. By E. C. Dubois. Boston: Lee & Shepard. New York: Charles T. Dillingham.

THIS little book, the publication of which was suggested, probably, by the success of that laughter-provoking absurdity, 'English as She is Spoke,' does not justify the choice of its title. The English used by the so-called Frenchman is generally correct, save a few sentences that serve to illustrate the misuse of the English preposition by foreigners. As much cannot be said of the French part of the book, notwithstanding the author's claim that it is "instructive as a handbook of French conversation." It bears evidence of a translation from an English text, being plentifully sprinkled with Anglicisms. No Frenchman would use such expressions as "difficile pour moi—d'autant plus parce que—ma tête serait assez longue—je ne vois pas le point!" The jokes are stale, the wit not very exhilarating. As for the misspelt French words, misplaced accents, and fitful punctuation, these are faults for which it is usual, charitably, not to hold the author responsible.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
